The economic and military defense of the hemisphere would be impossible without the cooperation and good will of the largest and most populous country of Latin America—Brazil. While for many reasons Brazil is traditionally cooperative with the United States, there are signs of certain fluctuations of ideology in the present Brazilian Government. We will not be able to understand and measure the situation without a better knowledge of the actual economic processes which took place since 1930 without a study of the Vargas regime changes.

In addition, Mr. Gauld has told me of the excellent work of the Inter-American Bibliographical and Library Association, founded by Prof. A. C. Wilgus, of George Washington University, a most active lecturer and writer. Both these organizations need funds for their programs and plans for publishing.

WHY BE NIGGARDLY IN SUPPLYING FUNDS?

It is regrettable that the timid and conservative Department of State has asked for only small sums, and that the Congress has granted them even less than requested for cultural relations. With billions now available for defense in all its aspects, there should be no further quibbling over the dangerously inadequate appropriations for Hispanic-American projects. Both the State Department and Congress must wake up.

Is there a slow-down in our defense relations with Latin America? And where does the fault lie? Are there too many dollar-a-year men sitting around talking and endlessly studying memoranda on what should be done about Brazil and Spanish America instead of going ahead and doing it? One hears the possibly unfair accusation that the men of State and Coordination consider themselves answerable only to the President and to God and not to the American people and their elected representatives. A drastic reform in men and methods seems to be needed.

It is not just a matter of too little and too late south of the Rio Grande. Our agencies, public and private, are doing far too little about certain dangers to American security through Nazi penetration and native fascism.

NAZIS CONTRASTED WITH US

Hitler is not losing precious time. The Nazis for years have been busy on the economic and propaganda fronts. In nearly every Latin American capital Germany has diplomatic staffs three or four times as large as ours. Zealous and hard-working Nazi agents should be matched, at least man for man, in South America by our State, War, and Navy Departments. Praise, however, is due many of our men there. The Nazis are militant believers in totalitarianism and work day and night to discredit the Anglo-Saxon democracies.

All too many American representatives are said to be rich reactionaries, indifferent to the Bill of Rights and bitter critics of President Roosevelt's reforms. Hitler claims his men are carefully trained in special institutes in Germany

where they are taught Spanish or Portuguese, and the history, geography, and culture of Brazil and the Spanish-American countries, each of which is proud of its own rich heritage. American consuls and diplomats are chosen chiefly for wealth and family position. It is no wonder that some of our frequently incompetent and tory snobs work only half as hard for American democracy as Hitler's hundreds of spies and embassy attachés who swarm freely over Latin America with diplomatic immunity.

STATE DEPARTMENT SHOULD BE LIBERALIZED

The papers have just carried the story of Assistant Secretary of State Berle's attempt to fire the son of a rich reactionary diplomat who admires Franco and fascism. The State Department could stand a lot of such house cleaning, as the late Ambassador Dodd's diary and the series in the newspaper PM make clear. Dorothy Thompson wrote in the Ladies' Home Journal, of August 1937, that the American people should demand and get a better Diplomatic Service, of men who know the languages, history, and culture of foreign lands. It would not cost much to double or treble the State Department budget and permit our best men to become our diplomats, to put democracy into our diplomacy. Let us democratize its policies and selection of personnel.

COMBATTING TOTALITARIANISM REQUIRES INTENSIFIED PERFORMANCE

The State Department has been functioning with too much secrecy and censorship. Roscoe Drummond, of the distinguished international newspaper, the Christian Science Monitor, recently raised the question of the press' right to information for the national good. Democracy needs the assurance and strength that fact alone gives. The German Embassy continues to be better informed than the American people.

Germany has been spending unlimited sums to win the small, rich, sophisticated class that owns and rules Latin America, along with the London and New York banks. Are we to continue to indulge in unsound, false economy by denying the Government even the paltry amount it requests for use in cultivating this key group? The spies, propagandists, and potential fomenters of disintegration and civil war are hard at work for Hitler in South America. It is clear that United States foundations, State, and Coordination are doing too little to train or employ young Americans to labor in the thorny Latin vineyard.

There does not seem to be any published data on whether the Army's Division of Military Intelligence and the Office of Naval Intelligence are as alert as they should be regarding South America. Until recently our Government was barely keeping abreast of what the Japanese, Germans, Italians, and their Spanish Phalanx allies were doing in Latin America to undermine democracy and smear this country. Now some steps are being taken, but they may be too few and too slow.

TOO MANY TORIES

The United States is pitting a Foreign Service consisting largely of Tories indifferent to American ideals against the fanatical agents of fascism. The Fascist missionaries are apparently making more converts among the generals, landowners, and dictators of Latin America than are our diplomats. Let anyone who doubts this read Pearson and Allen, Hubert Herring, the late Ambassador Dodd, and the 10 articles dissecting the Department of State in the newspaper PM in February 1941.

Let the doubters of these perils read what Archibald MacLeish wrote over a year ago in the Nation for February 10, 1940, of the disastrous loss of prestige we face if we fail to convince the ruling class in Brazil and Spanish America of the superiority of democracy. The able and eloquent Librarian of Congress is an authority on the art of being a good neighbor. He feels strongly that the American people and Government have committed themselves so definitely to better relations with Latin America that we must make good. He states that to fail would be fatal. We must send our ablest scholars and believers in free institutions, not mediocrities. Latin Americans judge nations by their cultural achievements and must be shown convincing proofs of the creativeness and vitality of our culture. If the dominant class is not converted to democracy, it may shortly go completely totalitarian. It is partially so now, particularly certain Nazi-decorated generals. We are fighting a cultural campaign against Hitler in Hispanic America without spending enough money and effort. The battle is in the balance, and it is not sure that we will win.

THE LIBRARIAN OF CONGRESS EULOGIZED

Archibald MacLeish is the ideal type of United States official to lead the cultural forces of our democracy. He had a brilliant career at Yale and Harvard, was an officer in the last war, and then spent years in France and in North and South America as a forceful poet, speaker, and writer. MacLeish, in preparing his epic poem on the conquest of Mexico, followed the route of Cortez from the coast to Tenochtitlan—Mexico City. As an editor of Fortune magazine, he recorded his penetrating observations of Chile and Argentina in 1938. Librarian of Congress since October 1939, he has worked tirelessly to cement pan-American cultural relations.

At the Library of Congress Mr. MacLeish has been ably supported by the Chief Assistant Librarian, Dr. Luther H. Evans. For years Dr. Evans headed the Historical Records Survey, which did such a splendid job recording and preserving the records of our history. This work is a model of what we might encourage and help Latin-American nations do with their priceless historical materials going back to the early sixteenth century.

Archibald MacLeish is the best-qualified general for our cultural war in Latin America with the forces of Fascist barbarism and imperialism. MacLeish won his spurs by fearlessly defending Loyalist Spain in its fight against United States and European Fascists. He knows the issues in South America, whose educated men have long looked to France as the mother of culture. MacLeish believes in organized labor and in making the Americas a bulwark of democracy. He feels deeply about the problems of racial injustice, exploitation of labor sweated by selfish corporations, and poverty, such as the poverty of Puerto Rico, whose nearly 2,000,000 American citizens have no vote in Congress. MacLeish plans to go to Puerto Rico next month to the conference of inter-American writers he helped organize. If only State and Coordination had a group of men like MacLeish!

WE MUST CONVERT LATINS AWAY FROM THEIR SUSPICIONS OF "YANKEE IMPERIALISM"

Most of Spanish America, although dreading a Hitler victory, is still suspicious of United States imperialism. They wonder if part of our huge and growing power is not designed to occupy and "protect" Latin America for United States corporations and banks.

Brazil alone likes and trusts us and has done so for decades. Yet to date we have done almost nothing to strengthen this providential friendship with Brazil. We have made little effort to understand the problems and progress of this nation of over 42,000,000 people, the most strategic and vulnerable part of Latin America, as I pointed out in my speech contained in the CONGRESSIONAL RECORD of March 14, 1941. Our schools ignore the amazing complexities of race and culture of Brazil, recently described by Charles A. Gauld in the Negro History Bulletin for February 1941.

BRAZIL IS OUR BEST FRIEND IN LATIN AMERICA

Brazil is our best friend in Latin America, but our country has failed to match the years of German cultural efforts and the publishing of Brazilian classics in German mentioned by Mr. Gauld. Fascist propagandists, press, and radio in Latin America have sneered at our half-hearted program as typical of a decadent and ineffectual democracy. South Americans see almost no United States students, professors, artists, or lecturers who might answer the Fascist attacks on us. How much longer are we going to talk and not act?

ENCOURAGE APPRECIATION OF LATIN LABOR PROBLEMS

We should send scores and scores of our brilliant and liberal union officials, college men, and teachers to Latin-American capitals as labor and cultural attachés. The A. F. of L. and C. I. O. should jointly strengthen Latin-American labor by insisting on labor attachés in our embassies. Why not? Labor relations and labor solidarity are the very basis and bulwark of democratic defense. The New Republic of February 17, 1941, under "Labor and defense" says:

> Labor morale is not unshakable. It can be maintained only through a belief in the democratic nature of the defense effort. If that belief is allowed to die, we shall have lost the entire struggle. We must remember now how plainly Europe has shown us that labor, not industry, is the strength of a democracy.

PROVIDE AN INTERCHANGE OF SOCIAL WORKERS AND LABOR LEADERS

Prof. S. G. Inman in this month's Survey Graphic declares the New World's best defense lies in solid unity for social and economic justice. In the long run,

it will be more important for the United States to help Latin America solve her social problems than to arm her. There should be an interchange of social workers as well as of labor leaders.

Dr. Inman last year attended a great labor rally in Buenos Aires and heard Argentinean workers demand cooperation with United States labor and democracy against Fascist forces, domestic and imported. A popular liberal poet drew tremendous applause, as Latins honor their poets before they die. Inman praises Argentina's large Jewish community for its model charities and Loyalist Spanish exiles as among the best opponents of totalitarian agents. Hitler's victims now help expose and combat his methods in Latin America. Yet our State Department has not helped bring them from European concentration camps to Latin-American nations which have opened their doors. The newspaper PM has for months been condemning our diplomats for their un-American callousness.

CLAUDE BOWERS IS AN IDEAL DIPLOMAT

Professor Inman lauds Ambassador to Chile Claude Bowers as one reason why South America trusts us more. Bowers is one of our rare envoys who displays real devotion to social democracy. Only as we send more diplomats like him to Latin America will we win full confidence.

If United States labor, liberties, and social progress are sacrificed in the name of defense and profits, Hispanic America will fear a new era of Yankee imperialism and may choose fascism as the lesser evil.

Charles W. Taussig, president of the American Molasses Co., writes with liberalism and sympathy of basic economic and social reforms needed in the Caribbean area. His Survey Graphic article this month shows how fair a progressive United States businessman can be about labor, social services, and the rights of the predominantly Negro masses of the poverty-stricken Caribbean islands. Mr. Taussig, unlike the majority of our corporation executives, criticizes reactionary foreign firms which treat Latin-American laborers and non-Caucasians badly and deny them fair wages, unions, and sufficient schools and hospitals.

Our Government's entire Latin-American program seems to be based on policies of ignoring labor and the interests of the majority of our people. Hemisphere defense is in the hands of tories and businessmen. These gentry were recently caught allowing petroleum products and aviation gasoline to reach Hitler through reexports from Latin America and Spain. What will they not do next for profits and to smash labor?

LET US HAVE MORE DIPLOMATS OF JOHN WINANT'S CALIBER

Fortunately the President occasionally gets time to appoint a man of genuine liberalism, like Ambassador Winant, who has a fine article on social security for Latin-American labor in the valuable special Hispanic-American issue of Survey Graphic. In a recent speech, Mr. Winant, a staunch friend of labor, said something that certainly applies to South America:

> We cannot now expect that a citizen with no share in the benefits of democracy will give his faith and his life for the preservation of the empty promises of democracy. * * * To win the war or build our defense, we must first justify our beliefs by strengthening the fundamental economic, social, and civil rights of all.

Pan-Americanism has heretofore been the property of reactionary big business and it has used politicians and diplomats adept at bartering the heritage of the common people. It is high time to apply to pan-Americanism the high ideals of the founding patriots of both North and South America. The American people must demand a better Latin-American policy or State and Coordination may go on ignoring their rights.

It is the workingmen and common people who will have to do the fighting and dying to defend the New World's imperiled freedom. Labor and liberals cannot count on any help from the Tory press, as George Seldes tells us every week in In Fact. The publishers are for the fine phrases but not for higher wages for Latin-American workers. Representative United States leaders, except labor leaders, are to be sent to Latin America by the State Department.

CHRISTIAN SCIENCE MONITOR IS PERFORMING GREAT SERVICES IN ITS TREATMENT OF LATIN AMERICA

In addition to the newspaper PM, the Christian Science Monitor deserves great praise for its Latin-American and labor coverage. Its eminent editor, Erwin D. Canham, has often written of labor's contributions to the upbuilding and protection of better citizenship and democracy. The Christian Science Monitor does much to raise the prestige of United States journalism in Latin America. Coordination might well finance an index to the Monitor to make it doubly useful in the Nation's schools and colleges.

DR. ERNESTO GALARZA

My attention has been directed to the unusually laudable set of articles in Survey Graphic of this month. Dr. Ernesto Galarza's "Labor—Leaven of Democracy," is the most important from the viewpoint of the strengthening of the democratic popular base of hemisphere defense, to which I referred in my speech on Brazil in the RECORD of March 14, 1941. Dr. Galarza has been doing exceptional work at the Pan American Union as chief of the neglected, almost sabotaged, but potentially vital, Division of Labor and Social Information. Dr. Galarza shows the need of an inter-American institute for social and labor research with adequate staff and funds for the significant study of social and economic aspects of labor's place in defense. He stresses labor's faith in democratic institutions and enthusiasm for their protection.

WE SHOULD BE AWARE OF DANGERS IN THE OFFING

Prof. W. R. Sharp, of New York, thinks the Pan American Union is understaffed and overworked. Salaries are as low as at the Library of Congress because of insufficient appropriations. Dr. Sharp recommends certain reforms at the P. A. U. to increase its effectiveness and multiply its contacts below the Caribbean. The P. A. U. seems to suffer from the same bureaucratic ills and stodginess as State. Sharp concludes his Survey Graphic article thus:

> Should the Axis win, pan-Americanism will require consummate wisdom, courage, and self-restraint to survive the ideological, economic, and perhaps military offensives that will beat upon it from without. If the democracies triumph, pan-America may well exhibit what can be accomplished through international good will and intelligent action—an example to the other hemisphere.

Professor Sharp contributed a most valuable study of the Vargas dictatorship, based on his visit in Brazil, to the Inter-American Quarterly of October 1940.

I trust there is nothing to prevent the Coordination Office from helping finance Dr. Galarza's Labor Division research and the publication acquisition programs of the Pan American Union and the Library of Congress.

WE MUST EVIDENCE A WILLINGNESS TO COOPERATE, EVEN THOUGH IT MAY CUT PROFITS

In the same Survey Graphic issue Hubert Herring, the much-traveled director of the Committee on Cultural Relations with Latin America, writes:

> The final test of the reality of our neighborliness will be our willingness to limit our immediate profits for the sake of a larger American prosperity. We must move toward an authentic all-American cooperative economy, else all talk about cultural interchange may well be put down as so much twaddle.

It may be difficult for certain State and Coordination officials to sacrifice the profits of their big business relatives and friends. However, Nelson Rockefeller exposed part of the sordid story of United States firms doing business with Nazis in Latin America. I hope this is just a curtain-raiser and that he will go after the shipments of oil and gasoline to Japan and Hitler Europe that some United States officials continue to permit. This two-faced policy does not favorably impress Latin Americans with our sincerity.

Has the Coordination Office tackled the placing in the Government service of young experts on Hispanic America whose talents are not now being used? The Civil Service Commission has been overworked and understaffed, and has not created a register of Latin-American specialists from the hundreds on the translator and other registers. Civil Service has been accused of lacking imagination and initiative, but the chief fault lies in the State, War, and Navy Departments for not requesting more such personnel to increase their staffs and replace deadwood.

EXPERTS ARE AVAILABLE—LET US RETAIN THEM

The Library of Congress wants to hire such experts but lacks the funds. In recent years it has had to employ young specialists on Latin America with 5 to 7 years of university training at as low as $1,020 and $1,260 a year. Most persons in this field seeking Government posts are bitterly disillusioned. They see the Government full of incompetents and reactionaries while highly trained college graduates are denied even $1,260 clerkships. The big foundations appear to be doing little to help them get to South America for research. Dr. Lewis Hanke, the dynamic Director of the Library of Congress' Hispanic Division, recently blasted the fossilized foundations for their do-nothingism, in Harpers magazine for November 1940.

The Army and Navy are, of course, doing the usual necessary things to promote United States-Latin American defense cooperation. Missions of our experts are in all parts of the South American continent. United States and Latin-American scientists jointly seek oil, strategic minerals, and expanded rubber production—one of the projects begun by HENRY WALLACE while still Secretary of Agriculture. Pan American Airways' several subsidiaries are splendid examples of cooperative enterprises of defense value.

OUR ARMY AND NAVY CAN DO MUCH

It is in the unusual necessary things requiring flexibility and imagination that our Navy and War Departments are said to be deficient. Fortunately, they apparently are only slightly less alert and ingenious than the Nazis. Lewis Mumford has dissected the military and bureaucratic mind, caustically depicting its conservatism and lack of creativeness. Like State and Coordination, the Army and Navy have moved slowly while the Germans acted swiftly, ignoring the cost. War and Navy may not have done enough to build civilian staffs of experts. Civil Service has sent them lists of eligibles passing the language examinations, and some young university graduates trained in Latin-American problems. However, few seem to have been hired in the Munitions Buildings or sent to South America. Presumably the departments depend almost solely on the reports of diplomats and attachés. These gentlemen are sometimes, but not always, as shrewd and hard-working as Hitler's numerous agents. Many of our officers are distinguished graduates of the special advanced schools of the Army and Navy. We may have too few men on the job of keeping track of Nazi and other subversive activities and reporting on conditions and important developments.

NAZIS DILATE ON RACIAL DISCRIMINATIONS

The Germans are capitalizing on our "too little and too late" policy in Hispanic America. The tireless Berlin propaganda in South America smears us systematically. The Nazis spread a revolutionary gospel in Spanish or Portuguese for the non-Caucasian and exploited masses, condemning United States discriminations in industry and the armed forces against Negroes and others, and pointing with alarm to Yankee imperialism, past and present. Because Hitlerism is both revolutionary and cynical, it plays class against class and race against race in Hispanic America to stir up as much disintegration as possible. Civil war is a trump Hitler is holding up his sleeve. He won some cheap and notable conquests in Europe by such disruptive and astute tactics. He sells a very different bill of goods to the upper classes in Latin America, but the United States is libeled in any case. How Hitler could attack the United States without invasion, with economic and political pressures and "diversions," was mentioned in the United States News for February 14, 1941.

WE ARE DERELICT ON THE PROPAGANDA FRONT

Propaganda Analysis for December 15, 1940, claims:

The United States has done little on the propaganda front to meet the Axis challenge. Until quite recently only the radio chains made any real effort to interpret the United States to Latin America. The Government itself has done almost nothing, although plans are now under way to remedy this situation.

That is the trouble—fine plans and insufficient action. Propaganda Analysis is right in urging the close study of totalitarian propaganda techniques and results among the Latins. Without such basic information, no intelligent program to counteract untruths is possible. If the Coordination Office has not yet sent well-qualified observers fluent in Portuguese or Spanish to South America, it might consider financing Propaganda Analysis, which should be able to do an excellent job.

Certain officials in the War, State, and Navy Departments are superficially qualified to deal with complex and perilous situations. Actually, these men's intellectual horizons are frequently seriously limited in several directions—by ultraconservatism, inflexibility, and stodginess. Germany is said to have rigorously trained officials and military men daringly and brilliantly to plan and execute unusual maneuvers on the economic, cultural, and war fronts. Sad things have been happening to European governments whose officers and bureaucrats failed to keep abreast of those of Germany. It is to be hoped that Hitler is not preparing any unpleasant surprises for us in South America for which we are not forewarned and well prepared.

WE MUST OFFSET NAZI FOMENTATIONS

Our diplomatic and defense officials will have to shoulder their share of the blame if the worst comes and Hitler is able to foment civil wars in Brazil and Spanish America. The Axis may in 1941 or 1942 decide to start trouble in our backyard to deflect the flow of aid to Britain. Hitler might try this regardless of whether he is winning or losing. God knows it might be a decisive factor.

What forces are there in Latin America which would welcome United States help in crushing Nazi-led civil strife or invasion? There are the untrustworthy domestic Fascists, dictators, generals, and tories whose selfish regimes our State Department apparently favors and supports in return for concessions to United States trade and speculators. There are the common people, left in poverty and illiteracy save in a few fortunate areas. Antilabor and imperialistic forces are powerful in this country and influence every administration's foreign policy. Their kept officials in our diplomatic service have knifed Latin-American labor and democracy. These forces and these men still strongly affect United States policies. Our cooperation with democratic groups in South America may yet be prevented by inside sabotage. Let us hope this betrayal will not come to roost on the Axis perch like the sell-out of Loyalist Spain by our own Fascists.

WE MUST ACT NOW

It is never too late to let the American people in on the truth and give them their choice of policies. We can give Latin Americans as well as our own citizens a better social and economic system and a democracy worth defending. That is sound defense strategy which our officials would do well to study carefully.

Export-Import Bank loans such as those to several nations for their steel industries should include labor safeguards and wage stipulations. Good pay and conditions are sound economics and build better markets and living standards. Mordecai Ezekiel pictures this clearly and eloquently in a major study published in "International Conciliation" last month. The question arises whether State and Coordination officials, as at present constituted, can be trusted not to continue to run defense policies in Latin America so that big business enjoys excessive profits with Government support of its imperialism. Let the American people beware of the prostitution of defense. As the world's leading Republic, we might try the novel experiment of an honest, open democratic and truly American program of diplomacy and defense.

At present our tactics seemingly tend to support tyrannies and to undermine truly liberal regimes like those in Mexico under Cárdenas, in Colombia and in Chile, which attempt to put human rights above foreign corporations' property rights. As many hard-hitting newspaper stories point out, this betrayal of liberty supplies ammunition to Hitler's propagandists and the native totalitarians south of us. Hispanic America's harassed democrats cannot be expected to continue their faith in our system of government if the officials of the great democracy of the north betray them while its people sleep.

To paraphrase George Seldes in In Fact of March 10, 1941, this Republic is in a position to extend its aid and open its markets in exchange not only for promises of democracy from Latin America's dictators, but for actions establishing democracy there now. Those who block this are the betrayers of the good neighbors.

The Selective Service Act

EXTENSION OF REMARKS

OF

HON. PHILIP A. TRAYNOR

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

RESOLUTION PASSED BY THE NEW CASTLE COUNTY MEDICAL SOCIETY AND ENDORSED BY THE MEDICAL SOCIETY OF DELAWARE

Mr. TRAYNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution from the New Castle County Medical Society and the Medical Society of Delaware, referring to the Selective Service Act:

Whereas it has come to the attention of the society that certain provisions of the

National Selective Service Act have proved unjust and unreasonable in their effect on members of the medical and dental professions—namely, that physicians and dentists have been inducted into military service as privates rather than as members of their respective professional groups, and that no provision has been made for medical students, hospital internes, and residents to complete their professional training; be it

Resolved, That the following recommendations express the opinion of this society:

(1) That the physicians and dentists called into service under the Selective Service Act be permitted to apply for commissions in the Medical or Dental Corps.

(2) That in the event such commissions are not available because the personnel of either corps is adequate, such selectees be permitted to enlist in the Reserve Corps, medical or dental, respectively.

(3) That medical and dental students' military service, if selected, be deferred until the completion of their professional training or until professional degree is granted.

(4) That internes be permitted to complete their terms of internship as provided in their contracts, being deferred if selected prior to the completion of interneship.

(5) That residents engaged in advanced training in an approved hospital for qualification in a specialty be permitted to complete their training, being deferred if selected prior to the completion of their residency. Such advanced training and approved hospitals are to be understood as those meeting the requirements of the examining boards of the particular specialty.

(6) That none of the foregoing recommendations are to be understood as suggesting that medical and dental students, physicians, and dentists be exempt from military service, or that internes and residents be deferred beyond the usual term of their hospital contracts, or that internes and residents be permitted to complete new hospital contracts for additional training made after they have been selected for military service, or that internes and residents be refused permission to make such new contracts before they have been selected for military service; be it further

Resolved, That this resolution be spread on the minutes of this meeting, and that the endorsement of the Medical Society of Delaware and the Delaware State Dental Society be requested, and that copies of the resolution be sent to the Senators and Representative of Delaware in the Congress of the United States, and the American Medical Association.

Greeks Fighting for All

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

ARTICLE BY GEORGE J. S. CHRYSSIKOS AND COMMENTS OF OUTSTANDING AMERICANS ON THE VALOR OF THE GREEK PEOPLE

Mr. McCORMACK. Mr. Speaker, 120 years ago today Greece started its war for independence with the help of Great Britain.

Today the whole world realizes history is repeating itself and the heroic valor of that little country has aroused the admiration of every liberty-loving American. That country—and it is a small country—has stood up and fought fascism to a standstill. It has put new heart into the little countries. I would like to quote from an article written by George J. S. Chryssikos, of the State of New York, as well as a quotation from Mrs. Franklin D. Roosevelt and other outstanding Americans:

GREEKS FIGHTING FOR ALL—APPEAL TO EVERY LOVER OF LIBERTY AND FREEDOM

One of the smallest nations of Europe, with ancient traditions of liberty—a nation, in fact, whose history from the fifth century, before Christ, to the present time is a long succession of heroic struggles in defense of western civilization and freedom—stands today in need of quick and generous help from the liberty-loving people of America. Greece, the cradle of civilization and the mother of democracy, is fighting valiantly against heavy odds. With a population of 7,000,000 inhabiting a mountainous country of superb beauty, but with few natural resources, she was unjustifiably attacked by Italy, with a population of 45,000,000. Everyone expected Greece to yield to the Italian aggression without resistance and to surrender her extremely important bases to the Fascist forces for use against the British Navy in the Mediterranean and against the British land forces defending Egypt, the Suez Canal, and Palestine.

But Greece chose to fight. Not only is she fighting now; she is fighting victoriously, showing to the world that a sense of honor and love of freedom, bravery, and a spirit of sacrifice are superior to numerical strength, even in modern warfare, with motorized armies and bomber planes. Greece has shown to us and to every other nation threatened by aggression that the Axis Powers are not unbeatable, that totalitarian invincibility is a myth.

Greece needs help, however, in order to stand the strain of this unequal struggle. She needs help urgently; she needs food and clothing for the families left behind by those hardy mountaineers who have rushed to the front and, at the point of the bayonet, driven the Fascist legions from Greek territory far into Italian-occupied Albania. Greece needs milk for the babies whose fathers are fighting to prevent the Axis Powers from completing their domination of continental Europe. She needs medical supplies and ambulances and hospital equipment to care for and save the lives of her heroic wounded soldiers. She needs warm undergarments and socks for her gallant warriors who are fighting at altitudes ranging from 6,000 to 8,000 feet above sea level. One or both legs of many of these soldiers have had to be amputated to prevent their frozen feet from being gangrenous as they chased away the invaders from snowy mountain peaks and high narrow passes.

To secure American help for Greece a Nation-wide organization has been established by prominent American citizens, with headquarters in New York City. This committee is known as the Greek War Relief Association, Inc., and has the honor of including the first lady of the land, Mrs. Franklin Delano Roosevelt, in the long list of its distinguished members. Its offices are located at 730 Fifth Avenue, New York City.

In asking you to send your generous contributation to the Greek War Relief Association, Inc., I wish to remind you that the heroic fight of Greece against Fascist imperialism has a significance which transcends her geographical boundaries and even those of Europe. To every American who believes with our Government that the British Fleet is our first line of defense and that continued British resistance is essential to our safety, it must be obvious that Greece's fight on the side of England and her splendid victories against Fascist forces, overwhelmingly superior in numbers as well as in modern equipment, serve to reduce the possibility of this country's having eventually to defend itself and the rest of the Western Hemisphere against foreign attack.

I cannot emphasize too strongly that Greece's struggle has a world significance and is not merely a Greco-Italian or even a strictly European affair. For this reason, it is in the interest of every one of us as a peace-loving people, as free citizens, as fathers and mothers of young men of military age serving in the fighting forces of the United States or waiting to be called for defense duty, to give Greece all possible help in order to encourage her in the unequal struggle and to enable her to emerge victoriously from the war into which she was plunged by Fascist aggression. This heroic little nation has poured out its blood and its treasures without stint.

In order to appreciate the importance of the refusal of Greece to surrender to the Axis and to become a tool against Great Britain and, indirectly, against the United States, one has but to compare the war situation as it existed on October 27, the eve of the Italian invasion of Greece, with the war situation as it stands today.

On October 27 everything had been arranged and prepared for a sudden descent of the German armies upon the eastern Mediterranean, with the Italians striking from Albania and advancing through Greece to join forces with their German allies at the Dardanelles. On October 28 the Italian invasion of Greece took place, but was quickly stopped, and the Greek Army took the offensive, driving the Italians out of Greek territory far into Albania. As a result of this the German armies are still in Bulgaria.

Nevertheless the struggle is not yet over by any means. Again let me urge that Greece must have assistance from abroad in the form of food, clothing, medical supplies, and the like, if she is to carry her gallant fight to a victorious end. Greek cities and villages are being systematically ruined by Italian bombing planes aiming at the destruction of the magnificent morale of the Greek people. The need for help is not only great and urgent but also immediate.

Let us consecrate ourselves to every necessary sacrifice for the Greek people and guarantee the future security of Greece, of democracy, of civilization, and of humanity. Spyros P. Skouras is the national president of the Greek War Relief Association.

Adolph Zukor, chairman of the board of Paramount Pictures, has organized the motion-picture industry and starting today in 8,000 motion-picture theaters throughout the United States collections are being taken to help the women and children of these dauntless defenders of democracy.

Here are a few tributes that have been made to that gallant country by famous Americans:

THE WHITE HOUSE,
Washington, February 15, 1941.

MY DEAR MR. ZUKOR: I am very happy to send you a few words to pay tribute to the valor of the Greek people in their defense of their country.

They are true to their traditions and all the world must pay them homage.

Very sincerely yours,

ELEANOR ROOSEVELT.

Not "the glory that was Greece," but, now, "the glory that is Greece."

To our everlasting debt of gratitude to the Aegean land for having enriched the intellectual and aesthetic life of mankind, we are once more adding new applause.

The glory that was Greece springs to life again, in deeds of valor, patriotism, and all the aspects of human chivalry that men admire, respect, and love to honor.

Down the glittering corridors of your intellectual and national history, O Greece, your long and glorious line of poets, sculptors, painters, statesmen, heroes, and patriots must be singing a heavenly chorus of hallelujah.

More power to the glory that is Greece!

FANNIE HURST.

Can our great Nation ingloriously desert and betray the Greeks in their hour of returning glory? Once more the Greeks are giving their blood for the freedom of the world. Shall we not even give them of our money?

RUPERT HUGHES.

Let us do our utmost now when real help will encourage this brave people to stand up as their forefathers did so many times before. We are undoubtedly all very sorry for them. Let us demonstrate how sorry we really are. No matter what other tasks we have this is one we should perform with great willingness and most generously.

HENRY MORGENTHAU.

I have just returned from the front impressed by the terrific problem there presented in connection with the relief of human suffering Certainly the work already being done by the authorities and your committee is magnificent but I believe that no efforts can be too great to meet the indescribable suffering and privation. I tell you this because I have myself witnessed the patience and heroism of people overwhelmed by war conditions in the depths of winter, people who though homeless and half frozen cheer when they hear the name of America, and I say God bless your efforts.

Col. WILLIAM DONOVAN.

Responsibility for Strikes in Defense Industries

EXTENSION OF REMARKS

OF

HON. LELAND M. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

EDITORIAL FROM THE SANTA MONICA EVENING OUTLOOK

Mr. LELAND M. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Evening Outlook of Santa Monica, Calif.:

[From the Santa Monica Evening Outlook of March 20, 1941]

ARE THE COMMUNISTS RESPONSIBLE?

As the number of strikes in defense industry multiplies, it becomes increasingly hard to believe that any honest American labor leader could be so heedless of the country's paramount need as to persist in such strikes in defiance of the pleas and warnings of the President of the United States.

The suspicion that many of these strikes are the work of Communists or other "fifth columnists" deliberately attempting to hamstring the defense program, is strengthened when one considers how skillfully these hamstringing tactics are being applied.

One of the latest and most striking examples of an industrial bottleneck being tied up by a strike is that of the Harvill die-casting plant, in Inglewood. Although this small company employs only 425 men, it furnishes castings to practically all the important airplane companies on the Pacific coast. It has been closed by a strike since last Friday, and the head of the Aircraft Division of the O. P. M. in Washington, Merrill C. Meigs, testified before a House committee that airplane production on the Pacific coast is likely to be completely stopped by this one small strike.

Is it simply a coincidence that such a small plant, which never had any serious labor trouble before, is closed by a strike at the very moment when its production becomes essential to aircraft production. The average American, recalling that the C. I. O. has never purged itself of its large communistic element, can only wonder whether the Communists in this country are not carrying out a deliberate plan for sabotaging American defense and aid to Britain.

If anything is certain, it is that the Communists will do everything they can to defeat this defense program. The Communist "party line" has decreed this and for the present all "reds" and party sympathizers in this country are virtual allies of the Axis Powers. It would not be surprising if they had a well-considered plan for sabotaging the defense industry. A great many of them occupy important positions in unions belonging to the C. I. O.

It is rather staggering to realize that the huge and powerful labor organization which the administration has favored these last 6 years contains among its leadership a considerable number of men who are enemies of our defense program and system of government. But the fact had better be realized soon, and these men deprived of their present power to sabotage the defense of democracy.

House Resolution 98

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

ARTICLE FROM NEW YORK TIMES

Mr. MARTIN J. KENNEDY. Mr. Speaker, my resolution, House Resolution 98, which was presented to the last Congress as well as this Congress, had for its object the feeding of the starving millions in the conquered and occupied countries of Europe.

The following article endorses what I proposed to the Congress:

[From the New York Times of March 25, 1941]

ARCHBISHOPS BACK HOOVER FOOD PLAN—CARDINAL O'CONNELL, FLOERSCH, MCNICHOLAS, AND 17 BISHOPS ARE SIGNERS OF STATEMENT—CITE INJUSTICE OF FAMINE—VICTORY "BUILT ON THE BODIES OF WOMEN AND CHILDREN" IS NO SOLUTION, THEY ASSERT

Three archbishops of the Roman Catholic Church and 17 bishops of Catholic dioceses throughout the United States have signed a statement supporting the plan of Herbert Hoover for relief of famine conditions among the small European democracies, according to an announcement made yesterday by the National Committee on Food for the Small Democracies, 420 Lexington Avenue.

William Cardinal O'Connell, archbishop of Boston, headed the list of 20 Catholic prelates endorsing the Hoover plan. The other archbishops among the signers were the Most Reverend John T. McNicholas of Cincinnati and the Most Reverend John A. Floersch, of Louisville, Ky.

TEXT OF STATEMENT

The statement follows:

"As individual American citizens—in cooperation with religious leaders of every denomination, who have publicly expressed their support and approval of Herbert Hoover's plan to relieve starvation within the occupied countries of Europe—we join in giving expression to our strong belief that the exigencies of even a just war do not require that millions of innocent children, women, and noncombatants be made to endure famine.

"A victory built on the dead bodies of starving women and children, innocent victims of the war over which they have no control, will destroy human sentiments that must necessarily enter into any form of enduring peace.

"The proposals of the National Committee on Food for the Small Democracies, of which former President Herbert Hoover is honorary chairman, are humanitarian and should be carried out in the name of Christian charity. Conditions set up by this committee specifically provide that none of the food, directly or indirectly, shall reach or benefit Germany. As long as this condition is maintained we cannot see why such a humanitarian and Christian proposal should be rejected.

"We hope and pray that those who guide the destinies of nations will be conscious of their obligation to protect the innocent, and not lay obstacles in the path of a movement whose sole object is to alleviate dire distress without affording aid to those who have invaded the lands of these many millions of starving and helpless fellow humans.

"With the Holy Father, Pope Pius XII, we believe that 'we can desire nothing more in such a convulsion of things than to help the bodies and raise the spirits' of the innocent victims of war."

OTHERS WHO SIGNED

Other signers of the statement, in addition to Cardinal O'Connell and Archbishops McNicholas and Floersch, were:

The Most Reverend Karl J. Alter, bishop of Toledo (Ohio).

The Most Reverend Stanislaus V. Bona, bishop of Grand Island (Nebraska).

The Most Reverend Matthew F. Brady, bishop of Burlington (Vermont).

The Most Reverend Joseph F. Busch, bishop of St. Cloud (Minnesota).

The Most Reverend John A. Duffy, bishop of Buffalo.

The Most Reverend Edmund F. Gibbons, bishop of Albany.

The Most Reverend Thomas K. Gorman, bishop of Reno (Nevada).

The Most Reverend William A. Griffin, bishop of Trenton.

The Most Reverend Francis C. Kelley, bishop of Oklahoma City and Tulsa.

The Most Reverend John T. McNicholas, bishop of Norwood (Ohio).

The Most Reverend Aloisius J. Muench, bishop of Fargo (North Dakota).

The Most Reverend Gerald P. O'Hara, bishop of Savannah-Atlanta (Georgia).

The Most Reverend John H. Peschges, bishop of Crookston (Minnesota).

The Most Reverend Joseph E. Ritter, bishop of Indianapolis.

The Most Reverend Paul P. Rhode, bishop of Green Bay (Wisconsin).

The Most Reverend Frank A. Thill, bishop of Concordia (Kansas).

The Most Reverend Charles D. White, bishop of Spokane.

The Most Reverend Christian Winkelmann, bishop of Wichita (Kansas).

Nation-wide Water Power Development, H. R. 4128

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

Mr. RANKIN of Mississippi. Mr. Speaker, I have introduced a bill (H. R. 4128) to create regional authorities similar to the T. V. A. for the development of the water power in every section of the United States; not only for the development of hydroelectric power, but for the development of every navigable stream and its tributaries, for purposes of national defense, navigation, flood control, irrigation, reclamation, and soil conservation, as well as for the generation of electric energy.

The passage of this measure would do more to absorb unemployment throughout the country in case this defense program should terminate, than anything else that could be done at this time. Not only that, but it would give the American people in every State in this Union the benefit of their own natural resources. It would reduce light and power rates by a billion dollars a year. These reductions would go to every community in America.

I recognize the fact that national defense comes first. If we had all the navigable streams in this country and their tributaries thoroughly developed, as they have in Europe, there is no telling what it would be worth to us in the present emergency; and there is no telling what it will be worth to the people of this Nation in the years to come if this program is carried out and these resources are developed as rapidly as possible.

The measure is subject to amendments, of course, and it is likely that two of these authorities may be combined.

I recognize the fact that next to domestic use and national defense, irrigation and reclamation have priority right to the use of the water in these streams. This measure recognizes those rights and provides for their exercise.

In other sections of the country floods are more disastrous than droughts, and the people in those areas are entitled to all the protection that can be given against disastrous overflows in their respective areas. This measure provides for that protection.

It is absolutely necessary that we improve the navigation of our inland waterways, not only for purposes of national defense but also for the purpose of transportation in times of peace.

We were told by a member of the Federal Power Commission, Mr. John W. Scott, a few days ago that the undeveloped water power in this country would produce 230,000,000,000 kilowatt-hours of electricity annually.

All the electric energy used in the United States in 1940 amounted to only $118,000,000,000 kilowatt-hours, as you will see from the table which I am inserting at the end of these remarks.

In other words, our undeveloped water power that now is going to waste amounts to almost twice the amount of electricity produced in this country last year with coal, gas, oil, wood, and water power.

This program would pay for itself within a generation, or within 50 years at the outside; and then the Nation would have an unencumbered asset that would be worth untold billions to the country as a whole.

In addition to that, it would force reductions of light and power rates to their proper levels in every section of the country, increase the use of electricity in every home and every business establishment, and enable us to electrify every farmhouse in America at rates based upon the cost of generation, transmission, and distribution.

That would save the present users of electricity a billion dollars a year, on the present load, in addition to amortizing the investment within the time stated.

These savings would increase with the increasing load, and by the time this entire development is amortized the ultimate consumers of electricity in the United States would save enough on their light and power bills alone to pay off the national debt.

I am inserting at the close of these remarks tables showing the number of customers in every class of service in every State, during the year 1940, the amount of electricity used, the revenues derived therefrom, and the overcharges according to the T. V. A. rates, the Tacoma, Wash., rates and the Ontario, Canada, rates; and then a final table giving the composite figures for all classes of service in every State in the Union. If there is anyone who doubts the accuracy of these figures, let him get the electric-rate book, or the one called Typical Electric Bills, for his own State—both of which are published by the Federal Power Commission—and make his own comparisons. He will see that these figures are extremely conservative.

What we are doing for the people in the T. V. A. area, we now propose to do for the people of the entire Nation.

The tables referred to follow:

TABLE 1.—*Residential electric service, 1940*

State	Estimated sales data for 1940			Estimated revenues and consumer savings under rates in effect in—

COMMERCIAL RATES

The following table shows the overcharges paid by the commercial consumers in every State and the District of Columbia. Any merchant, hotel, restaurant, filling station, barber-shop or beauty-parlor operator, any professional man, or anyone who pays commercial rates can take the rate schedule for his home town and figure these overcharges for himself.

When these commercial consumers realize that they are paying an annual overcharge for their electric energy ranging from $386,438,000, according to the T. V. A. rates, to $449,527,000, according to the Ontario rates, it is enough to stir them to revolt.

TABLE 2.—*Commercial electric service, 1940*

State	Estimated sales data for 1940			Estimated revenues and consumer savings under rates in effect in—					
	Number of customers	Total kilowatt-hours	Total revenues	Tupelo, Miss. (Tennessee Valley Authority)		Tacoma, Wash.		Ontario, Canada

INDUSTRIAL RATES

While the large industries of the country, as a rule, are able to secure electricity at reasonable rates, or produce it themselves, the smaller industries pay exorbitant overcharges, as the following table shows:

TABLE 3.—*Industrial and other electric service, 1940*

State	Estimated sales data for 1940			Estimated revenues and consumer savings under rates in effect in—					
	Number o customers	Total kilowatt-hours	Total revenues	Tupelo, Miss. (Tennessee Valley Authority)		Tacoma, Wash.		Ontario, Canada	
				Revenues	Savings	Revenues	Savings	Revenues	Savings

TOTAL OVERCHARGES BY STATES

The following table gives the composite overcharges, showing that they amounted, in 1940, to more than $1,000,000,000.

I hope every Member will investigate these tables carefully and check them carefully by comparing them with the rates charged in his home State, his home city, his home town, or his home community.

TABLE 4.—*Total electric sales, 1940*

State	Estimated sales data for 194			Estimated revenues and consumer savings under rates in effect in—					
	Number o customers	Total kilowatt-hours	Total revenues	Tupelo, Miss. (Tennessee Valley Authority)		Tacoma, Wash.		Ontario, Canada

Feed the Hungry

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

Mr. RABAUT. Mr. Speaker, several weeks ago I introduced a bill to establish a European food distribution commission which would attempt to alleviate the hunger in the conquered countries of Europe.

To date, only two objections have been raised against this proposal: First, we should feed our own people first; second, some of the food might go to Germany.

Let me discuss these objections briefly. I agree that our own people should be fed first. "Charity begins at home." In fact when I introduced my bill I stated publicity that "it is true that our own people must be fed, but I propose to use only the surplus food over and above our own needs." We have ample supplies of food to care for our own and at the same time assist other hungry people. The Commodity Credit Corporation in the United States owns or holds under loans 283,000,000 bushels of wheat; Argentina has 175,000,000 bushels in storage; and Canada has a surplus of 672,000,000 bushels. Argentina and the United States between them have 1,160,000,000 bushels of corn. We also have a surplus of pork, lard, fresh fruits, milk products, eggs, and meats. This should prove that we can afford to send some food to Europe without causing hardship to our own people. And in addition, our farmers are well prepared to raise far more food than we could possibly use ourselves.

It is true that there is a slight possibility that Germany might confiscate a part of this food. But it is highly improbable, for that would automatically end the plan. The food is to be distributed directly to needy individuals and families by agents of our own Government. Certainly, there is little danger here of the food being diverted to the German Army.

As other objections are raised, I shall discuss them with you. But in the meantime I believe that action should be taken on this matter. We have demonstrated our desire to help Britain, why should we not try to alleviate the suffering of those who were Britain's allies until they were overthrown by a power greater than they could withstand? They are now caught between the cruel and unjust occupation of Hitler on the one hand, and the needless and unsympathetic blockade of Britain on the other. We have a right to ask permission to feed these poor people. We have a duty to perform this act of charity. We want to save democracy, we want to stop aggression, but these people are starving. Since when has America marched to her objective over the emaciated bodies of helpless women and children? The end may be glorious, but it does not justify such means.

The Cotton Warehouse Bill

EXTENSION OF REMARKS

OF

HON. A. SIDNEY CAMP

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

Mr. CAMP. Mr. Speaker and Members of the House, I hesitate to take further of your time on this cotton-warehouse bill, S. 262, especially after such southern Members as Judge HATTON SUMNERS, HENRY STEAGALL, JERE COOPER, PAUL BROWN, BUTLER HARE, ORVILLE ZIMMERMAN, WRIGHT PATMAN, GEORGE MAHON, and others, representing as they do, every portion of the Cotton Belt, have told you of its operation and explained to you that its passage will not in fact cost the Government any more money but that it will be greatly to the benefit of the cotton grower for this cotton to remain on storage in the interior warehouses.

But there are some points I feel should be emphasized and more clearly explained to Members who are not familiar with the method of storing and marketing cotton, and I hope you will indulge me a few moments.

If stored in a good building and kept clean and dry, cotton will keep almost indefinitely and does not deteriorate. Consequently, there are cotton warehouses all over the interior of the Cotton Belt, at almost every point where it is ginned. After a farmer gins a bale of cotton he invariably carries it to a warehouse directly from the gin, has it weighed on certified scales, and receives a ticket or warehouse receipt for it. His cotton then is contained in the same building with his other cotton and that of his neighbors, and can easily be seen and graded by the buyers. The local warehouse therefore makes it possible for the farmer to have a market close to his home, and he has always been able to sell his cotton at the market price. Buyers take the cotton either for domestic mills or export. If the domestic mills buy it, they ship it to their own warehouses at their mills, and if it is bought for export, it is shipped on to the concentration warehouses at the ports for compress and shipment.

There was ample local warehouse space in the Belt to handle the crop until export shipments began to fall off a few years ago. All interior warehouses filled up and there was no place to store the

cotton. It was piled up on the streets around the warehouses in the weather where it would deteriorate. In most cases the farmers themselves erected new buildings to house this cotton, and they have had to make sacrifices to build them. In doing this, however, the farmers have been able to help themselves, for they have lowered the storage rate on cotton. Formerly cotton did not remain long in the interior warehouse before it was sold, so that the storage rate was 40 to 50 cents per bale per month. Now, because this surplus cotton is remaining the whole year, and because of the quantity of it, this monthly rate has been greatly reduced, the Government only paying 12½ cents per bale per month. If this Government cotton is reconcentrated at ports, it will cost the Government as much or more than any saving in storage rate to haul the cotton to the port by freight train, and if the cotton is removed from the local interior warehouse it will be absolutely necessary for the local storage rates to farmers to be increased.

There is another point I would like to stress; our export trade in cotton has dwindled to almost nothing comparatively. Why store it at the ports when it will in all probability have to be shipped back to local cotton mills for consumption? Our domestic consumption of cotton is increasing. American mills used more cotton in January of this year than ever before in any one month. If they keep up that rate they will use in this year, 1941, as much cotton as is produced this year.

I represent the fourth district of Georgia in Congress. The cotton mills in that district use far more cotton than the farmers of the district produce, and yet our district is one of the best cotton-producing districts. Do not you think it would be folly to move the Government cotton from the warehouses of our district to the ports?

Let me close with this thought. Cotton is one of the most vital materials in the defense program. Blankets, clothing, tents, hospital supplies, and gunpowder itself are made from it. One factory in the defense program alone uses more than 100 bales for explosives daily.

Is it wise to concentrate the Nation's cotton in a few vast port warehouses where one act of sabotage might destroy a considerable portion of it?

I do sincerely hope you will join with us in passing this bill.

The Weapon of Food

EXTENSION OF REMARKS

OF

HON. JOSEPH E. CASEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

EDITORIAL FROM THE BOSTON EVENING TRANSCRIPT

Mr. CASEY of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Evening Transcript of March 13, 1941:

[From the Boston Evening Transcript of March 13, 1941]

THE WEAPON OF FOOD

Force may or may not conquer Hitler. But force by itself certainly is not going to bring victory for the cause of freedom. It never has and it never will. It may bring a temporary victory; it may bring a truce till the opposing powers of force recuperate. But force alone will never bring permanent peace, spiritual progress, or economic prosperity.

Statesmen are often prone to consider force their only weapon. There are other weapons even more powerful. Let us consider the weapon of food. Although the problem has its moral aspect, let us here consider it only from the point of view of strategic statesmanship.

Britain says no food shall go through the blockade to the conquered peoples of Europe. We are all familiar with the argument. It will be stolen by the Nazis. Or its equivalent will be saved by the Nazis. And in this age of chemistry, food materials are also converted into war materials.

The argument is easy to accept when one is fighting for life. The misfortunes of others fade into the background. But America has less excuse for shortsightedness than has Britain. Britain is too close to the bombs to have perspective.

The argument is not sound when examined in the light of self-interest and strategic expediency of winning the war. The policy enunciated by Britain may well spell her defeat unless it is changed.

Victory and an ultimate peace which is worth fighting for, which is worth any fractional part of the sacrifices we and the entire next generation must make, are absolutely dependent upon a reasonable degree of world unity when peace comes.

Does anyone think for a minute that the Belgians, the French, or the Norwegians or the Dutch will come rushing under the banners of an Anglo-American order, if America and Britain have refused them food and they have seen their wives, their children, their mothers, their fathers die of starvation or its attendant diseases? When such food as they did have was Nazi food and Britain and America refused even to try to send any?

Not for 1 minute!

Can anyone possibly assume, after Britain survives the threatened invasion, that these same peoples are going to rise up and welcome a British rescue party when there are vacant chairs at every family hearth because America and Britain refused to allow food to go through the blockade? Of course they are not. These peoples are going to hate Britain, and they are going to hate America. And in their hate they are going to accept the Nazi hand that fed them, even though scantily.

It is no use to argue that the food would not get through and would aid the enemy. Very likely it would be diverted to Germany. But in refusing to make the attempt, Britain and America are adopting a policy which may well spell ultimate defeat in this war, to say nothing of destroying any possibility of creating a world order thereafter which is worth any part of the effort.

By refusing to send food, we put Germany in a position to say quite truthfully to the conquered peoples that Britain and America allowed them to starve as a military necessity, and to say that she herself has done all the feeding. The Nazi propagandists would hardly express it so politely. And Britain and America could make no acceptable reply whatsoever.

Suppose, on the other hand, we do send food. It will either get there for the purpose intended, or it won't. If it does, the beneficiaries are our friends for life. During the progress of the war, as well as thereafter, this is worth more in a military way than all the "billions for defense." If it is not used as intended, then shipment should be stopped.

At this point the shoe goes on the other foot. The Nazis, instead of Britain and America, become the goat. We sent the food. We tried to feed. All the hate will then be directed at the Nazis who stole it. Enough news will get through, by underground channels, so that the Nazis or anybody else cannot hide it. From the strategic viewpoint, the attempt is more important even than the actual amount of food which gets through.

In America's hands lies the decision. Today we have the ultimate power. Britain has asked our unlimited aid. We have agreed to place our entire national economy behind her, realizing that it is also in our interest. At 4 o'clock Tuesday afternoon America became entitled to express her will in the conduct of the war. Whether we do so or not, we will now be held jointly responsible for policies pursued.

We should tell Britain immediately that food is going to be shipped and that we hope it will be shipped with her aid. But shipped it's going to be.

Mr. Hoover is ready to do the job. The Society of Friends is known to have the confidence of all the European peoples. Whether we agree or disagree with Mr. Hoover politically, we are unanimous that he, more than anyone else in this world, is best equipped to undertake the task.

Mr. Hoover and a few food ships will do more to win the war for a new world order than the combined British and American Navies will ever do by force alone.

Let every person with a tongue and a pen speak up. Now is the time. Next year, next month, next week will be too late. As long as we are free every citizen shares the responsibility for what America does.

Let's realize that in the end it's love not hate, that it's food not bombs, that it's freedom not force which conquers.

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

EDITORIAL FROM THE NEW ORLEANS ITEM

Mr. HÉBERT. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD and include therein an editorial from the New Orleans Item, I offer the following article in connection with the St. Lawrence Waterway Treaty:

[From the New Orleans Item]

THE SEAWAY STRATEGEM

President Roosevelt, with the aid of the State Department, has put over a fast one. Instead of trying again to obtain two-thirds Senate approval of a St. Lawrence seaway with Canada, he arranges for our Minister to Canada and Prime Minister MacKenzie King to sign for the two countries an agreement to proceed at once with the long and hotly disputed project. The President must now ask Congress for money to do the job, but a simple majority vote can give him that.

All may be fair in love and war, and the President, in presenting the seaway and power proposal to the country this time has decked it out as a defense effort. But even so the

proverb will fall far short, in the eyes of many, of justifying the President's resort to roundabout devices to wish his pet project on the country. His course does not in the least invalidate any of the objections to it.

We hoped the southern Governors, when in conference here recently, would pass a resolution opposing the President's scheme. To advance this as a preparedness measure is to our mind absurd.

After years of delay and a great effort, the city of New Orleans, strategically situated for war or peace at the mouth of the Mississippi, gets one relatively small shipyard. Yet ships can be built here the year round. But it is in the same period seriously proposed to devote 4 or 5 years to construction of a St. Lawrence seaway so that ships may be built on the Great Lakes of a size to pass through a larger canal. And this is to be undertaken in the midst of a war which, God willing, may be ended in a couple of years. Meantime, thousands of men are to be diverted from immediate preparedness labor to build the canal.

As a byproduct of the last war, the Mississippi Valley has greatly advanced navigation on its inland waterway from the Gulf to the Great Lakes. Diversion of water from Lake Michigan is needed to insure a navigable depth in the Mississippi at low-water periods for this great and growing barge-borne river commerce. One of the proper protests against the St. Lawrence scheme is based on the possibility of its threatening the valley's cargo-bearing, diverted water from Lake Michigan.

To bear its part in the country's World War shipbuilding effort, New Orleans spent $20,000,000 on its Industrial Canal. Six months' work and $15,000,000 would extend that canal, for a 40-foot depth, to deep water in the Gulf. And along that canal sites would be available for 50 or more shipyards—yards in which the climate would permit full-time operation 12 months of the year.

The St. Lawrence seaway project would vitally and adversely affect most of our Southern and Valley States. Yet, strange to say, many of the Senators and Representatives from these States have voted for it.

Americans, Be on Guard

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

EDITORIAL FROM THE DELAWARE REPUBLICAN

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from a recent issue of the Delaware Republican:

[From the Delaware Republican]

AMERICANS, BE ON GUARD

Sportsmen throughout the State have been greatly alarmed by the introduction of a measure in the New York Legislature providing for the registration of all guns, including sporting arms, by their owners. This iniquitous measure would make it nothing less than a felony to own a shotgun, rifle, or airgun, or have such in one's possession without registering such arms with the police.

A felony is a major crime. The new measure is designed to cover all arms not covered by the Sullivan law, which requires a permit to possess a pistol or revolver, and would cover usable antiques and muzzle-loaders.

The Constitution of the United States says that the "right of the people to bear arms shall not be abridged." The first step necessary to a would-be dictator is to take arms away from the people. Then, when they have no means of defending themselves, to subject them to slavery. France, Holland, Belgium, and other countries had forbidden possession of arms—even sporting arms—by the common people. And we have seen what has happened to those countries. Even England, a democratic country, had forbidden possession of arms by the common man, and when invasion threatens the country has had to call on America to send over a lot of old arms with which the civilian population may hope some day to save itself from parachutists, "fifth columnists," and invaders.

Of course, there are always a lot of well-meaning but ignorant people who believe that guns and rifles are bad, that shooting game is wicked, and that anything that is fun is a sin. These mistaken people are a very small minority. Others think to disarm the people would lessen crime. The error in that logic is that having been disarmed, the law-abiding citizen has no protection against thugs, who can always secure guns, law or no law.

Americans want no law abridging the constitutional right to bear arms. Tell your senator and assemblyman that in no uncertain words.

A Reasonable Variable Grant Formula for Pension Increases to Those Senior Citizens of the Poorer States

EXTENSION OF REMARKS
OF
HON. CLYDE T. ELLIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

Mr. ELLIS. Mr. Speaker, today I am introducing a pension bill which, although it is not the ideal solution to the problem, is offered only for the purpose of equalizing as far as possible the benefits to those senior citizens who happen to live in the poorer States. And when I say "as far as possible" I mean as far as we could probably go at this time. To this end the bill does, in my opinion, represent the best thought of those who have given the problem long and careful study. It is obviously a variable grant formula.

Offered as an amendment to the existing law, the bill briefly provides that for those States whose per capita incomes are below the national average the Federal Government will pay up to three-fourths of all expenditures for old-age assistance and assistance to dependent children and the blind in the same ratio as the per capita income of the United States bears to the per capita income of those States. In other words, in Arkansas our 3-year average for 1937, 1938, and 1939 in per capita income was $240, as compared to $535 for the Nation. That of the Nation, therefore, was 2.23 times greater than that of Arkansas. Therefore, the Government would pay to the old people of Arkansas under this plan $2.23 for every $1 paid by the State. The average amount paid out in January by Arkansas for old-age assistance was $7.82. Half of this, or $3.91, was Federal funds. Instead of multiplying the $3.91 by one and adding it to $3.91, which is the present system, under this bill we would multiply the $3.91 by 2.23. That would be $8.71, or the Federal grant. Add this to the State grant of $3.91, and this would have given the old people of Arkansas, under this bill, for January an average of $12.62 instead of $7.82, or an increase in the Federal grant of $4.80.

Even this is wholly inadequate, but it is far better than the present system.

I quote here the bill in full:

Be it enacted, etc., That effective January 1, 1942, there is added the following new section to the Social Security Act, as amended:

"SEC. 1108. (a) In any case in which the per capita income in any State is less than the per capita income of the United States, the amount to be paid by the Secretary of the Treasury, for each quarter to such State which has an approved plan for old-age assistance, aid to dependent children, or aid to the blind, shall bear the same ratio to the amount so expended which is derived from State sources as such per capita income of the United States bears to such per capita income of such State, but in no event shall the amount paid under this provision to any State for any quarter be more than three-fourths of the total of the sums so expended in such State for such quarter.

"(b) The total amount to be paid under subsection (a) to a State for a quarter for all approved plans shall in no case exceed the difference between the total of expenditures under all such plans for such quarter, and one-fourth of the total of expenditures derived from State sources for all such plans for 1940.

"(c) The per capita income of each State except Alaska and Hawaii and of the United States excluding Alaska and Hawaii shall be determined by the Social Security Board between July 1 and December 31 of each even-numbered year for the most recent period of 3 consecutive years for which satisfactory data are available from the Department of Commerce. Such determination shall, for purposes of this section, be conclusive as to per capita income for each of the eight quarters in the period beginning on the July 1 next succeeding such determination; provided that for each of the 10 quarters in the period beginning on January 1, 1942, the average per capita income of the years 1937, 1938, and 1939 shall apply."

Platform of Dairy Cooperative

EXTENSION OF REMARKS
OF
HON. STEPHEN BOLLES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

PLATFORM ADOPTED AT ANNUAL MEETING OF LAND O'LAKES CREAMERIES, INC.

Mr. BOLLES. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include a platform adopted at the annual meeting of the Land O'Lakes Creameries, Inc., Minneapolis, Minn., as follows:

We believe that agriculture will be best served, and along with it the best interests of America as a whole, if Congress gives study and consideration to the need of managed currency. This is a duty and obligation bestowed upon Congress by the Constitution of the United States and, under existing circumstances and situations that we are bound to face in the future, we are definitely of the opinion that Congress must exercise to a greater extent its control over monetary matters.

We recommend that appropriate steps be taken to the end that all agencies of the United States Government, when purchasing agricultural products, shall accept the grading and inspection services of the Agricultural Department, or of any State department of agriculture, or the organized grading and inspection service of the industry involved where any such grading and inspection services have been established and are available.

We urge the Food and Drug Administration of the Federal Security Agency in its orders prescribing labeling to make such regulations to the end that they do not interfere with the free distribution of natural foods.

We commend the Federal Government for encouraging the rural electrification program. We believe the R. E. A. project should be developed and maintained as bona fide cooperative enterprises, the Government being repaid by cooperating users well within the established physical life of the facilities.

We oppose any amendment to the existing Federal oleomargarine law which will have the effect of lessening present regulatory powers of the Federal Government.

We also urge the enactment of legislation designed to prohibit the shipment in interstate and foreign commerce of any oleomargarine product containing any ingredient of milk and its products.

Despite vigilant and continuous efforts by Federal authorities to enforce the Federal law prohibiting interstate commerce in filled milk, this traffic is growing and is steadily becoming a menace to public health and to the dairy industry.

We therefore urge the Congress to amend the law so as to enable the Federal authorities to enforce this act.

Whereas for years skimmed milk and dried skimmed milk has been dealt in commercially as a food product of recognized value, but due to the fact that the word "skimmed" cast a stigma on the product in the minds of the public, it is felt that the new terminology, namely, "Dry milk solids not over 1½ percent fat" proposed by the dry milk industry of this country is a proper descriptive name for this product; and

Whereas the States of Minnesota, Michigan, Illinois, Utah, and Rhode Island have officially promulgated definitions and standards for this product in the new terminology—namely, "Dry milk solids not over 1½ percent fat"; and

Whereas the Food and Drug Administration, Federal Security Agency, has promulgated a definition and standard of identity for this product as "Dried skimmed milk," and has refused a request of the milk industry for a rehearing on this matter: Therefore be it

Resolved, That the Land O'Lakes Creameries, in annual meeting assembled, go on record as being opposed to the terminology "Dried skimmed milk" for this product, or any terminology, including the word "skim," or any derivation of such word, and favor the new terminology adopted by the several States named above.

In the course of national preparedness commissions of various kinds are being set up whose duty it is to assist in the complete mobilization of manpower and resources in the defense of this Nation. So far agriculture has not been properly represented on these commissions.

Therefore we urge that the President of the United States recognize the importance of agriculture and its ability to serve the Nation in equal capacity on these commissions as that of industry and labor.

The Federal Government is hereby urged to regulate its purchases of agricultural products so as to give preference to those produced in the United States and to extend credits now available to other nations for such purchases, with the understanding that available agricultural products of the United States will be given primary consideration because: (1) The tax burden supporting such purchases falls heavily on farmers, (2) there exist surpluses of many staple and specialty agricultural crops, (3) the normal export markets for substantial portions of the agricultural crops of this country have disappeared.

We urge that all States, in preparing legislation of special interest to the residents of their own States, avoid so far as possible the enactment of legislation that will set up unnecessary trade barriers between States.

These are times when the 48 States need to cooperate to the full extent of their ability in making American markets fully and unrestrictedly the property of the American people. This can only be accomplished if and when States recognize their interstate obligations and consider the fact that in the times ahead of us our home markets are going to be even more essential to the well-being of America than they have been in the past.

The Problem of Parity

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

RESOLUTION BY CONSOLIDATED BADGER COOPERATIVE AND REPLY THERETO BY HON. REID F. MURRAY, OF WISCONSIN

Mr. MURRAY. Mr. Speaker, there have been very extensive discussions about parity in Congress and throughout the entire Nation. Both political parties gave great import to parity in their platforms. The hearings before the Subcommittee on Appropriations on the agricultural bill recently passed indicate the interest shown by Hon. CLARENCE CANNON, chairman of this subcommittee.

The machinery to give the farmers parity for their products is nearly enough perfected and the legislative situation is such that the farmers can be given parity any time the President wishes them to have it. The so-called basic commodities—cotton, wheat, tobacco, corn, and rice—at this time are so affected by legislation as to enable the farmers who raise these crops to obtain loans of 52 to 75 percent of parity plus the subsidies that accompany the present so-called parity payments and other subsidies enjoyed by this group. The nonbasic commodities, which represent the great bulk of our national agricultural production, can be assured parity by loans already available under present legislation. Of course, there are no legislative restrictions on these nonbasic crops at this time.

I wish to bring to your attention a resolution forwarded to me by one of Wisconsin's largest dairy cooperatives and my reply thereto. They are as follows:

CONSOLIDATED BADGER COOPERATIVE,
Shawano, Wis.

HON. REID F. MURRAY,
Member of Congress, Washington, D. C.

DEAR SIR: In accordance with the desire of the membership of the Consolidated Badger Cooperative we are sending you a copy of the resolution that was adopted at our annual meeting held March 4, 1941:

"Whereas the dairy industry is the largest and most necessary national-defense industry in America; and

"Whereas the dairy industry is the only industry in America selling their products far below cost of production; and

"Whereas the fight between capital and labor will skyrocket taxes and the cost of products and service the farmer must buy: Therefore, be it

"*Resolved*, That we, the members of the Consolidated Badger Cooperative, recommend that the Federal Marketing Act be amended and that 100 percent parity be set as a goal for dairy products, and that the Secretary of Agriculture instruct the Dairy Products Marketing Association to increase gradually the price of butter and cheese until 100 percent parity is reached."

We further recommend that in order to maintain a parity price level that a production control be set up by the A. A. A. and supervised through the town, county, and State Soil Conservation committeemen.

It is further agreed that a copy of this resolution be mailed to the Secretary of Agriculture, Senators LAFOLLETTE and WILEY and all other Congressmen in Washington.

Yours very truly,
CONSOLIDATED BADGER COOPERATIVE,
By GEO. W. RUPPLE, *Manager*.

MARCH 18, 1941.

MR. GEO. W. RUPPLE,
Manager, Consolidated Badger Cooperative, Shawano, Wis.

DEAR MR. RUPPLE: This will acknowledge receipt of the resolution passed at the annual meeting of your cooperative in regard to the Federal Marketing Act of 1940.

I have been spending considerable time in learning the present status of legislation in connection with parity. It seems that the basic commodities—corn, wheat, cotton, rice, and tobacco—are entitled to loans running from 52 to 75 percent of parity. There is at the present time legislation under consideration to raise these loans to 85 percent of parity and there has been a bill introduced to make loans of 100 percent of parity for the five so-called basic commodities.

In studying this matter I have learned, through the legislative counsel of the House of Representatives, that there is a provision made in section 302 (a) of the Agricultural Adjustment Act which reads as follows:

"SEC. 302. (a) The Commodity Credit Corporation is authorized, upon recommendation of the Secretary and with the approval of the President, to make available loans on agricultural commodities (including dairy products). Except as otherwise provided in this section, the amount, terms, and conditions of such loans shall be fixed by the Secretary, subject to the approval of the Corporation and the President."

This paragraph, I am advised by the legislative counsel, makes it possible to loan up

to parity on all agricultural products except the basic commodities. The present legislation is such that loans can be made on basic commodities at 52 to 75 percent of parity and on nonbasic commodities loans can be made up to 100 percent of parity if the Secretary of Agriculture so desires and if he has the approval of the Surplus Commodities Corporation and the President.

The above-mentioned parity approach to nonbasic commodities would be arrived at by loaning parity amounts rather than by direct price fixing or direct appropriation from the Federal Treasury. One thing must be kept in mind and that is that there is no present legislative control over production of the nonbasic commodities.

So, in direct reply to your letter and resolution, I wish to say that the present administration has sufficient existing legislation now to provide parity prices for dairy products and other nonbasic farm commodities up to 100 percent of parity, if and when the Secretary of Agriculture, the Surplus Commodity Corporation, and the President desire you to have it.

The apparent unfairness of the parity payments to date is shown by the fact that these payments have been going to only a little over a third of our agriculture. The following table shows where the money appropriated for parity payments has gone during the year 1940:

Cotton	$96,183,000
Corn	48,824,000
Wheat	56,666,000
Rice	1,359,000
Total	203,032,000

You will note that cotton has had 47 percent of the funds appropriated for this purpose although cotton represents less than 10 percent of our national farm income. At the present time there is more of an interest in an all-inclusive farm program than there has been at any time since I have been here.

You have assurance of my keen interest and continued effort in regard to this question and I shall be glad to have further comments on this or other legislation of interest to you at any time.

Sincerely yours,

REID F. MURRAY,
Member of Congress.

A Letter to Americans

EXTENSION OF REMARKS
OF
HON. GERALD P. NYE
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Monday, March 24, 1941

ARTICLE BY COL. CHARLES A. LINDBERGH

Mr. NYE. Mr. President, during my years of membership in the Senate I have listened to many witnesses who have appeared before congressional committees. I have yet to hear a witness, and I think I never shall hear a witness, more direct, more sincere, more courageous, than was Col. Charles A. Lindbergh in his appearance before the Committee on Foreign Relations in January.

The current number of Collier's magazine contains an article entitled "A Letter to Americans," by Col. Charles A. Lindbergh, which, like his testimony, is direct and excellent, and at this time I am almost led to think should be required reading. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Collier's for March 29, 1941]

A LETTER TO AMERICANS

(By Charles A. Lindbergh)

I address this letter to every man and woman in America who is opposed to our country's entry into the European war. I write because we are being led toward that war with ever-increasing rapidity and by every conceivable subterfuge. While our leaders have shouted for peace, they have constantly directed us toward war, until even now we are seriously involved.

I write to ask your immediate aid in maintaining the independent American destiny our forefathers established. I write to warn you that the men who entice us on to war have no more idea of how that war can be won than the Governments of France and England had when they declared war on Germany. The interventionists call on us to fight, and then their responsibility ends. They offer no feasible plan for victory.

The situation in America today is alarmingly similar to that of France and England in the years prior to this war. There, as here, people let their emotions get the better of their judgment; and they had the same unwillingness to face realities. Both countries had refused to take part in a European readjustment while there was still time to make it peacefully. Both had refused to make the sacrifice that was essential for adequate rearmament. They, too, had cultivated the philosophy that it was necessary to defend someone else in order to defend themselves. How they could defend anyone else if they were unable to defend themselves they apparently did not consider any more than we are considering today.

Their failure is now obvious and stands out clearly before us. The imposition of "sanctions" did not save Abyssinia, but it threw Italy into the arms of Germany and sowed the seeds for the Axis. The threat of war by England and France did not save Poland, but it forced Germany and Russia into an alliance and precipitated a disastrous war. Adjustments that should have been made in peace and moderation were finally brought by war and resulted in immoderation. The failure to face realities in peace brought the curse of war on Europe. The failure to face the realities of war brought defeat to France and devastation to England.

When the last war ended, the victorious Allies had two courses open to them. They could either have assisted Germany back onto her feet as a self-respecting nation, or they could have kept her in a weakened condition by the use of military force. But they followed neither of these policies. England and France wavered back and forth between the two, while the United States withdrew her armies and her politics to the Western Hemisphere, avowedly forever.

During the years immediately succeeding the last war, Germany was held down with an iron heel. The terms of Versailles were the terms of a military victory, and when Germany defaulted on her payment of reparations, French troops occupied the Ruhr. But during the following 2 decades England decided to disarm, while France allowed the equipment of her army to become obsolete for modern warfare. Then Germany broke the terms of Versailles, rearmed, and marched her troops back into the Rhineland. When this happened, a few men in France and England, with greater vision than the rest, cried out that Germany must be stopped then or that it would be forever too late. Their statements were met with popular indifference.

During the most active years of German rearmament, France and England exerted relatively little effort to compete. It seemed impossible for them to realize what was taking place in central Europe. But later, after Germany had trained her armies, built her air force, and constructed the Siegfried line, the demand grew in France and England for military action—a demand which culminated in the declaration of war of 1939, and which has already caused the defeat of France and the devastation of England. While there was still time to fight, populace and politician refused to let the armies move. When the time to fight had passed, the armies were forced into a hopeless battle.

I sat in England one afternoon in 1938, listening to the man who had charge of coordinating defense for the British Government. I had pleaded with him to take additional steps to safeguard the British position in aviation. I had told him that if this were not done, Germany would soon become as supreme in the air as England was at sea. He listened courteously, and then replied that if the wars in Spain and China had demonstrated one thing, it was that the danger of air bombardment, and the damage which could be inflicted by bombing planes, had been grossly exaggerated. He said that the British aviation program was being "adequately expanded."

A few months later, at the time of the Munich crisis, I went to see one of the foremost leaders of England. I went at the request of other English leaders, to tell him my belief that the strength of German aviation was underestimated in England, and that the strength of Russian aviation was almost as much overestimated. He did not agree with me, although he admitted that the situation was serious. While I was there, however, he showed me an official report concerning British antiaircraft units. The report stated that not enough antiaircraft guns existed in all England to form an adequate defense for the city of London alone. Yet that man at that moment was advocating war.

At the time of Munich, the Royal Air Force had only a few squadrons of modern fighters and bombers. The majority of their planes were obsolete. And all of them put together totaled a fraction of the German air force. The condition of French aviation was even more deplorable. There was not a single squadron in France equipped with modern pursuit planes, and the French Government was looking forward to the time when its aircraft production would reach a total of 200 fighting planes per month.

When I returned to Paris after a flight to Russia, in the fall of 1938, I met, at his request, one of the members of the French Cabinet. I gave him my estimate of the Russian and German air forces, telling him of the tremendous expansion of military aviation that had taken place in Germany, and that Russian aviation had been unable to keep pace. He replied that my estimates confirmed the worst fears of the French, and corresponded to the reports of an air mission they had recently sent to Germany. I found that aviation circles in France, at that time, freely admitted that Germany would take supremacy of the air almost as soon as a war started.

From the standpoint of logic, the aviation situation in Europe was in itself sufficient reason to prevent a declaration of war by France and England in 1939. But when one looked further, he found that the same conditions existed in relation to the ground armies of Europe. Even the civilian population of Germany had been trained and prepared for war, while the people in France and England were not.

One of the striking differences between France and England, during the months immediately preceding this war, lay in the fact that France was alert to her danger but disorganized; while England was organized but only half awake. In France, internal conditions were so bad that I often wondered whether war or revolution would break upon the country first. In England there was no danger of revolution, but the people of that nation had never adjusted themselves to the tempo of this modern era. Their minds were still attuned to the speed of sail rather than to that of aircraft. The way of life in England was ideal for times of peace, but fatal for a modern war. In Germany, on the other hand, one found a nation that had risen from the prostration of a previous defeat—a nation less tolerant, less satisfied than its neighbors; a nation fully trained for war, and nurtured on the philosophy that right is inseparable from might.

The true facts of the European situation had been hidden from the people of England and France. They were not adequately informed either of Germany's strength or of their own weakness. Politicians and idealists harangued them about stopping aggression, about defending freedom and democracy, about maintaining their way of life, but the realities of modern warfare—the elements that spell failure or success—were seldom discussed. The orators shouted: "We must stop Hitler." The newspapers echoed: "Down with the Nazi regime." The people of France and England resigned themselves to the inevitability of war. But not a single man told how to break the Siegfried line.

I can best illustrate the attitude in the democracies of Europe by telling you of a conversation I had one evening with a French businessman on the outskirts of Paris. He had been talking for nearly an hour about the inevitability of war, and why German aggression must be stopped. He advocated a declaration of war by France.

"What would your first move be?" I asked him.

"We must fight the Germans," he replied.

"But how?" I asked him. "Do you think the French Army can break the Siegfried line?"

He looked startled, then sank back into his chair. "Oh, I don't know about that," he answered. "That's up to the military men."

A week or two later I was having lunch with one of those military men—a general in the French Army. I asked him if he felt that the Siegfried line could be broken.

"No," he replied; "I don't think so." And then added, "But if it could, the cost would be too high."

"What's the answer, then?" I asked, for the war drums were beating loudly.

He shrugged his shoulders. "If only they had let us attack when we wanted to," he said. "When we could have won, the people would not fight. And now, when we cannot win, they want war."

France waited until it was too late. England waited until it was too late. We in America have waited until it is too late; and yet we step closer and closer to the war, as though hypnotized by its bombing and its fury. Like France and England in 1939, we are unprepared today. We have not as many thoroughly modern fighting planes in our Army and Navy combined as Germany produces in a single week, and our Army is deplorably lacking in such essential items as tanks and antitank cannon. We have not made the sacrifice necessary for adequate rearmament. We, too, have cultivated the philosophy that it is essential to defend someone else in order to defend ourselves. Our politicians and idealists harangue us about defending freedom and democracy and our way of life. They are now shouting, "We must stop Hitler." Our newspapers echo, "Down with the Nazi regime." But not one feasible plan has been offered us for an invasion of the Continent of Europe. With the disaster of France and England fresh before us, we are following the selfsame path.

We in America are being led to war by a group of interventionists and foreign interests against the will of a majority of our people. Every poll of public opinion has shown that from 80 percent to 95 percent of Americans are opposed to entering this war. Both the Republican and Democratic Parties were forced to incorporate antiwar planks in their platforms. Both Presidential candidates were compelled to take a stand against our intervention. Yet today, although no one has made an attempt to attack us, we already have one foot in the war. We have even now entangled "our peace and prosperity in the toils of European ambition, rivalship, interest, humor, and caprice."

What has happened to us? How was this condition brought about? The procedure has not been dissimilar to that which took us into the last war. When hostilities in Europe began it was fully realized by the foreign interests and interventionists in this country that the great majority of Americans stood firmly opposed to entering the conflict. These interventionists knew that it was useless for them to advocate openly a declaration of war by America. They therefore adopted a more subtle plan. They believed that while the people of the United States would not agree to a declaration of war we could be beguiled into supporting steps that would inevitably lead to war. Consequently, instead of advocating war, they advocated steps which they called short of war—steps which have already entangled us, and which will leave us no alternative to war if we continue to take them. The policy of the interventionists has been from the beginning to support every movement that would lead us in the direction of war, and to oppose every movement that would not—always under their mask of "aid short of war." I have listened more than once to interventionists in America discuss the question of what steps "short of war" would take us into war most quickly.

To be specific, soon after war was declared in Europe, the interventionists advocated, and obtained, the revision of our Neutrality Act. They persuaded us that we could sell arms on a "cash and carry" basis without becoming involved in the war ourselves. They were emphatic in saying that no one asked us to lend money, or to send troops abroad. Their next step "short of war" was the demand that aircraft, cannon, destroyers, and other munitions be taken from the American Army, Navy, and Air Corps, and transferred to the French and British forces in Europe. In this, too, we acquiesced. Then we began to hear it whispered that we were already too far in the war to back out—whispered by the very people who had advocated the steps "short of war" which involved us. Now we are told that we have not done enough; that there must be no limit to our assistance; that we must be the "arsenal of democracy" for the entire world, lending, leasing, or giving all the resources of our Nation, if necessary, to the cause of the British Empire. (And here it is interesting to note that the cause of the British Empire does not prevent us, as the "arsenal of democracy," from supplying arms to Russia, though she be both an aggressor nation and a totalitarian state.) The advocates of intervention are beginning to forget the qualifying phrase "short of war." The more daring among them are openly discussing and American expeditionary force for Europe.

Along with steps "short of war" has gone a supporting campaign of propaganda. Our country has been full of it for many months—a propaganda as subtle, insidious, and effective to date as that which led us into the last war. Before we entered war in 1917 we were told, as we are being told today, that American troops would not be needed. Then, after we declared war, we were asked for a "token" division to fight in Europe. But we ended up with more than 2,000,000 soldiers overseas, and a war debt that has not yet been paid.

British propaganda in the United States attempts to persuade us that Great Britain will win the war, provided she receives somewhat more help than we have, up to this moment, given her. Coupled with this has been a campaign to convince us that a British victory is essential to American security. It is taken for granted that we would not be willing to take part in a war which we felt would be unsuccessful. Consequently, news releases from London minimize all German successes and exaggerate all British successes. They avoid any discussion of war aims, peace terms, or how England can win now that Germany has defeated France and controls the continent of Europe. This is simply the A B C of wartime propaganda. It is carried on by both sides in a war. I am discussing British propaganda because it is that to which we have been subjected and therein lies the danger of our involvement. There is certainly no danger of our fighting on Germany's side, and her propaganda in America has been relatively ineffective.

To be specific again, you will remember that even before hostilities commenced, factual statements concerning the growing military strength of Germany were bitterly attacked by the pro-British press. Those of us who saw the growth of the German air force were severely assailed because of the reports we made describing it, although these reports now turn out to have been almost unforgivably conservative. Then, you recall that when the Germans invaded Austria, it was claimed by the propagandists that their mechanized divisions broke down; that the workmanship on their tanks, trucks, engines, etc., was too inferior to operate successfully in a major war. German aircraft were said to be weakly constructed; there was a shortage of pilots, raw materials, and fuel. We were told that Germany did not have sufficient food to wage a war. And in addition to all this, internal conditions were said to be so bad that the German people would start a revolution rather than fight again.

If you question the accuracy of my statement that we have been misinformed through propaganda, I ask you to glance through our daily newspapers since the war began. If you are pressed for time, take any one of the major campaigns—Poland, Finland, Norway, Holland, Belgium, and France. You will find that we in America were misinformed about these campaigns until the actual military position made it impossible to hide the facts any longer. Do you remember when we were informed over the radio that the French Army had penetrated the Siegfried line in five different places? Do you recall the headlines of battles raging on the western front during the winter of 1939–40—battles we now know were never fought? Were we told how desperate the Finnish position was before the final break-through of the Russian Army? Do you remember how, after reading day after day of allied successes in Norway, and how Germany had put her neck in a noose, we were startled by the announcement that the Allies were evacuating all of their forces? Who was it said the Maginot line was impregnable; that bombing planes were no match for the British Navy; that England had the submarine menace well in hand and had already "won the battle of the air"?

The propagandists who made these claims do not bother to explain them. They know that people forget quickly, and they are too busy leading us along with new fallacies. They must confuse America's desire to aid England with our desire to stay out of the war. They must convince our people that England is winning the war in Europe, even though she has lost every major engagement in which she participated—that all she needs is more help than we have up to that mo-

ment given her; and that if we should get into the war, it would not be necessary to send troops. They must build up the element of fear in America. They must persuade us that if England loses, we are not strong enough to defend ourselves; that we may be invaded by aircraft from the Greenland ice cap, or even by trans-Atlantic parachute troops descending on our city streets. They have already led us far along the road to war—the same road that we traveled in 1917; then, too, at their behest.

But there is one all-important difference between the European war when we entered it in 1917 and the European war today. It is this difference which must be brought to the attention of every American, for the entire future of our Nation hangs upon it. It is that when we entered the last war we could see how victory could be won, but today we cannot. In 1917 the Central Powers were fighting France and Great Britain in the west, Russia in the east, and Italy in the south. The German armies had already suffered severe reverses. Even Japan had entered the war on the allied side.

In 1941, however, we face an entirely different situation. Germany has conquered France. She has an alliance with Italy, Russia, and Japan—300,000,000 people. Her armies control the coast of Europe from Spain to the Arctic Ocean. British shipping losses are already of the utmost seriousness, and the major ports and industrial centers of England have been heavily bombed.

The fact is that America is not in a position to wage a successful war in Europe under present conditions. We ourselves are not prepared, and even if we were, where would we send our soldiers to fight? How are we to force a landing on the European Continent against the prepared positions of the strongest military power in the world? If the British, French, and Belgian Armies combined could not hold the fortifications they had spent years in building along the German border, how can we be expected to cross the Atlantic Ocean and invade the Continent of Europe against the opposition of the same army, navy, and air force that thrust the British Fleet from the coast of Norway and broke the Maginot line?

The people who shouted for England and France to declare war in 1939 called for suicide and defeat. Because of their hysteria and blindness, the bravest men of France and England marched to disaster and to death. While the intellectuals of Europe preached of Christianity, democracy, and idealism, they threw a wave of human flesh against a fortified concrete line—without adequate guns, or tanks, or aircraft even for defense, to say nothing of attack.

Has this attitude of life succeeded? Has it gained freedom for France or security for England? Has it stamped out aggression or heightened civilization? Has democracy gained or has it lost through such leadership? These are questions that we in America must answer. With failure in Europe before our eyes, shall we follow this same course? Shall we throw ourselves into war in a fervor of idealism, shouting about how we think the world should be run? Or shall be discuss calmly how our objectives can be accomplished, and adequately prepare ourselves to reach them?

Personally, I believe that by our withdrawal from Europe after the last war, and our failure to prepare for this one many years ago, we are already committed to a policy of military isolation. I believe that if we abandon this policy at the present time, we are courting national disaster, just as France and England courted disaster when they, unprepared, declared war over the German invasion of Poland. A nation cannot change overnight from an attitude of peace to an attitude of war. It takes many years of planning and preparation before great military strength can be attained. I believe it is not any longer a question of what we wish to do in this war, but rather one of what we can do. I believe that for us to enter the conflict in Europe at this time would result in defeat and humiliation. If we are to enter such a conflict successfully, then we must prepare for it not for 1 year or for 2, but for 10 years or for 20 as Germany has done.

On the other hand, I believe that we can build a military and commercial position on this continent that is impregnable to attack, and which will force other nations to trade with us, if through expediency alone. Even if America intended eventually to dominate the entire world, as some people now seem to want us to do, I would say that our first step should be to consolidate our defenses at home, so that we could prepare ourselves in safety for our adventures beyond the seas.

Every difficulty we would have in invading Europe would be an advantage for us in defending America. Our armies would be fighting on home soil, our Navy would be close to its bases, our air force could strike with its utmost effect. It would be the enemy's problem, not ours, to cross the ocean with millions of troops and their supplies, to pass by our submarines, our battleships, and our bombing planes, and to force a landing on American shores against the guns of our coast artillery and our Army.

When England could not hold the coast of Norway against the German air force; when the British Navy dared not remain in the Skagerrak, or even permanently in the North Sea; when the German military machine, after crashing through the Maginot line and routing the French Army and the British Expeditionary Force, has been held up for 9 months by 25 miles of English Channel—how is any navy to approach the shores of America and land an invading army against the combined resistance of our military forces?

There has been much discussion of an air invasion of America. This is partially due to propaganda, partially to hysteria, and partially, I believe, to a misconception of the so-called air invasions of Norway and Holland by the German air force. Personally, although I think the effectiveness of military aviation is still underestimated, I do not believe there is the slightest danger of a purely air invasion of America now or at any time we can now foresee. To begin with, the distance across the oceans is far too great to permit the air transport of armies large enough to invade us successfully, even if one assumes that they had a place to land unopposed by our own military forces. But, aside from the question of distance, we should be reassured by the fact that there has never been a successful invasion by air alone. The outstanding examples of the use of aviation for invasion of enemy territory occurred during the German occupations of Norway and Holland. But in each of these instances the landing of troops by air was carried on simultaneously with the movement of ground and naval forces on a major scale. The maximum number of troops that could have been transported and supplied by air would have been ineffective without the immediate support of a ground army. If air invasion alone could be successful, it would have been used by the Germans against England many months ago.

But what about the northern routes, cry the alarmists; won't we be invaded by way of Greenland and Alaska, where the distances between land are short? Possibly the best answer to this question is in the form of another: Why, if these northern routes are so advantageous, do you suppose the commercial air lines to Europe and Asia prefer the great over-water distances farther south? The answer is that ice and fog and bitter cold still force men southward in their quests of commerce and of war. Except in adventure and exploration, men follow the routes which offer the greatest safety and require the least effort—and these are not in the north.

Of all the trans-Atlantic air routes, the simplest to fly is the one that lies between Africa and South America. This fact is being used today in much of the war propaganda we hear. German airplanes, we are told, will fly to Africa by the thousands, hop across the ocean to South America, refuel, and fly up and invade the United States.

Leaving aside the problems that would have to be solved in Europe and Africa before thousands of German airplanes could take off on such a venture, let us consider what preparations would have to be made for their arrival in South America—in Brazil, to be specific. There would have to be dozens of previously prepared airdromes, equipped with tanks and fuel and crews of skilled mechanics. All of the men and supplies required would have to be transported by sea. In fact, many ocean transports and tens of thousands of workmen would have to be busy for months before the necessary landing facilities could be arranged. So that when anyone speaks of an air invasion via Africa and South America, he presupposes that Germany has won the war in Europe; that the countries she has conquered are either so well satisfied or so completely subdued that she is able to devote her attention to an interhemispherical struggle (with Asia always at her back door); that she has Africa also well in hand; and, finally, that she has, in opposition to the armed forces of Brazil backed by our own Army, Navy, and Air Corps, been able to construct and supply the necessary airdromes in eastern South America.

After that, of course, it is still farther from eastern Brazil to the continent of North America than it was from Germany originally, so other groups of air bases would have to be established farther north before enemy planes based in South America would have any advantage over enemy planes based on their home airports in Europe. And since there are no railroads through that portion of South America, these bases, too, would have to be established by sea.

No; the more one studies the problem, the more obvious it becomes that an air invasion of America is entirely out of the question. Invading forces would have to come by sea, and if they made such an attempt, it would be our American aviation that flew out to meet them and did the raiding.

Of all the nations in the world, we hold the most impregnable position of defense. We have highly developed industries, great national resources, and a population of 130,000,000 people upon which to draw. There is not a nation in this hemisphere strong enough even to consider attacking us. We are flanked by the Atlantic Ocean on the east and the Pacific on the west. In the north, we are protected by the wastelands of the Arctic. Where in all history has a nation been similarly blessed? Then why in our maturity any more than in our youth, "Why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalship, interest, humor, or caprice?"

It is often asked today why our rearmament program moves so slowly, why our people are so divided and confused. Why, indeed. The answer is clear. It is because we have neglected the wisdom and experience of our forefathers—we have not followed Washington's advice. We have let the destiny of America become confused and entangled with that of foreign lands. Our leaders have attempted to transfer loyalty for our own country to loyalty for a part of Europe. One portion of our people has attempted to force its ideas about Europe upon another portion of our people—to inject into our midst today the very quarrels of the Old World that our forefathers left behind.

We, in America, should not be discussing whether we will enter the war that England

declared in Europe. We should not be wasting our time arguing about whether it is cheaper to defend someone else than to defend ourselves. We should not be conscripting our youth for a foreign war they do not wish to fight. We should all be marching together toward one clear and commonly accepted goal—the independent destiny of America. If we desire unity and strength among our people, we must turn our eyes back from these everlasting wars of Europe—back to our own country, to the clear horizons of a great American future. Let us learn from the errors made by the democracies abroad, and not repeat them. Let us give thanks to the generations of Americans before us who won and maintained the independence of our Nation against far greater dangers than we face today. Let us dedicate ourselves to guarding that independence that we may pass it on to the future in even greater security than we received it from the past. It is by building our own strength and character at home—not by crusading abroad—that we can contribute most to civilization throughout the world.

If you believe that we should not enter this war, your help is needed vitally by those of us who stand against our intervention. The policy of our Nation is still influenced by the desires of its people. You can help us by organizing mass meetings against our entry into the war. You can help by attending such mass meetings. You can help by writing to your Congressmen, to your Senator, and to your local newspaper, telling them of your views. Such letters have more influence than most people realize. But if you stand with us against war, you must act now or it will be forever too late. It is not enough to write once. Write every time an issue arises—several letters each week until this crisis has passed. Demand of your representatives that they oppose our entry into the war, and be on guard against these steps that will inevitably lead us to it. It is worth all the effort we can give. Our future, our children's future, our country's future, all that we hold worth while is in the balance.

I have one last request, and then this letter is ended. Before you make your final decision, reason through for yourself what war would mean to this country. Demand a practical plan from those who preach of defending democracy throughout the world. Ask them to explain how we are to invade successfully the Continent of Europe—how we are to impose our ideology on the peoples of Germany, Russia, Italy, and Japan combined against us. Insist on an answer that is clear, couched in terms of soldiers killed and years of war. Stop them from telling you what should be done, and make them demonstrate to you what we have the ability to do. Ask them to define our war aims; our plan of defense and of attack. And if someone says that such questions must be left to experts, ask them: To what experts? To the same experts who for the last 20 years led France to defeat and England to ruin? To the same experts who have created the greatest national debt in American history, and still left us a nation unprepared in the midst of a world at war? To the same experts who failed either to maintain peace or to prepare for war? No; such leadership will never make us a strong and victorious nation. It will not carry us successfully through these periods of war and crises. If our American ideals are to survive, it will not be through the narcotic of a foreign war, but through a reawakening of the spirit that brought this Nation into existence. It will be only if you and I and people like us take the reins in hand once more, as our forefathers have done in times of crisis.

The future of America, of our way of life, and of western civilization itself lies not so much in the outcome of these wars abroad as in the action that we take now, here, in our own country. In this action your help is urgently and immediately needed.

W. P. A. and Construction

EXTENSION OF REMARKS
OF
HON. STEPHEN BOLLES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

RESOLUTIONS PASSED AT WISCONSIN CONSTRUCTORS' CONVENTION

Mr. BOLLES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include resolutions passed at the annual convention of the Wisconsin constructors' convention assembled at Fond du Lac, Wis., February 7, 1941, as follows:

RESOLUTION NO. 1—W. P. A.

Whereas 80 percent of the employables under W. P. A. were placed in the construction industry and thereby caused a serious dislocation of employment of construction workers; and

Whereas at the present time there is before Congress a relief and work appropriation bill calling for additional funds for W. P. A.; and

Whereas it has been demonstrated through investigation that the time necessary to complete construction work under W. P. A. methods is 400 to 500 percent longer and at least several times the cost of equivalent production under the contract method; and

Whereas W. P. A. continues to undertake construction projects for which they have no qualification whatsoever; and

Whereas millions are returning to private employment under the defense program and an equal number are being inducted into the military service, yet further W. P. A. appropriations in excess of a billion dollars are being considered; and

Whereas the defense program requires economical completion of projects in the shortest possible period of time and which we know to be impossible under W. P. A. methods: Be it hereby

Resolved, That the Wisconsin Constructors' Convention, assembled at Fond du Lac, Wis., February 7, 1941, hereby suggest that the above appropriations be curtailed to cover only indigent workmen and other unemployables as their needs may arise; be it further

Resolved, That a copy of this resolution be mailed to the House Appropriations Committee of the House of Representatives and to the Wisconsin Senators and Representatives.

RESOLUTION NO. 2

Whereas we believe that the Temporary National Economic Committee has in the past given valuable information regarding housing costs: Be it

Resolved, That the Wisconsin Constructors recommend and urge that a study be made by the Temporary National Economic Committee and sufficient funds be provided to finance such a study investigating the field of low-cost small-home construction.

RESOLUTION NO. 3

Whereas the Wisconsin Constructors, representatives of the construction industry of Wisconsin, are assembled at their fifth annual convention at Fond du Lac; and

Whereas the United States Government, according to newspaper reports, has awarded $1,800,000,000 of defense-construction contracts for all types of defense work to date, over 400 projects, and not a single one in Wisconsin; and

Whereas the State of Wisconsin, in population, industry, and taxation, is about twelfth ranking in the United States; and

Whereas the State of Wisconsin, in its metropolitan area, has over 84,000 men and women on W. P. A., relief, direct and indirect, and a similar condition throughout the State; and

Whereas the State of Wisconsin has one of the greatest heavy-machinery centers in the country, with thousands of skilled mechanics; and

Whereas the construction industry, due to the stoppage of P. W. A. and all other forms of Government construction activity outside of defense, has a large surplus of employed construction workers; and

Whereas the State of Wisconsin leads as a pioneer in vocational-school training and has thousands of unemployed youth: Be it

Resolved, That we, the Wisconsin Constructors, representing an industry which employs 25 percent of the State's employable workers, hereby petition the President of the United States, our United States Senators and Congressmen to provide our State its fair and equitable proportion of the national-defense construction activities, and that copy of this resolution be sent to all our National Representatives.

The Forgotten Man

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

ARTICLE BY EDWARD A. O'NEAL

Mr. CANNON of Missouri. Mr. Speaker, under leave granted me to extend my remarks, I include an article by Mr. Edward A. O'Neal, president of the Federation of the Farm Bureau, in the April number of the Nation's Agriculture:

[From the Nation's Agriculture for April 1941]

THE FORGOTTEN MAN

(By Edward A. O'Neal)

Washington, nerve center of a great nation undertaking frantically to rebuild our military defenses, is boiling with activity. A determined President, Commander in Chief of the United States military forces, and clothed with vast authority, sits in the White House at the controls of the colossal mechanism that is the national economy.

By cable and by wireless, the President is in constant touch with United States emissaries in the far corners of the world, through whose reports he feels the world pulse. Direct wires to key men in Government agencies carry an almost continuous stream of messages, which, digested and relayed to the Chief, supply him with the information upon which he bases daily decisions which in the aggregate shape our national policies.

Fingering the levers, accelerators, petcocks, buzzers, and countless other gadgets of power, and watching the speed meters, power gages, pressure indicators, barometers of public opinion—and above all the clock and the calendar—the President spurs the United States monster production machine to greater and ever greater output. And the American people are solidly back of him.

Well the President knows that the giant which is United States industry, and the giant which is United States labor, both must be encouraged as well as goaded, enticed as well as exhorted, if they are to render maximum service. A great industrialist and an outstanding labor leader were placed in positions as first lieutenants, so to speak, taking orders direct from the President, and dealing for him with the industrial and labor groups.

Industrialists were assured that their interests would be safeguarded in new defense undertakings. Contracts were made on a cost-plus basis; cash by the wagonload was made available to them; easy amortization arrangements on capital expenditures were provided; assurances were given that all excess profits on Government contracts would not be taken away by taxation; in many other ways industry was coaxed, cajoled, patted on the back.

Labor was assured that its gains of recent years would be fully protected during the emergency. Limited hours, short workweeks, excess pay for overtime work were guaranteed, and no pledge to refrain from strikes was demanded. Opportunity was given to labor unions to add millions to their membership. In addition to being patted on the back, labor was kissed on both cheeks.

Agriculture was taken for granted because its granaries were filled to overflowing as never before. Farmers, alone of all groups, were ready for any emergency. "We can always depend on the farmer; that's one thing we won't need to worry about," expressed the general attitude. Agriculture was given a sort of window-dressing place in the inner councils, but window dressing is about all that it has amounted to. The farmer has become the forgotten man in Washington.

Farmers stand to gain nothing and lose much out of the war emergency. The war has turned off the farm-export faucet. Increased domestic demand for some food products will ensue, but it won't offset the loss in foreign outlets. More than half of United States farmers produce crops that depend heavily on foreign markets. Relatively no cotton can be exported, and we have on hand a 2-year supply. Almost no wheat can be exported, and we have on hand more than a year's supply. Trainloads of surplus corn are in storage. Tobacco, lard, fruits, canned goods, and many other products have piled up in domestic warehouses.

And so, while industry's prices rise and labor's earnings soar, the farmer's prices are held down by the burden of surpluses. Commodity loans underpin the price of some commodities, but the loan level is on a peacetime, not a war basis. Parity payments were included in the Federal Budget, but that amount will take us only part way to parity. It comes as a shock to the farmer to learn that the principal Government proposal to help farmers is to buy more farm products to feed the Nation's jobless. And this at a time when men are going back to work at a rate never before approached in this country.

Appeals for farm parity make little impression today. Congress hands out billions for battleships, billions for bombers, billions for guns, billions without end for armaments, billions for Britain (and I approve of all this)—while the farmer plows and plants, digging and hoeing as usual, while his goal of parity recedes further and further in the distance—eventually, perhaps to be blotted out entirely by the clouds of war. We have fought for 20 years to overcome the disparity brought about largely by the last war.

If anything is to be done for the farmer, he must see to it himself. He can do it in only one way—through his organizations. He can't go to Washington himself, but he can send representatives. Farmers are people. Farmers have to eat and wear clothes and educate their children. Farmers supply their full share of soldiers for the Army. Farmers produce, as Representative CLARENCE CANNON says, the munition without which no war can be fought. Adequate supplies make a nation impregnable. And farmers have votes. They can get parity if they will fight for it. They must let their Congressmen know how they stand on this vital issue.

The Farm Bureau has written a bill that will, if adopted, assure parity, or close to it, for the America farmer. It simply gears up the present farm program to make it more effective. We will fight to push this bill through Congress. We will never haul down the flag of parity. We do not ask for cost-plus prices, for time-and-a-half returns for our efforts, for shorter hours and shorter workweeks, for the right to strike—all we ask is prices and income that will enable us to exchange our products on a fair basis for the goods and services produced by other groups.

Food is cheaper, relatively, than any other thing the people buy; and yet metropolitan dailies thunder about food prices. Laboring men are better able to buy food and fiber than they have been for many years; and yet there are outcries against the price of steaks and beef roasts. We get only 40 cents of the consumer's dollar; only a few years ago we got 53. We ask for less than any other group, and yet that little has been denied us. Consumers regard low farm prices as normal prices. They have been fed and clothed at the expense of agriculture for many years. Parity farm prices will not penalize a single consumer.

This Nation must make a decision now. Either agriculture must be given its fair share of the national income or inevitably it will decline, and gutted soils, withered farm buying power, and eroded humanity will result. Peasantry and bare subsistence have no place in the American plan. American agriculture is a $46,000,000,000 industry and represents 32,000,000 people. It is the world's greatest mass market for goods and services. No nation can long endure, much less prosper, if it allows its agriculture to deteriorate.

And so for the farmer's welfare, and for the Nation's welfare, the Farm Bureau raises again the flag of parity and marches into battle. This is a critical hour for agriculture. Well we know that if we do not get parity now for this crop in 1941, we will have small chance of getting it in the economic cataclysm that will surely follow the war. We are not defeatists. We will not falter in the fight. We will not haul down our colors so long as we have even a handful of farmers to support us. This fight is your fight; this flag is your flag. Let us rally behind it and drive on, against any and all opposition, to final victory in a cause that is just.

Un-American Activities in the Western Hemisphere

REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1941

Mr. DICKSTEIN. Mr. Speaker, the matter of hemisphere defense has become very obvious at a time that this Government obtained military and naval bases among British possessions in the Western Hemisphere. The vital need for our defense was recognized by the Government of Great Britain and that Government very graciously ceded to us territories which would enable us to establish bases for our defense throughout the Caribbean Sea. Now that the need for our defense has been recognized both by Congress and the public of the United States, it becomes very important for us not to permit infiltration of subversive activities from other countries into this hemisphere.

I take great pride in the fact that it was I who recognized this danger back in 1934, and was instrumental in creating a committee by this House to investigate and expose subversive activities. It was my action which made it clear to every right-thinking American how important it was to guard ourselves against our enemies from within. Foreign governments have for many years been fomenting unrest and treason within the borders of this Republic. Those governments have been spending large sums of money for the distribution of tons of propaganda by mail, as well as agitation by many professional spies and saboteurs. These activities have been exposed by me, and I am happy to feel that the ideas which germinated through my efforts in 1934 have borne fruit.

Congress is now definitely committed to a policy of investigating, exposing, and eradicating anti-American subversive movements. Congress is now committed to a policy of fighting treason within our borders with every weapon at our command. Congress is likewise committed to the view that it is of great concern to us how the Western Hemisphere as a whole can be fitted into the defense program of the United States.

Our President has made it clear that this hemisphere must be defended as a unit and that we will not allow any foreign country to interfere with the liberties of the peoples of this hemisphere; not only the American people but every nation which has established its independence on this hemisphere has the right to our protection should its independence be threatened in any way, either from within or from without.

The Nazi technique of infiltration is different from every other form of conquest which this world has seen before. The Nazis do not send large armies to conquer small nations. What they do is to send trade envoys, tourists, students, and other inconspicuous individuals to divide and conquer. These agitators seek to spread their poison in subtle and devious ways. In one place some innocent-looking individual will establish a trading post for the Nazi regime; in another place some other gentleman will establish a tourist center; another man will simply advertise German goods for sale and will seek to undersell everyone else by every possible trick of the trade. Another method of attack is to establish schools for German children, or even churches for German residents, so that with the aid of these agencies there may be spread every possible infiltration of nazi-ism into the commercial, economic, or business life of these nations.

This method is not new. It has worked very successfully in the countries adjoining Germany in Europe. Side by side with German conquest by arms there was

and is German infiltration by salesmen, tourists, and other agencies.

In this era of commercial expansion, it is particularly dangerous to overlook the fact that the German regime is able by underselling every other country to sell its products in Latin America despite the strong effort of the British blockade. Boatloads of German merchandise are being dumped on the South American market, particularly Argentina and Brazil. Millions of dollars' worth of uncut diamonds are being brought into South America and then find their way into the United States. The accumulation of moneys from the sale of these products aids in the purchase of raw materials for Germany at present, such as oil, cotton, and other products for war purposes. Thousands of agents in the last 12 months have found their way into South America. One of the most outstanding agencies of strong Nazi pressure was the activity of German Consul Reid, whose activities in South America far overstepped the propriety of consular services. He himself organized bund posts and Nazi schools for purposes inimical to the forms of government existing in South America.

In my own exposure of conditions prevailing in the German consulates throughout the United States I had occasion to establish the fact, which can be proved by reference to our own CONGRESSIONAL RECORD, that the many German consulates throughout the United States are used to a very large extent as agencies of propaganda and for the purpose of glutting this country with its insidious propaganda. All these activities which now exist to such a large extent in South America were tried in this country. It was only due to our own vigilance and the fact that Congress has ever been alert to suppress such activities that our German consulates in this country have been brought to some measure of control, although I am sure that we have not gone far enough in suppressing all anti-American activities which emanate from German consulates in this country. Nevertheless, a beginning was made, and largely through the vigilance of our State Department it was possible to expose some of the more glaring violations of international comity by the German consuls in this country.

I am sure that this House will ever watchfully continue to pay its attention to the work of these German consulates, and that it will be impossible for these consulates to become what they seek to become—centers of espionage.

At this point, my friends, I wish to call your attention to a very serious leak in the matter of freezing foreign funds. This Government saw fit to freeze the funds of all nations which are occupied or under the domination of Germany, but we have not seen fit to freeze German funds, so that it is still possible for Germans to transfer their assets to Mexico, and every day large amounts of money are being diverted to Mexico for the purpose of doing the sabotage and espionage work which otherwise was infesting the United States and Canada. Thus, it becomes doubly necessary to examine into the situation prevailing south of the border, and I am sure that if the Mexican Government will see fit to cooperate with us, it will gain the benefit of our experience in tracking down subversive agitators and keep them under their own surveillance. In this connection it is very interesting to observe that because of the cooperation this country received from the Republic of Panama, it was possible to clean house in the Canal Zone and get rid of the most daring and glaring members of this espionage group in that locality.

We must not forget that in the city of New York there is an institution known as the German Library of Information which seemingly still operates without restraint and which is perhaps one of the most effective centers of Nazi propaganda anywhere in the Western Hemisphere. Nor must we forget the German American Board of Trade in the city of New York which is likewise an arm of the German Government operating as the headquarters of the entire German economic system in the North American area.

Totalitarian methods are much more devious than those with which we are familiar and to which we are accustomed. We feel that there is a logical way of coping with a situation such as the one I described heretofore. The totalitarian powers do not work that way at all. What they do is enlist the services of every man and woman and child and, by pushing and pressing from all directions at once, they are able to achieve results where our democratic set-up is wholly incapable of coping with the situation.

It was therefore a great source of gratification to me that I was able to learn that the Federal grand jury in the district of New York saw fit to indict the manager of a German news agency known as Trans-Ocean, as well as an employee of that agency, for noncompliance with the law relating to registry of foreign agents, a law which was enacted by Congress after the committee of which I was a member and vice chairman saw fit to recommend such a statute to this House. I feel that my work of 8 years' standing is beginning to bear fruit, and I hope that in the not-too-distant future all foreign agitators, spies, and saboteurs will be put where they belong.

Many years ago it became quite obvious that in Brazil particularly there was a large-scale German colony and that since Hitler came into power that colony became the springboard from which all antidemocratic activities were launched. Hitler sent his district leaders, county leaders, and state leaders down to Brazil to organize the German people into a compact group.

The same policy was adopted with reference to Argentina, Bolivia, Peru, Chile, Ecuador, and other countries. Everywhere the technique was the same. You send down an organizer, who takes charge of the particular population, making various members of the German colony act as a unit in all matters, and in due course you have an army on your hands which will fight at will and by direction of this foreign agent. This has been the modus operandi throughout the length and breadth of South America. In this way every German tourist and every German resident, teacher, and even German servant girls were part of a ruthless machine which aims to dominate the world. Each has assigned to him or her a special function and each will be the particular means by which our democracy will be overthrown. Such at least is the scheme and plan of the master who sent all these agitators to the South American countries, and it requires great vigilance on our own part to prevent these agitators from becoming a menace to our own security and defense.

Our national defense requires, in the words of our President, that we give an all-out aid to all democracies wherever they find themselves beset by totalitarian aggressors. The democracies of South America are now in this very position. By subtle propaganda and deft working from within the Nazi regime has obtained a strong foothold on these many South American lands, which in turn would impair and destroy the efficiency of our own national defense.

It might perhaps be a good idea for the President to call together a convention of all the heads of the Latin-American governments to meet in Washington and to decide in which way this defense of our hemisphere could be made more effective. I am sure that one of the ways by which this defense could be made very strong will be by close supervision of all activities by foreign agitators throughout our hemisphere. Only by continuous vigilance can we find the means of our own national defense.

I cannot let this opportunity pass by without expressing my particular appreciation of the work of two outstanding statesmen in Latin America who have done everything in their power to clean house within their respective borders. One of them is the President of Cuba, Col. Fulgencio Batista, and the other is the former head of the Dominican Republic, General Trujillo. These men have performed a real yeoman service and deserve the thanks of the American people for having in their own way done away with and cleared up a great deal of subversive activities which otherwise would menace not only their own country but the United States as well.

The Strike Situation in Re National Defense

REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1941

Mr. WOODRUFF of Michigan. Mr. Speaker, the Nation has become thor-

oughly aroused by the epidemic of strikes which has been dangerously delaying national-defense work. Letters and telegrams are beginning to reach Members of Congress from citizens all over the United States who are becoming alarmed and indignant that the Nation's needs in its hour of peril are being utilized, apparently, by some labor leaders for their own personal and official profit and power without regard to the welfare of the country as a whole.

Those Members of the Congress who, like myself, have, down the years, been the friends and champions of organized labor hope that only a few of the labor leaders are guilty of demanding extortionate fees from free American citizens for permits to work on national-defense projects. The real friends of organized labor in the Congress hope that only a very small percentage of labor leaders are guilty of bringing about strikes in defense industries in order to increase the dues income of their unions, their powers over the unions, and to augment the political powers which some labor leaders are seeking to extend at the expense of the national defense.

The real friends of organized labor in the Congress are seriously embarrassed by these unwholesome and un-American attitudes exhibited in various ways by some labor leaders. We like to believe, we want to believe, we do believe, that the rank and file of American workingmen are just as patriotic as any class of citizens in the country, but we friends of labor in the Congress are afraid that labor may be misled by self-seeking leaders into sacrificing the good will of the American people. That would be a tragic thing to happen to the organized American wage earners.

The good will of the general public in America is vitally essential to the maintenance of all that labor has gained in the last 20 years.

Labor itself must put an end to these strikes. It is obvious the administration is still temporizing with the problem. The President recently named an 11-man Mediation Board. That Board was supposed to operate to prevent strikes in the same way the Railway Labor Mediation Board does. The President left a fatal flaw in his set-up. The Mediation Board cannot touch a single strike or dispute in defense industries until the Secretary of Labor, Madam Perkins, certifies the strike or labor dispute to the Board for action. Before doing that, Madam Perkins is empowered to decide two questions: First, whether, in her opinion, any strike or labor dispute does in fact delay or threaten to delay the defense program; second, having decided that point, whether or not a bureau in her own Department—the United States Conciliation Service—can handle such strike or dispute without referring it to the Mediation Board.

Under this set-up, if the Army officials, the Navy officials, the O. P. M., and any or every other agency of Government might be convinced a strike or labor dispute was, in fact, delaying progress of the defense program, it would still remain for Madam Perkins to take all the time she might deem necessary to determine the two important questions prerequisite to certification to the Mediation Board for action, namely, whether Madam Perkins believed the strike or dispute was damaging the national-defense program, and whether she believed her Department's own Conciliation Service might handle the situation without the help of the Mediation Board.

Obviously, the effective way to have the Mediation Board operate would be to have it work directly with the Office of Production Management and the appropriate Army and Navy officials, leaving the Labor Department to handle its routine peacetime duties.

As it is, the Mediation Board cannot be anything more than a secondary fact-finding commission and information bureau to try to bring about, by influencing public opinion, results which the Railway Mediation Board has long since proved can be achieved in another, and vastly more efficient, way.

It is regrettable—and dangerous—that the administration does not see fit to meet this menace of strikes and labor disputes which are threatening national defense, and which, if allowed to go sufficiently long, could do to this country what the same kind of strikes and labor disputes did to France.

St. Patrick's Day Address

EXTENSION OF REMARKS
OF

HON. RAYMOND S. McKEOUGH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1941

ADDRESS BY HON. JAMES P. McGRANERY, OF PENNSYLVANIA

Mr. McKEOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Hon. JAMES P. McGRANERY on March 17, 1941, at the annual dinner of the Society of the Friendly Sons of St. Patrick, Bellevue-Stratford Hotel, Philadelphia, in response to the toast to the United States:

Mr. President, reverend clergy, distinguished guests, and fellow members of the Friendly Sons of Saint Patrick, it is a happy and hallowed occasion when once again on the feast day of Ireland's great saint we gather together as friendly sons of Saint Patrick and raise our glasses, "Beaded bubbles winking at the brim," to toast the United States—the country of our first loyalty, the land where our Irish ancestors gained the freedom of their heart's desire.

It is a particular joy and privilege for me—as a member of this truly American organization—to respond to the toast to the United States, and I answer with renewed oath of fealty to this our beloved America. I answer with my heart, as any American in whose veins flows the blood of Ireland must answer, when speaking of the United States, the final bulwark of man's liberty today.

It was James Stephens, that most characteristic of Irish writers, who quoted the philosopher as saying: "That the head does not hear anything until the heart has listened, and that what the heart knows today the head will understand tomorrow."

No wonder, then, that our hearts are full this evening with a knowledge that has come down through the one hundred three score and ten years passed since this group first organized to aid future Americans who might emigrate from Ireland. A few minutes ago, as I saw your upraised goblets, I visioned joining with you in that toast one who was himself a friendly son of St. Patrick, and who was also the father of these United States.

And the echo of some of his words resounded in my memory—those well-chosen words in his first inaugural address:

"The preservation of the sacred fire of liberty and the destiny of the republican model of government are justly considered * * * deeply, * * * finally, staked on the experiment intrusted to the hands of the American people."

If that were true in 1789—and no one dare deny it—how much more significant is that statement today.

In the time of Washington the spirit of democracy was inspiring a new nation born in spite of the alien influences of contemporary nations. In the time of Lincoln the spirit of democracy was revivifying itself in the face of alien influences within the Nation. Today the spirit of democracy must rearm against hostile forces not only abroad but also at home.

We hear much of the need for defense material, for reorganization of the Army and the Navy. And your Congress has devoted itself to the task of materially rearming the United States, at the same time providing material aid for victims of aggression.

For from the beginning it has been demonstrated, as that great Secretary of State, Cordell Hull, has so well expressed it, that:

"For us to withhold aid to victims of attack would not result in a restoration of peace. It would merely tend to perpetuate the enslavement of nations already invaded and subjugated and provide an opportunity for the would-be conquerors to gather strength for an attack against us."

Therefore during the week just concluded the Senate and the House of Representatives of the United States voted and the President signed the aid-to-democracies bill, which will speed to Greece, to China, to Britain the ships, the planes, the food, the guns, the ammunition, and the supplies of all kinds required for them to continue to wage war against their totalitarian foes. The pagan forces that would enslave the world learned during this last week that the United States is eager, ready, and fit to be the arsenal of democracy, as President Roosevelt long since foretold.

During these many months the Congress has provided for a two-ocean Navy, for adequate defenses on land, on sea, and in the air. Appropriate legislation has for a fixed period enrolled in the Army our young men that they might be adequately trained to defend their country. Public-spirited representatives of labor and of management have given of their time and of their energy in organizing the assembly lines to produce the material needed by the forces of democracy on the battlefields abroad and in the training camps at home. Already under congressional appropriation $28,500,000,000 have been set aside to purchase implements and material required to carry out our program of national defense.

And during this week just beginning, under a special rule there will be brought to the floor of the House of Representatives a bill

which will authorize the expenditure of another $7,000,000,000 to pay the costs contemplated by the aid-to-democracies bill. Of this sum, in my judgment, about $2,054,000,000 will purchase airplanes; $362,000,000 will purchase tanks, trucks, and armored cars; $629,000,000 will purchase ships; $1,343,000,000 will purchase ordnance supplies, gun parts, and ammunition; and $1,350,000,000 will purchase agricultural and similar commodities.

It is my conviction as I stand before you this evening that the House of Representatives will pass this bill and will send it to the Senate with all the patriotic speed asked by our great President.

The Republic of the United States has visibly demonstrated to the world of dictatorship that democracy can function with efficiency and unity in the face of menace from abroad.

It will continue to do so because the representatives of the people are themselves the sons of men, plain men, who came here from far countries, seeking liberty.

And so, though they may differ about many things, and please God, they always will share points of disagreement, nevertheless they are united against foreign threats to our democracy.

All the activity for defense of our rights, and of the rights of others, to democracy has been carried on within the framework of the Constitution and without violation of the Bill of Rights. We have maintained freedom of religious worship, freedom of speech, freedom of the press, and freedom of elections, while in other parts of the world freedom is rapidly being replaced by slavery.

The sacred fire of liberty has indeed been kept burning on these shores—although there is a black-out abroad—whether we look east or west.

We have organized and rearmed; we are rearming materially to shield the flame of democracy. But we must also rearm spiritually if our program of defense is to be effective.

The spiritual stamina of our people must be renewed; our spiritual vigor must be increased, for a time of trial is at hand, and only with the spiritual armor of brave souls and stout hearts will we survive the test that is coming.

The stout-hearted men of Erin who were our forebears shared that spiritual armor with the men who walked barefoot at Valley Forge, with the men who smiled—even if a bit grimly—during the tedious and troubled times of the reconstruction.

Because these men knew the spirit of sacrifice, the light of freedom has continued to glow through the darkness of the years. And the same spirit of sacrifice will be called for from our generation of Americans as we begin to pay the price of defending democracy.

The cost of liberty, though high, I am convinced will be met by our fellow Americans with courage and realism. The true story of the gallant defenders of democracy in our age will be the tale of the average American who, while going about his daily work—supporting wife and children—will be contributing his share, through taxes, of the tremendous cost of the defense of freedom in the world. He will be another unsung hero of the humdrum. No medals will adorn his breast. No military titles will precede his name. But it will be his willing sacrifice of luxuries, perhaps even of necessities, that will make it possible for our Nation to continue free for his children, and for his children's children.

The spirit that will animate him will be the American spirit, rearmed and refortified. It is the same spirit that inspired our forefathers to immigrate to the shores of these United States, the land of liberty, their heart's desire. It is the same spirit that has filled the hearts of Friendly Sons of St. Patrick since 1771. It is the same spirit that inspires us as we are gathered here to rededicate ourselves to the purposes of the Friendly Sons of St. Patrick to the democratic ideals of these United States, and to the eternal truths of our divine creator.

May God bless these United States.

Seven Billion for Britain

EXTENSION OF REMARKS

OF

HON. EARL WILSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1941

EDITORIAL FROM THE MADISON (IND.) COURIER

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial of March 13, entitled "Seven Billion for Britain," by Mr. M. E. Garber, editor of the Madison Courier, Madison, Ind.:

[From the Madison (Ind.) Courier of March 13, 1941]

SEVEN BILLION FOR BRITAIN

Perhaps it was intentional, or possibly just a coincidence, but the Roosevelt request for $7,000,000,000 to finance the aid-to-Britain bill set the exact sum that Woodrow Wilson sought to take this Nation into the World War 24 years ago.

Wilson sought to impress the enemy with the financial strength of the United States and its intention to carry on in such a big way that there could be no escape from its power, and Roosevelt is credited by his friends with having the same ambition.

In carrying out this policy of overwhelming the enemy with the size of the American effort the Wilson administration ran the public debt from $1,000,000,000 in April 1917 to $27,000,000,000 in November 1918 and spent more in 18 months than Great Britain and France spent in 4 years and more.

It was this policy of breaking hearts by the size of the American expenditures that brought Muscle Shoals into being, that planted embryo steel plants here and there over the Nation and caused the billion-dollar airplane effort and Hog Island, all of which had no direct effect upon the war but added about half of the debt.

Starting with almost fifty billions of public debt rather than a mere one billion as was the case in 1917, it may be better policy to impress the enemy with a determination to spend freely but also wisely and at such a pace as may be kept up over a term of years and not as a spendthrift handles money carelessly and then finds himself unable to complete the effort.

Every group of reformers has found some way to hitch their cause to national defense, and unless some restraining influence is placed upon the aid to Britain there is a real danger that the move will become so burdened with extraneous matter and so wasteful that the Nation will be unduly weakened before the desired end is gained.

Strikes Are Dangerous

EXTENSION OF REMARKS

OF

HON. H. CARL ANDERSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1941

EDITORIAL BY COL. E. E. HOWARD

Mr. H. CARL ANDERSEN. Mr. Speaker, I ask unanimous consent to have printed in the RECORD a very worthwhile, common-sense editorial in the Wheaton (Minn.) Gazette of March 21 on the strike situation. Col. E. E. Howard brings out in this editorial the danger to our Nation at this time of the strikes hampering our national defense, and I wholeheartedly commend this editorial to the attention of the House.

The editorial follows:

[From the Wheaton (Minn.) Gazette of March 21, 1941]

While President Roosevelt has been inclined to minimize the effect that strikes have had in hampering defense efforts, there were 31 strikes going on the first of this week.

There have been twice as many strikes in 1941 as in the same period a year ago. Many of these strikes are over nothing more nor less than the question of which union shall control the workers on a job. They are known as jurisdictional disputes.

If we are to have "all-out defense" measures, it is certain that we cannot be successful without the cooperation of employers and labor.

Labor must realize that it has a stake in our democracy which must be defended. What became of the unions in Germany and Italy? What would become of the social gains made in the United States if Hitler took over?

National defense will require sacrifices on the part of every American. When thousands of young men are being called to serve a year or more at $21 up per month, is it too much to ask the laborer to refrain from holding up work vital to the supplying of these men with the arms and ammunition needed for a successful defense?

The young men inducted into the Army do not have the right to quit and go home. They are serving Uncle Sam. Workers on defense industries, even though paid by a private employer or a corporation, yet are working for Uncle Sam when they are making guns, cars, or powder needed by the Army. While they get paid 2 to 10 times as much as the draftee, yet they want the privilege of striking to get higher pay.

Much talk is heard of the right to strike. Time was when Americans believed that anyone who quit a job had every right in the world to do it but he had no right to keep anyone else, by force or intimidation, from taking the job he vacated. Today it seems any outfit of "hooligans" that calls itself a branch of a union can commit almost any act of violence and get by with it.

The political strength of union labor seems to have grown so great that no man in high office dares question any act of a union or its members. When it comes to a question of seriously interfering with defense measures though, public opinion will demand

that the welfare of the Nation be placed above all else.

Strikes have no place in the picture while the emergency exists.

Letter to Hon. Marriner S. Eccles in Answer to Charge of Inflation Against Proposal That Government Can Save $2,000,000,000 a Year in Interest Charges

---

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

Mr. PATMAN. Mr. Speaker, a good slogan, or "catch" phrase, is oftentimes sufficient to crush and absolutely stop the timid, afraid, and uncourageous person. If anyone suggests a sound, feasible plan that cannot be answered that is against the interest of the few money changers, who have been controlling our monetary system for so many years, he has hurled at him immediately such phrases as "inflation," "printing-press money," "baloney dollars," and other similar phrases and slogans. Some people are willing to accept a slogan as a truth, since they hear it repeated so much and so often.

GOVERNMENT INTEREST BURDEN GREATLY INCREASED

In the case of our money system the payment by the Government of interest on bonds for the first 25 or 50 years of our Government's existence, when the amount of interest paid each year by the Government seldom exceeded $3,000,000 per year, was not burdensome; and possibly it was not so bad up until 25 years ago, when our Government seldom paid more than $25,000,000 a year in interest charges. But now, when the interest burden on the Federal Government alone has increased to more than $1,000,000,000 a year—and next year it will be at the rate of $2,000,000,000 a year—it is time for sane, sensible people to sit down and reason this thing out; and if there is a way that this interest can be saved without jeopardizing the country's welfare, it should be done.

Whenever you talk about depriving the greedy of a few billion dollars you will certainly have plenty of opposition. You may well expect those who are selfishly interested to disseminate their slogans and phrases all over this Nation through the use of every means of communication possible. The people of this country cannot understand why they have to pay $2 for every $1 that is borrowed by the Federal Government. They cannot understand why the Government that creates both bonds and money must sell its bonds for the money of its own creation and pay interest on the bonds each year.

MR. ECCLES' LETTER

A few days ago I received a letter from the Honorable Marriner S. Eccles, Chairman of the Board of Governors of the Federal Reserve System, Washington, D. C. It was dated March 21, 1941. I replied to his letter March 24, 1941, and after I had mailed my reply to him he not only made public his letter to me but he also delivered a copy to a Member of another body and caused it to be placed in the CONGRESSIONAL RECORD. I wonder why someone in the House did not submit the letter for the CONGRESSIONAL RECORD?

MR. ECCLES HAS BECOME MY INSTRUCTOR

This does not meet with my disapproval. I welcome the opportunity of bringing this issue into the open. If those of us who entertain the views entertained by me are wrong, our arguments will not stand the light of day and we will lose. On the other hand, if we are right, Mr. Eccles and his group will lose. Therefore, it is very pleasing to me to thrash this issue out before the Congress and the people of the country. There is no better way to start than to get an understanding between ourselves as to what each is contending and proposing. For that reason my letter to Mr. Eccles is not a reply to the statements he made but is for the purpose of eliciting from him additional information which I should have in order to adequately reply to his letter. I shall await with interest his reply to my questions. He can submit them with the understanding that I expect to place his reply in the CONGRESSIONAL RECORD and give it just as much publicity as I am giving to my own letter. Mr. Eccles has taken it upon himself to become my instructor. This, too, is all right with me. All I ask him is not to give me a lecture and stop there. He should also submit to questions. If I am misleading the people, as alleged, he should assist me in obtaining the correct information. I do not promise to be an apt pupil but I will be a willing pupil, anxious to learn, and while he is teaching me he can also teach the people, many of whom entertain the same views I do. I am convinced that Mr. Eccles will not try to keep his light under a bushel. His letter to me was given to the press before I had time to reply. He is not trying to hide anything that is favorable to himself.

The letter is as follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., March 24, 1941.

HON. MARRINER S. ECCLES,
Chairman, Board of Governors,
Federal Reserve System,
Washington, D. C.

DEAR MR. ECCLES: I have received your letter of March 21, 1941, and I expect to reply to it as soon as I have the time to do so. It is my belief that your views should be given to the public, and when I reply to your letter, I expect to insert it in the CONGRESSIONAL RECORD, along with my reply.

Before replying to it, and in order to get our definitions straight, I would like for you to answer the following questions:

1. Has the Federal Reserve Banking System refused to comply with certain laws, which affect governmental institutions, including civil service, because the Board took the position that it is not a governmental institution?

2. Is it not a fact that the Open Markets Committee has the greatest power and influence that can be exercised by any group in connection with the Federal Reserve Banking System? (If you disagree about this, please outline the tremendous powers that can be exercised by this Committee and state wherein these powers are not as great as the powers possessed by any other committee or group in the System.)

3. Please give the names and addresses of the Open Markets Committee and the institutions in which the members of this Committee, who are not on the Board of Governors, are connected.

4. Please give the names and addresses of the Advisory Committee and the names of the companies and institutions the members of this Committee are connected with.

5. I have asserted that the Federal Government can issue either interest-bearing bonds or money, or both bonds and money. Is this a correct statement or not?

6. I have also asserted that a Federal Reserve bank obtains money from the Federal Reserve agent for the cost of printing, which is approximately 30 cents per $1,000. If this statement is not true, please indicate wherein it is untrue.

7. I have also asserted that Federal Reserve notes that are paid into circulation by a Federal Reserve bank are not obligations of the Federal Reserve bank, but these notes state on their face: "United States Government promises to pay upon demand ——— dollars." Am I correct in the statement that the money issued by the Federal Reserve banks is obligations of the Federal Government and not the Federal Reserve banks and is the same as a Government noninterest-bearing obligation?

8. I have stated that under our present system, the Treasury can sell a thousand-dollar bond providing for an annual interest payment to a Texarkana, Tex., bank and that the Dallas Federal Reserve Bank could take the $1,000 worth of Federal Reserve notes and buy these bonds from the Texarkana bank. That the Federal Reserve bank at Dallas could continue to hold the Government bonds until due and collect interest each year when payable from the Government; that this was, in effect, permitting a privately owned institution—the Dallas Federal Reserve Bank—to use the Government's credit free of charge to buy an interest-bearing obligation, which the Government must continue to pay interest on. Do you agree that this illustration is possible under our present system? If not, why not?

9. Do you agree with my statement that the private commercial banks have created by bookkeeping transactions almost $20,000,000,000 the past few years for the purpose of acquiring United States Government interest-bearing obligations?

If you agree that the banks create this money, do you also agree that the Government could create it directly without having any more money in circulation than if the banks created it?

10. Do you also agree that the Federal Reserve Banking System creates money on the Government's credit without paying the Government anything therefor?

11. Do you agree further that the same security that is behind a United States Government bond is behind a Federal Reserve note, which is a Government non-interest-bearing obligation?

12. Do you believe that the Federal Reserve Banking System should be wholly owned and controlled by the United States Government through its duly appointed representatives?

13. Is it a fact that if a board in charge of the Federal Reserve System is given the powers, which were recently requested in a

special report, that dangerous inflation can be prevented, even though the Government uses its own credit by paying money into circulation instead of using the present system?

14. If in answer to the preceding interrogatory you state that the powers would be insufficient under the circumstances, what additional powers could be granted by Congress that would absolutely control and prevent dangerous inflation?

15. I have often asserted that by the time the Federal Government pays a long-term bond, it will pay as much in interest as on the principal. Do you agree that this statement is correct? If not, give me your opinion.

16. Do you consider the title to the gold in the United States Government or in the Federal Reserve banks?

17. How much money could be created by the Federal Reserve Banking System under existing laws and regulations if used to the limit upon the gold certificates claimed by the Federal Reserve banks and United States Government bonds held by both the Federal Reserve banks and the member banks?

18. Is it true that the Board of Governors have agreed upon a policy to pursue that will cause an increase in interest rates generally?

19. Is it true or not true that you personally believe interest rates should be much higher?

20. Is it true or not true that you favor the Federal Government taxing the income of State and municipal securities for the purpose of causing an increase in interest rates generally?

21. Please state your answer to the following:

(a) All of the stock of the 12 Federal Reserve banks is owned by private commercial banks and not one penny of it is owned by the Government or the people.

(b) The Federal Reserve banks pay no taxes whatsoever to the Federal Government and only pay taxes on real estate to the States and political subdivisions in which they are located.

(c) Salaries are paid to individuals connected with the Federal Reserve Banking System up to $50,000 a year.

(d) Practically all of the income of the Federal Reserve banks is from Government bonds which were purchased through the free use of the Government's credit.

(e) Although the original law required excess profits of the Federal Reserve banks to go into the Federal Treasury, at this time, under existing law, the Federal Reserve banks do not pay anything into the Federal Treasury.

22. I would like to precede this question with an explanation. My proposal is for the Government to pay the private commercial banks the $138,000,000 that they have invested in stock in the Federal Reserve Banking System and for the Government to take over the System and operate it in the public interest. If Congress should enact such a law, do you agree that the Federal Reserve banks could accept from the Treasury non-interest-bearing obligations and give the Government credit upon the books of the Federal Reserve banks therefor, permit checks to be drawn upon the account by the Treasury, and no more credit or money would be placed in circulation than if Government interest-bearing bonds had been issued and sold to the commercial banks?

23. Do you agree that if the Federal Reserve Banking System is owned by the Government and Government expenditures are financed as proposed by me that there will be no more actual money printed than is printed under the present system?

24. Although the members of the Board of Governors are appointed by the President, is it a fact that their salaries are paid by the privately owned banks?

For your information, I am not advocating the issuance of any kind of new money and am not advocating abolishing the charging of private interest, except on United States Government obligations. Further, I am not proposing for the Government to issue money or credit with no expectation of it being paid. I agree that some one must pay for everything, and if the Government issues non-interest-bearing bonds under my proposal, they could be paid back 4 percent a year and the debt entirely liquidated in 25 years, whereas under your system, if 4-percent interest is paid each year for 25 years, the Government will still owe the principal of the debt.

When you have replied to these questions, and I hope you will see your way clear to do so at an early date, I shall be very glad to answer every question raised in your letter of March 21, 1941.

Yours sincerely,

WRIGHT PATMAN.

Mr. Speaker, it is hoped that a reply will be forthcoming within the near future. I hope his replies are reasonably short and to the point, in order that the issues between us may be clarified easier and more quickly.

MY PROPOSAL

More than half of the Members of the House of Representatives have expressed themselves in favor of Government ownership of the 12 Federal Reserve banks. I have advocated the Government ownership of these 12 banks for many years, and my proposal embraces more than government of the 12 banks. It is substantially as follows:

First. The Government to acquire the entire ownership and control of the Federal Reserve Banking System by paying the member private commercial banks the $138,000,000 they have invested.

Second. Have a board of 12 governors appointed by the President, each representing a different area to have control of the system.

Third. Any member of the board, or all of the members of the board, subject to removal by the passage in either the House or the Senate of a resolution asking for dismissal.

Fourth. Have this board stabilize the value of money and prevent booms and depressions, which we have suffered every few years. Our opponents say this cannot be done. We believe it can be done. We know the present system has failed, and a change could not be a serious mistake.

Fifth. Directors of each of the 12 Federal Reserve banks to be appointed by the Board of Governors.

Sixth. Placing all Federal Reserve employees under civil service.

Seventh. Abolishing the Federal Advisory Council, which is composed of private bankers, and who have demonstrated the enormous powers they exercise over the Board of Governors.

Eighth. The private commercial bankers not to be on the Federal Open Markets Committee. This committee to be composed of the 12 members of the Board, who are responsible to the people and subject to the will of Congress.

Ninth. No officer or employee of any Federal Reserve bank to receive an annual salary in excess of $25,000.

Tenth. Permit no connection between the private commercial banks and the Board of Governors. At present the salaries of the Board of Governors are paid by the privately owned institutions.

Eleventh. Then when the Government needs money, the Treasury can deliver to the Federal Reserve Banking System interest-bearing bonds and receive credit upon the books of the Federal Reserve System for the amount of the bonds. Checks can be drawn by the Treasury to pay any debt owed by the Government. The Government owning the System, the profits from the interest on the bonds will flow right back into the Treasury, unlike the present system where the interest is held by the Federal Reserve Banking System and used to pay fabulous salaries and extravagant expenses. Or, have the United States Treasury deliver to the Federal Reserve Banking System non-interest-bearing obligations and have the System give the Treasury credit for the amount of the bonds. Checks can be drawn upon the account and any debt owed by the Government can be paid as at present.

Twelfth. The Board of Governors to be given enormous powers over excess reserves and sufficient powers to absolutely stop at any time any serious threat of dangerous inflation. The plan advocated by the special report of the Board of Governors in a communication to Congress recently would not be bad if the powers are exercised by a Board that is more subject to the will of Congress, in no way connected with the private banking system, solely under obligations to the people and under no circumstances their salaries paid by the privately owned institutions.

If this plan is placed into execution, it is my contention that it will prevent dangerous inflation. It will save the taxpayers $2,000,000,000 a year in interest. Our entire national debt can be liquidated in 25 years by paying 4 percent each year on the principal of the bonds, instead of paying 4 percent each year on the interest and nothing on the principal. Last, but not least, it will repeal the laws which have farmed out the use and abuse of the Government's credit to the private commercial banks.

Importation of Dressed Meats and Meat Products

EXTENSION OF REMARKS

OF

HON. H. CARL ANDERSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1941

RESOLUTION OF THE MINNESOTA STATE LEGISLATURE

Mr. H. CARL ANDERSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the Legislature of the State of Minnesota:

Joint resolution memorializing the President and the Congress of the United States not to repeal or modify the Embargo Act of 1927 relating to importation of meats from foreign lands

Whereas as a result of repeated outbreaks in this country prior to 1927 of the dreaded cattle disease known as rinderpest, or foot-and-mouth disease, there was enacted in that

year a congressional embargo upon the importation into this country of dressed meats and meat products from any country where said disease exists; and

Whereas prior to the imposition of the embargo the spread of that disease in this country demoralized the domestic livestock industry, seriously jeopardized the public health, and resulted in the expenditure of millions of dollars by Federal and State governments and by the livestock industry for the eradication of that evil; and

Whereas the wisdom of that congressional embargo, embodied in the Smoot-Hawley Tariff Act, has been indubitably justified, as attested by the fact that since January 1, 1927, there has been only one minor outbreak of that disease—in the State of California in 1929—which outbreak has since been traced directly to a violation of Federal regulations relating to the unloading of certain materials; and

Whereas there is increasing evidence from authoritative sources that a serious attempt is now under way to influence the President of the United States and Congress to circumvent or remove the embargo upon the importation of dressed meats and meat products for the benefit of certain foreign nations in which the said livestock disease is prevalent; and

Whereas any modification of that embargo would be inimical to the best interests of this Nation and would cause a recurrence of the evils existing prior to 1927 as enumerated above; and

Whereas the agricultural and livestock industry of this Nation is playing and must continue to play a vital and indispensable part in the program of national defense, and nothing would more seriously affect that burden and the program of national defense than a relaxation of the existing barriers to the importation of infected livestock: Now, therefore, be it

Resolved by the Legislature of the State of Minnesota, in regular session assembled, That we hereby respectfully and earnestly importune the President of the United States and the Congress of the United States, for reasons herein stated, to resist any attempts and to refrain from any action designed to repeal, circumvent, or modify the Embargo Act of 1927 relating to the importation of dressed meats and meat products from foreign lands in which there is prevalent the livestock foot-and-mouth disease; be it further

Resolved, That the secretary of state of the State of Minnesota is hereby instructed to transmit a copy of this resolution to the President of the United States, to the presiding officers of the Senate and House of Representatives of the Congress of the United States, and to each of the Senators and Representatives from the State of Minnesota in the Congress of the United States.

The United States "Neither Realistic Nor Rational"

EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1941

EDITORIAL FROM THE SATURDAY EVENING POST

Mr. TINKHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Saturday Evening Post of March 22, 1941:

[From the Saturday Evening Post of March 22, 1941]

THE NEW APOCALYPSE

It is time to realize that this country has assumed an unlimited responsibility for the outcome of the war. This means simply that anything short of the total overthrow of the Nazi principle in Europe would be an American defeat.

We have arrived at that responsibility with no material condition, no bargain, no stipulation beforehand—at least none that the American people are aware of—and, so far as we are informed, with no realistic political forethought. The premises were all emotional. Beyond the fear motive, our obligation to humanity, to civilization, to anything in the world calling itself democracy has been passionately acknowledged. Almost nothing has been said about our rights.

What are the American rights in this war? Who has yet defined them? What steps have been taken to protect them?

We know for sure only that the war will sometime end, and that when it does there will be some kind of peace. How the war will end, or what the world will be like at that time, we do not know, and yet the possibilities are few and may be stated.

The British Empire could fall. In that case we should be at war with Hitler, facing him alone, and how that would turn out we think we know; but this, we believe, is, of all the possibilities, the one most remote.

The German thing could itself collapse. That seems unlikely to happen, but if it did, there would be consequences over which, so far as we can see, we should have no control whatever. What would the next state of Europe be, and what should we have to say about it? The probability is that we should lose everything it had cost us to assist in bringing that sequel to pass, and be expected besides to aid in the reconstruction, as a duty, on the ground that we had let others do the fighting.

It could come to a kind of stalemate between Great Britain and Germany. That is to say, Hitler might see that he could never conquer the British with the American arsenal behind them, and so abandon that idea and go on the defensive in Europe; and the British at the same time might see, as perhaps they see already, that even with the American arsenal behind them, they will be unable to reconquer Europe with their own manpower. At that point they might be strongly tempted to consider a negotiated peace. They might think of embracing the Lothian formula, which was that Great Britain should detach itself from the European system, simply let it alone, and find its own future in the world system. We do not say this is probable. We say only that it is one of the possibilities, and one that is bound to be taken account of by intelligent statesmanship. And if it began to materialize, what could the American Government do about it? What hostage has been taken against it? Definitely, that outcome would be an American defeat. There would exist then a European system under Hitler, a world system dominated by Great Britain, and the American system. How could the rivalries among them be resolved? What would be the position of the American system?

But the American Government has said there shall not be a negotiated peace. The outcome we have underwritten, the one for which we have assumed an unlimited responsibility, is a complete victory over the Nazi principle, no matter how long it may take, nor how much it may cost. Anything less, as we have said, would be an American defeat.

Suppose then a victory in that shape, since it is the only kind we can accept. What shall we do with it? What shall be done with the Germans? How shall the principle of aggression be chained down? How shall the age-old racial and national conflicts in Europe be composed? Shall all the former national sovereignties be restored, and if so, with what sureties for a durable peace among them? And shall the new order be trusted to keep itself? If not, who shall keep and mind it? And when all of this has been arranged, what of the new Anglo-American world? How shall that be divided up?

The only answer to such questions as these is a vague romantic assumption that when, by the exercise of its irresistible economic power, America has destroyed the terrible viper of Europe, its moral authority will be irresistible, too, and the Old World will be happy to embrace it.

Mr. Willkie now expounds that idea. "Our concern," he says, "is broader than the welfare of any single nation. It is that the area of freedom be as large as possible. If Britain prevails, the enslaved democracies of Europe will revive." When he was asked by the Senate Foreign Relations Committee to be specific, to say what democracies and what of Finland, he answered: "If America gives effective aid to Britain, America will dominate what happens afterward. * * * If we give her that effective aid, then gentlemen such as you, Senator, will determine whether or not these enslaved democracies will survive. * * * If America gives that effective aid, then America will have the power to determine whether the captured democracies of Europe survive. And, in my judgment, American public sentiment will require that they survive."

We think there have been few more touching illustrations of the innocence and political immaturity of the American mind. Mr. Willkie may know what he means by the democracies. We certainly do not. We would challenge him to define them. Was Greece a democracy? Anyhow, upon all nations from Athens to Cathay that will make the genuflection to democracy we are going to confer the gift of life. The American Senate can do that. If the American Senate cannot do it, the public sentiment of America will.

And then, according to the vision of the President, the four horsemen of American freedom will go riding to all corners of the earth—freedom of speech, freedom of conscience, freedom from fear, and freedom from want—"which, translated into world terms, means economic understandings which will secure to every nation a healthy peacetime life for its inhabitants—everywhere in the world." This vision, not of a "distant millennium," says the President, but of "a kind of world attainable in our own time and generation," represents the American war aim. A New Deal for the whole world, planned that way, and financed in the beginning with American billions.

The British, who live in the world in a practical way, have not subscribed. They have steadily refused to define their war aims or to say what kind of world they are thinking of to come afterward. What they think of the American millennium they wisely do not say.

Is it permitted to ask what America will get back? Do you suppose the liberated democracies of Europe in their gratitude will buy the American agricultural surplus instead of South American grain and meat and cotton at lower prices? Or can you imagine that Europe would say that the rich American people, by providing the only weapons—if that were all—had tried to buy the right to dominate the peace? What if Europe should resent our moral imperialism? And if Europe did that, what could we do about it? Demand our weapons back? Or ask to be paid for them in cash?

We are being neither realistic nor rational. No other people in the world would behave in this manner, or could survive if they did. The world we now undertake to save is one we have imagined. It does not really exist. But for all we have said, and beyond any reason, the spirit of crusade is a noble possession.

The Enfield Navigation-Power Dam

EXTENSION OF REMARKS

OF

HON. HERMAN P. KOPPLEMANN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1941

RADIO ADDRESS BY HON. HERMAN P. KOPPLEMANN, OF CONNECTICUT

Mr. KOPPLEMANN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address, which I delivered over the radio on March 23:

The project to improve the Connecticut River between Hartford and Holyoke is before Congress again. This project has two aspects. One is navigation, the other is power.

This project was authorized by Congress 11 years ago. Authority then was given to a private power company to construct a dam at Enfield. That power company had a license from the Federal Power Commission, but it didn't raise enough capital and never exercised that license. The company has since gone out of existence.

In 1935, 6 years ago, the Rivers and Harbors Committee of the House of Representatives authorized the Army engineers to review the whole proposal and to advise Congress whether the project should still be undertaken and whether changes should be made in the original plans. As a result of their further study, the Army engineers 2 years ago again recommended that the project be undertaken, but this time they recommended that the power dam at Enfield be constructed by the Federal Government instead of by private interests. This dam is a necessary part of the navigation-improvement plan, but a substantial amount of electric energy can be produced there. Therein lies a focal point of opposition.

The House committee approved the Army engineers' recommendation, but the proposal was defeated in the House.

It is now before us again for consideration.

First, I want to call attention to the changed attitude of Connecticut toward this project. Two years ago the entire congressional delegation opposed it. The man who was then Governor opposed it. Speaking for him, witnesses from Connecticut holding official positions appeared before the committee in opposition.

This year I am glad to report that I expect several of my Connecticut colleagues to support it. Our efforts are considerably bolstered by the open mind of our Governor and his sincere desire that the benefits of cheaper power be made available to Connecticut residents in the cities as well as in the villages.

Now, bear in mind that the Army and Federal Power Commission engineers are career men. Their duty is to state the merits and the demerits of proposals of this nature solely from the point of view of ultimate benefit to a section and the Nation as a whole.

The opposition to this project suggests that the dam at Enfield will increase the flood hazard. This question was raised 2 years ago. It was raised again at the hearing last week.

Col. John S. Bragdon, head of the Army engineers at Providence, and the engineers of the Federal Power Commission are thoroughly familiar with the flood conditions in the Connecticut River Valley. They told me the dam could never heighten the flood level by more than 2 inches. I was guided by their recommendations when I urged Congress and the President to approve the project and funds for the diking system at Hartford and East Hartford, as well as the comprehensive flood-control system of dams and reservoirs along the upper Connecticut River, when I was your representative before. Government engineers are emphatic in stating that there will be no increase in flood hazards if the Enfield Dam is built. It is my own opinion that flood threats are only a scheme to frighten the people against the project.

Naturally for construction of the dam some land must be taken. There are wild rumors about the amount of land which will be needed. I am specifically informed by the engineers that not more than 900 acres will be required, not 9,000 as reported in the Courant. And that land will be paid for.

This is the first project of its kind for Connecticut. We have the successful example of similar projects at Bonneville and Grand Coulee on the Columbia River, at Boulder Canyon on the Colorado; the 10 projects on the Tennessee River and Fort Peck on the Missouri River. Other projects have been built and are being built on other rivers of the Nation. The natural resources in those sections have tremendously enhanced in value. The people of those sections are enjoying lower electric rates from the Government and from private utilities too. And the private utilities are still making handsome profits.

In this great crisis in our Nation's history these projects are important to our national defense.

I am pleading that we of Connecticut may have the same advantages which wise men have secured for other regions. All these projects are going to pay for themselves.

The opposition now proclaims that we should concern ourselves only with flood-control projects.

You remember, during the flood-control fight of 1936 and 1937, that we asked for flood-control projects. The question of power did not enter into our plans. It was this same utility opposition to this power dam at Enfield which injected the question of power into the flood-control projects at that time. They knew there was power to be developed, and they attempted to secure for themselves the rights over that power for 999 years. At that time I agreed to accept their compact if they would strike out all reference to power. This they refused to do. Now that they know that we know there is power in this proposed Federal navigation dam at Enfield, they piously plead for flood control and flood control only. Aren't they cute?

One more word on the question of flood control. Today at Hartford and East Hartford the dike program is two-thirds completed. Definite flood control is assured.

The power interests, as usual, are smart. They have set up headquarters in Washington, and their representatives are attempting, on the quiet, to swing Members of Congress against it. The Washington correspondent of the Hartford Times reported this last week. Commenting on this lobby, the Holyoke Transcript editorially said, "Power is powerful."

Members of Congress know that the objections come from two sources. The railroads don't like it because the people will get lower freight rates. The power interests don't like it because they don't want a yardstick that will show up their high rates.

It is well known that the Connecticut charges for electricity, home, business, and manufacturing consumption, are among the highest in the country. Just over the Massachusetts line, Holyoke has a municipal plant. It charges $1 for 25 kilowatt-hours. Chicopee, next door, has a municipal distributing plant but has to purchase its power from the Holyoke Water Power Co. It charges $1.30. Windsor Locks, this side of the line and away from a public yardstick, pays the Connecticut Light & Power Co. $1.82.

From three different citizens' groups at Thompsonville I received telegrams urging the adoption of this project. Thompsonville is forced to pay the same high rates as Windsor Locks. Incidentally, in Hartford we pay the Hartford Electric Light Co. $1.75, while Farmington, a suburb of Hartford, pays the Connecticut Power Co. $2.35. Everyone knows the Connecticut Power Co. and the Hartford Electric Light Co. are Mr. Ferguson's twins. Maybe Mr. Ferguson would like to explain this.

The concern expressed by certain newspaper advocates of private utility companies about the $13,000,000 which the entire project calls for overlooks entirely that Connecticut might very easily through the Enfield Dam save that entire cost to the people in 1 year by reducing the cost of electricity.

Even if it took 2 years of reduced rates to make up this $13,000,000, which is about one-third the amount paid by consumers each year to electric companies in Connecticut, don't you believe with me it would be sound economics and worth while?

At Windsor Locks the Army is establishing an air base, which will bring here about 2,500 Army men, with their families. The testimony at the hearing last week revealed that the Hartford Electric Light Co. submitted a wholesale estimate for electric service for this national-defense air base which, as one Member of Congress remarked, is higher than the retail rate charged in his State. Even the Army can't get away from excessive Connecticut rates.

Electricity can be obtained from the Enfield Dam for the Windsor Locks air base at about one-third the charge now asked, and I take into account the cost of building the dam as well as manufacturing the electricity.

The increased industrialization of this region points to a shortage of power after 1942 despite efforts being made by local utility companies to increase their production capacity. There has been an effort to belittle the amount of electricity that could be generated at the Enfield Dam.

Opponents of this bill intimated that this power would be available only a few weeks of the year.

I was concerned about this, and I asked the Army engineers. They assured me the power from this dam will be available 24 hours a day every day of the year.

While substantial navigation benefits will accrue through use of river transportation, those benefits alone might not warrant the cost of improving the river. Combined, however, with the benefits from power production, the project is economically sound. In addition, the residents, businesses, and manufacturing concerns will have the use of power so generated at greatly reduced rates.

Undoubtedly many of you will have questions to ask or will want more information than time has permitted me to give. I want you to understand this subject, so please ask me for any further facts you want. I shall be happy to answer.

Real Security for America's Old Folks

EXTENSION OF REMARKS

OF

HON. GERALD W. LANDIS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1941

Mr. LANDIS. Mr. Speaker, it is our duty to plan now to carry our country safely over the difficult and dangerous period of adjustment which will inevitably come upon us when the period of our huge defense program comes to an end.

If America is to survive and prosper, it will be necessary to decentralize industry and bring the factory to the farm, place a legal floor under domestic farm prices, build a four-lane highway system, plan a housing program, perfect a better youth program of education, and establish the right kind of a social-security program for our elders, disabled, and dependents.

First we should establish a social-security program which will not only protect our elders against want and insecurity, but which will also operate as a means of maintaining a balance between the producer and the consumer.

We should have an old-age-assistance program for all American citizens over the age of 60, except those persons whose incomes are large enough to pay a Federal income tax.

A program of this kind will keep our elders from the W. P. A. and relief rolls. They will not have to mortgage their little homes to participate. In such a system investigators and red tape will be eliminated. All Federal payments will be direct and on an equal basis to all people throughout the United States.

Adequate provision must be made for dependent children, widowed mothers, the blind, and the disabled. This should be financed, as at present, out of general revenues on the part of the Federal Government, together with the participation by the States in proportion to their ability to pay.

The program of old-age assistance could be supported by a national gross income tax. In 1933 the State of Indiana enacted a gross-income tax as a major part of a replacement-tax program to alleviate the disproportionate tax burden of property owners and to provide an adequate source of revenue to meet the general welfare and public school operating costs. In Indiana the greater part of the revenue from the gross-income tax is returned to the local school corporations on a basis of teaching units. In the past years, each teacher received $700. In addition to the money paid the teachers, the State pays from the gross income tax revenue 30 percent of the cost of old-age assistance, 40 percent of the cost of caring for dependent children, and 50 percent of the cost of caring for the needy blind.

Since the enactment of this law in Indiana the number of licensed stores have increased from 58,763 in 1933 to 73,060 in 1939, a gain of 14,297 in a 6-year period. We have had far fewer business failures in proportion than States that have been using the sales tax. Property taxes in Indiana have been reduced almost 30 percent.

The revenue from a national gross income tax could adequately finance a decent old-age assistance program. America, with an $80,000,000,000 national income and an average 2-percent gross income tax, would yield our elders about $73 per month. An average gross income tax of 1½ percent would yield our elders $50 per month.

This old-age system would be on a pay-as-you-go basis—everyone pays his share of the tax and all needy American citizens over 60 years of age participate.

The national gross income tax is a tax imposed upon all persons, firms, groups, and corporations, except labor unions, hospitals, and religious organizations and educational institutions which are not organized or operated for private benefit. It is purely a gross-receipts tax and applies to every kind or character of income.

In the application of the national gross income tax, gross income and gross receipts are synonymous. Gross receipts is the measure of the tax imposed and means all cash, credits, notes, or other property received in lieu thereof from any and all sources, and includes the following:

Compensation for personal services, including wages, bonuses, pensions, fees, salaries, commissions, gratuities, rentals; gross receipts received from trade, business, or commerce; gross receipts received from the sale, transfer, or exchange of property, tangible or intangible, real or personal, including the sale of capital assets, or from the assignment or sale of rights; all the receipts received from the performance of contracts; all receipts received as prizes and premiums; all receipts from insurance; all receipts received as alimony, damages, or judgments; investments of capital receipts, such as interest, discount, rentals, royalties, dividends, fees, and commissions; receipts received from the surrender, sale, transfer, exchange, redemption of, or distribution upon, stock of corporations or associations; and all other receipts of any kind.

Gross income of banks, trust companies, building and loan associations, brokers, finance companies, dealers in commercial paper, and persons engaged in the business of lending money or credit, shall be deemed to mean "gross earnings." This is also applicable in the case of individuals dealing in margins, without any deduction for losses and without any deductions for taxes, brokerage commissions, or other expenses incident to the transaction.

RETAIL SALES

The term "selling at retail" means and includes only a transaction by which the ownership of tangible personal property is transferred, conditionally or otherwise, for a consideration, when such transfer is made in the ordinary course of business and at a fixed and established place of business. Retail sales also includes all sales to a division, subdivision, agency, instrumentality, unit, or department of government, or any other sale not defined as wholesale.

WHOLESALE SALE, ONE-FOURTH OF 1 PERCENT

First. Sales of any tangible personal property, except capital assets of the seller, to a purchaser who buys the same for the purpose of reselling it in the form in which it is sold to him—sale of goods to a grocer.

Second. Sales of any tangible personal property as a material which is to be directly consumed in direct production by the buyer in the business of producing tangible personal property by manufacturing, processing, refining, repairing, mining, agriculture, or horticulture.

Third. Sales of any tangible personal property which is to be incorporated by the buyer as a material or an integral part into tangible property produced by such buyer in the business of manufacturing, assembling, constructing, refining, or processing—sale of wood to furniture factory.

Fourth. Sale of drugs, medical and dental preparations, to be directly consumed in professional use by doctors, hospitals, embalmers, and tonsorial parlors.

Fifth. Sales of tangible personal property to be directly consumed by the buyer in the business of industrial cleaning—sale of soap to laundries.

Sixth. Sales of any tangible personal property to be directly consumed in the business of rendering public-utility service—sale of coal to a public utility.

To distribute the tax burden with exact justice is impossible. The tax burden under a national gross income tax rests on different taxpaying groups with more equity, more equality, and more balance.

SUGGESTED GROSS INCOME-TAX SCHEDULE OF RATES

First. Tax on income from salaries, wages, and commissions:
$1 to $800, 1 percent tax.
$801 to $5,000, 2 percent tax.
Over $5,000, 3 percent tax.
Second. Tax on selling at retail:
Under $1,000, one-half of 1 percent tax.
$1,001 to $30,000, 1 percent tax.
$30,000 to $1,000,000, 2 percent tax.
Over $1,000,000, 3 percent tax.
Third. Tax on gross receipts from trade or business, except receipts from retail:
Under $1,000, one-half of 1 percent tax.
$1,001 to $30,000, 1 percent tax.
$30,000 to $1,000,000, 2 percent tax.
Over $1,000,000, 3 percent tax.
Fourth. Tax on selling at wholesale,
Tax on display advertising and subcontracts, any amount, one-fourth of 1 percent tax.

We should be willing to try this plan for 1 year. Everyone should be willing to pay his share of gross income toward insuring the security of this country, the stability of his job, and the welfare of his people. Every American who seeks the protection of his elders should demand immediate action.

Protest Concentration of Industry

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1941

RESOLUTION OF THE SOUTHERN GOVERNORS' CONFERENCE AT MOBILE, ALA.

Mr. SPARKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Whereas at the September meeting of the Southern Governors' Conference at Mobile, Ala., by appropriate resolution, the attention of the President of the United States and the members of the National Defense Council was

directed to the importance and advisability of utilizing for national preparedness the vast reservoirs of natural resources and available labor offered in the South; and

Whereas in said resolution we have called pointed attention to the necessity of immediate action to effect further decentralization of industry in the interest of the national security and post-war economy for all sections of our country; and

Whereas it is now apparent from statistics reported in an address by the Honorable Chester C. Davis before the Southern Governors' Conference now in session at New Orleans, La., that these recommendations have not received deserved attention; and

Whereas these statistics disclose that the policy now being pursued by those in authority is resulting in a greater concentration of industry than ever before, thereby endangering our national security and post-war economy for all sections of our country: Now, therefore, be it

Resolved, That the Southern Governors' Conference, assembled, hereby goes on record as condemning the continuation of this unsound and dangerous policy now being pursued by those in authority, and hereby directs the chairman of the conference to appoint a committee from the membership of this conference to wait upon the President and the Office of Production Management, to present in person this protest, and at the same time urge immediate correction of this situation.

This the 15th day of March 1941.

FRANK M. DIXON, *Chairman.*

Attest:

WALTER R. MCDONALD,
Executive Secretary.

Office of Government Reports

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1941

Mr. McCORMACK. Mr. Speaker, since the days of the immortal George Washington, almost every one of our Presidents, regardless of political persuasions, has found it necessary from time to time to remind Congress that it is essential the American people be kept informed on the processes of government; that they have the widest possible knowledge and public education on the ideals of democracy and the broader conceptions of national life.

Never has this been a partisan issue, nor advice and admonition flavored with politics. There is a unanimity of opinion among our great statesmen of the past, although they phrased the objective in a variety of words. Thomas Jefferson expressed it this way, and I quote:

> Education is the true corrective of abuses of constitutional power. Ours, as you know, is a government which will not tolerate the being kept entirely in the dark.

From the Messages and Papers of the Presidents, page 470, you will find these enduring words from James Madison; and again I quote:

> Whilst it is universally admitted that a well-instructed people alone can be permanently a free people, and whilst it is evident that the means of diffusing and improving useful knowledge form so small a proportion of expenditures for national purposes, I cannot presume it to be unseasonable to invite your attention to the advantages of superadding to the means of education provided by the several States, a seminary of learning instituted by the National Legislature.

Yes, Mr. Speaker, and fellow Members, I could continue to turn the pages of history and summon as witnesses the wisdom and bound thought of Ulysses S. Grant, Rutherford B. Hayes, Theodore Roosevelt, the beloved Woodrow Wilson, and that great statesman and great American, William Howard Taft. Their state papers all testify to the value of wide dissemination of useful information and the security which rests in a forum of enlightened people.

Because the minority has both respect and veneration for the reasoned opinions of William Howard Taft, I should like to point out a very brief passage from his Messages and Papers, which testifies to his broad vision, and might well be used as an argument for H. R. 3368. On December 6, 1910, he said in a message to the Congress, and I quote:

> The president of a private corporation doing so vast a business as the Government transacts would, through competent specialists, maintain the closest scrutiny on the comparative efficiency and the comparative costs in each division or department of the business. He would know precisely what the duties and activities of each bureau or division are in order to prevent overlapping. No adequate machinery at present exists for supplying the President of the United States with such information respecting the business for which he is responsible.

Mr. Speaker, that is exactly what the Office of Government Reports, and this authorization provides. It provides exactly what President Taft felt he needed to implement his office with essential information, and it places at the continuing disposal of President Franklin D. Roosevelt a facility that has helped make him the most enlightened man in the world.

Mr. Speaker, I do not propose to take up the time of this House with any glorification of the present administration. The record of achievement has been sufficiently endorsed by the American people. Nor can any feeble words of mine add to the accomplishments and career of Mr. Lowell Mellett, an outstanding liberal in thought and deed; a newspaperman who left his indelible impression for integrity and sound logic on the profession he adorned before he was called into the service of the Government.

I would address myself in these brief remarks to the paradoxes and contradictions which have surrounded discussion of this bill, and which becloud its merits. I discern not only one red herring drawn across the line of vision, but a subtle attempt to drag in an aquarium.

For myself, I am quite content to accept the word of the President of the United States, as voiced in his letter to the chairman of the committee, the gentleman from New York [Mr. O'LEARY]:

> In brief, the Office of Government Reports, operating at modest expense, is an essential part of the executive office of the President.

In these times of stress and world struggle I am certain that no patriotic member of this body consciously would restrict the Chief Executive, or deny him any facilities that would help in the solution of grave problems, or the fulfillment of his heavy tasks.

They say—and I refer to the minority report—that it is a step toward the creation of a propaganda machine. They bring no facts or records to sustain the charge because, frankly, gentlemen, any examination of the activities of the Office of Government Reports reveals nothing to give credence to such a vague indictment.

What is propaganda? In world affairs we have come to think of it as lies artfully camouflaged to resemble truth. Or as it is scientifically disseminated by the organized voices of aggression, the sugar-coated disguise applied to cover bitter reality. In Germany of today it is everything but the truth. How that nation has retrograded since Frederick the Great, succeeding to the throne in 1740 said, and I quote:

> A man that seeks truth and loves it must be reckoned precious to any human society.

I am reluctant to believe that any American today feels this Government would sanction, or lend even tacit approval, to an official agency pledged to mislead, or circulate anything not founded upon solid fact. No, gentlemen, we use the word carelessly, and in politics we are prone to label something the other fellow says that we do not particularly like as propaganda. Only those nations can endure whose cornerstones and foundations are raised upon the abiding strength that reposes in truth.

What is a propaganda machine? In its invidious sense, I presume we can call it an official agency of the governing power to control and direct public expression, whether the approach be through the printed word, the radio, or other avenues of enlightenment. In operation the people hear what the Government wants them to hear; it colors and distorts the truth to suit official purpose, it molds and guides public opinion by dictatorial ukase, and it absolutely strangles any minority thought, or ideas, that run counter to the ruling power. It runs contrary to the American concept of liberty, a free press, the rights of the minority, and other democratic ideals. I say now, it has not, and never can be created here.

Let us look at the facts. The Office of Government Reports, since its inception in November 1933, has issued but one press release. That release was a summary of the report to the President on the activities of the National Emergency Council. I submit to you gentlemen that Herr Goebbels would discard as a travesty on propaganda efficiency any agency which in 7½ years issued only one official communiqué designed for newspaper consumption.

The Washington Office of Government Reports retains no high-priced staff of writers or word manipulators issuing regular releases conceived, as some seem to fear, to extol the present administration. It has never tried, nor never will, to influence editorial opinion one way or the other. On the contrary, Mr. Speaker, it

is exactly what is was created to be, a central clearinghouse for information concerning Federal activities, to report on the opinions, needs, and desires of citizens. And that, may I add, includes Members of Congress, who use—and are invited to use to the full extent—its great wealth of background and factual information, and its source material on happenings in a fast-moving world.

Now, I should like at this time to comment briefly on how this agency touches upon the essential work of every hard-working and conscientious Member or Congress. How it saves time and voluminous correspondence for those Members who must keep in touch and meet the daily demands of a constituency. Perhaps the secretaries of Members, who handle office detail, would be better witnesses for O. G. R. efficiency. Last year this agency handled 8,000 inquiries referred to its office by Members of Congress. During 1940 it furnished, upon request, some 166,000 clippings to the Members of both branches. There is no definite record of how much factual information, statistics, and pertinent data it provided Senators and Representatives for the preparation of public speeches and reports. Its service is, of course, nonpartisan and nonpolitical, as it is accurate and comprehensive. I know, as do many other Members, how handy and useful it can be as a central source for information on perplexing questions that are conjured by constituents in the daily routine.

Take the matter of finding defense jobs. I mention that subject because every Member of this House has been flooded with requests for definite information from men and women eager to ally with the defense program. We like to give them this information as quickly as possible. I am sure that the little booklet Defense Employment and Training for Employment has satisfied more requests for this knowledge than any other Government publication. Over 10,000 copies have been provided by O. G. R. for congressional offices, and 80,000 have been distributed. Not being a statistician, I cannot compute the hours saved and the travel to Washington avoided by having such information readily available through the Office of Government Reports. Does this sound like the work of a bureau of propaganda?

Here I should like to comment on the work of this highly important office with relation to the general public and what we popularly call big business. In 1940, during the normal months, and before defense preparation involved such wide Federal expansion, it received and answered some 100,000 requests for information on governmental activities. These inquiries came from every section of the country, and since the period of the emergency general public correspondence with the Office has trebled.

Businessmen generally have keen interest in Government contracts and expenditures incidental to defense preparation. The Office of Government Reports prepares and distributes a regular tabulation, National Defense Contracts and Expenditures, which is the only authoritative and over-all compilation of its kind. It is an invaluable aid to the world of business, and of tremendous assistance to Members of Congress in keeping them aware of activity in their particular districts. This tabulation is sent every fortnight to 55 Senators, 199 Representatives, 117 Federal agencies, 75 railroads, 99 newspapers and magazines, 90 banks, and 630 individual business concerns. The United States Chamber of Commerce distributes more than 3,000 copies of a summary of this tabulation, and the National Defense Advisory Commission distributes it to all local and State defense councils.

We might truthfully say that most mail, carelessly directed to the Government, Washington, D. C., finds its way to the O. G. R., and it is efficiently administered. The President has remarked this agency could be addressed as "Uncle Sam, post-office box No. 1," since a huge volume of direct-contact mail from the general public is handled by O. G. R. That includes, of course, thousands of letters from the parents and relatives of men now in the service, or about to be drafted, which are routed to the proper departments for final disposition.

No, gentlemen, I submit this has been, and will continue to be, an administration of unparalleled openness. In this House we occasionally hear criticism that the Government conceals, or keeps secret, its intentions and purposes, or exercises in fact a limited censorship. The facts belie the charge. What President in the history of this Republic twice weekly undergoes gracefully a searching quiz from 80 to 100 trained newspaper correspondents, privileged to ask the answers on matters of public policy? What President has regularly reported to the Nation, and the world, on matters of public importance? Where are all Cabinet offices open to representatives of the press? All officials concerned with the defense programs can be readily contacted. There has been no policy of suppression, repression, or censorship. Indeed, the policy is one of free expression. Government information has been more readily obtainable in Washington than in any other world capital. And it will continue to be. We have the pledged word of Mr. Lowell Mellett, Director of O. G. R., that no censorship is contemplated—and I quote from the published hearings of this committee:

The CHAIRMAN. The press seems to have criticized section (c) of the bill, fearing that it might bring about a censorship. What are your comments on that section?

Mr. MELLETT. If any censorship is contemplated by this administration, I believe our organization would not be a particularly useful one for that purpose. I do not believe we are organized in any way that would make us a good spot for any censor to operate from. However, I do know that no censorship is contemplated.

Mr. BENDER. Is a censorship contemplated during wartime?

Mr. MELLETT. None that I know of. It is my belief—and I believe my information is as good as anybody else could have on the subject—that none is contemplated in wartime. If I might be permitted to explain, that does not mean in case there should be war that there will not be military censorship, as there has always been, and I presume always will be. In other words, the Army and Navy will have control over the information coming from the Army and Navy. But censorship in the sense I believe is feared—that is, the kind we see abroad—the actual censorship of newspapers or other publications, simply is not contemplated in any manner.

I have up to now merely touched upon the controversial phases of this bill. In its broader aspects the Office of Government Reports performs such important functional services that I assume there is no dispute about the necessity of sustaining it as an official arm of the Chief Executive. Let me briefly summarize how it fits perfectly into an efficient governmental pattern. It has three operating divisions: Field Operation, Press Intelligence, and Information Service.

The Division of Field Operations serves as a contact between the Federal and State Governments, local governments, and citizens. It serves also as a liaison and coordinating office between Federal agencies in the field. Finally, and perhaps most importantly, it serves as an information service to the President on the functioning of Federal programs in the States.

At present there are 34 State offices, and if and when this bill meets with the approval of Congress, these will be enlarged to give every State representation. With 44 State legislatures meeting this year, the service has been expanded. Over 150 bills, including defense-housing bills for 40 States already have been cleared to State directors, and reports on current status of bills covering roughly 53 general subjects are being prepared biweekly. Through the State offices weekly broadcasts were made during the year in cooperation with various other Federal agencies, intended to explain the functioning in the field of these Government units. The Office also aided in the presentation of a series of 15 electrical transcriptions on the national-defense program, at the request of the National Defense Commission, over some 250 stations throughout the country.

The Division of Press Intelligence makes available to Government officials—executive, legislative, and judicial—a day-by-day and permanent record of newspaper information and newspaper opinion on matters of public importance. It provides a daily bulletin, an index of news and editorial comment from 350 daily newspapers. This bulletin is distributed each morning to executive officials and Members of Congress. The service unit provides for the prompt delivery of requested clippings, it conducts special research for Federal agencies and Members of Congress, and in 1940 filled 1,996 such requests.

The Information Service provides for the public a single, central clearing house in Washington for inquiries concerning all branches of the Government. By mail, telegraph, telephone, and in person inquiries pour into this office, the total in 1939 reaching 88,500 requests, and last year well over 100,000 applications were satisfied. The Service limits its dissemination of information to strictly factual. The staff does not undertake to interpret regulations, orders, reports, or other data, but refers inquirers to the sources from which interpretations may be obtained. Students, research workers, and

writers in quest of factual data on the Government use the reference facilities of the Service in addition to making specific inquiries.

Mr. Speaker, I have tried to give in a short time a brief but accurate perspective of a service that the President of the United States deems essential to the effective conduct of his high office. I feel that we should accept his words on the requirements of the Executive, just as he religiously accepts our findings on the contingent appropriations and the conduct of the legislative department. Some Members say we are fortunate to have a man of such high-minded purpose and solid character as Lowell Mellett as Director of O. G. R., but what is to become of it after he leaves? That, I say, is tomorrow's problem.

May I, in closing, turn again to the words of another of our Presidents, Rutherford B. Hayes. Like many of his predecessors and those who have come later to the White House, he saw the value of public education and the necessity of promoting it. Let me quote his exact words, which seem so appropriate at this very moment:

> The capital of the Nation should be something more than a mere political center. We should avail ourselves of all the opportunities which Providence has here placed at our command to promote the general intelligence of the people and increase the conditions most favorable to the success and perpetuity of our institutions.
>
> Whatever government can fairly do to promote free popular education ought to be done. Wherever general education is found, peace, virtue, and social order prevail and civil and religious liberty are secure.

As it was in 1876 so it is today. The need for information was never more urgent, for if humanity is ever going to return to the highway of universal peace, that happy day will arrive when enlightened peoples impress upon their rulers the follies of war and organized destruction.

Eternal Vigilance Is Still Price of Liberty

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 19, 1941

Mr. SHAFER of Michigan. Mr. Speaker, passage of the so-called lease-lend bill and our subsequent seven-thousand-million-dollar gift to Great Britain have placed this Nation in the war to such an extent that we are compelled to see it through to the finish.

Whether we supported or opposed the lease-lend bill, every American must now support this administration's war policy. Unless Hitler and the other dictators are defeated, they can hold the United States liable for tremendous damages under the lease-lend legislation. Members of this House recall that this Nation collected staggering sums from Great Britain following the Civil War for damages done to our shipping through similar aid given by England to the Confederacy. Because of this, if for no other reason, it is now to our interest to see that the Axis Powers are defeated.

I do not apologize to anyone for my opposition to the lease-lend bill. As has been stated by others during this debate, I owe allegiance to but one nation, and that Nation is the United States of America. I have consistently opposed all measures which I believed would lead this Nation into actual participation in the European war. At the same time I have given active support to every effort to improve our national defense.

I pray that the steps we are taking will lead us in the opposite direction from war, but after reviewing the program of this administration since its inception, I am frank to say that I have little hope that this Nation will escape actual involvement.

Let us go back to 1932 when Mr. Roosevelt was a candidate for the Presidency for the first time. At that time he said to the American people:

> But, remember well, that attitude and method—the way we do things, is nearly always the measure of our sincerity.

That statement was a true statement. It is as true today as it was on September 19, 1932. Time and again since then, up to November 1938, Mr. Roosevelt declared against war. He declared over and over and over again against America's having any part in anybody's war anywhere in the world. He summed it all up best in his statement at Chautauqua, N. Y., on August 14, 1936, when he said—and I quote:

> The Congress of the United States has given me certain authority to provide safeguards of American neutrality in case of war.
>
> The President of the United States, who, under our Constitution, is vested with primary authority to conduct our international relations, thus has been given new weapons with which to maintain our neutrality.
>
> Nevertheless—and I speak from a long experience—the effective maintenance of American neutrality depends today, as in the past, on the wisdom and determination of whoever at the moment occupy the offices of President and Secretary of State.
>
> It is clear that our present policy and the measures passed by the Congress would, in the event of a war on some other continent, reduce war profits which would otherwise accrue to American citizens. Industrial and agricultural production for a war market may give immense fortunes to a few men; for the Nation as a whole it produces disaster. It was the prospect of war profits that made our farmers in the West plow up prairie land that should never have been plowed, but should have been left for grazing cattle. Today we are reaping the harvest of those war profits in the duststorms which have devastated those war-plowed areas.
>
> It was the prospect of war profits that caused the extension of monopoly and unjustified expansion of industry and a price level so high that the normal relationship between debtor and creditor was destroyed.
>
> Nevertheless, if war should break out again in another continent, let us not blink the fact that we would find in this country thousands of Americans who, seeking immediate riches—fool's gold—would attempt to break down or evade our neutrality.
>
> They would tell you—and, unfortunately, their views would get wide publicity—that if they could produce and ship this and that and the other article to belligerent nations, the unemployed of America would all find work. They would tell you that if they could extend credit to warring nations, that credit would be used in the United States to build homes and factories and pay our debts. They would tell you that America once more would capture the trade of the world.
>
> It would be hard to resist that clamor; it would be hard for many Americans, I fear, to look beyond—to realize the inevitable penalties, the inevitable day of reckoning, that come from a false prosperity. To resist the clamor of that greed, if war should come, would require the unswerving support of all Americans who love peace.
>
> If we face the choice of profits or peace, the Nation will answer—must answer—"We choose peace." It is the duty of all of us to encourage such a body of public opinion in this country that the answer will be clear and for all practical purposes unanimous.
>
> * * * But all the wisdom of America is not to be found in the White House or in the Department of State. We need the meditation, the prayer, and the positive support of the people of America who go along with us in seeking peace.
>
> No matter how well we are supported by neutrality legislation, we must remember that no laws can be provided to cover every contingency, for it is impossible to imagine how every future event may shape itself. In spite of every possible forethought, international relations involve of necessity a vast uncharted area. In that area safe sailing will depend on the knowledge and the experience and the wisdom of those who direct our foreign policy. Peace will depend on their day-to-day decisions.
>
> At this late date, with the wisdom which is so easy after the event and so difficult before the event, we find it possible to trace the tragic series of small decisions which led Europe into the Great War in 1914 and eventually engulfed us and many other nations.
>
> We can keep out of war if those who watch and decide have a sufficiently detailed understanding of international affairs to make certain that the small decisions of each day do not lead toward war and if, at the same time, they possess the courage to say "no" to those who selfishly and unwisely would let us go to war.

Here was a profound and fundamental basic statement by Mr. Roosevelt against everything that the administration is doing now.

Here in this statement Mr. Roosevelt envisioned every bit of the propaganda that the New Deal has since sponsored to get us into war. In this speech Mr. Roosevelt foresaw all the stresses and strains and pressures that would be brought to bear to induce us to send American boys back into the horror of the trenches.

Why have all of those declarations against our participation in war been forgotten? Why is it that before the November elections there was not a responsible New Deal spokesman who did not preface everything he said about aid to the other democracies, including Stalin's "wonderful Russian democracy," with the statement that we would give aid "short of war"; we would adopt measures "short of war"; we would take steps "short of war"?

I want to ask if there is any Member of this House who can rise and point out one single time since election when any responsible person in the administration, from the President down, has used that term one single time? It has completely disappeared from the lexicon of the New Deal administration as though the words did not belong in the English language.

Now, let me again go back to the sentence with which I opened this address:

But remember well that attitude and method—the way we do things is nearly always the measure of our sincerity.

Now, the President and his spokesmen have talked one way. Have they done things the way they said they would? Has their attitude and method been in accord with the words they have spoken, with the promises they have made, with the speeches they delivered when they wanted votes for a third term?

I am fully aware of the serious implications of the things I am saying to you. I am fully aware that we are in this war now up to our ears. I am fully aware that as long as we have been taken into this war that we must have unity in building our national defense; that we must have unity in trying to create for ourselves a protection against the resentments of other nations against whom we are at war that will enable us to maintain our security.

Both candidates, Mr. Roosevelt and Mr. Willkie, made speech after speech during the campaign in which their sole platform, the platform on which they ran for, in one case, reelection and, in the other case, election, was "America must be kept out of war." I am going to leave it to you to judge whether or not the attitude and method since then have been in accord with, and consistent with, those solemn promises.

The fact of the matter is that the American people never voted on the question of how far we should go into the war. The American people never voted on the question of unlimited aid to the other countries in the war who might be fighting the dictatorships. The American people never had a chance to pass judgment or register their will on any question of whether or not we should hand over billions piled upon billions of dollars of their money under any so-called lease-lend plan.

I think it is time for just plain, common honesty with the American people. I want to say that there is nobody in Washington in an official position that I know who even remotely expects ever to get back a dime or a dollar of anything that we lease or lend to the other countries. On the contrary, when the war is over, if it ever does end, we will go into a new era of propaganda designed to have us finance and feed the rest of the world, including the dictator powers, just as we did after the last war.

There is a line written somewhere that—

The luring voice having spoken, falls silent and only echo answers.

It has been written somewhere else—I believe by our old friend Omar Khayyam in the Rubaiyat—

The moving finger writes, and having writ moves on.

Those voices which were raised in the luring promises that America can be kept out of war have fallen silent, and only echo answers, but the moving finger having writ—having writ that our neutrality law must be amended to the point of attrition—moves on to write that the lease-lend bill must be passed. That $7,000,000,000 must be voted to be given away to other countries. That same moving finger will soon write that the St. Lawrence waterway, which has been debated over and over in Congress and time and again turned down, must now be built, and that the people of the United States must pay practically the whole cost of its building, as a measure of national defense. Now I hope that moving finger may not move on to write another message which may be "our boys must go across again."

I said a moment ago that the people of America never had a chance to vote on any of these measures. The only issue on which the people had a chance to register their will at the polls last November was on the issue of keeping America out of war. That is the issue the people voted on and it is my honest opinion that practically everybody who voted, voted with that issue in mind—keep America out of war.

I also said a moment ago that we must now all pull together to get through these perilous times as best we may, but that we must be vigilant because national defense means something vastly more than defense against some dictator across the sea. It means vastly more than getting into bed with Stalin, the bloody-handed dictator of Russia, and that we are going to deliver the bloody hand of the dictator Hitler, or the trembling palsied hand of Mussolini. National defense means to defend ourselves by our vigilance and our alertness against alienisms here at home. It means to defend ourselves against sabotage inside our own borders. It means to defend ourselves against those who would lay the pattern for first, war; second, economic chaos; and, third, the overturn of constitutional government.

I do not intend to take your time by narrating step by step the attitude and method by which we have been taken into this war in the very hour when, word by word and speech by speech, we were being assured we would be kept out of this war. We are in position now where we realize that the captain of the ship has let the ship go into the breakers. Now that we are in the breakers, we must stand by the captain of the ship as far as we may and help him get the ship out of these breakers if we can, but that does not mean that we must all unite in permitting the ship of state to be steered out of the breakers up on the beach of communism, or fascism, here in America.

We are fighting today to retain constitutional government. We are fighting today to maintain the Declaration of Independence. No thinking man and woman who reads the newspapers can escape the implication inherent in statements by Harold Laski, British labor economist; by Mr. Bevin, the labor representative in the British Government; by Mr. Wedgwood, labor Member of Parliament, all of whom have declared within the last 7 days that industry must be socialized in England after this war is over and that a necessary measure is that industry must be socialized in all the other countries, including the United States of America and all the dominions and colonial possessions of Great Britain.

We find in this country today a definite, well-defined, highly financed propaganda for "union now," which means to say, union with Great Britain. We find today in America active propaganda which may soon crystallize to take us into the British family of dominions.

I want to say now, so there can be no misunderstanding of my position, that I, for one, want the United States of America to remain the free and independent United States of America.

There has been a good deal of the appearance of spontaneity given to these various steps leading us into war, but let me remind you of something. The morning newspapers of March 22, last Saturday, carried the story that Gen. Sir Arthur Salter, K. C. B., had arrived in Washington to coordinate the shipping interests of the United States and Britain. Now, let me call your attention to a mimeographed brochure issued by Sir Arthur Salter on November 11, 1937, concerning an Anglo-American trade agreement, in which General Salter pointed out several important and significant phases of the British trade agreement then being discussed.

He said in one point in this brochure:

The technical negotiators naturally proceed with this as their main preoccupation; political advantages are not their professional concern. At the same time, the Foreign Office, which would naturally welcome an agreement for its political advantages, has some difficulty in making its point of view effective, because the negotiations are, in their nature, highly technical and complex and outside their professional competence to assess exactly.

The issue will, therefore, probably depend upon whether the political advantages are adequately realized, and are given their full weight by means of constant pressure on the Prime Minister and Foreign Secretary, assisted by clear indications of the interest of the general public.

Now let me quote another paragraph which is carried under the title "The Political Implications."

I quote:

The political importance of these trade agreements can hardly be overstated. All those in America who are concerned to see an improvement of relations with this country attach the utmost importance to a successful conclusion of the negotiations. They regard it as a crucial test of the possibility of a real development of cooperation between the two countries; and believe that while success will give a strong impetus to this development, failure will no less certainly involve a very serious setback. Those who are most closely in touch with American opinion are aware that the importance attached to the negotiations in the United States of America is immensely greater than is generally realized here and are bound to accept the evidence that America's attitude toward this country and, indeed, her policy generally in regard to external relations will be substantially affected by this particular issue.

I continue to quote:

That being so, the importance of the question is obviously very great at this juncture. President Roosevelt is trying, as his great Chicago speech of October 5 showed, to arrest and reverse the strong movement toward complete isolationism reflected in the neutrality legislation. It is also obvious that he is encountering great resistance. It is evident that an American movement toward cooperation can only proceed through economic, as distinct from political, action. Economic cooperation, however, inevitably has a political effect; it may, or may not, lead later to political action—e. g., a modification of the neutrality law or direct advice

in a particular political dispute, or even in a particular case, economic action directed to a political purpose.

Let me now quote a few more lines from General Salter's brochure.

I quote:

The international position has so deteriorated that the peace-loving nations with systems of government that are favorable to policies assisting the prospects of peace cannot count upon a position in diplomacy which is stronger than that of the aggressive dictatorships. The balance is doubtful and precarious. But the dictators are not yet confident of their superior strength. There are too many uncertain factors. They are pursuing a power diplomacy, in which every sign of weakness in the free countries, every indication that they are unable to cooperate or to act, encourages them to a more aggressive policy; while, conversely, any indications of the opposite kind have a restraining effect.

Now, Mr. Speaker, I want to ask you if you believe, in view of what I have read, which was written and issued and distributed to certain people in Washington on November 11, 1937, this brochure, which was written by Sir Arthur Salter, indicates that there was any intention or even idea on the part of the administration then—in 1937—to take us into this war, economically or otherwise?

We find, as I said, that this same Sir Arthur Salter is now in Washington to coordinate shipping relations between the two nations. From what we know of the British, I ask if any man here ever heard of a Britisher who did not coordinate shipping to the advantage of Great Britain whenever he got a chance?

Now, this has not been a pleasant task for me to speak as I have, and the reason I have spoken to you in this vein is because eternal vigilance is still the price of liberty in the United States of America. If we are to maintain and retain the Bill of Rights, and if we are to uphold the Constitution, then we must be mindful of the dangers which may threaten us from within as well as those which, we are told, threaten us from without.

In the last campaign I told the people of my district that I was against this country being taken into war. Previous to that, during my first term in Congress, I made a speech in which I discussed frankly the horrors of war. My position today is unchanged. I am still against America being taken into foreign war. I am in favor of a national defense that will be absolutely impregnable to the assaults of any nation or any group of nations, or collection of nations, which might at any time in the future seek to implement by action their natural resentments of our efforts to aid in their defeat. I believe that we should maintain the kind of a defense that can meet an enemy so far off our shores and defeat him so far out at sea that our coastal cities will not have to suffer.

I believe, however, that if we undertake to establish the now famous "four freedoms" in every country in the world that we will have serious trouble with Great Britain, because I do not know how Mr. Roosevelt can proceed to establish his famous "four freedoms" in India without some misunderstanding with Great Britain. I do not know how we are going to assure the hordes of Asia, the hungry millions of Russia, and other hungry millions of China freedom from fear, freedom from want, at the expense of American citizens, without bankrupting the people, without bankrupting this Nation.

Do not misunderstand me. If I had it in my power to so change the mental attitude of peoples that every man would be every other man's brother, and that peace and good will would cover this earth from pole to pole, God knows, I would do it. But let me say to you that freedom is not an external condition. It is an inner light. Freedom cannot be legislated. It must be lived. Good will cannot be legislated, it must be lived. Honesty in government cannot be legislated; it must be inherent in the heart, the mind, and the desires of the administrators. You may compel a man to act as though he is honest, but he will be honest only when he loves honesty more than he loves his own personal interest. You may compel a man to act as though he were just, but he will be just in truth only when he loves justice more than he loves his own immediate personal interests. You may compel a man to talk as though he loves his country, but he will love his country only as he loves the rights, the freedoms, the liberties, and the privileges which his country made possible for him. And he can enjoy those rights, those liberties, those freedoms, and those privileges only so long as he accords the same rights to his fellow man and is willing to correct his own action so as not to infringe upon those rights.

We cannot take the gospel of democracy to India, because India does not want democracy. We cannot take the gospel of plenty to China until Chinese millions are ready to have plenty and know how to use plenty.

Mr. Speaker, there is so much here that we try to dispose of by words, by slogans, by shibboleth that must be lived in the hearts and minds of the people before it can be realized. Therefore, in conclusion, let me say to you that while we must all unite in trying to carry our Nation through these perilous hours of its utter danger we must be just as alert to the dangers to our freedoms and to our constitutional Republic from within as to any dangers that may threaten us from without. And may God help us to avert them both.

Sale of Alcoholic Liquors at Military Posts and Naval Stations

EXTENSION OF REMARKS

OF

HON. KARL M. LeCOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1941

RESOLUTION BY THE GENERAL ASSEMBLY OF THE STATE OF IOWA

Mr. LECOMPTE. Mr. Speaker, under leave to extend my remarks, I include the following resolution adopted by the General Assembly of the State of Iowa to pass the bill S. 860:

House Concurrent Resolution 28

Concurrent resolution memorializing the Congress of the United States relative to the early consideration and passage of Senate file 860

Whereas there is now pending before the Congress of the United States proposed legislation, designated as Senate file 860, providing for the common defense in relation to the sale of alcoholic liquors to the members of the land and naval forces of the United States and to provide for the suppression of vice in the vicinity of military camps and naval establishments; and

Whereas the Federal Government has located in the State of Iowa, and may hereafter locate in this State, an ordnance plant or other plant or plants which it may deem desirable in the development of the national defense; and

Whereas it is desirable in the interest of the common defense to provide for the suppression of all forms of vice in the vicinity of such plants or projects, and the people of the State of Iowa are greatly interested in the passage of such legislation: Now, therefore, be it

Resolved by the house of representatives (the senate concurring), That the General Assembly of Iowa respectfully petition the Members of Congress to give early consideration to Senate file 860, now before the Senate, and to the enlargement of the provisions thereof in order to include the suppression of vice in the vicinity of ordnance plants or projects now or hereafter erected and maintained by the Federal Government in the development of national defense, and to enact such legislation at an early date: Be it further

Resolved, That copies of this resolution be forwarded to the presiding officers of the Senate and the House of Representatives of the Congress and to each of the Senators and Members of the House of Representatives from Iowa in the Congress of the United States, and that they be urged to use their best offices to procure the enactment of such legislation in Congress.

I hereby certify that the foregoing concurrent resolution was duly adopted by the forty-ninth general assembly.

A. C. GUSTAFSON,
Chief Clerk of the House.

The Vision of Benjamin Harrison

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1941

Mr. LUDLOW. Mr. Speaker, by unanimous consent of the House, I submit for publication in the CONGRESSIONAL RECORD an editorial from the Indianapolis News, dealing with Benjamin Harrison's far-reaching vision as a conservationist.

The editorial follows:

[From the Indianapolis News]

HARRISON'S VISION

In carrying out its duty to recommend to Congress a form of memorial for Benjamin

Harrison, the Benjamin Harrison memorial commission has suggested that the 700,000-acre national forest purchase unit in the south part of the State be named in his honor and soon acquired, that a national forest institute be established in Marion County in his honor, and that the Harrison home in North Delaware Street be preserved by the Federal Government.

The forest memorial recommendation was adopted after a study of the Harrison administration and the effect of its achievements on the country. Few of Harrison's contemporaries would have ranked his forestry policy as important during his administration, but he saved the California redwoods by executive order, set aside 13,000,000 acres of the public domain for the first national forests and created the United States Forest Service.

In the perspective afforded by 50 years, the tariff issue, the question of Latin-American relations, the foreign policy, the admission of six States in the westward movement have receded to a secondary place in the achievements of Harrison's administration. Today it is seen that Harrison was a man of great foresight. He is being ranked by some authorities as the most farsighted conservationist of the nineteenth century.

If Congress approves the recommendations, Indiana will feel not only that its only President has been suitably recognized, but that the country has gained much in its battle to conserve its lands and forests. Harrison's stature grows with the years, and the people's sense of their indebtedness to him grows with it.

Oregon Requests Legislation on Matters of Interest to State

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1941

RESOLUTIONS BY OREGON LEGISLATURE

Mr. ANGELL. Mr. Speaker, I ask consent to extend my remarks by including three memorials recently passed by the Oregon State Legislature. Senate Joint Memorial No. 7 petitions the Congress to enact Federal legislation against lynching; House Joint Memorial No. 8 requests removal of all restrictions on hunting of blue herons and mergansers in the State of Oregon; and Senate Joint Resolution No. 16 petitions the Congress to provide for the establishment of a supplementary military or naval academy somewhere within the borders of the State of Oregon.

The memorials and resolution referred to follow:

Senate Joint Memorial No. 7

To the Honorable Senate and House of Representatives of the United States of America in Congress assembled:

We, your memorialists, the Forty-first Legislative Assembly of the State of Oregon, in regular session assembled, respectfully request and petition as follows: to wit:

Whereas the heinous crime of lynching still continues occasionally in various States of the United States; and

Whereas local law-enforcement officials have in numerous instances been unwilling or unable to protect citizens against this outrageous practice; and

Whereas the people of the State of Oregon, in common with nearly all citizens of the United States, are eager to see the crime of lynching forever eliminated from our democracy: Now, therefore, be it

Resolved by the Senate of the State of Oregon, the House of Representatives jointly concurring therein, That we, your memorialists, the Forty-first Legislative Assembly of the State of Oregon, do hereby most respectfully request and petition the Congress of the United States and the Members of Congress from the State of Oregon to consider favorably and enact Federal legislation against the crime of lynching; and be it further

Resolved, That copies of this joint memorial be forwarded by the secretary of state of the State of Oregon to the President of the United States, to both Houses of Congress of the United States, and to each member of the Oregon delegation in Congress.

House Joint Memorial No. 8

Whereas the blue heron and merganser are included in the migratory bird treaty and, therefore, are protected from hunting by regulations of the Federal Government; and

Whereas the blue heron and merganser exist almost entirely on young fish life; and

Whereas the blue heron and merganser are widely known water birds in Oregon and are found in practically every creek and lake throughout the State, and cause a heavy toll of young fish each year: Therefore be it

Resolved by the House of Representatives of the State of Oregon (the Senate jointly concurring therein), That the Congress of the United States hereby be memorialized to take such action as will remove all restrictions on hunting of blue herons and mergansers in the State of Oregon; and be it further

Resolved, That a copy of this resolution be sent to the members of the Oregon delegation in Congress and to the director of the Federal Fish and Wildlife Service.

Senate Joint Resolution No. 16

Whereas the defense of America requires strong bulwarks of protection on both seaboards; and

Whereas there are now pending in Washington, D. C., proposals to establish supplementary naval and military academies at various points along the Pacific coast; and

Whereas the State of Oregon is strategically located with respect to harbors, rivers, and mountain ranges; and

Whereas training and instruction near to home often result in stronger cultural and social ties so far as the recruit is concerned: Now, therefore, be it

Resolved by the Senate of the State of Oregon (the House of Representatives jointly concurring), That the Congress of the United States be petitioned to provide for the establishment of a supplementary military or naval academy somewhere within the borders of the State of Oregon; and be it further

Resolved, That copies of this memorial be sent to the President of the United States, the President of the United States Senate, the Speaker of the House of Representatives, the Secretary of the Navy, the Secretary of War, and to all the Members of the Oregon congressional delegation.

Our National Defense—Reporting Action of the Legion's National Executive Committee

EXTENSION OF REMARKS

OF

HON. WILLIAM H. LARRABEE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1941

RADIO ADDRESS OF HON. MILO J. WARNER, NATIONAL COMMANDER OF THE AMERICAN LEGION

Mr. LARRABEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call to the attention of my colleagues, who may not have had an opportunity to hear the message, nor to have read a detailed report of same, the statement made on Sunday evening, March 16, over a national radio chain, by Hon. Milo J. Warner, national commander of the American Legion.

Mr. Warner's address on that occasion called to the attention of the Nation the action of the national executive committee of the American Legion, in its special meeting at Indianapolis, March 14 and 15, in which meeting the committee considered the question of national defense in the light of recent developments and upon the basis of the report made to the committee by the American Legion mission, which only recently returned from a study of affairs and conditions in Great Britain.

Whether or not we agree with the action of the American Legion's national executive committee, the report of the Legion's mission to Britain, or the statements made by Mr. Warner in reporting to the Nation, I am sure we shall all agree that the Legion and its leadership is primarily interested in the welfare of our country and our people, and the views of the Legion's executive committee and the Legion's commanding officer are certainly worth our careful consideration.

I submit herewith Mr. Warner's statement:

Ladies and gentlemen of the radio audience, today, we of the American Legion, more than 1,000,000 members strong, in nearly 12,000 posts, in every community of our land comprising those who fought in the armed forces in the last war, are celebrating our twenty-second birthday as an organization, at a time when world events which threaten the life of democracies are sweeping us on toward a new destiny.

Yesterday the American Legion's national executive committee, composed of one representative from every State in the Union, concluded a special 2-day meeting at its national headquarters in Indianapolis. This meeting was called to consider our national defense in the light of present-day events and to receive and act upon the report of an American Legion mission which it had authorized to visit Great Britain for the

twofold purpose of studying civilian defense and to consider how best to make effective a resolution adopted at our 1940 Boston convention last September, to the effect that a sound national defense for our country calls for the giving of all practicable aid to Great Britain at this time.

This mission, made up of Franklin D'Olier, the Legion's first full-time national commander; Maj. Gen. Frank Parker, United States Army, retired, who commanded the First Division overseas in the last war; Joseph S. Deutschle of the national headquarters staff, and the speaker, left New York by clipper ship February 5, returning March 6, after an 18-day visit in England.

We went as fact gatherers and observers for the American Legion. Our purpose at all times was to serve the Legion's interests and the interests of the United States first, last, and always. We endeavored at all times to keep ourselves in an objective frame of mind. We represented no other group or organization, political or otherwise, and we did not go as individuals. We went solely in the service of the American Legion.

We visited Coventry and Birmingham in the Midlands, Bristol on the west coast, Portsmouth, Southampton, Bournemouth, Folkestone, and Dover on the Channel coast. We were with the Army, the Navy, and the Royal Air Force, and inspected Home Guard battalions and units. We studied air-raid precautions. We visited factories engaged in vital defense production. We inspected observation posts, air-raid shelters, communal feeding, canteen services, the fire brigades, some of the shipping docks, and met with numerous officials of the British Government in all lines of military and civilian defense. We observed the activities and leadership of labor and industry and the morale of the people and the armed forces.

We met with the British Legion, an organization somewhat similar to the American Legion, and observed its activities in wartime. We were privileged to meet with Prime Minister Winston Churchill, and were deeply impressed by his great leadership and ability. He is a truly great leader.

Although our time was too short in England to make any highly accurate technical study of particular phases of the various situations, we were conducting an intensive reconnaissance, and did get and feel the force and impact of certain impressions which came to us, not through the sieve of censorship or colored glasses, but from actual conditions and events which we saw and which could not be denied.

These are some of the impressions which we of the mission received and reported to the national executive committee of the American Legion at its meeting:

The British on the island have made a remarkable recovery from the very severe punishment of last fall and the early winter.

They fully realize the terrific seriousness of their present situation and unquestionably appreciate it is a life-and-death struggle in which they are determined to win out, no matter what the cost.

The morale of both the civilian population and the armed forces is excellent. The armed forces particularly are hungry to close with the enemy and get their hands on him. I would not like to try to land or place an invading force among them. The civilian population is unselfishly sacrificing and courageously carrying on.

They sorely need war materials, munitions, and certain food supplies, and it is definitely in the balance whether they can win without them; that is, the actual delivery to them in Great Britain of these much-needed munitions and food supplies, with which their ultimate victory is practically certain.

Germany is conducting a carefully planned, relentless, and besieging warfare by submarine and bomber upon English shipping, its life lines and terminals, and while the British Air Force is confident that Germany will never secure supremacy of the air over England and the Army is confident that an invasion cannot ultimately be successful, nevertheless the British realize the great threat against their shipping and the difficulty actually to get munitions and supplies into England.

This, in part, was our report to the national executive committee.

So that you will gain some definite impression of the importance attached to this emergency by the Legion, I want to say that the meeting of that committee held in Indianapolis Friday and Saturday of the past week was only the fourth such special meeting of this committee ever held in 22 years.

The national executive committee represents every section of our Nation, and each member speaks for his own State in matters of Legion policy. Agriculture and industry and labor, the civilian, the spokesman for military interests, and those who have occupied high places in the Government were represented in the expressions arising out of the meeting.

There was entire freedom of expression in the discussion that followed our presentation of our impressions.

Following this discussion a subcommittee composed of five past national commanders of the Legion drafted a resolution to express the thought of the organization in the present situation. It was unanimously adopted by our national executive committee.

There has been some confusion in the public mind arising from the manner in which that resolution was reported in the newspapers. There is no confusion in my mind as to the definite statement that was made by the national executive committee of the American Legion.

Basing its resolution on the action of the 1940 Boston national convention of the Legion, the national executive committee quoted the Boston convention where that body went on record by saying, "that we should at this time give all practicable aid to Great Britain and those alined with her in their fight for freedom.

But in this special meeting, the national executive committee, taking into consideration the state of national affairs created by the passage of the lend-lease bill, and associating such a national action with the reports of our mission, definitely gave recognition to the belief that aid to Great Britain should be delivered to her now.

Our national executive committee recognized the urgency of prompt delivery to Great Britain of the materials that will be helpful to her in the terrific struggle in which she is engaged. That means delivery now. It means delivery when and where delivery will be of some benefit. It does not mean the delaying of aid to Great Britain. It means the actual delivery of every resource we possess which can be of help to Great Britain without crippling our own national defenses.

Over and beyond the Legion's statement of its policy with respect to giving aid to Great Britain, our national executive committee went further and declared that the administration should remove any tolerance of bottlenecks, obstructions, or hindrances of whatever nature which now hamper and delay the production and delivery to Great Britain and those alined with her of all necessary arms, tools, and materials of national defense.

It is as direct a statement as could possibly emanate from such a group. We have said that aid should be delivered to Great Britain. We have said that no delays in producing the material aid should be tolerated. To the Government we have left the direction and the management of all the component elements which will make production and delivery with speed and in quality and quantity sufficient to the needs of the hour.

In committing itself to the above policy the American Legion says that all this should be done, not because of any sentiment for Great Britain but on the purely patriotic basis of the best possible defense of our own country.

At all times all of us of the American Legion who have been privileged to fight for our flag and country are thinking and acting solely in its interests, first, last, and always.

England is dependent upon us for munitions and supplies to win the war in which she is engaged against dictator nations and totalitarianism.

Should England fail, our combat, or potential combat, task will be all the harder.

Should England fail, our need for continued maintenance of larger armies and navies will not only be necessary but absolutely essential for our self-preservation as the great Nation we are.

Should England fail, the need and danger of sending many of our armed forces into the face of blazing war and actual combat will be much greater. So it is for our interests as a nation that we say we should actually deliver all the aid we can to Great Britain at this time and see to it that it actually reaches Great Britain.

Every American citizen should be filled and inspired with the will to live and fulfill our destiny as a nation—the will and determination to go on and on when the going is hard for all of us, each doing his part when the doing of it is hard; each of us strengthened by the will to reach the goal, which is the very breath and spirit of life—of real life—without which there is mere existence, not life as free, courageous, alive American people.

Let every American man and woman accept the self-discipline necessary to say truthfully:

"I am really doing my bit and all of it; I am a true American; I am not failing my Maker, who placed me here for life on earth. I am dealing fairly with my God and with my country. I am showing my gratitude to God, who made me, and to my country, which has given me so much, by not holding out on either of them, but going on fearlessly toward that destiny which lies ahead."

Serious Situation Confronting the Nation's Farmers

EXTENSION OF REMARKS

OF

HON. R. T. BUCKLER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1941

LETTER FROM JAMES M. WITHEROW, OF MOORHEAD, MINN.

Mr. BUCKLER of Minnesota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter which I received yesterday from James M. Witherow, of Moorhead, Minn. He brings out some facts and presents some viewpoints and observations which should be of interest to the people of the United States and particularly to Members of Congress. His letter is as follows:

MOORHEAD, MINN., *March 22, 1941.*

Hon. R. T. BUCKLER,
Representative in Congress,
Washington, D. C.

DEAR MR. BUCKLER: The situation of the farmers throughout the United States still continues to be serious, by reason of the

eastern newspapers and eastern politicians representing manufacturing organizations. It is almost impossible for a real farmer or any person representing the interests of the farmers to be heard fully and frankly on the merits of the industry in which their money is invested, without eastern politicians and eastern newspapers attempting to make it an object of ridicule.

Two years ago one of the large eastern magazines sent out one of its reporters to cover the Dust Bowl region and report upon its conditions. The burden of his report was that he found the dust piled up around the fences and the barns in many places to such an extent that the farmers and the livestock were without any food and provisions. Then he told of driving to a nearby village where the only provisions he could get were warm beer and poor-boy sandwiches. The general substance of his argument was that the efforts of the Government to build up the community was "boondoggling," and the real sufferer was the poor reporter who was obliged to subsist on warm beer and poorman sandwiches. The fact that the homesteaders had invested their all and striven to build up a home and a family was something that was not entitled to consideration.

Another magazine reporter, who likes to pose as an economist, took a trip around, consulting with the local bankers, railroad agents, and Republican newspaper proprietors, and then wrote an article which he entitled, "The Pain in the Northwest," in which he attempted to ridicule farmers for cultivating their soils and making an effort to obtain the same economic privileges for livelihood which was enjoyed by other citizens in the Republic.

And so it goes. One newspaper after another using their circulation to suppress both the expression and the opportunities of the farmers to develop their industries along sound industrial experience instead of under eastern domination. Quotas are attempted to be established to meet the requirements of the eastern manufacturers rather than the farmers. For example, 25,000,000 bushels of flax are imported every year from Argentina, because the handicap of railroad freights to the eastern crushing points are practically equal to the tariffs, and outside markets have control over our flax market; and still the farmers, who are paying steadily increasing taxes upon flax land, are criticized for their lack of economic progress.

The same thing is true in regard to the sugar industry. Both the cane and the beet producers are kept under the financial control of the manufacturers; and through lack of an adequate tariff they are scarcely permitted to make a decent living.

Even the Weather Bureau is charged up against the Agricultural Department, and its agents and observers are kept constantly employed working for the transportation companies, while observation in regard to moisture conservation of the soil, percolation, and cultivation are not only steadily neglected, but are treated with ridicule when they are asked to devote their attention to the service for which the Government pays them a salary.

Experience shows that food production in Europe and other portions of the world are being diminished and reduced to a very limited supply. Yet Mr. Jesse Jones lends billions of dollars to other enterprises, but will not reply to a letter relative to the opportunity to finance agriculture and the exports of the products abroad. Throughout the country manufacturers, banks, railroads, and every other financial organization have their needs carefully considered, and liberal advances made; but agriculture is a "Cinderella industry" and it is not socially proper to have the interests of the farmers considered; while the lobbyists of the industries throng the Washington hotels.

I realize the obstacles which confront you as being one of the very few real operating farmers who are in Congress, but I will be glad if you will put these matters in progress and see if it isn't possible that the farmers should have at least a decent hearing in regard to their problems instead of being constantly made an object of ridicule and braintrusting for the benefit of the other industries of the country.

Very truly yours,

JAMES M. WITHEROW.

Communists in Industry

EXTENSION OF REMARKS

OF

HON. MARTIN DIES

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1941

TELEGRAMS FROM OFFICIALS OF STEEL WORKERS' ORGANIZING COMMITTEE AND REPLY THERETO

Mr. DIES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegrams and a copy of my reply to Mr. Philip Murray:

WASHINGTON, D. C., *March 25, 1941.*

Congressman MARTIN DIES,

House of Representatives:

You are quoted in today's newspapers as having made speech in Congress about alleged Communist operations speech in steel industry and of their supposedly being on pay rolls of Steel Workers Organizing Committee. You are quoted as naming 27 individuals in this respect. I have no knowledge of these individuals being Communists or ever having been Communists. But I have definite knowledge of the fact that of the 27 individuals named by you, only one, namely Clarence Irwin, is on S. W. O. C. pay rolls. He is wiring you direct. Eleven individuals named by you were never on S. W. O. C. pay rolls; the other 15 have been disassociated from S. W. O. C. for a considerable period of time, ranging from 3 years to 5 years ago. This information would have been available to you had you been interested in making a fair investigation. If this is the nature of evidence you are quoted as saying presents an alarming picture, I believe the facts herein show your speech to be a false alarm. I can give you my personal assurance that your concern on this score is entirely groundless. I shall appreciate your reading this telegram on the floor of Congress.

PHILIP MURRAY,
Chairman, Steel Workers Organizing Committee.

BALTIMORE, MD., *March 25, 1941.*

Congressman MARTIN DIES,

House of Representatives,

Washington, D. C.:

I see by the press that you have used my name in your speech before the House of Representatives in some sort of connection with the Communist Party. I absolutely deny any connection of any kind, either past or present, with the Communist Party. I have for many years been an active member of the organized labor movement and your vicious attempt to smear my name with such false, slanderous statements can only be interpreted as an attack on the legitimate labor movement as well as an attack on me personally. I request that this wire will be read by you before the House of Representatives.

CLARENCE IRWIN,
National Representative,
Steel Workers Organizing Committee.

WASHINGTON, D. C., *March 26, 1941.*

PHILIP MURRAY,

Chairman, Steel Workers Organizing Committee, Congress of Industrial Organizations, Washington, D. C.:

This is to acknowledge receipt of your telegram which you have requested me to read to Congress.

In my speech before the House I stated that the persons named by me had been connected with the S. W. O. C.; that I did not know whether they were still on the pay rolls of the S. W. O. C. as of today as I do not have access to the account books of the organization. Our committee gave this information to the country nearly 3 years ago. Spokesmen for your organization denounced the committee as red baiting. Now I am advised that 15 of these people have at some time been connected with your organization, but have been disassociated from it. You do not state why these people were disassociated from the organization, but evidently it had nothing to do with their Communist connections since you state that you have no knowledge of these individuals being Communists or ever having been Communists. This statement on your part amazes me because many of these people are notorious and active members of the party.

As chairman of the C. I. O. please advise me by telegram at once so that I may read your reply to the Congress whether or not the C. I. O. is ready and willing to expel from its ranks and from positions of leadership members of the Communist Party.

What does your organization propose to do with the following officials of the C. I. O. concerning whose Communist affiliations there can be no doubt in view of the evidence before our committee?

Joseph Curran, head of the National Maritime Union and vice president of the C. I. O. as well as a member of your executive board; Ben Gold, president of the International Fur and Leather Workers Union and a member of your executive board; Donald Henderson, president of the United Cannery Agricultural Packing and Allied Workers of America and also a member of the executive board of the C. I. O.; Harry Bridges, president of the International Longshoremen and Warehousemen's Association and a member of your executive board; Michael Joseph Quill, president of the Transport Workers Union and a member of your executive board, and also John Santo, Austin Hogan, officials of the same union; Lewis Merrill, president of the United Office and Professional Workers of America and a member of your executive board; Abram Flaxer, president of the State, County, and Municipal Workers of America and a member of your executive board; Ralph Dawson, alias Austin and Olney, president of the Los Angeles C. I. O. industrial council; Kenneth Eggert, international representative of the National Die Casters Association; Marcel Sherer, national organizer for the Federation of Architects, Engineers, Chemists, and Technicians Association, and Lewis Alan Berne, president of the same union; Grant Woakes, chairman of the Farm Equipment Workers Organizing Committee; Joseph Selly, president of the American Communications Association; James Matles and Neil Brandt, organizers for the United Electrical, Radio, and Machine Workers of America, and others whose Communist records are equally clear.

Earl Browder testified before our committee that 50,000 members of the Communist Party are also members of trade unions; that two-thirds of them are affiliated with your organization and that hundreds of his members are officials of your unions.

I will appreciate a direct and unequivocal answer so that the Congress and the country may definitely know once and for all what the attitude of your organization is with respect to the retention in your ranks and in positions of leadership of well-known Communists.

MARTIN DIES,
Member of Congress.

Investigation of Subversive Activities

EXTENSION OF REMARKS
OF
HON. LE ROY D. DOWNS
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1941

RESOLUTION BY THE YANKEE DIVISION VETERANS' ASSOCIATION

Mr. DOWNS. Mr. Speaker, under permission granted me, I wish to insert the following resolution in the CONGRESSIONAL RECORD as adopted by the Yankee Division Veterans' Association:

Whereas the investigative personnel of the United States Treasury Department, operating under the direction of Elmer L. Irey, Chief Coordinator of the Treasury enforcement agencies, Secret Service, Intelligence, Alcohol Tax, Narcotic, and Customs Units, be delegated the authority to investigate subversive activities: Be it therefore

Resolved, That the American Legion and Yankee Division Veterans' Association strongly urge upon the President and the Congress of the United States the immediate adoption providing this authority to the Treasury enforcement agencies in the field in eliminating all subversive activities in the United States and assist in the successful prosecution in the courts in accordance with the due process of law, to the end that these groups and these individuals will be entirely eliminated from our Nation.

Minority Role

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1941

EDITORIAL FROM THE WASHINGTON POST

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of March 26, 1941:

[From the Washington Post of March 26, 1941]

MINORITY ROLE

Representative JOSEPH W. MARTIN'S dual role as minority leader in the House of Representatives and chairman of the Republican National Committee gives him a heavy burden to carry. Nevertheless, the G. O. P. National Committee has shown good judgment in refusing to permit Mr. MARTIN to resign, for he has proved himself to be a capable party leader and a statesman of considerable stature. Probably more effectively than any other G. O. P. leader in Congress, Mr. MARTIN has outlined a reasonable course of action for Republicans in the present emergency. "We may differ among ourselves," Mr. MARTIN told the House in supporting the Senate amendments to the lease-lend bill recently, "but there is no division in our loyalty to our country or our determination to protect the security of our people. We are one people, an undaunted people, determined that real Americanism shall not perish * * *." That note was reiterated in his address to the Republican National Committee on Monday.

Mr. MARTIN sees no occasion for inactivity on the part of the minority party. He seeks national unity for defense and in pursuance of other policies which Congress approves through the democratic process. But he also points to the need for "an intelligent, constructive, and courageous opposition." National unity, vital as it is, must not degenerate into the expression of a single standpoint. When the Nation is face to face with gigantic problems, the opposition party has a special obligation to counsel the administration in a spirit of nonpartisanship and to criticize policies it believes to run counter to the national interest. In the present emergency the minority party has an obligation only less important than that of the majority to meet each new problem with courage and honest thinking. Mr. MARTIN provides a happy link between Republican legislators and the party organization in fulfilling this responsibility.

Iowa Press Association Says Wages and Hours Act Is Unfair To Small Newspapers

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1941

RESOLUTIONS OF THE IOWA PRESS ASSOCIATION

Mr. LeCOMPTE. Mr. Speaker, under leave to extend my remarks, I include resolutions adopted by the Iowa Press Association in their convention March 15, 1941:

Be it resolved by the Iowa Press Association in convention assembled this 15th day of March 1941, That this association expresses heartily to its officers and directors its appreciation of the service rendered during the past year and the efficient manner in which its business has been conducted, especially commending President Ward Barnes, Managing Director Don Reid, and his office assistant Miss Cleona Neidt.

We further express our appreciation for the entertainment and courtesy extended by the Greater Des Moines committee. Its activities have done much to unify the spirit of all Iowans. We also thank those who have taken part in the program, which has been both profitable and enjoyable: Be it further

Resolved, That the Iowa Press Association welcomes as a valuable cooperator the Iowa Press Women's Club, an organization calculated to stimulate the spirit and efficiency of the press of Iowa.

Resolved, That this association approves the efficient and speedy manner in which the General Assembly of Iowa is handling the routine of its work. It is a record of which the State may be proud. While on the subject of legislation we urge action to coordinate the Federal and State laws on unemployment compensation and to assure that those establishments which maintain a high stability of employment may receive merit rating and appropriate relief from taxation to carry the load of employers who do not maintain such stability. We further endorse the passage of Senate file 360, the bill to require the publication of the proceedings of school boards in the larger districts. If we did not have faith in the power of publicity we would not be in that business. The major portion of local taxes are spent by school boards. Publication of such expenditures will be a protection to both the public and the school-board members. And in this connection we urge our own members to publish all official proceedings of public bodies in such manner as to be easily readable by the public: And be it further

Resolved, That the press of Iowa pledges its support to the Government and people of the United States in the effort to maintain the opportunities for free governmen in the world. Whatever we may have come through or wherever we may be going, the immediate task ahead is the defeat of totalitarianism in the world. We would call the American people to a more profound realization of the serious responsibilities ahead of them. Hitler prepared for this war by more work and less booze. The United States has been preparing by less work and more booze. As a nation we will have to reverse this condition and rise at least to the standard of Hitler in these matters. But we must go further and renew our faith and allegiance to the Divine Creator, whom Hitler has rejected. If we do this, then "this Nation, under God, shall have a new birth of freedom, and that government of the people, by the people, and for the people shall not perish from the earth."

Whereas the Federal Fair Labor Standards Act, commonly known as the wage-hour law, has brought about a condition which, in our opinion, instead of promoting fairness, is, in fact, unfair to local small newspapers and the communities where they are located, the Iowa Press Association in convention assembled this 14th day of March 1941 subscribes to the following statement of facts:

The wage-hour law exempts from its provisions retail mercantile establishments, farms, and most local industries. It also exempts weekly and semiweekly newspapers having circulations of under 3,000. All other newspapers, according to the interpretations of the Wage and Hour Administration, are covered by the act. It is apparent from the exemption made that it was the intention of Congress to exempt, along with other local enterprises, newspapers doing mainly a local business.

But there are many weeklies and semiweeklies having circulations in excess of 3,000 and small dailies doing a strictly local business in small cities and rural communities. Their business is almost entirely within a limited local trade area and they are supported by communities in which nearly all business is exempt from the provisions of the wage-hour law. Their interstate business is confined to a comparatively few subscribers, former residents of the communities where published, who want the old-home news. Such circulation does not contribute to the cultivation of interstate trade.

By imposing the regulations of the wage-hour law on such small dailies, weeklies, and semiweeklies Congress has set them up as

islands of short hours and high wages in communities where the prevailing hours are longer. From the apparent intention of Congress to exempt small local papers, it would seem that failure to include in the exemption small dailies and local weeklies and semiweeklies with circulations above 3,000, but doing a local business only, was due to a misunderstanding by Congress of the true situation with regard to such papers.

This discrimination is unfair to the publishers of such papers, to their workers, and to the communities which support them. A peculiarly intimate relationship exists between the country newspaper and its supporting community. The demand for newspaper and printing service in such communities is not, and cannot be, uniform throughout the year. If the newspaper is to serve its supporting community, it must serve it when it needs service. Such a paper usually employs all the printers in the community. If work is not reasonably steady, printers will not remain in the rural communities, but drift to the larger centers. In fact, such newspaper shops usually recruit and train their help from among local boys as more printers are needed. When the peak load comes, these regular forces must carry them. There are seldom any reserves of idle printers on which to draw.

If the overtime provisions of the wage-hour law are enforced the publishers must either lower in some way the regular 40-hour wage scales, gouge the patrons to make up the higher costs, lay off men whenever possible, do business at a loss, or refuse to care for the needs of the community. While such local, home-trained printers are usually among the best-paid workers in the ordinary rural community, taking in their total annual incomes and working conditions, their scales are not up to city wage scales, which would be out of line with local prevailing wages and conditions. Therefore, the publisher cannot go to the cities for extra help without seriously upsetting his regular schedule of prices and costs.

Because of a lower wage scale the printers in the rural communities need to work more hours in order to have an adequate income, and can do so without injury to health, as they usually live close to their work and have more life in the open air than workers in the larger cities, and in doing so they are only accommodating themselves to the conditions of workers in other local enterprises exempted by Congress from the provisions of the Wages and Hours Act.

The conditions of which we complain are aggravated by the defense program and the Selective Service Act. There never had been any surplus of skilled printers in the smaller communities. Under the defense program there is already a serious shortage. This will bear especially hard on the smaller papers of limited circulation as the larger papers will draw on their labor to fill vacancies.

The Iowa Press Association makes no complaint against the general spirit and purpose of the Wages and Hours Act, but it does complain that it is an unfair discrimination to enforce its provisions against newspapers in communities where the overwhelming majority of the people from whom local papers derive their support are not so covered.

The most of strictly local newspapers would be included in an exemption of all papers, daily as well as weekly and semiweekly, having circulations of under 5,000, or exemption of newspapers when 75 percent of their circulation is in the local trade area where published: Therefore be it

Resolved, That the Iowa Press Association respectfully petitions the Congress of the United States to so amend the Wages and Hours Act as to exempt all local community newspapers, including dailies, having circulations of under 5,000, and/or all such papers 75 percent of whose circulation is within 40 miles of the place of publication. It is the intent of this resolution to ask that the wage scales and working conditions of newspaper workers be made to conform with the prevailing scales and conditions of the communities in which they are published; and be it further

Resolved, That copies of this statement and resolutions be forwarded by the secretary of the Iowa Press Association to the Senators and Congressmen from Iowa and to the chairmen of the Labor Committees of the House of Representatives and Senate of the United States.

Was It Pure Demagogery?

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

Mr. COCHRAN. Mr. Speaker, the gentleman from Missouri [Mr. BENNETT], in a speech March 24, page 2595 of the CONGRESSIONAL RECORD, criticized some remarks I made March 21 and used the following language—I quote:

> It is pure demagoguery, and was doubtless made for the purpose of injuring me politically.

On March 21 I was speaking in reply to an attack made upon me by the gentleman from Kansas [Mr. LAMBERTSON]. I referred to the attitude of Republicans generally in connection with the Work Projects Administration. I also called attention to an amendment offered by the gentleman from Missouri [Mr. BENNETT] to the urgent deficiency bill.

Now, what are the facts? I have made a little investigation to find out just what Mr. BENNETT would have accomplished by his amendment, and I find the Emergency Relief Appropriation Act of 1940, passed in June 1940, contained a limitation for administrative salaries of $34,105,000, on expenditures for the entire fiscal year if the original appropriation of $975,000,000 was made to last throughout the entire fiscal year. However, in view of the fact that the original appropriation was expended in 8 months, it was necessary, in the urgent deficiency appropriation bill, to increase the total amount to be obligated for administrative salaries for the entire fiscal year to $37,100,000. The Work Projects Administration has already obligated, through February 28, 1941, a total of $25,479,811 for administrative salaries. Mr. BENNETT's amendment therefore would have reduced the authorization below the amount which had already been spent during the first 8 months. The $25,000,000 contained in Mr. BENNETT's amendment would have limited the expenses for administrative salaries to 1.8 percent of the total appropriation of $1,379,650,000 for the fiscal year. The $37,100,000 now authorized is 2.7 percent of the total appropriation. I said in my statement it was about 3 percent.

W. P. A. administrative employment has been reduced from an average of 36,003 in the fiscal year 1939 to 21,237 on February 28, 1941. The $37,100,000 now authorized in itself requires a further reduction to approximately 18,750 persons by June 30, 1941.

As far as possible, W. P. A. administrative employees are picked from the needy unemployed. However, for the proper operation and supervision of the whole program it is necessary that administrative employees be chosen primarily for their qualifications to perform specific functions and not solely on the basis of need. It is necessary to pay salaries such as will permit the employing of qualified persons. However, the average salary of W. P. A. administrative employees is approximately $300 per year less than the average salary of Government employees in other Federal agencies.

After reading this analysis of Mr. BENNETT's amendment I do not feel anyone would be justified in stating my language could be classed as pure demagoguery.

Initiation Fees of Labor Unions

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1941

LETTER FROM THE PRESIDENT OF THE AMERICAN FEDERATION OF LABOR

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written by President Green, of the American Federation of Labor, to Senator NORRIS, of Nebraska:

MARCH 24, 1941.

Hon. GEORGE W. NORRIS,
United States Senate, Washington, D. C.

MY DEAR SENATOR: In the letter you sent me dated March 21 you advise me you have received complaints from individuals against the amount of membership initiation fees charged by local unions which were chartered by international organizations affiliated with the American Federation of Labor.

Be assured that I fully appreciate the importance of the complaints referred to and the effect which such complaints have upon public opinion. As you have convincingly pointed out in your letter, some complaints are well founded, while others are not. Only an investigation of each complaint could actually determine whether they were well founded and true, or whether they were false and exaggerated.

I can assure you that the members of the executive council of the American Federation of Labor, including myself, are gravely concerned over the situation which you bring to my attention. We have been and are now dealing with it in accordance with the provisions of the laws of the American Federation of Labor, and within the limitations of its constitution. Unfortunately, there are many people—some friendly and sympathetic to the American Federation of Labor and others who have ever been hostile and unfriendly—

who conclude that initiation fees charged new members by local unions during these days when our Nation is engaged in the execution of a national-defense policy, is new, of a special nature, and imposed only upon those employed upon defense projects. In other words, it is alleged by some friends, as well as our foes, that union labor is taking advantage of the national emergency to impose excessive, indefensible initiation fee charges in order to enrich the treasuries of national and international unions.

These assumptions and conclusions are wrong. Instead, the facts are that labor unions always required nonunion workers to pay an initiation fee when they become members of the union, and the initiation fees charged nonunion members who secure employment on defense projects are no higher now, but in some instances lower than the initiation fees charged during normal periods, before the national-defense program was launched.

When the officers of the American Federation of Labor take up complaints which allege the imposition upon nonunion members of excessive initiation fees with the officers and members of local unions located at points where these complaints originate, said local officers and members immediately explain that they sacrificed much while fighting for the establishment of decent wages and working conditions during a period of many years in the localities in which they reside. They show that they were compelled to pay the same amount of initiation fees now collected from new members into the local when they joined, and that during all the time while they were members of their local they paid their dues and assessments regularly each month. They protest strongly that nonunion men who now secure employment made no contribution toward the establishment of the decent wage scales which prevail, but in securing employment become the beneficiaries of the wage level established by the union, are entitled to enjoy all its benefits, and that the union requires and compels the contractor to pay the newly admitted member the same wage scale and accord to him the same favorable working conditions as every union member employed at the plant enjoys. These union members argue vehemently that the initiation fees charged new members do not represent an amount of money equal to that which they paid into the union over a long period of time all during which they fought for the establishment of decent wages and humane conditions of employment.

These local union officers and members also point out that the initiation fees charged and collected from new members go into the local union treasury, and that the new member, through the payment of his initiation fee, acquires an equity in the funds belonging to the local union. Not one single penny of the initiation fees collected goes to the national union treasury. All of it, every penny of it, is held by the local; belongs to the local; is deposited in the local union's treasury, protected and safeguarded by local union officers who are required to furnish adequate bond. Thus, new members who join the local and pay their initiation fees, become beneficiaries in that the funds thus accumulated in the local treasury are used for the purpose of paying sick, death, and accident benefits, and unemployment benefits in many instances. In other words, the funds are used for the benefit of the local members and are identified with the local organization, and the newly admitted members share equally with every other member of the union in the benefits guaranteed to individual members.

You can see by this brief explanation that the older members of a union establish the fact that they paid into the local more in money than do new members and, in addition, immeasurable sacrifice and suffering which resulted from strikes, discharge for union activities, and discrimination on the part of hostile employers. The newly admitted member made no financial contribution to the establishment and maintenance of the union or the establishment of decent wages and working conditions.

It is pretty difficult to argue with the members of a local union that now they should admit nonunion members when economic conditions have changed without collecting any initiation fee or only a nominal fee. They insist on demanding that nonunion members pay the same initiation fee they paid when they joined the union.

The working men who make up these local unions in different American communities are hard-working American citizens. They are neither dishonest nor are they racketeers. They shape and formulate the policies of the American Federation of Labor. No doubt you know personally many of these capable, highly skilled mechanics who reside in the State of Nebraska and in the community in which you live. These men and women point out that, figuratively speaking, they have built a house which cost them much and in which the family of organized labor resides. They maintain that simple justice and fairness call for the payment of an entrance fee to anyone who now enters this house of labor and occupies a room therein, enjoying all its benefits and protection. Can anyone challenge the validity of such a position?

I am not presenting this situation to you as a justification for the imposition of high initiation fees, particularly at this time. Instead I feel that the exigencies of the situation call for special consideration and special action by the membership of our affiliated unions. In every attempt we make, however, to achieve this purpose, we are brought face to face with constitutions of national and international unions which were adopted at conventions in a democratic way by a majority vote of delegates in attendance, which are now in effect, and which confer upon local organizations the power and authority to fix the initiation fees which nonunion members are required to pay, and which will remain in effect until changed by future conventions.

We have, however, taken definite action within the limitations of our authority. National and international unions affiliated with the American Federation of Labor, acting in accordance with authority conferred upon them, have instructed local unions that only a uniform, standard initiation-fee charge can be made. That is, one local organization in some locality where the local is strong cannot charge a higher initiation fee than other locals in other localities. This means that a limit has been placed upon these local unions thus affected as to the maximum amount which they may charge as initiation fees. Frankly, I called upon our affiliated unions to eliminate the abuses in connection with the collection of initiation fees and dues by local organizations affiliated with the American Federation of Labor. I am strenuously endeavoring to prevail upon local organizations to collect only a nominal fee from nonunion members who secure employment and work in defense-production industries. Such action on the part of our locals would be in keeping with the requirements of the situation which call for the adoption of moderate policies, sacrifices, if necessary, in the interest of the common good, and for patriotic reasons at this time when we are preparing to fight for the preservation of freedom, liberty, and democracy throughout the world, and for the protection of America.

If you will supply me with a report of the individual cases which have been called to your attention wherein it is charged that excessive initiation fees have been imposed, I will assign a capable representative to make an investigation of each case, with instructions to ascertain the facts, and, if an injustice has been done, to act vigorously in bringing about a correction upon some fair and just basis.

In conclusion, may I assure you that it is my intention and purpose to present complaints which have reached me, similar to yours, against the imposition of excessive initiation fees by our local unions, to a meeting of the Executive Council of the American Federation of Labor which will be held within the near future, with the request that the council deal with said complaints insofar as its authority and power may permit.

Be assured that I appreciate the fine spirit which prompted you to write me as you did. I regard your letter as coming from one who during all his years of public service has manifested a most friendly and sympathetic attitude toward the cause, aims, purposes, and objectives of the American Federation of Labor.

Very sincerely yours,

WM. GREEN,
President, American Federation of Labor.

What Is Going To Happen To California's Old-Age Pension Law?

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1941

RADIO ADDRESS BY MARTHA CHICKERING

Mr. VOORHIS of California. Mr. Speaker, the following speech by Martha Chickering, director of the Department of Social Welfare of California, speaks for itself. I want to say, however, that I agree with her spirited defense of our California law and I earnestly hope some way can be found to prevent the ruling of the Social Security Board from compelling a backward step by our State.

I am indeed appreciative of the opportunity afforded to me by Governor Olson to explain to you this evening the important issue facing California. Our California State programs for aid to our needy aged and needy blind are seriously threatened.

Word has been received by the State that the Federal Government may withdraw its share of California's payments to persons who receive what is popularly known as the old-age pension. As a matter of fact, of course, this isn't really a pension. It is public aid to old persons who are in need—in other words, it is aid to the needy aged. Any person over 65, who is in need of assistance in California may receive up to $40 a month, of which the Federal Government at present contributes one-half. Now there is a serious possibility that the Federal Government will cease to give its half of this aid. This would be a catastrophe to the State, and our citizens wonder how it can be. They remember that it was due to the Federal Government that most of the States of the Union first

started to give aid to their needy aged. They remember that it was only when the Congress of the United States, under President Roosevelt's leadership, passed the Federal Social Security Act late in 1935 that most States began to give regular assistance to needy aged citizens. It seems almost unbelievable, therefore, that the Federal Government should now be requiring that California reduce the amount it gives its older citizens or have Federal help taken away.

What, then, has happened? You will remember that the State of California has always been more generous to its older citizens than any other State in the Union. When California's old-age security system came into being in 1930, we were the first State in the Union to have State-wide payments to aged citizens. You probably know that from the beginning in 1930 until this very day California has consistently made higher payments to aged aid recipients than any other State in the Union. Today it is giving this public assistance to more persons than any other State. Finally (and here is where we get to our present problem), California has, in addition, a provision in its law which makes it possible for an old person to receive his $40 of public assistance and also to earn up to $15 a month over and above his aid grant. California, of course, believes that this is in line with our own best traditions. California has always believed that it is important for a man or woman to have work to do and to want to do it. We believe that it is better to make an effort and earn something each month, even if you are past the age of 65, than it is to sit idly at home and wait for the postman to bring you your monthly check from the State. The old people themselves would rather work while they have the strength, and for this reason the California Legislature passed this law which made it possible for these older citizens with strength and health enough to do it to be allowed to earn and retain this small sum of $15 each month without having it deducted from their $40 grant.

Now this is where the difficulty begins. In 1939 the Congress of the United States passed an amendment to the Federal Social Security Act which provides that (and I quote the exact words of the Federal law)—"Effective July 1, 1941, the State shall, in determining need, take into consideration any other income and resources of an individual claiming old-age assistance." The California law, however, provides that (and I quote the exact words of our State law—"Net income from any of the following sources of a combined total value not exceeding $15 per month shall not be considered for any purpose." And then the California law goes on, as I have indicated, and lists these exempt sources of income: Earnings from the applicant's labor or services; value of foodstuffs or other merchantable products which he himself produces; the value of firewood or water produced on his premises; or the value of gifts of money other than those from responsible relatives. These things, most of them good pioneer ways of trying to earn a living, a man or woman may have in California and still not have the amount of his old-age assistance reduced.

What I have just told you about California's aged-aid law and the possible effect on it by amendments to the Federal law is also true with respect to California's blind-aid law. Let me list briefly the points of similarity. As with aged aid, California was a poineer State in providing for its needy blind residents, the present system beginning in 1929. As with aged aid, California is paying blind aid to more persons than any other State in the Union participating in the Social Security program. As with aged aid, California is more liberal in its payments to needy blind persons than any other State.

In order to provide blind persons with added incentives and means to rehabilitate themselves, California's law permits them to earn or have other income up to $33.33 a month without requiring any deduction from their normal blind-aid payments. Now, the amendments to the Federal Social Security Act regarding blind aid are exactly the same as those governing aged aid. If our California code provisions are out of line with the Federal amendments regarding income of aged aid recipients, they are also out of line with regard to the Federal amendments regarding income of blind aid recipients.

So let us go on to a consideration of California's immediate emergency, bearing in mind that it affects both recipients of old-age security and State aid to the needy blind. As we have seen, the Federal law as amended says that income must be taken into consideration and the California law requires that certain income be not taken into consideration. This clearly required an amendment to our law, and bills have been introduced into the legislature to meet the requirments of the amended Federal law with provisions that regular income received from labor or gifts should be deducted from the amount of the monthly aid grant.

But here is a strange thing: When Congress passed the Federal amendment it intended to liberalize aid to the aged citizens of these United States, and that will be the actual effect in most States. The Social Security Board then issued regulations telling States that they should not figure up and deduct from the grant of each recipient of aid income that was irregular, casual, or inconsequential. So the bills introduced into the first session of the legislature were carefully worded to protect for the blind and aged every advantage of such a liberal interpretation of the Federal amendments. Then the blow fell. Word came that the Federal Social Security Board does not regard California's proposed amendments as satisfactory. They told us our law can contain no provisions to guarantee to the recipients of aid any security above the actual monthly grant—no exemption of firewood, no exemption of foodstuffs raised in the backyard, no exemption of occupancy of a man's own home.

The Federal officials said if a similar State regulation should be passed that might be accepted. But we must not write any protection into our law, even though we in California have long had a preference for having the protection of our citizens clearly stated in the law, rather than left to administrative rulings. They told us that we must not provide in the law that an old man or woman can raise a few vegetables in his yard without having their value deducted from his grant. They said that we must not provide that a blind man can do a little work every few months, or than an old man could try to raise a small crop and have some income from it 1 or 2 months out of the year without taking an equivalent amount out of his grant. Finally, the Federal officials ruled that if a person receiving public assistance is living in the home which he bought and paid for years ago out of his own labor and on which he has paid taxes most of his life, our law must require that the income value of living in his own home must be deducted from his monthly aid. The Federal Social Security Board says all this is in order to make the treatment of all recipients of aid equal, but the Governor of this State and the State Social Welfare Board do not agree that this will be its effect.

When these Federal rulings came to the State, Governor Olson, always interested in the welfare of the people of his State, immediately sent a letter of protest to Mr. McNutt, the head of the Federal Social Security Agency, asking that this State be allowed to secure a court ruling as to whether the Federal act really means that we must deduct these things from our grants to recipients of aged and blind aid. In addition, he sent an urgent letter to the President of the United States, asking him to do what he could to prevent California from being forced to retreat from its advanced system of aid. Most of California's Representatives in Congress are reported also to have protested against this ruling. I am going to quote briefly from Governor Olson's letter to Mr. McNutt:

"I am compelled in the name of the people of California to protest against these interpretations of the Federal act and to express to you and to the Federal Social Security Board the request that the Board reconsider these provisions of the act with a view to finding a more liberal interpretation, that will enable California to maintain its present standard of assistance to its needy aged and blind and receive the Federal grants upon which it depends in its present provisions for aid to its needy aged and blind.

"California and other progressive States, in taking the lead toward securing provisions for adequate old-age pensions and blind assistance by State and Federal Government, should not be compelled to retreat from the advanced positions they have achieved by any Federal act, and certainly not by any interpretation of any Federal act which is not absolutely compelled by the plain wording of that act."

To this a reply has just come from Mr. McNutt and other officers of the Social Security Board. They indicate that a way may be found to amend California's law without forcing us as a State to retreat from the social advances we have made. They do not indicate exactly what that way shall be, but the door is not finally closed.

This, then, is the issue which is today before the State of California. It is a very serious issue. The State department of social welfare has estimated that if we take the interpretations made by the Federal social-security officials and amend our law in accordance with their rulings, grants to some 45,000 needy persons will be reduced in California. Whereas, if California refuses to make further concessions, Federal aid to the State will be withdrawn by the Social Security Board as a penalty. This State would then lose $3,000,000 every month in Federal funds and thousands of blind persons and old men and women may be thrown into acute want and suffering.

The Federal letters indicate that the Federal Government may want us to put our needy aged and blind back on a budget as a basis for each grant. A budget, as you know, is an estimate of what a person on relief must have to meet his actual needs—how much food, how much clothing, how much for his tobacco, how much wood to keep him warm, and how much money to pay for rent. This is set up as a measure called a budget, and is used as a basis in each county to decide the grant to each individual, wherever he is. California tried it once, and the legislature wiped it out of the law several years ago because of popular demand. The old people and the blind just didn't like it. Will California be forced to take up this method again?

The effective date of the Federal amendment is July 1, 1941. How far should California go in being forced into conformity with Federal rulings? Can we stand the loss of Federal financial help on the aged and blind aid programs? Is a budget basis the answer, as the Federal people seem to think?

The people and their representatives in legislative and executive authority must decide California's course of action.

There Is No "Pork" in Legislation for Improvement of Rivers and Harbors

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1941

ARTICLE BY DURWARD H. PRIMROSE, EDITOR, MARINE JOURNAL

Mr. SMITH of Washington. Mr. Speaker, there is no class of projects undertaken by the Federal Government which possesses greater merit or which is subjected to more thorough study and investigation than projects for the improvement of rivers and harbors. Some of the reasons why this is the fact are succinctly set forth in an article by Mr. Durward H. Primrose, editor, Marine Journal, New York City, which was published in the Evening Star, Washington, D. C., March 21, 1941, reading as follows:

SAYS THERE IS NO "PORK" IN LEGISLATION FOR IMPROVEMENT OF RIVERS AND HARBORS

To the EDITOR OF THE STAR:

Year after year the opponents of river and harbor legislation try to kill it by derision. "Pork barrel," they say, meaning that the bill carries appropriations for projects without merit except political advantage. The astounding thing is that so many believe it, despite the fact that river and harbor legislation is entirely free from "pork" by reason of the method of its adoption and enactment, and has been so for a generation.

In the first place, Congress does not appropriate for particular projects. It appropriates lump sums to be spent by the Secretary of War at his selection (and that means at the selection of the Chief of Engineers, United States Army) from a list of approved projects. And what are these approved projects?

They are projects that have been certified economically sound after long study by the Corps of Engineers, United States Army, made first by the district officer, reviewed by his superior, the division engineer, then by the Board of Engineers for Rivers and Harbors, and finally by the Chief of Engineers. No part of the study is perfunctory. Many projects are rejected.

Having passed that test, they go to the Rivers and Harbors Committee of the House, and, if approved, are incorporated in the river and harbor authorization bill, which carries no money.

When the bill becomes law they become approved projects, to which the Secretary of War may allot funds when made available by Congress.

There is no form of Government expenditure subjected to closer scrutiny as to its worth. Not to use too strong a word, labeling such legislation "pork barrel" is unscrupulous. To do so is to impugn the integrity of the Corps of Engineers and its Chief, the integrity of the Rivers and Harbors Committee, and the Members of the House and Senate.

The use of such a weapon suggests a bad cause.

DURWARD H. PRIMROSE,
Editor, Marine Journal.

NEW YORK CITY.

Net-Worth Tax

EXTENSION OF REMARKS

OF

HON. JOHN W. BOEHNE, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1941

Mr. BOEHNE. Mr. Speaker, I have recently received a communication from the Honorable Benjamin E. Buente, judge of the superior court, Vanderburgh County, Evansville, Ind., as well as president of the Indiana Judges Association, which is of more than passing interest. I have asked that it be inserted in the CONGRESSIONAL RECORD so that the question he presents may be studied by all those interested. He proposes a constitutional amendment, reading as follows:

NET WORTH TAX

The Congress shall have power to lay and collect taxes on the net worth of persons, in whatever form or from whatever source derived, without apportionment among the several States, and without regard to any census or enumeration.

In commenting on this subject, he writes:

The Government must be kept solvent and the bonded debt burden should not be carried too far into future generations. Therefore, the Government must have greater income, which income should be derived according to ability to pay. Present income alone does not correctly reflect ability to pay; net worth should also be considered.

The vast Government expenditures are for the purpose of defense, and those who have more in value to defend have a greater obligation to pay the defense tax. This is based on the sound principle upon which insurance premiums are formulated—the more you have to insure, the more premium you have to pay.

Pursuant to such constitutional authority the Congress could enact a law requiring all persons having a net worth above a specified amount (say $10,000) to file a schedule showing their assets and liabilities. From the net worth thus ascertained, appropriate exemptions could be allowed for dependents.

Some Sound Sense

EXTENSION OF REMARKS

OF

HON. A. LEONARD ALLEN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1941

ADDRESS OF CHESTER C. DAVIS, DIRECTOR OF THE AGRICULTURAL DIVISION OF THE ADVISORY COMMISSION TO THE COUNCIL OF NATIONAL DEFENSE

Mr. ALLEN of Louisiana. Mr. Speaker, when the conscription bill was up before the House last year, as I recall, only two men from the Southern States, both Republicans, voted against it. This year, when the lend-lease bill was up before the House, only four men from the South, three of them Republicans, voted against it. Later, when the $7,000,000,000 appropriations bill to aid England came before the House, not a single southern man voted against it.

It is clear, therefore, Mr. Speaker, that the South has shown in every way possible its patriotic zeal. In the face of these facts it is a hard blow to our section of the country to know that the South has been almost completely ignored in the establishment of defense industries and has been largely ignored in the placing of defense orders. Notwithstanding the fact that the South is the gateway to most of the island possessions of foreign governments from which trouble may first come if the European nations who are unfriendly to the United States should get a foothold, and notwithstanding the fact that it was generally understood only a few months ago that defense industries would be scattered around, we find now a greater concentration than ever in regions near the coast. The South has abundant labor, has much of the raw materials, has abundant cheap fuel in the form of natural gas and crude oil, and has a climate making possible year-around production of defense materials. This Nation ought to profit by the experience of other nations and should distribute these industries so that if an attempted invasion should ever come, we will have ample factories in the interior to make it possible for this Nation to adequately defend itself.

Mr. Speaker, the Honorable Chester C. Davis, Director of the Agricultural Division of the Advisory Commission to the Council of National Defense, in an address on March 15, in New Orleans, before the southern Governors' conference, discussed the position of the South in this respect with such clarity and force that I believe that all of the South and much of the balance of the Nation would be interested in it and will read it with profit. I therefore ask that this speech be inserted here in the RECORD.

The address follows:

Governor Dixon, and gentlemen, I can imagine the palpitating interest with which this audience awaits my words, which were published in the city generally, in the early editions of the afternoon paper. Something was said to me, I think, by wire, about radio broadcasting, and that will be my excuse, gentlemen, for having prepared the talk I am going to deliver today, as you have already noticed by the papers, and I hope you will pardon me for following my notes with some care. Somewhere along the latter part of the talk are some statements made I would like to see quoted literally.

You have asked me today to talk about the role of the Southern States in the defense program; and on the relation of war and our whole defense effort to the peculiarly difficult problems which you have faced in the South in recent years. I believe it is necessary for me to begin with this second phase of my topic—with some consideration of the economy and economic problems of the South. I do this because to me it is self-evident that a strong and effective participation in the work of national defense proceeds from a

sound and properly organized economic life. Energies which have to be devoted and absorbed completely in the struggle for a bare living cannot be diverted to defense activity.

The South has come through difficult years, and we know there are difficult days ahead. But if it is to be an effective participant in the work of defense, it must have an economic organization which makes effective use of the southern manpower and material resources. An economic organization that holds the great mass of the people struggling to grow one crop which, under existing and prospective conditions cannot produce a decent American standard of living for many of them, is not making full and effective use of this section's resources.

The South is an agrarian economy—its living, or the vast part of it, has been derived directly from the soil. Traditionally the farmer has organized his operations and planned his output independently of his fellows. He has taken the market-determined price for whatever supply resulted from the combination of individual decision and the accident of crop yields. Nowhere else in our economic system in recent times has there been the same dependence on the free, uncontrolled, and competitive market as in the case of agriculture.

During the aggressive expansion of the nineteenth and early twentieth centuries, this economic isolation of the farmer was not a serious disadvantage. His market, both at home and abroad, was expanding rapidly—sometimes more rapidly than his ability to supply it. But since the World War the American farmer has been living in a contracting market. European countries during the post-war period no longer financed our railroads and our industries, and we no longer were able, therefore, to service our debt with wheat and cotton. With controlled immigration and latterly a slower rate of population increase, our domestic market has been growing less rapidly than before. The free market of the farm producer therefore reflected the full burden of the producer—and reflected it directly on the producer. The farmer could not, as could industry, control or check the downward movement in his prices and gradually adjust his supply to the new situation. He had to take the rap.

Now, as I see it in broad outline, during the last 8 years we have made some progress in meeting this fundamental situation in agriculture; the farmer has managed—and nowhere with such unanimity of action as in the Cotton Belt—to develop a measure of control over his production and the price at which it sells. In other words, agriculture has gained a measure of protection from the vicissitudes of uncontrolled production in the free market. This protection, together with the expansion of domestic demand which has taken place in recent years, has put some farmers in a reasonably favorable situation. Some 2,000,000 persons have found employment during the past 12 months; it is fair to assume that nearly all of these have increased their purchases of food products. The market for beef, lamb, pork, milk, butter, eggs, and cheese—these are luxury items for many farmers still—again is expanding.

But the position of the 2,000,000 farms which produce cotton and of the 10,000,000 people who live on these farms is very different. These, and the tobacco and wheat producers, do not face an expanding market; rather, they now face an adjustment to a still further contraction in their existing market. Before the war—the present war—we were holding our own against our old cotton competitors, Egypt and India. And, in spite of the increasing use of cotton substitutes, the world consumption of cotton was increasing. In 1914 the world consumed about 20,000,000 bales of cotton, and after the interruption of the World War it again reached this figure in 1923. By 1936 world consumption had climbed up to some 30,000,000 bales. The world still likes cotton, and I think it is important to keep that in mind. However, as you well know, strong new competitors have arisen in South America, Africa, and China. These new competitors probably have a staying power in world markets at least as great as our own staying power. Finally, the war, for the time being, has slashed off the greater part of our overseas market in its entirety.

Obviously, if southern manpower is to be as effective, land and resources are to be used most effectively in the period ahead, vigorous and imaginative action is necessary. Steps must be taken which will provide a supportable livelihood for those farmers who were in the path of the aggressors; we must find a useful outlet for the manpower which in the past produced for these markets; and, if possible, we must work toward a solution which will leave the South prosperous and secure when the present period of crisis is over.

To begin with, we must take for granted, I think, that the South is going to continue to grow cotton and that the world in the future will purchase a part of our cotton products. Even were we told tomorrow that not another bale of American cotton would ever leave the country, we could not, at once, place ourselves on a purely domestic cotton basis. But I see no reason why we should make any such assumption or take a defeatist attitude. We are still part of the world. Our policy of aid to Britain, so firmly supported in this part of the country, shows the extent of our participation in the world community. This policy means that we intend in the future to participate in the world community. On the economic level, it means that we will continue to supply the world with a part of its cotton.

In both the immediate and the indefinite future the South will be living with its great staple crop. It follows that cotton prices must provide a supportable return to those who produce it. We must continue with measures which will make cotton growing remunerative, particularly in those areas and for those people who have no ready alternative. We must do this even though, temporarily, we may accumulate surpluses even larger than those we now have. I should like to add right here that I hope we do not spend too much time worrying about the size of this cotton surplus. Many of you will disagree with me, I know, but I must insist that the problem of our cotton stocks is in part a state of mind. Were they half as large as they are, we would still worry; were they half as large again, we would not worry much more. We can develop, and in some measure we have developed, machinery so that a 12,000,000-bale carry-over bears only a little more heavily on the farmer than a 10,000,000-bale carry-over. Let us count on this machinery of loans and storage, or the equivalent of this machinery in some other form, to protect the producer from the price-depressing effects of our surplus. And as for the surplus, let us not during this crisis worry too much about something which any other industrial country would be delighted to have.

But to make cotton reasonably profitable to live with is only a first step. It still leaves us with idle hands and idle lands. It still leaves us largely with the curse of a one-crop economy.

We must have a better balanced agriculture. You all know the difficulty in the past which has faced those who have talked about the diversification of southern agriculture. We have wanted to diversify our cotton acreages, but with what? Other things besides cotton were too plentiful to sell at a remunerative price. Now this situation is changing. There are alternatives. We are entering a period of expanding domestic demand for dairy products, meats, and vegetables. So we face a period when the South can increase its production of foods without raiding the markets that heretofore have been enjoyed by other nations. As the Nation's food requirements expand in months ahead, I feel that we must look upon the South as a new and important part of the Nation's larder. By so doing we will save ourselves from uneconomical and perhaps, in the long run, unnecessary expansion in the present meat and dairy areas of the United States. But particularly we will leave the South with a better balanced agriculture for an increased and better balanced home consumption. In all our agricultural programs, both State and national, we should give close attention to expanding the food resources of the South. The time has come, I think, when we can approach this problem as a truly national objective on which all can agree. To the extent we are successful then we will accomplish something toward the second great step, the diversification of the agricultural economy of the South.

There are several further steps in a complete program, one which I should like to stress in particular. Diversification of agriculture is but one step in a larger process—the process of diversifying an economy. A diversified economy is one which combines both agriculture and industry. Full adjustment and full balance in the southern economy will not come until a part of the agricultural population has found an effective and useful employment through southern industrial expansion. This is the great step which is necessary if the South is to become a strong and effective part of our national economy. It is the step which must be taken if the full power of the South is to be made available and used in this defense effort. It is one of the purposes to which this association of Governors of the Southern States is dedicated.

There is no easy road to industrial development. In modern economic society the tendency is to a centralization rather than to decentralization of industrial production. The British Empire has developed with a small industrial core on the British Isles and a vast world hinterland from which it draws its raw materials and to which it ships finished products. Somewhat similarly, the United States has developed its own industrial core in the North and Northeast with its own agrarian empire in the South and West.

In the case of both Britain and the United States this pattern of industrial concentration has been deeply influenced and confirmed by war. The era of industrial expansion in Europe, which historians term the "industrial revolution," coincided with the Napoleonic Wars under way at this time. England entered these wars with a substantial head start in its industry, and while the Continent suffered under a succession of military campaigns, English industrial production continued intact. In other words, England became the banker and in measure the arsenal for her continental allies, and by the time peace came she had far outstripped her industrial rivals across the channel. She was able, as we know, to maintain this leadership for more than a century.

Very similarly in the United States, the War between the States found the North with a nucleus of industry which was greatly expanded to supply its armies. The antebellum South, using its natural agricultural advantages, had specialized on cotton, tobacco, and sugar. Its industry was relatively undeveloped and what there was was destroyed or rendered ineffective, particularly after Sherman's campaigns. Northern industry was confirmed in its head start and it, too, has maintained that lead throughout these years.

The Great War—1915–18—brought a new period of expansion—one far in excess of that of the war of the 1860's. During the Great War we expanded existing industries and we located our new war industries close to the present centers of industrial activity.

The result reinforced the industrial concentration of the Northern and the Northeastern States. I might add, also, that this policy created some very serious subsidiary problems. So great was the congestion of industrial activity in that northeastern triangle that in 1918 the War Industries Board was forced to suspend for a period all further war orders going into the factories of Northeastern States. The reason for that was the task of supplying fuel and food to these areas had gone beyond the capacity of the railroads and the ability of the main rail gateways to handle freight. Acute labor shortages developed in spite of mass migration into the northeastern area. While that was going on in 1918, manufacturers outside of the area had a labor surplus and idle-plant capacity. In many cases they were unable to use this labor and plant because of their inability to get materials which were tied up under priorities in the eastern areas.

I stress these matters for I believe the current flows strongly in the United States toward a concentration of industrial enterprises, and it is vital that we watch this current, particularly in time of war. People in the South and West have looked at times upon their labor force and their raw-material resources and labor supply and have assumed that the logic of events would cause them to be used—that if they waited industry would employ these resources in the community where they existed. I can't help thinking that they were too optimistic. I have had some recent experience with this problem that leaves me in a frame of doubt.

When the National Defense Advisory Commission was organized last summer I expressed the view that new industries required under the defense program should not be located in areas where existing industries essential to defense are now concentrated when there was any possibility of placing them elsewhere without sacrifice of speed and efficiency. It was clear that this was the only way in which new reservoirs of manpower, unemployed, and resources would be tapped without uprooting families and shifting them thousands of miles into communities where ebbing of the armament effort would leave them stranded.

The plans, such as they were, which had been made prior to the emergency for maximum war production were not based on such a principle. In carrying out the program we have made some progress toward decentralization, but I have been far from satisfied with it. I am afraid that, in the defense effort up to date, we have followed the same pattern of regional concentration that was followed in 1917 and 1918. Then, as I have said, we handicapped our effort by shortages of labor and transportation and left an aftermath of overbuilt and overconcentrated industry. I am afraid that we are again going to reap some of the same harvest of economic and social consequences.

In the period between June 1 of last year and January 31 of this year some seven and one-half billions of defense contracts had been let; this figure excludes contracts for ship construction and supplies where obviously seaboard States must dominate the picture. Of this total only slightly over a half billion, or approximately 7 percent, have been placed in the 11 States of Alabama, Georgia, North Carolina, South Carolina, Oklahoma, Florida, Arkansas, Tennessee, Mississippi, Louisiana, and Texas. This 7 percent of the total compares with a value of manufactures in 1937 manufacturers census in these States of slightly over 11 percent of the national total. These figures are for defense contracts. Up to March 1 plans have been completed and allocations made for the construction of some 302 new facilities for defense production. Of these 302 only 24, valued at $166,271,860, have been located inside the 11 States I have just mentioned, as compared with 302 at a cost of $1,600,000,000 in the rest of the country. These, as I say, were the new facilities and included many plants where I had hoped we would have a special freedom of choice in finding favorable locations in accordance with the broad principle of decentralization. As I said, I am far from satisfied with the showing and, as I have said on other occasions, I feel equally dissatisfied with the results in the rural areas of the West.

In part, the hands of men working on the defense programs were tied by the compelling need for speed. But there were other reasons. The line of least resistance was to place business and locate industry in existing industrial areas. Those of us who were interested in a larger decentralization of this effort found ourselves placed largely in an advisory role. An adviser whose advice runs counter to established lines of procedure is pretty sure to have some difficulties. Industrial management has thought quite largely in terms of doing new business at the old stand. On occasions they stoutly opposed any shift from their existing areas of operation. We were faced with inertia and habits of thought in that line. We found people unable to visualize the vast productive power of the United States could release were we able to mobilize the reservoirs of manpower now partially or ineffectively used throughout the South and West.

I think there is another reason, equally important to the ones I have cited. I was interested and I was somewhat shocked a few days ago to see a tabulation of the distribution of defense orders to date not as between areas but between industrial concerns. Now, included in the tabulation were eleven and one-half billions of prime contracts awarded between June 13 of last year and February 15 of this year. This tabulation includes all types of prime contracts. Of this vast total, between one-fifth and one-quarter had gone to two groups of companies of very closely interconnected ownership. Between 40 and 45 percent had gone to 6 very closely interconnected groups. And a total of 80 percent has gone to 62 companies or financially interrelated groups of companies. There is rich food for thought in these figures. I believe they are closely related to the mediocre success we have had in apportioning a part of this new defense industry to the States represented here today. Our defense contracts are being absorbed by a small handful of concerns and the very smallness of the number threatens to be a serious bottleneck on the full use of our industrial and human resources, and it is a bottleneck which must be broken.

As I mentioned to one of your Governors, Commander Simpson is in the city today, and will be here part of the time tomorrow. He attended a meeting this morning at the New Orleans Division of the Federal Reserve System, discussing the steps which are being taken to make these 36 Federal Reserve offices possibly of service, and trying to get the subcontracts tied in with the prime contractors, and, as I say, this work that represents eleven and one-half billion dollars of orders in a relatively few hands must be spread out, and the only way is through the subcontracts, and I hope your conference will have some time to meet Commander Simpson while here.

For the South the lesson is clear. Your area has been waiting for industry to come and use its manpower. I am afraid it is going to be a long wait and one which will only provide a few crumbs from the concentrations of existing enterprise unless the most vigorous and most positive efforts to achieve recognition of your labor reserves and labor resources can be made.

But more than this is required. The time has come I think for the southern people to join together and start on the hard route to industrialization—that of encouraging industrialization. It is significant that our greatest success in expanding industry in the South, both before and since the beginning of the defense program, has been in two directions. One was the shift of the textile industry nearer to the sources of raw material and labor supply. The other has been in the immediate Tennessee Valley area. Within recent months the T. V. A. and T. V. A. power have brought an aluminum industry, an ammonia industry, and the manufacture of explosives to Tennessee and Alabama; there would have been precious little defense industry in these States without T. V. A. facilities. The development of the Tennessee Valley was largely the product of southern initiative and imagination. It should be an object lesson to the South in what a genuine industrial development requires.

In the first stages of the defense program I must frankly say important opportunities have been missed. I had hoped that we might use this surplus manpower or ineffectively employed manpower of the South and make it a part of our full labor-power potential. I had hoped we might use this labor near home and thus avoid moving folks across the country to supplement a labor supply which in some of the large urban centers is already running short. I had thought that this might open the way for a better balance between industry and agriculture for the future. The farmer who depends only on one crop is never in a very secure position; the same is true on a larger scale of those parts of our country—those States and regions—which depend only on agriculture. They, too, are one-crop areas and they lack the stability and security of better-diversified areas. The job in the future will have to be done better than the job has been done in the past.

Now in conclusion: As I look back over what I have said this afternoon I realize that little of it has been new to you. You have been thinking and saying these things yourselves, many of them for years, some during recent months. We must continue to say them, patiently and persistently, until they are translated into accomplishment. We must not permit temporary set-backs to discourage us as we stand shoulder to shoulder on these principles. Thank you. [Applause.]

Dominion of Canada

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Thursday, March 27 (legislative day of Monday, March 24), 1941

ADDRESSES BY HON. CLAUDE PEPPER, OF FLORIDA

Mr. PEPPER. Mr. President, I ask unanimous consent to incorporate in the Appendix of the RECORD some addresses recently delivered by the junior Senator from Florida in the Dominion of Canada.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

[Address before the Empire Parliamentary Association composed of the members of the Senate and House of Commons of the Canadian Parliament at Ottawa, Canada, March 18, 1941]

Mr. Chairman, Members of the Senate, Members of the House, it is difficult to say

whether a sense of honor or a sense of satisfaction is uppermost in my mind as I have for the first time this great privilege of addressing in this historic chamber you who represent the people of Canada with whom we in the United States have so long enjoyed what one has called the brotherly relation of peace with friction.

When I reflect upon our long and happy associations I am reminded of the country boy in my State of Florida who, when his girl accepted his stammered proposal, was so beside himself that he rushed out of the house into the beautiful moonlight, stretched his hands upward to the kindly moon, and said, "Oh Lord, I ain't got nothin' agin nobody."

While I should have liked my visit to Canada to have been earlier, yet I believe that if I could have chosen a time in my life to visit you, I would prefer this time when I can come fresh from the Congress of the United States and tell you and through you the heroic people of Britain and the stalwart peoples of the British Commonwealth that we will not abandon you in this hour of trial. We free men and women challenge the enslaved to a test of endurance. Let us see who is made of the sterner stuff.

We challenge the dictators in Europe and in the Orient to shake off Winston Churchill, McKenzie King, Franklin D. Roosevelt, and the others who speak for free men.

I owe it to you to say that it is the gallant and limitless way in which all of you who are fighting this good fight of faith have thrown yourselves into it which has made our people as determined as they are to help you until it hurts. Before I came here I knew what share of your income you were spending in the cause. I was aware of some of the external evidences of your mighty effort, but I did not know until I came to see it and to feel it just how fixed and determined was the purpose of your people to carry on until the inevitable day of victory against this devilish attack upon freedom everywhere.

It is like your great past, like the great races to which you belong, to entertain these sentiments. It is like you not to give them up at any cost.

Our people in the United States are not strangers to these same sentiments. You know how common our origins are, how parallel have been our careers, how much alike we are, how these same mountains and plains and lakes and rivers, these great forests, the tides of these oceans, have their counterpart with us. You know how freely and naturally travel and trade and understanding, the niagaras of friendship, have flowed across this almost imaginary line that barely perceptibly divides us from each other.

You know the history of the long years in which we have each worked out by the oceans, by the streams, in the forests, in the fields, the kind of a world which seemed right to us, and how the taproots of our lives reach down deep into the same earthlike traditions which we cherish. Whatever our shortcomings, whatever we may not have done or have done poorly, the effort has been ours. Under God it has been our world here. Under God it shall be our world to the end.

We are not ashamed to say that both you and we prayed that this cup might pass from us. Our lives, our destinies are in the Americas. In nothing that we have done, in nothing that we intend to do, do we propose to lose sight of that first principle of Americanism. Assuredly the most repugnant policy imaginable to the minds of our peoples is to seek involvement in any foreign war. The whole race knows not only how we cherish peace, but what we have done to assure it and to preserve it. Nothing could enough entice us, so allure us by way of gain for selfish purpose, that we would for it spend the life of a single boy in any province or state.

But we are sensible people. We know the delicate equilibrium there is in the world in which we live. We know how the economy, the security, the integrity of the whole world, has become a single pattern. To tear it or break it anywhere weakens the whole and dislocates and disturbs all lives and all nations. We know that we do not and cannot live alone and live as we now live. We must sell to others and buy from others. To buy and sell we must be able to carry our goods and our people along the sea lanes of the world. We know there must be a medium of exchange that will promote rather than clog our commerce. We know we must be able to depend upon men's words and men's bonds to do business—to carry on. We know we must have a satisfying sense of security, to know that we will not be attacked in the night by some powerful enemy. We know that nothing is safe, neither life nor property, if international brigands bent upon loot, stopping at nothing, are allowed to run loose. We know that if force be the criterion of all things among nations, if might be the single arbiter of right, all that we have tediously and painfully built up, all that the sweat and tears and blood of the past have won and kept, is lost. We know that if tyranny gains supremacy over the earth freedom is dead, and our race of men still prefers death to slavery.

In these circumstances, then, what can we do save to say that these cruel men who would destroy all these things upon which we live cannot and shall not prevail? We are bent upon a single purpose. We shall choke them into impotence. They shall not destroy our world. To that task each of us in his own way and according to his own tradition shall give himself without stint.

How could we if we would restrain the impulse of exultation and joy that rises up within us from the spectacle of what our kind of men and women, boys, and girls are doing in other parts of the world? Let those who scorn what they call the decadence of free men behold what fighting men they are, entrenched behind their homes and altars, their temples, the ramparts of their faith. Let them see how terrible is their wrath when provoked beyond endurance.

No knight was ever braver, more gallant, than those boys who left their classrooms a few months ago and have now saved a world in the clouds. No heroine was ever more noble than those women who have sent their offspring away while they stayed to carry on, to dress the wounds of the injured, to solace the hurt, or those who have saved their bodies that they might throw them as a shield between a devil's bomb and an innocent babe. Such courage no pitiless power can break.

It is a paradox that while one part of this generation has reached the depths of depravity yet another part has soared into the sun.

When we think of the future we turn to the past. I wonder if you remember the letter that a great American, Simon Bolivar, wrote in 1815 to an English gentleman in the English colony of Jamaica, who had given him friendly refuge from the unfavorable fortunes of the revolution which he was leading. In this letter Bolivar said:

"How beautiful it would be for the Isthmus of Panama to be for our nations what the Corinthian Isthmus was for the Greeks. Would to God that some day we might enjoy the happiness of having there an august congress of representatives of the republics, kingdoms, and empires of America to deal with the high interests of peace and of war with the nations of the other three parts of the world."

When he had gained the liberation of his people this great patriot and prophet set out to make real his dream, a Congress of American nations. He issued an invitation to all the free nations of this hemisphere, including the United States. You will recall that an English observer was invited also. This is an excerpt from the note sent to Great Britain:

"The Congress of Panama will bring together representatives from all the governments of America and a diplomatic agent of His Brittanic Majesty. This congress seems destined to form the vastest league, the most extraordinary and the strongest which has ever appeared on earth. * * * The human race would give a thousand thanks for this league of salvation, and America and England would receive manifold benefits from it."

This is the significant statement with which the invitation concluded:

"Such ideas are to be found in the minds of some Americans of the highest quality; they wait with impatience for the congress of Panama to initiate this project, which may be the occasion for the consolidation of the union of the new states with the British Empire."

This congress, of course, was ahead of its time, and it failed. What might have been saved, how many might have been spared had the world embraced the dream of Simon Bolivar only the historian and the Omniscient One can say.

But this concept of Bolivar, thinking of unity in the Americas which Great Britain and the United States had solidly resolved would forever be for Americans, had also sprung out of the fertile mind of Thomas Jefferson. It found fervid echo in the eloquence of Henry Clay. It came forever into reality when James G. Blaine, as Secretary of State of the United States, in 1889 called in Washington the first Pan-American Conference. This first conference laid the foundation and breathed the spirit of the noble edifice which was to grow upon it. Former President Richardo J. Alfaro, of the Republic of Panama, described this first conference in these words:

"No treaties or conventions were signed at this meeting, yet its achievements were great, for it served three transcendent purposes. In the first place it crystallized into action the latent sentiment of pan-Americanism and laid down the foundations of a united America, as dreamed by Bolivar and Clay. In the second place it gave birth to the central organ of continental action, the Commercial Bureau of the American Republics, which was the forerunner of the present Pan American Union. And last but not least, the conference of 1889 went down in history as the first occasion upon which representatives of the great majority of the continent united in condemning the right of conquest and in proclaiming the principle of compulsory arbitration.

"* * * Pan-Americanism is a structure devoted to peace and prosperity. That structure rests upon the four pillars of independence, equality, justice, and cooperation, and those four pillars were erected in 1889."

Nine further historic conferences since that one in 1889 have built the permanent and effective institution of pan-Americanism. Not only a new spirit but a new relationship has come about among the 21 republics on your southern border. New standards in international affairs not only are spoken of but are observed.

One of those who has taken the mote out of its own eye before complaining about the beam in the eye of its neighbor has been the United States. That country has frankly confessed the error of many of its own ways. It has expressed the principle which perhaps more than any other epitomizes this new spirit—the principle of the good "neighbor who resolutely respects himself, and because he does so, respects the rights of others," uttered by an Elisha worthy of Simon Bolivar's

mantle, a friend to man, Franklin D. Roosevelt.

In the spirit of the new pan-Americanism each nation has reexamined its policy to be sure there was nothing by omission or commission in that policy that would be inconsistent with these new concepts of neighborliness.

At Montevideo in 1933 this policy of the good neighbor found expression in solemn covenants wherein every one of these 21 republics with unshakable determination resolved that no nation in all this continent had a right to interfere with the internal affairs of any other nation, and that the territorial and national integrity of each nation was to be respected by all others as a sacred thing.

At Buenos Aires in 1936 met the first Pan American Conference, dedicated to the maintenance of peace in the Western Hemisphere. There for the first time effective collective action was taken and machinery for collective cooperation set in motion that gave a real as well as a philosophical solidarity to all this vast territory and all these many peoples. It was readily recognized no less enthusiastically by the United States than by any other power that the Monroe Doctrine was not a doctrine of the United States of America but a doctrine of the Western Hemisphere, which, asserted the right of this hemisphere to be free of European aggression and to develop its own destiny in its own way. The interdependence of all our many nations was recognized in the conclusion of this conference, that a threat to the security of one of our neighbors was a danger to the safety of all our western neighborhood.

In 1938 came the Conference of Lima and its splendid declaration of American principles. Here consultative machinery was more specifically provided for and set in motion. This principle of solidarity among the American republics was becoming one of the vital forces of the world.

Then at Panama in 1939 met the foreign ministers of the pan-American group to meet the challenge of this new menace to our security.

In 1940 at Habana again came together all our 21 republics and further coordinated our common effort, strengthened our common ties and quickened the pace of our cooperation.

These conferences have been but the external appearances of deeper forces which were moving through the minds and hearts of our governments and our quarter of a billion people.

In Washington the great Pan American Building is the seat, not only of the pan-American sentiment, but of an effectively functioning pan-American service. Committees of earnest and able representatives of all these nations are constantly working through the day and the night to improve and to better assure the security, to improve the health, to raise the standard of living, to promote a better exchange of the cultures of all our nations and all our peoples. We stop not at the noncontroversial boundaries, but the common effort enters also into the field of reciprocal helpfulness one to another in the strengthening of one another's economic life.

I may mention what my own country is doing through the Export-Import Bank in furnishing capital and credit to our friends and neighbors which has the double aspect of helping both them and us. This fact alone indicates most significantly a new attitude in the realm of international relations and international finance. Capital is regarded as the instrument of national policy, the vehicle for international progress, and not the exploiting tyrant which in some times past has bent national policy supinely to its will.

The armed forces of no one of the pan-American republics is thought of in relation to the collection of either private or public debts. The good neighbor policy is, of course, bilateral and multilateral. It is mutual and reciprocal in its character. Nevertheless, it is ancient history in the pan-American world that even severe differences in business transactions or policies can be a cause for intervention, much less war.

In the modern pan-American order we no more think of the use of a gun in international business affairs than in private business affairs.

The United States, as you all know, has even removed the former vestiges of the old order, in, for example, our voiding of the Platte Amendment which gave our Nation certain rights in respect to our neighbor Cuba, the revision of our treaty with Panama, which in its original form was thought somewhat to impair the national integrity of our good friends in the Republic of Panama.

In these days when we hear so much of the greed of nations for territory and resources, it is perhaps permissible to add that any suggestions relative to any change in the existing law providing for the independence of the Philippines has come from the Filipinos themselves and not from us.

All these things that I have said simply relate to doings in our neighborhood in which I knew you were keenly interested. No discussion, of course, of international affairs could leave out of consideration, indeed of emphasis, a system and a sentiment which has given peace over a larger area to more people for a longer time than any other system in history.

What a happy prospect it is to turn our eyes to your great Nation here, to think of the long years of our unbroken friendship, the many ties of interest, understanding, mutual helpfulness, and affection which bind us together with hoops of steel.

You and I know that we could no more get along without each other sentimentally than we could get along without each other economically. What an example to the world we have given in mutual confidence and trust, in working out our differences by honest discussion or fair arbitration, in maintaining the machinery for the adjustment of frictions which inevitably develop among strong peoples, in the removal or the limitation of artificial barriers which impede the natural flow of goods and services across our thin boundary. And last, and most glorious of all, the welding together in insoluble bonds our two Nations for our common defense.

What our President said to you here at Queens College in 1938—that we would not sit idly by and see your fair land made the victim of aggression by any foreign power—was but a natural assurance of what you knew already; and but the same sentiment which your great Prime Minister, whom we so highly esteem, would have expressed in my country had circumstances made it appropriate there. In other words, it is a good idea for nations to do what husbands and wives ought to do—tell each other they love each other, even if each knows it already.

At Ogdensburg, of course, our cooperation began in earnest. Personally, as a legislator, I have the right to hope that our cooperation shall extend far beyond what was said at Ogdensburg; that our effort to build here in this continent an overflowing arsenal of democracy shall be so synchronized that it shall be as much one as are our common wills that democracy shall survive.

Is it too much to hope that the spirit of Simon Bolivar, Henry Clay, and those who have dreamed their dreams, can see this glorious spectacle in which your people and mine join together the two mightiest systems upon the face of the earth, half of all the world's people, more than half of all the world's surface, in a common friendship, common understanding, and a common purpose?

It is no Pax Romana; it is no gigantic slave state; we are not brought together under the yoke of tyranny. Ours is a new kind of empire. It is a new kingdom, a dominion of the spirit which echoes back the hosannas of the angels, "On earth peace, good will toward men."

When we have passed as we shall the crisis in this malady from which the world so bitterly suffers, our next problem shall be to think of a healthy future. Each of us, all of us, must make it his first concern that we shall not make the mistakes we have made in the past. The scales have fallen from many eyes and they no longer see as through a glass darkly. They see clearly the tragedy which has befallen a selfish and a short-sighted policy. We in our country are beginning now to be a little ashamed of ourselves, not of what we did in the World War, but of what we didn't do after that war. We are praying that we shall be big enough and wise enough this time not to try to run away from a world from which there is no escape for any of us. There was a time in your country and mine when it was easy to flee beyond the mountains, beyond the rivers, beyond the plains, from the exacting pressures behind. With both of us that time has largely passed. However we "grunt and sweat," there is no place now to flee to. We must stay and meet our problems like men.

It is not easy, of course, for your people or mine to come to the consciousness that they are just a family in a busy world community.

We have had so long security here upon our continent that many have come to confuse security with what some called isolation. Even in an earlier day we were not so much isolated that both you and we did not feel the dynamic reverberations of the earth-shaking wars of Europe. The oceans were not so broad that the soldiery of Europe could not reach again and again our own lands and the lands of our neighbors. That was before modern ships, the long-range bomber. Who can say what will be the weapons of tomorrow, when men are talking about the release of the energy of the infinitesimal particles of matter.

But we are come to see in our country that it was not the oceans which gave us our security, but the statesmanship and the courage of our leaders and our people. For over a century because of the happy accord between Great Britain and the United States in laying down and in maintaining the Monroe Doctrine, the fleets of those nations have lain like an impenetrable screen across the exits of the Old World and the entrances to the new. We recognize the farsightedness of our Jefferson who saw that the restless Napoleon was not a good neighbor.

Now not only our President but our people have come with rare unanimity and by the democratic process to the solemn resolve that we shall pour our substance out to those heroic men and women who upon any one of the world's fronts is stemming the tide of slavery.

I like to imagine that I see in spite of all its fluctuations some continuity in the sentiment of our people, a persistent adherence to the principles of freedom, independence, and justice. What we gained for ourselves we have many times helped others to gain. We will now help others to keep.

None of us can see over the hill and know just what our path will be beyond the crest, but we know the direction in which we are going. We know the faith which shall move us and guide us, both here and on the other side. We shall not be afraid of sacrifice in peace as we have not feared it in strife. Man's destiny grows fuller. He has hardly begun, even to see it, let alone to reach it. Nothing can stop his onward march.

There are some words with which I should like to close. They are the last words uttered by Woodrow Wilson in the last speech he made in the West before he fell like a brave

soldier facing the enemy. As he uttered those words I visualize him in the shining raiment of prophecy. He said:

"Now that the mists have cleared away, I believe that man will see the truth, eye to eye and face to face. There is one thing that the American people always rise to and extend their hand to, and that is the truth of justice and of liberty and of peace. We have accepted that truth and we are going to be led by it, and it is going to lead us, and through us the world, out into pastures of quietness and peace such as the world never dreamed of before."

[Address before the Canadian Club of Montreal, Canada, March 21, 1941]

DEMOCRACY IN THE MODERN WORLD

Mr. President, neighbors, and friends of Canada, President Wilson, appearing before the convention which nominated him for the governorship of New Jersey, opened his remarks with these words: "Have you ever experienced the elation of a great emotion?" One could not come, as I am privileged to do today, to address for the first time an audience of neighbors and new friends, friends which he expects to know and to cherish for a very long time, without experiencing the elation of the great emotion of happiness.

You know, we in North America are friendly people. We like to visit, and it is easy for us to know one another because we have so many things in common. We both have our oceans, our mountain ranges, our plains, our barren lands, our lakes; in the East we have industry and, westerly, agriculture.

We even have the same troubles. We make more, in factory and on farm, than we consume. We live and have our being in a great world from which we buy and to which we sell many things. The streams of world thought and the ebb of world tides wash across both our countries.

We both have politics, good, and in our case, at least on occasion, even bad politics and politicians.

We have the same traditions. We didn't, like Topsy, just grow. We both grew slowly, tediously, even painfully. We together, and many times with mutual helpfulness, turned forests into thriving cities, beautiful villages, and inviting countryside, wildernesses into farms and humming factories. We have laden the backs of our streams with burdens of commerce and harnessed the waters to the dynamos of the modern world.

We have wrought the spirit of our creative peoples into great institutions of inspiration, stability, and permanence. We have developed sentiments which we think of as colored by our own evolution of them—such sentiments as liberty, freedom, responsibility, national and personal dignity, physical, mental, and spiritual integrity.

Now, I guess we are both about grown up. I remember when I was a little past 11, somehow I got the impression that one did not become morally accountable until he reached the age of 12. I shall never forget what great satisfaction I derived from the escapades I committed in those last months before reaching 12, devilishly immune from accountability for those wrongs of which I was gleefully aware.

After a fashion I had the same experience when I got into politics. Surely, I thought, no one could be held really accountable for what he did when he was still under 40. Last fall I reached that perihelion, and, alas, I am afraid that now I shall have to answer to my constituents in Florida for what I do that they don't like. So you and I and Canada and the United States are now grown up, and we shall have to face this modern world like mature men and nations, and we shall not be able to make excuses either for our failure to understand it or to meet it. Our people and our history will observe only that we either did or did not meet that world as we should.

This modern world presents to the institution of democracy its most supreme challenge. No institution has ever struggled with a world like this because there has never been a world like this. There were never before so many people, and since people make problems, there were never before so many problems. People never lived so intimately before. They were never so interdependent. Their welfare was never so inextricably interwoven. They never were so keenly competitive as they now are. They never had so many things in common. They never had so many reasons to oppose one another for what there is. They never had so many causes to work together to enjoy what there is and to make more.

Obviously, when almost all the world can hear a man speak at the same time, when most of the world knows most of the world's news at almost the same time, when modern transportation has contracted the globe almost to a neighborhood, no part of the world or the race of man does or can live alone. Modern technology has emphasized our interdependence, for from the ends of the earth come together the elements of our daily lives. Interrupt the streams of raw materials as they move almost like falling waters toward the machines of the world and modern life would stop. Disturb the delicate equilibrium and adjustment of the labor which turns and guides those machines and life slips back at once through the centuries. Affect the delicate mechanism of the exchanges and immediately comes chaos and confusion. Burden the free movement of vital forces with unnatural restrictions and the whole economic machine groans.

Is it possible that fair balance can be kept in this giant constellation by the processes of democracy as you and I know them?

From many parts of the world the answer is an authoritative "No." This is all too vast, too complicated, too delicately balanced, too throbbingly alive to be guided by more than a single mind—steered by more than one hand. In no other way, say they, can there be the timing or the comprehensiveness which will keep it in order. It is a job, they contend, only for especial skill. It requires a particular technique which grows out of nice distinctions and subtle differentiations. It must have, they contend, scientific accuracy and no allowance can be made for human error or frailty. All must be subordinated to the central purpose. The individual must give way to the group. The individual is nothing—the state all, and above the state must be one to say, "I am the state."

Those who believe that and we who believe our way are in mortal struggle which can end only when the stronger and the right shall prevail.

It is the fiercest struggle of history. The whole world is engaged. Some contribute materials, some heroically give both men and materials. Some give their mite, and others, whom inglorious circumstances have made mute, give only their prayers; but all give something which is their stone in the edifice of our effort, bearing their own craftsmen's mark.

If our kind of democracy is to persist we must first make it work in our own nations. Second, make it work in our continent; and third, do our part to make it work in the world. Undoubtedly, to make democracy work in the modern state in this technological age, is the severest test of genius, understanding, and patience. If there is overproduction in the totalitarian state, the adjustment is made by an order. If populations are needed in one place more than another, they are simply moved, body and soul. If there is no money with which to pay them, their labor is forced by a simple decree. If funds are not to be found, currency can be issued, obligations put into circulation by simple steps of inflation, while by mere mandate prices and wages remain stable. Of course, the innocent can be robbed to fill the looters' treasury and the concentration camp or the nameless grave can stifle the remonstrances or the cry of the protestant against any ravage.

With us men and women are still sane. They can speak, assemble, write, and vote. They can stir up a terrible tempest in the political teapot. They have to be explained to as to why you do and why you don't. They have to be told why they don't get something, and if they get something why they didn't get more. They have to vote contributions to the tax gatherer. They have to be compensated for their property or their time. They have something to say as to what kind of work they do, what kind of crops they grow, and where they labor or produce.

And they insist on doing it all in their own way and in their own good time, regardless of whether that is the scientific way or not. Moreover, they must have it not only in circumstances as they want it, but by the particular method they prefer, and in getting what they want they insist that they will not give up things which may be to some just ideas, but to them are very valuable possessions.

It is clearly apparent that something must enter into the spirit of men, a new kind of willingness to assume a new kind of discipline, before such democracy can really save the modern world as we know it in our homelands.

There are some who think that any discipline is tyrannical. You and I know that the character of the disciplined depends upon its source, its authority. If our farmers, because they have an unmarketable excess, see their Congress establish a method to curtail production and to enrich their soil, if two-thirds of them in a fair election in which only farmers participate approve that method and reapprove it each year it is in force, the resulting mandate which carries out that method is not dictatorship, it is democracy.

If we agree that we will pay a minimum wage; that we will not exceed maximum hours of labor; that we will break up monopolies; that we will forbid unfair trade practices; that we will regulate commerce in its flow; that we shall require the observance of private morals in business financing; these are but the evidence of our common will imposed for the common weal. If we plan, think ahead, give and take, we surrender no liberties. We gain independence.

Of course, it is not always easy for one to fit into his or her particular place, however strong the wish to do so. Ability to serve contemplates not only willingness but training and helpful instruction. And there must be an understanding that democracy is a pearl of great price and cannot come cheaply. It must be bought with sacrifice and sometimes with "sweat and tears and blood."

We cannot ask the world to adopt and live by the principles of democracy unless we can show them that we have first made democracy work in our continent. Cooperative democracy in this hemisphere has given peace to more people over a larger area and for a longer time than the world has ever seen before. In this dreary hour, when men have so much to bring despair to their hearts, where is there a picture so inspiring, so reassuring as that which is presented over all these thousands of miles, among all of these 22 nations, among all these different people, speaking their different languages, having their variable origins, their own distinctive characteristics and aspirations?

See them, wedded together in sickness and in health, in peace and in defense, until God doth them part.

Was there ever such neighborhood in the world? It is the very antithesis of the pax romana, the totalitarian state, where unity is achieved by force. With us unity springs

from the deeper source, a deep-rooted consciousness of right, justice, interdependence, and awareness that we are not our brother's killer but our brother's keeper.

Here we meet not by summons of the gun; we sign our conventions not under the drawn sword. We come together because we want to work together, and we make our accords because true friendship is in our hearts. Our many differences, our natural frictions, we settle not by command and coercion, but by reasoning together, by give and take, by arbitration.

In all this massive land dividing the oceans we have found no problem—territorial, racial, religious, political, economic, social, or cultural—which would not melt under the radiance of these warm sentiments of mutual respect and affection.

I delight to do honor to a great American, not of our continent, but of our land, Simon Bolivar. You know the story of how this far-seeing patriot wrote a letter in 1815 to an English gentleman in the English colony of Jamaica where he had found a friendly haven from the vicissitudes of the revolution he was leading. In this letter he said:

"How beautiful it would be for the Isthmus of Panama to be for our nations what the Corinthian Isthmus was for the Greeks. Would to God that some day we might enjoy the happiness of having there an august congress of representatives of the republics, kingdoms, and empires of America to deal with the high interests of peace and of war with the nations of the other three parts of the world."

Having achieved his glorious victory at Ayachuco in 1824 the independence of the Americas was assured. The distinguished prophet of the future set about to realize his dream of a congress of American nations. Invitations were issued to the free nations of the hemisphere, including the United States. An English observer was invited as well. Here are excerpts from the memorandum sent to Great Britain:

"The Congress of Panama will bring together representatives from all the governments of America and a diplomatic agent of His Britannic Majesty. This congress seems destined to form the vastest league, the most extraordinary, and the strongest which has ever appeared on earth. * * * The human race would give a thousand thanks for this league of salvation, and America and England would receive manifold benefits from it."

The invitation concluded with this significant statement:

"Such ideas are to be found in the minds of some Americans of the highest quality; they wait with impatience for the Congress of Panama to initiate this project which may be the occasion for the consolidation of the union of the new states with the British Empire."

This congress was, of course, doomed to failure. It was too far ahead of its time. We will leave it to the historian to reflect upon what the world might have been spared had it then embraced the dream of Simon Bolivar.

But these sentiments, having found happy lodgment in the United States, finally in 1889 resulted in James G. Blaine, as Secretary of State of the United States, calling in Washington the first Pan-American Conference.

The nature of this conference, the foundations it laid for the whole structure of pan-American unity, which has so gloriously grown up since, is well stated by former President Ricardo J. Alfaro, of the Republic of Panama, who said:

"No treaties or conventions were signed at this meeting, yet its achievements were great, for it served three transcendent purposes. In the first place, it crystallized into action the latent sentiment of pan Americanism and laid down the foundations of a united America, as dreamed by Bolivar and Clay. In the second place, it gave birth to the central organ of continental action, the Commercial Bureau of the American Republics, which was the forerunner of the present Pan American Union. And last, but not least, the conference of 1889 went down in history as the first occasion upon which representatives of the great majority of the continent united in condemning the right of conquest and in proclaiming the principle of compulsory arbitration.

"* * * Pan Americanism is a structure devoted to peace and prosperity. That structure rests upon the four pillars of independence, equality, justice, and cooperation, and those four pillars were erected in 1889."

Since that historic conference there have been nine Pan American conferences, which have molded pan-American relations into an edifice of firmness, effectiveness, and permanence. An entirely new relationship among the 21 republics on your southern border has, under the impulse of this American spirit, come about. The United States has frankly reversed some of its own policies. It has laid down what it may not be too much to say has become the principle that best expresses this American spirit—the principle of the good "neighbor, who resolutely respects himself, and because he does so respects the rights of others," uttered by a worthy champion of Simon Bolivar's dream, a friend of man, Franklin D. Roosevelt.

The United States now is proud of its friendship with the other nations of our world, proud of the fellowship which it enjoys with them, proud of the happy community which we have created with these great Americas, proud of the respect which each accords the others and enjoys for all, proud of the friendship of the smallest as of the largest, and no more designing upon the one than the other. It is a source of immeasurable satisfaction to us that what was once taken as policies of paternalism or maybe aggression are now taken by none except as ties that bind us together for our common defense against a common danger.

But most salutary of all is that out of this new fraternity in the Americas there has come not only sentiments of understanding and friendship but effective, efficient, constantly functioning instrumentalities and agencies for meeting and solving the myriad problems of the workaday world which affect us all. In Washington stands an imposing building which is the seat of pan-American functioning as well as sentiment. Supporting this superstructure of pan-American accord are numerous committees working through the days and the nights to improve the health, the standards of living, the cultural opportunities, the security, may I add the happiness, of a quarter of a billion men, women, and children whom God has blessed with the Americas.

And here, as you and we clasp hands across this almost imaginary border which hardly perceptibly divides us, Simon Bolivar's dream has come to a substantial reality, for which the contact between you and us, the British Commonwealth of Nations, a great and salutary world institution is brought into the comradeship of your neighbors in the Americas. Can the spectacle fail to inspire you?

A major part of the world's surface, the dominant part of the world's people, constituting two gigantic world systems meeting at an unfortified boundary between your country and mine.

How pitiful, how spiritually barren, is the so-called new state by comparison. Here no chains of slavery forged by a tyrant, no throwing of people together into the dungeons of slavery, but more than half the people of the earth saying to one another, "We want to be your friend. We want to work together in peace so that the humblest man, the frailest little child, shall have a fair chance to find a way to his own just destiny."

Is it surprising, then, that we are not afraid, that we are confident, that we defy the monsters who would crush all these fine things in their cruel and lustful grasp, who would scorch our fair lands with their flaming hate?

It gives me no little satisfaction to come fresh from the American Congress, which has laid down in the democratic way the positive policy of our people, which is understood by all—that we shall build an arsenal for democracy the like of which the world has never seen.

It is not enough to have democracy these days in a part of the world. Democracy must and can live only in a healthy environment. The world can no more be half slave and half free than can a nation be. The very nature of each philosophy makes totalitarianism and democracy mutually exclusive. They can no more live in the same earth than light and darkness can at the same time occupy the same space. The organization, the aims, the very spirit of each is repugnant to the other. Now the struggle is on, the issue joined as to which shall live and which shall die. The first task then is to throw back the beast which leaps at us all, to strangle him into impotence, to destroy his power, to disturb the orderly progress of man upward.

That we shall do, each in his own way, consistently with his own traditions and institutions, but so cooperatively that there shall be no doubt about the unity and the effectiveness of the common effort. And we shall stay at it until the job is done, because it is the history of our people that having taken hold we don't turn loose.

When that job is done in due course, then we shall have to think about what we ought to do to encourage a cooperative peace and progress in the world. Not one of us, I am sure, but what is willing to do his or her part; not one of us has a thought of shirking our fair share of responsibility; not one of us is unwilling to measure fairly and squarely the risk of doing something with the risk of doing nothing.

Whatever form it may take, we know that the pillars of the structure will be the principles of the good neighbor which prevail with us here—"the neighbor who resolutely respects himself and, because he does so, respects the rights of others."

In the foundations can be no other supports than willingness to admit the other man's rights while you insist upon your own, earnest recognition of the interdependence of us all, sincere desire to cooperate helpfully with one another, acceptance of the principles of honest discussion or fair arbitration as a method of settling differences, recognition that whatever impairs or obstructs the fullest possible exchange of goods, services, ideas, and inspirations harms all, and, above all, understanding that the most glorious monument that man can build is not a dazzling state but a healthy, busy, happily striving people.

While the sky is dark, while the hearts of men are heavy, and the cries of the anguished echo around the world, those of us who have never lost our faith in man and man's God know that the darkest hour comes just before the dawn and from the fallow ground of suffering have sprung forth the most beautiful specimens of the spirit.

The portals of the future are ajar. They challenge us to open them and through them to enter into the abundance, the security, and the beauty of a better world.

[Address before the Canadian Club of Toronto, Canada, at noon, March 17, 1941; the Canadian Club of Ottawa, Canada, March 19, 1941; and the Canadian Club and the Canadian Women's Club, at Quebec, Canada, March 22, 1941]

SHALL DEMOCRACY MEET THE CHALLENGE OF TODAY?

Mr. Chairman, friends, and neighbors, you can imagine what a thrill and what a joy it is for one who has admired you so much to be able to come to know you—to greet you for the first time. To me this is a significant occasion, because I venture to believe that I am making friends whom I shall long cherish, and I have the stimulating consciousness that I am in the flood of friendship which flows in ever-increasing volume between your country and mine. I know of no happier picture than that of the comradeship and the cordiality of the United States and Canada; not just of the Governments of our two countries, as intimate as they are, but the people themselves, in whatever part of our respective countries they live.

Surely Canada has no better friends than in my State of Florida, which lies far to our south. Many of your people come to visit with us, and we accept them as one always does when a good neighbor comes to see him. Many of our people, in turn have the privilege of visiting your inviting land and come back again and again for refreshment, recreation, trade, and sometimes residence.

It is easy for us to be friends, of course, for we have learned here in the Americas that the test of virtue is what you are and not where you come from, what race you belong to, what language you speak, or what is your faith. Here in our great countries people readily lose all allegiance save to our own fallow ground. There is something about our mountains, our plains, our rolling rivers, our pulsating lakes, our great forests and wide fields, even the waters from the broad Pacific and the Atlantic which lave our shores, that bind us together with hoops of steel. We are proud to say that we are Americans, first, last, and all the time.

We have out of a common experience developed common traditions and concepts. When men and brave women pull down the forests, clear the fields, open up the wilderness in a new land they become comrades whether they do it north or south of a given line of latitude.

Our forebears came here with a new spirit. They were resolved that there should not only be here something different, but something new. And by newness they meant not only new fields and new homes and new shops; they meant new institutions and particularly a new spirit. They meant to do things in a new way because they had seen how the old way had borne down upon them, its burdens of sadness and sorrow. How it had frustrated the dreams of the multitudes for peace, security, abundance, happiness. They had followed son after father and son after father in the long lines, the unending lines, of those whom jealous conflict had led to an obedient soldier's grave. There was always generation after generation, a tearful mother, a sad wife, who were no less the victims of the old way than those who died.

Hence, here we sought understanding of each other's problems, adjustment in an honorable way of recurring frictions which are the incidents of innumerable contacts between busily striving people. So well have we succeeded that over 5,000 miles of boundary, barely perceptible to us, demark you from us, without a sentinel or a fort, without a thought of fear each of the other. We have through the long years lived the policy which our President promulgated in his first inaugural, the policy of the good neighbor; "the neighbor who resolutely respects himself, and because he does so, respects the rights of others."

But we have gone far beyond a neighborly relation which just forbids each to attack the other. We have made the concept of neighborhood an attitude of mutual helpfulness. We not only visit together, we work together in the same spirit in which the pioneers of both our lands built together their homes and churches and schools in the wild wilderness.

Knowing that trade is the lifeblood of our prosperity, we have sought in every way possible to remove or to diminish impediments to its natural flow between us; and our aim, of course, goes far beyond what we have so far been able to achieve. We have set up and propose to maintain a continuous body which shall concern itself not only with the adjustment of questions of boundary and the like but with any other problem the adjustment of which is mutually desirable to promote cordial and profitable contacts and cooperation between us.

And now we are wedded together in the greatest effort of our history, each in his own way, in accordance with its own tradition and circumstance, to throw back this monster who strikes at us from beyond the seas, who wills to destroy all these fine things we have won and saved from the "sweat, tears, and blood" of the past.

What was said by your great Prime Minister, who holds such high place in our regard, and our President at Ogdenburg, was what our respective peoples, of course, expected them to say. And what has been done to promote the common defense since that time, and what is yet further to be done, is simply a reflection of our determination to stand shoulder to shoulder in this hour of greatest peril. I know that you and I hope and expect that the military aspects of our cooperation will be the least part of it all. We hope as laymen and as citizens that our economies, the productive facilities of our two nations, shall be so molded that they make a common front and an overflowing arsenal against which this sinister enemy cannot stand.

In this coordination which will be another great step in world pioneering, where the money comes from, where the machines are, on which side of a line of latitude they stand, by whom they are operated, is really immaterial. The important thing is that they are soldiers of democracy, who shall together bring victory to our honorable cause.

It is not men with guns, I venture to say, but men and women who man these whirling machines, who shall eventually strangle into impotence these brigands who aim at nothing less than the loot of the world.

It gives me not a little satisfaction to come to you now fresh from the Congress of the United States, which has in the democratic way laid down the forthright policy of the people of the United States. You know that we have resolved to spare no expense, to shirk at no sacrifice to make our country a Niagara of support to those heroic peoples who stand today with indescribable valor in the front lines. You and they can count upon it that we are with you to the end. We have adopted in our hearts those words which were the spirit of Verdun, "They shall not pass."

We hope only that it may be said that our effort is as splendid as yours, for we know that it is no less our cause than your own. This thing is no European war, no boundary dispute, no struggle for trade. It is a world shaking revolution led by the most sinister genius who has appeared to degrade the name of man. It aims to shake from their foundations every institution which we have built in our world, to strangle every dream which has burst from our hearts, to tear asunder the pattern of these lives which we have woven from the sacrifice of our honorable ancestors.

Not law, not justice, not right, is their creed, but—

"The simple plan,
He may take who has the power,
He may keep who can."

They propose not only to take from us what we have gained from our labors but the very liberty which to us is life itself. This devilish Samson, in the agony of his blind hate, is willing to run the risk of his own destruction in order to pull down the temples of our world. All that he preaches, all that he teaches, is the antithesis of what we believe. Where he raises race to hate race, nation to hate nation, creed to hate creed, paganism to hate religion, we have all these years been trying to bring men together in the realm of understanding and in the spirit of tolerance. Instead of setting religion against religion, we have lifted our eyes to the horizon of the world and seen there many honest men and many honest faiths.

One, Harry Romaine, has expressed what he saw in these words:

"At the Muezzin's call for prayer,
The kneeling faithful thronged the square,
And on Pushkara's lofty height
The dark priest chanted Brahma's might.
Amid a monastery's weeds
An old Franciscan told his beads;
While to the synagogue there came
A Jew to praise Jehovah"s name.
The one great God looked down and smiled
And counted each His loving child;
For Turk and Brahman, monk and Jew
Had reached Him through the gods they knew."

We have shown the world that men do not have to speak the same language, belong to the same race, look or dress alike, to respect one another and to live together in peace and brotherhood.

What a discouraging spectacle it is when there was so much to indicate the race's progress toward peace and understanding, one part with another, to have these jungle forces to rear their ugly heads across our path.

Here in Canada two great races have found friendship and accord. In my country many races from many lands have become one people. Here in this continent even nations have come to be members of a happy neighborhood.

I like to let memory run back to Simon Bolivar, a great American, who held up first in a letter to an English gentleman in Jamaica who had given his weary body and mind refuge in 1815, the dream of a happy family of American nations living in cordial and free intimacy with another neighborhood, the British nations. What romance there is in seeing this dream echoed and reechoed in the eloquence of patriots and prophets of our lands and finally coming into reality in 1889 in the first Pan American Congress called by one of your closest neighbors, James G. Blaine, of Maine, then Secretary of State of the United States.

You know that since that eventful congress there have been nine additional congresses of the 21 American republics lying beyond your southern border. Now, the world knows that pan Americanism is one of the most vital forces in the affairs of men. Through it there has come about a new relationship, a new spirit throughout these many nations, these many people, stretching over these many thousands of miles, permeating many races, bringing together men of many origins.

This system, be it known, has given peace and tranquillity to more people, over a longer period of time, throughout a larger area, than has ever been seen in the world before. It has not only established the principles of the

good neighbor, of equality, justice, honorable dealing, one nation with another, but it has been the means of these 21 republics actually setting up the functioning machinery of cooperation.

This cooperation covers the whole field of our relationships. It is working for our common defense. It is strengthening our several economies. It is promoting better understanding of one another's language, culture, and aspirations. What it means is that what the world has known as Americanism is now not confined to any segment of these great continents of ours, but to the whole area from Arctic to Antarctic.

I include the people of Canada, of course, when I speak of these American sentiments, because what has now grown up, the principles which are now cherished among us and our neighbors to the south, some geographically remote from us, have been from a time whereof the memory of man runneth not to the contrary the sentiments between my country and yours.

Have you realized what it means for the people of Canada and the United States to be joined together in friendship; have you realized that through us across this thin boundary line come together the two greatest political systems in all the world, in peace, understanding, good will, and now in common unshakable resolve?

What could be so comforting to him who has flashes of fear from all these horrible things that are now going on in the world, as to realize that the mightiest assault of history has not only left these two systems, the British Commonwealth and pan-America, unshaken, but stronger in their unity than they have ever been, both introsystem and intersystem. It does not seem to us that there are insurmountable barriers to the spread of the sentiments which have made up these systems to other nations and other peoples of like mind and heart.

Our first task, of course, is to chain the international culprits to the stocks, to shut them in the prison walls of impotence, to take the dangerous weapons from their hands; then men of good will may lay down their arms and sense the inexpressible satisfactions of peace.

Then will be the time for men to plan their peace. Not only to cherish it but to nurture it, so that it shall grow from a frail plant to a giant, unshakable tree.

You and I know how we have flung away opportunities to save the peace in the past. You will understand me, I know, when I say that I know how culpable my own country has been; that our regret is not what we did in the last war but what we did not do when the storm of that struggle had passed. We have not committed the only error, either of omission or commission, which has been committed. We are not alone at fault. Some of our leaders have not been the only ones who did not see.

But when the mischief has been undone again the test of the sincerity of our repentance will be what use we make of future opportunities.

What is there to prevent the application of the principles of pan-Americanism to the wide world—to other hemispheres as well as our own? It may or may not be too soon, even when peace is with us again, to set up the superstate or a proven form of world organism, but it will certainly not be too soon for the representatives of all the nations of the earth, great and small, black and white, yellow and brown, to establish the habit of meeting together, of talking about common problems, of setting up the machinery of cooperation, in meeting those things that threaten us all—disease, crime, poor food, poor shelter, poor working conditions—to work out the many noncontroversial ways in which we may help one another, all may help each.

I will not believe that any one of the British Commonwealth or of the pan-American republics would object to such an effort and would withhold its honest cooperation from such an aim.

There has never been such an opportunity as there will be when this outbreak of outlawry shall again be suppressed; there has never been the intimacy among the peoples of the world there now is, physically, intellectually, spiritually. A man now speaks and the world hears him, writes and the world reads him, thinks and the world thinks with him. If there was ever any doubt that any of us was not an integral part of this great world organism, that doubt has passed away. We move in the rapidly flowing stream of life all along together, whether we want it or not, whether we know it or not. If we would guide our own course, we must guide the course of it all, for where they go, we go, and where we go, all go.

Destiny has chosen your people and mine to have an honorable part in our time. At each stage in our history we have seen the expanding frontier. First it crossed the mountains, then the rivers and the plains. It stopped not at the mountains again. Finally it reached the moving waters of the Pacific. Since we have seen it stretch to the north and to the south. It moves in its irresistible march across yet other rivers, other plains, more mountain ranges, until it passes the torrid lands of the Equator and finally reaches the cold seas of the Antarctic. Now it has changed direction, but it moves on, for we have come to see that frontiers are not geographic but mental and spiritual.

But those who shall break the new ground as the new pioneers must have the intrepid spirit of the old. They must be unafraid, strong, and have in their minds no thought except forward, ever forward.

The fascinating adventure of this future reaches out its hand to us. Under the leadership of Winston Churchill, McKenzie King, and Franklin D. Roosevelt we shall take that hand, and in the words of Woodrow Wilson, who fell leading the hope of an earlier day, "it shall lead us, and through us, the world, out into pastures of quietness and peace such as the world never dreamed of before."

Presentation of State Flag of Wisconsin at Independence Hall

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, March 27 (legislative day of Monday, March 24), 1941

ADDRESS BY HON. ALEXANDER WILEY, OF WISCONSIN

Mr. WILEY. Mr. President, on March 24, 1941, it was my privilege to present the State flag of Wisconsin for inclusion in the permanent display of State flags in Independence Hall.

The flag was the gift of the Wisconsin Society of the Sons of the American Revolution as an expression of honor and reverence for the Revolutionary War soldiers buried in Wisconsin.

It was a great honor to present the flag of my State to the Mayor of Philadelphia for the collection in Independence Hall, because I believe that in these troubled times particularly the presentation of this flag may, in a sense, symbolize our national unity.

Mr. President, I ask unanimous consent to have this very brief presentation speech inserted in the Appendix to the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, ladies and gentlemen: My pleasure in being permitted to be here with you today is tempered only by a distinct regret that the late Mrs. George Horace Lorimer, who gave so unsparingly of her time and thought to the creation of this "trooping of the State colors" in Independence Hall, is not with us. She was one of the truly great patriotic women of our time.

At the outset of this ceremony I should like to acknowledge a debt of gratitude to this outstanding patriot for her fervent interest and for her work in arranging for the display of the State flags. In a real sense this proceeding today is a memorial to her.

I should like also to acknowledge my appreciation to Mrs. Robert Carson and her associates in the Hannah Penn House for the painstaking care which they have devoted to this presentation. In so doing I know that they are building a memorial not only to a worth-while cause but also to a beloved associate.

At this time may I also express my appreciation to Mr. Alonzo H. Wilkinson, of Milwaukee, Wis., who arranged for the gift of the Wisconsin State flag by the Wisconsin Society of the Sons of the American Revolution as an expression of honor and reverence for the Revolutionary War soldiers buried in Wisconsin.

It is an honor for me to be present with you people today, in this hallowed hall. Independence Hall is a patriotic shrine for all America. It is a cathedral of American hopes and American ideals.

As we step across its threshold, we embrace the memories of those great men who lived in the formative period of our Nation. Here in this very hall Washington and Jefferson, Franklin and Adams, Hamilton and Lee, Hancock, Sherman, Morris, Rush, Wilson, and Livingston, and other great nation-builders met and discussed the affairs of state.

Every schoolboy knows the story of Independence Hall. It is the first place we want to see when we come to Philadelphia. My visit here today brings back pleasant memories of former years when, as a young man, I walked through these sacred halls.

As I entered the building today, I felt the same thrill, the same fervor, that I did in my first visit.

The history of this building dates from that chilly morning in 1732 when the 30 members of the Provincial Assembly reached the still-uncompleted Statehouse.

This building on that sultry 4th of July in 1776 saw the Declaration of Independence receive the signatures which made it official. It was here on July 16, 1775, that Washington was given command of the Continental Army. It was here on July 9, 1778, that the Thirteen Colonies were welded into a union by the ratification of the Articles of Confederation.

It was here on September 17, 1787, that the Constitution was drawn. It was here in 1848 that the draped body of John Quincy Adams lay in state in the same room where his father had fought for independence. It was here some 4 years later that a funeral procession bearing torches arrived at midnight with the body of Henry Clay.

This building saw Independence Square thronged with people singing deliriously as

Richmond fell. It was here just 2 weeks later that a double file of soldiers marched in lockstep to the south door of Independence Hall bearing on their shoulders the casket of the martyred Lincoln.

Independence Square is alive with the memories of the famous 100 working days with George Washington presiding in his high-backed chair, and turning now and then to speak to the aging Benjamin Franklin.

Independence Square saw the creation of the Federal Government and the Constitution, the Army, the Navy, and the Mint. It was here that the Jay Treaty was debated and ratified. It was here that Washington was inaugurated for a second term. It was here on September 17, 1796, that he delivered his Farewell Address.

Independence Square for three-quarters of a century was the stage on which the great drama of a new nation was unfolded. We could say of Independence Square, as Byron said of Greece, "Where'er we tread, 'tis haunted holy ground."

The corporeal heritage of those stirring days lives here in Philadelphia, but the spirit of independence and freedom which was born in these halls lives today in the hearts and minds of men and women and children all over America. It is a proud part of the birthright of every American. It is a part of the heritage of each of our States.

I come from a section of the country about which the founding fathers knew little or nothing, but down through the years we, too, have lived and breathed in the spirit of this glorious heritage whose shrine is here in Philadelphia. I bring to Independence Hall today the flag of a State about which the founding fathers scarcely dreamed.

Of course, Wisconsin's vast area of some 56,000 square miles had already been traversed by the French explorers. That French period began with Jean Nicolet's voyage to the heart of Wisconsin in 1634 and it ended with the Treaty of Paris in 1763. It was a period when Wisconsin was a far-flung fringe on the French-Canadian life which had its heart along the St. Lawrence River. It was through the historic gateway of the St. Lawrence River that Wisconsin was discovered and explored more than three centuries ago by the men of New France.

It is not my purpose to discuss here today the history of this land crossed by the great glaciers more than a million years ago. It is not my purpose to tell you a story of timber and trapping, of the stark daring of frontier life in the northland, of the century when we were the favored recruiting ground of the French, of the courageous explorations by the missionaries, of the alliance which the Wisconsin Indians made in 1778 with George Rogers Clark.

It is not my purpose to discuss the two centuries of romance which preceded the days when Wisconsin emerged from the winding Indian trails unto the broad highways of a great agricultural, dairying, and industrial State.

I am interested, however, in recalling to your minds the fact that when John Jay and John Adams went to Paris to join Benjamin Franklin, the fate of the West and the fate of Wisconsin was at stake. There was a treaty signed on September 3, 1783, and under the terms of that treaty Wisconsin was included in the United States.

Again at the time of the War of 1812, the fate of Wisconsin was dependent upon a European treaty. The Treaty of Ghent ended European control in the Northwest, and Wisconsin territory was still a part of the United States.

It is well today that in this birthplace of independence we recall that this Wisconsin flag represented a territory once dominated by European control.

For the most part, during the revolutionary days, my State was a land of virgin forests, inhabited only by the painted tribesmen of Wisconsin. Its towering pines reached upward to the sky, and its great lakes, Superior and Michigan, and the great "Father of Waters," the Mississippi River, were known only to few, and they only thought of them as names associated with distant lands.

But now, thank God, this State which I have the honor to represent in the United States Senate is one of the Original Thirteen. We are one country—one people.

It is a great happiness I am experiencing today. I bring to you the flag of my Commonwealth, to be placed in this sacred depository along with the other State flags as a symbol of national unity. Each of our flags becomes a part of the greater flag—the red, the white, and the blue of America. Each flag symbolizes a star in the firmament of the United States.

This Commonwealth, which I have the honor of representing and which was little known in the days when this Nation was born, now has a population comparable to that of the Thirteen Original Colonies. In the State of Wisconsin we have great and beautiful cities, fertile farm lands, sparkling brooks, thousands of inland lakes, and great rivers—a land singularly blessed by the Creator and extending from the rolling hill country of southern Wisconsin to the pine-crowned Apostle Islands of the Chequamegon Bay of Lake Superior and from the rugged western sentinel cliffs of the Mississippi to the broad expanse of sandy beaches fronting Lake Michigan.

Wisconsin, thoroughly American, is a melting pot of the strong races of the world—races who have met here and formed a great, sturdy, and industrious people.

Though, according to the rich historical lore of Wisconsin, our State made provisions for a flag as early as 1863, it was not until 1913 that our State flag was officially adopted. Since our State flag consists of the State coat-of-arms, it is interesting for us to briefly consider the history of the great seal and the coat-of-arms of Wisconsin.

Our State was admitted to the Union on May 29, 1848, and on June 21 of that year the first great seal of the State was engraved. Gov. Nelson Dewey didn't like the first great seal of the State, however, and in 1851 he took steps to have a more satisfactory one provided. We are told that when he went to New York he carried with him a design which had been prepared at his request by Chancellor John H. Lathrop of the University of Wisconsin.

It was said that Governor Dewey took the design with him with the intention of having it engraved. According to the story, as he was walking down Wall Street, he met Edward G. Ryan, afterward chief justice of the supreme court of Wisconsin. Governor Dewey showed Mr. Ryan the design and Mr. Ryan pointed out several features which he disapproved. That discouraged Governor Dewey and he abandoned the design.

Then the two men sat down together on the steps of one of the banks on Wall Street and worked out the design which is today the present coat-of-arms and the great seal of the State. The new seal was practically a reproduction of the seal of 1851, though some changes were made.

The coat of arms of the State of Wisconsin is in reality a part of the State seal and consists of a quartered shield—the quarters bearing, respectively, a plow for agriculture, an arm and hammer to represent manufacturing, a shovel and pick to represent mining, and an anchor to represent navigation.

In the center of the shield there is a smaller shield with 13 upright bars, as shown in the coat of arms of the United States. Around the smaller shield is a double circle or garter on which appears the motto of the United States, "E pluribus unum." The motto and seal of the United States were both included as symbols of Wisconsin's loyalty to the Union.

Beneath the larger shield is a pyramid of pig lead and a cornucopia or horn of plenty. The lead indicates Wisconsin's mineral wealth and the cornucopia indicates the general resources for prosperity in Wisconsin.

There are two supporters of the larger shield. The dexter or right supporter is a sailor holding a coil of rope which represents labor by water. On the left or sinister side there is a yeoman with his left hand resting on a pick. He represents labor by hand.

Just above the shield is the form of the badger from which our State derives its familiar designation as the Badger State. Above the crest on a banner is the word "Forward," the motto of the State of Wisconsin.

Mr. Chairman, I present this flag not only to be a part of a State display of flags, but to emphasize that unity of purpose, that oneness of ideals by which we as a Nation may go forward.

Here in Independence Hall today, it is well for us to reconsecrate ourselves to the beliefs which first found their expression in this hallowed place; to rededicate our lives to the cause which was born in Independence Square to recovenant our faith in our way of life; to rekindle in our hearts the fervor and the flame of loyalty and devotion of a united people to the United States. There are challenges today as great as those which confronted the men who from this hall began a crusade which has given us the greatest land and the greatest people which the world has known since the beginning of time.

It is my hope that we will meet the challenge of this ruthless era with the same sincerity and abiding faith which characterized the men of Independence Hall. In that high hope, Mr. Chairman, I present this flag as a symbol of Wisconsin's devotion to the unity of this great land.

Address Before American Legion, Washington, D. C.

EXTENSION OF REMARKS

OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Thursday, March 27 (legislative day of Monday, March 24), 1941

ADDRESS BY HON. WILLIAM LANGER, OF NORTH DAKOTA

Mr. AIKEN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a speech delivered by the junior Senator from North Dakota [Mr. LANGER] before the Second Division Post of the American Legion at Washington, D. C., on March 18, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Post Commander and members of the Legion, I feel greatly honored by your invitation this evening.

I am a newcomer to Washington. I come from the great prairie State, North Dakota.

In North Dakota we still are proud of the boys who went to war in 1917 and 1918. We have done many things for World War veterans. In 1919, the legislature of our State enacted and the State paid the largest State bonus ever paid to World War veterans. We paid $25 per month for each month while in the military service. Some of our boys got as high as $800 State bonus. I understand that in the District of Columbia no bonus was paid and that in many of the Eastern States only a small State bonus was paid. Our bonus was paid in cash by direct taxation and our people gladly paid it because they knew of the sacrifices which our boys made. We have for a number of years maintained a State service commissioner on the State pay roll, whose sole duty is to look after claims of veterans and their dependents. All of this may be done when a free people have a voice in their government. I have always felt, and now feel that it is the first duty of a State or a country to take care of its citizens first, to protect the economic status of the ordinary citizens and to see that the average man and woman gets a square deal. That is why when I was Governor of my State I invoked a moratorium on mortgage foreclosures so that the average citizen who owned a home or a farm might recover his economic status. A nation is no stronger than its citizens. To have a strong nation we must have happy and contented people who own their homes and are free from burdensome debts and worries. While my primary interests are directed to saving of the agricultural interests from economic ruin I have in my heart a deep desire that this Nation shall fairly and justly treat the Nation's defenders in the last war.

In the early part of the World War Congress enacted the War Risk Insurance Act, which provided among other things for the payment of compensation to men in the military or naval forces of the United States and also provided for the issuance of insurance. The two things are separate. As you men know, if you wanted to have insurance, you must have made application therefor and paid the necessary premiums. About four and one-half million applied for this insurance. Millions of your dollars were paid into the Treasury of the United States as premiums on this insurance. Compensation was payable whether you applied for insurance, but insurance was payable only if you paid the premiums, except during the short period of time in which so-called automatic insurance was in force. The Government required you to keep your part of the contract, and I feel, like a great many others, that the Government should keep its part of the contract. The insurance contract provided insurance against death or permanent and total disability. No one explained to you at the time just what constituted permanent and total disability. Total disability was defined by regulation as any impairment of mind or body which prevents the disabled person from following continuously any substantial gainful occupation, and total disability was deemed to be permanent when it was founded upon conditions which made it reasonably certain the total disability would continue throughout an insured's lifetime.

Many thought that in order to obtain their insurance one would have to refrain from all work. The insurance issued in 1917-18 was not authoritatively defined until many years later when the Supreme Court in January 1934 spoke in the Lumbra decision. The Supreme Court held that one did not have to be bedridden in order to recover, and that the mere fact that one had done some work would not prevent a recovery for permanent and total benefits on the insurance contract. It was not until this decision came down that a great many persons entitled to insurance knew what their rights were under the insurance contracts. In the meantime, the right to file suit on such claims for insurance had expired some 8 years before this authoritative decision was rendered. In order to have the right to file suit the claim for insurance, unless within a 6-year period, must have been filed prior to July 2, 1931. In other words, the Supreme Court of the United States did not make any definite decision as what constituted permanent and total disability under the contract of insurance until 3 years after the present statute of limitations had run. I am, of course, speaking of the claims for insurance from 1918 and 1919. The Veterans' Bureau, and later the Veterans' Administration, has rated a large number of cases at, say, 65- to 90-percent disability for compensation purposes. Many of these veterans have never worked since they came back from the war, or they may have worked for short periods of time. They were under the mistaken impression until the Supreme Court spoke that they could not recover because the Veterans' Bureau had never rated them 100 percent disabled. This is not true, but when they found out that fact they no longer had a right to bring suit on their claims.

The act of March 20, 1933, also known as the Economy Act, repealed all rights under the insurance contracts, and from this date until the Supreme Court 2 years later, in the Lynch and Wilner decisions, held this repealing clause was unconstitutional, veterans did not file claims. This little-known decision of the Supreme Court, scarcely mentioned in the press of this country, is one of the most important decisions ever rendered by the Supreme Court of the United States. It holds that the United States Government cannot repudiate its contracts. That the insurance which you men had constituted contracts, and that if you had any rights under them, that the Government could not take away such rights without violating the Constitution of the United States. But because Congress did pass such a statute attempting to take away these rights, many persons thought it was a valid act and saw no use of filing claims if such benefits were repealed.

A suit also cannot be brought against the Government without a disagreement. That means that the claim for insurance must be denied by the Veterans' Administration before a suit may be filed. Much confusion arose when a disagreement existed, and Congress defined this by an act of January 28, 1935, and made the provisions retroactive as of July 3, 1930. Prior to that time a claimant had to prosecute his claim through the appellate boards of the Veterans' Administration. When this retroactive statute was enacted the statute of limitations began to run as of July 3, 1930, or when a denial was made by a subordinate board. This resulted in many decisions which appear to me to be unjust. The Frank Parker case arising in West Virginia is a fair example. Parker filed a suit prior to January 28, 1935, after a denial of his insurance claim by an inferior board. This suit was filed in the northern district of West Virginia. Under the ruling of the Circuit Court of Appeals for the Fourth Circuit, the suit had to be dismissed because he had not prosecuted his claim to a final decision in the Veterans' Administration. He therefore dismissed his suit and then proceeded to further prosecute his claim in the Veterans' Administration.

He got a final denial and filed suit, and in the meantime the act of January 28, 1935, had been enacted. The district court held that the action was then barred by limitations. A third suit was filed within 1 year as it is provided may be done under the statute where the prior suit was dismissed for a reason not affecting the merits, and this suit was dismissed because it was held that Parker had his day in court and the issue was res judicata. The case was appealed, but the Circuit Court of Appeals for the Fourth Circuit held that Parker had a "trial on the merits" and that he had his day in court. Certiorari to the Supreme Court was not asked, because shortly after the circuit court held this World War hero had his day in court he died from his wounds. He had lost a leg overseas and had spent the major portion of his time since discharge in hospitals of the United States. I mention this case in passing simply to show you the importance of the giving to every veteran a right of a real day in court where his case may be heard upon its merits and not upon technical defenses.

I am informed that the principal defenses of the Department of Justice to this class of litigation is technical defenses, such as the statute of limitations.

The Veterans of Foreign Wars have had a bill introduced abolishing all statutes of limitations in insurance cases. There is much merit in this contention. Why should any government who entered into a contract and sends its men to foreign lands to fight an enemy have any qualms about hearing cases on their merits and not on technical defenses? At common law there is no statute of limitations. It was not until the legislative body enacted a statute that one was prevented from going into court and having his claim heard upon its merits. The statute of limitations has been the refuge of the cheater and the dead beat—the man who did not want to pay his legitimate debts. It was enacted primarily against stale claims, but insurance claims are not in this category. The Government, through the Veterans' Administration and the War Department, have complete records of all veterans. These are official records entitled to be admitted as evidence. There is very little opportunity that a fraud may be perpetrated upon the Government. The cases can be and will be heard upon their merits if my bill is enacted.

Senate bill 954 simply extends the time for filing suit on these claims, and makes a few more exceptions to the general statute, which has not been amended since July 3, 1930.

It preserves the right of trial by jury, and provides that suit may be brought either in the District of Columbia or the district in which the claimant resides. It goes somewhat further in that it permits the recovery of costs and interest against the Government. In this respect it makes the law uniform. Interest and costs may be taxed against the Government in all civil suits except in war-risk insurance cases. If you file a suit in the Court of Claims, you recover your costs, and if you obtain judgment you are entitled to interest at the rate of 4 percent per annum until the judgment is paid. These provisions I have written into the bill for the reason that I feel that the veteran is entitled to the same rights as any other citizen who may sue the Government.

The bill also provides that the remedy under act to proceed by suit shall not prevent a court from compelling the Administrator of Veterans' Affairs from performing his duty by paying claims. When the Supreme Court of the United States in 1940 overruled the Administrator of Veterans' Affairs in cases arising under section 305 of the World War Veterans' Act, by holding that insurance might be revived after July 2, 1927, there were, I am informed, several hundreds of cases pending in the Veterans' Administration which were payable under this decision. Some of these cases have been paid, but in some of them, new ratings have been made and the provisions of section 305 of the act have been defeated. The courts hold that a new rating for compensation cannot be made which would defeat the provisions of section 305 of the act. But the Administrator of Veterans' Affairs pays no attention to the law as laid down by the courts, he still continues to make such ratings. Many

claims have been denied. The courts cannot compel the Administrator to pay the claims, although they are clearly payable under the law and the facts, and suit cannot be brought because the statute of limitations bars suits. The courts have held that where a remedy is available, that mandamus will not lie. It is difficult to reconcile this rule with the principles of right and justice but it is the rule as laid down by the courts and suits here in the District of Columbia, otherwise clearly payable have been dismissed. I, therefore, provide in the bill that the right of suit on the insurance contract is not exclusive; that the courts of proper jurisdiction may also compel the Administrator of Veterans' Affairs to pay claims for insurance which are clearly payable under the law and the facts.

I have also provided in the bill that mere delay in prosecuting a claim shall not create any presumption. The courts have arbitrarily created this rule, and I feel that it should be abolished. So long as there is a right of suit, no presumption should be created against the claimant. In trials of this character, involving permanent and total disability, medical testimony is of the utmost importance. Such medical experts are better qualified to state whether an insured is able to work. I feel that they should have this right. I have therefore provided in the bill that they may state their opinion on the ultimate fact for the benefit of the jury or the court.

The Government has taken many appeals in war-risk insurance cases. Many of the judgments obtained by claimant have been affirmed on appeal. The cost of printing briefs, attending court, and other incidental expense has been thrown upon counsel for the plaintiffs. Under the present law, a claimant cannot recover costs. The attorneys are entitled to no greater fee than if there had been no appeal. I therefore feel that the Government should pay an extra attorney's fee as costs if they without merit appeal from a judgment. This will stop the Government attorneys from taking appeals where the judgments are meritorious. The fee is small, at any rate, being limited to 10 percent of the amount recovered. The bill simply adds that amount of fee to be paid by the Government if it loses on appeal. This will stop appeals being taken simply to harrass a claimant. It follows closely the statutes in many States imposing a fee as a penalty for an appeal taken without merit.

I have further provided in the bill that the verdict of a jury should not be lightly set aside; that if two juries find that an insured is permanent and total that no court shall set aside such a verdict. There has been a growing tendency upon the part of circuit courts to substitute their judgment on the facts and set aside the jury's verdict. The recent decision of the Supreme Court of the United States in the case of Leroy A. Berry on March 3, 1941, may stop this practice. Berry recovered a judgment on his war-risk insurance contract in the District of Vermont. The Government, not satisfied, appealed, and the Circuit Court of Appeals for the Second Circuit, which sits 300 miles from the place of trial, set aside that verdict and ordered the action dismissed. Berry, however, asked the Supreme Court for a writ of certiorari, which was granted. On March 3, 1941, the Supreme Court, in an opinion by Mr. Justice Black, reversed the circuit court and affirmed the judgment of the district court. The Supreme Court said that issues of fact were for the juries and not for a reviewing court to substitute its judgment. I hope that this decision will put a stop to the prevailing practice of the circuit courts.

In plain words, I am only asking that a disabled veteran, so disabled that he could not perform any gainful occupation, be given the right to come into court and have his case heard on its merits.

St. Lawrence Waterway Project

EXTENSION OF REMARKS

OF

HON. PRENTISS M. BROWN

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Thursday, March 27 (legislative day of Monday, March 24), 1941

LETTER BY HON. PRENTISS M. BROWN, OF MICHIGAN

Mr. BROWN. Mr. President, several Senators have suggested that I place in the RECORD a letter which I sent to the chairman of the Commerce Committee a few days ago. I do not in this communication intend to touch on the larger aspects of the proposal but to call attention to certain related matters and obtain expert opinion on them, particularly as they affect Michigan.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UNITED STATES SENATE,
COMMITTEE ON COMMERCE,
March 25, 1941.

Hon. JOSIAH W. BAILEY,
Chairman, Committee on Commerce,
United States Senate,
Washington, D. C.

DEAR SENATOR BAILEY: I write you in regard to the general subject of the Great Lakes-St. Lawrence waterway. I realize that there has been no definite assignment of the matter to the Committee on Commerce. Some suggestions were made on the floor of the Senate yesterday. I interposed to say that consideration might be given to the matter of joint reference to Commerce and Foreign Relations. This has been done in some instances. However, regardless of the reference of the subject matter, the inquiries I here am about to make affect water-borne commerce on the Great Lakes.

Great Lakes commerce is a very important factor in our economic life. It is probable that more tonnage floats on the Detroit River than on any other comparable stream in the world. Duluth Harbor is second only to New York Harbor in total cargo tonnage. Tonnage passing through the locks at Sault Ste. Marie, Mich., is greater over the years than the tonnage passing through the next three largest canals in the world—the Panama, the Suez, and the Kiel. Approximately 90 percent of our iron ore, which is probably the most vital single commodity in our defense program, is transported for the major part of its journey from mine to mill on the waters of the Great Lakes. The journey is close to 1,000 miles in length. It is often said that the Great Lakes provide the cheapest carriage of commodities to be found anywhere.

The Government of the United States, through the War Department, in the construction of the Soo Canal and locks, the deepening of the connecting waters between Superior and Huron, Huron and Erie, and the improvement of various harbors, has been a great factor in the development of this commerce and unquestionably has made the cost of iron and steel and the multitudinous commodities that come from this basic industry much cheaper than would be the case otherwise.

I am not without experience in relation to these matters, and the inquiries I make are the result of considerable thought on my part over the years. I would appreciate it if you would forward a copy of this letter to Maj. Gen. Julian L. Schley, Chief of Engineers, War Department, for comment on my questions and observations.

The questions I have to ask of the War Department are there:

Would it be possible to raise the level of Lakes Huron and Michigan by the construction of works at Port Huron at the foot of Lake Huron, at the source of the St. Clair River?

Would the construction of such works to retard the flow of water there require similar works at the foot of Lake Erie at the source of the Niagara River?

Would the raising of the levels of these lakes, the levels of which are much below their original or natural height, be the economic thing to do considering these two opposing factors:

(1) Possible damage to shore lines necessitating the raising of docks, etc.?

(2) Eliminating the necessity of deepening many harbors?

The damage to docks and other riparian rights, it seems to me, would not be very great if we raise the level to the 1929 figure, which as I recall it was slightly over 582 feet. In 1936 the Michigan-Huron level was slightly over 577 feet or a 5-foot drop.

In this connection in my own time I have seen the levels of Lakes Michigan and Huron vary, according to the best of recollection, around 5 or 6 feet. It occurs to me that if we could put 3 feet or thereabouts on top of the present level in Huron and Michigan, we might save considerable money that would be otherwise expended in the deepening of the various harbors and connecting ways by reason of the necessities arising under the St. Lawrence plan. I refer to the greater depths that would be required by ocean-going ships entering the Great Lakes.

It has seemed to me that by diminishing the flow at Port Huron and possibly by diminishing it at other points along the St. Clair and Detroit Rivers, we could substantially raise the levels of Huron and Michigan and possibly solve the troublesome Chicago Drainage Canal problem without serious impediment to navigation. We might even provide some compensation to dock owners and other riparian owners without spending as much money as would be required to deepen the many harbors and these two lakes.

The Meander line established by the Mullett and Burt survey of the 1840's in my State is very far from the present water line on Michigan and Huron. In my judgment, in addition to the cycle movement so often referred to by marine men on the lakes, there have been three principal factors in the fluctuation and decline of water levels. One is probably the denuding of the forests in Great Lakes watershed; second, the deepening of the St. Clair and Detroit Rivers, both by erosion and the dredging operations of the War Department; and third, the turning around of the Chicago River, and the drainage canal. The cycles which some marine men say occur each 7 years do, it seems to me, show a periodic upsurge from low levels, but they seldom seem to reach as high a point as was reached in the preceding cycle. In other words, there has been a gradual decline in levels. I think there is no doubt about this statement.

The more constant conditions on Lake Superior bear out the theory that by the construction of retarding works at Port Huron, we would materially raise the levels of Huron and Michigan. The level could be fixed by proper control at Port Huron. I believe it could be done without a lock, or a dam reaching above the maximum depth required for commerce. I have in mind the construction of weirs, and possibly the construction of an underwater dam at the point where the St. Clair River leaves Lake Huron between Fort Gratiot and Port Edwards, that would diminish the depth to say 30 feet. Possibly a lock

would be necessary, but I doubt it. I grant that the situation is somewhat different at the St. Marys Falls, because at that point there is a definite falls or rapids where the drop is some 18 or 20 feet within a short distance, while the lesser fall of about 6 feet from Huron to Erie is over a considerable distance. It is well-known that the level of Lake Superior has been maintained at approximately 601 feet above sea level, and that it has been reasonably constant. It can, within limits, be controlled. Observation of the shores and the distance of the timber growth from them on Michigan and Huron as contrasted with Superior indicates by the closeness of the timber line to the water on Superior that the level has been approximately the same for a great many years, while the great distance of the timber line from the shores of Michigan and Huron shows that there has been a considerable recession of water (with possibly some accretion of land) in the last 50 or 75 years. I think the Government record as to levels will bear out this statement.

If Lake Superior can be maintained at a constant level by the dams at the head of the St. Marys Rapids, it seems to me that Michigan and Huron, as well as Erie, could be similarly maintained at a constant level by works at Port Huron and at Fort Erie.

The above has to do with considerations affecting commerce and navigation. I now want to ask about power. Have we developed fully the water power at Sault Ste. Marie? I think not. While this is merely a matter of recollection on my part, a considerable addition to the water power at the Soo was contemplated some 30 or 40 years ago, and a canal was at least partly constructed. At the present time there is a small power canal which services the city of some 15,000 population and surrounding territory. There is a power canal of considerable size which services some local industries, principally the Union Carbide Works. These are on the American side. On the Canadian side there is also a power canal. My own impression is that considerably greater development could take place. It seems to me that in the St. Lawrence agreement as proposed great emphasis is placed on power development in the northern New York area in and about Massena, with little said about power development elsewhere. We in Michigan and the Midwest are delighted to supply the water for New York, but we want careful consideration given to our own power possibilities.

May I call attention to the fact that the area around Sault Ste. Marie is most favorably situated for the development of industry. With closer relations developing between the United States and Canada, the immense raw-materials supply of the Lake Superior area on both sides of the international boundary—its timber, its minerals, and other resources—might well give rise to a manufacturing industry where cheap power could be found, as I think it can be found by further development of power at St. Marys Falls. This industrial area, based on raw materials and power, would, in my judgment, develop on both sides of the boundary between our State of Michigan and Canada's Province of Ontario. I am confident that in the contemplation of the entire St. Lawrence-Great Lakes project that not only Michigan's Senators and Representatives, but many others, will be interested and affected by these considerations.

While I am of the offhand opinion that there is little likelihood of power development between the foot of Lake Huron and the head of Lake Erie, a fall of less than 10 feet and a distance of approximately 90 miles, I do want to ask whether or not any consideration has been given to this subject.

I would appreciate it very much if General Schley could give me the benefit of the Department's views on these questions and observations to aid me and others in our general consideration of the commercial and navigation questions that arise by reason of the submission of the St. Lawrence waterway proposal to the Congress.

Yours truly,

PRENTISS M. BROWN.

The St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Thursday, March 27 (legislative day of Monday, March 24), 1941

EDITORIALS FROM THE MANCHESTER UNION AND CONCORD MONITOR

Mr. BRIDGES. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD two editorials on the St. Lawrence waterway and power project. Both of these editorials oppose this project and are worthy of the attention of the country. They are editorials from the Manchester Union and the Concord Monitor.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Manchester Union of March 22, 1941]

ST. LAWRENCE WATERWAY

The Roosevelt administration has apparently adopted some clever maneuvering to win its way on the question of the St. Lawrence waterway. This project was decisively defeated by the Senate 7 years ago. At that time it was introduced in the form of a treaty between the United States and Canada, which required a two-thirds vote of the Senate for adoption.

Now it is brought up in the guise of a defense measure. But that is not all. It is presented not in the form of a treaty but of an agreement between the United States and the Canadiar Governments, which must come before both Houses, but will require not a two-thirds vote but only a majority. The administration doubts its ability to get the two-thirds endorsement required for a treaty, but it believes that it can obtain a majority.

That raises the question of the difference between a treaty and an agreement as an international pact. Moreover, the argument supporting this issue as a defense measure is particularly weak. According to the agreement, Canada proposes to complete essential links in the waterway by December 31, 1948. What value can a project have as a defense measure to meet the emergency facing the United States today that cannot be completed for almost 8 years?

Meanwhile the project will add, according to the lowest estimates, at least half a billion dollars for expenditures, at a time when the Nation is bearing an excessively heavy burden to meet defense needs that are imperative.

[From the Concord Monitor of March 21, 1941]

CONTRARY TO PRIMARY NEEDS

President Roosevelt seems determined to use national defense as an excuse for building the St. Lawrence waterway at an estimated cost of nearly $700,000,000, which actually will probably become a billion and a half dollars before the project is completed.

The single fact that the project probably could not be completed in less than about 6 years is sufficient to impress the average American that its construction for national defense, at least in the current international situation, is mere pretext and probably folly. Yet the average American feels that somehow, and without congressional consent, the President will have his way, which only illustrates to what an extent the American people have lost confidence in the Congress and in the United States Supreme Court as checks and balances designed to prevent unconstitutional acts by the Chief Executive.

The United States has one great task immediately ahead of it, arming against every eventuality which may grow out of the second World War. To divert any least part of the national effort to such a project as the St. Lawrence waterway would be to reduce the effectiveness of the defense program by just that much.

Proponents of the St. Lawrence waterway say that it would provide benefits within a group of northern Central States roughly bounded by a line drawn through New York, Pennsylvania, West Virginia, Kentucky, Missouri, Kansas, Colorado, Wyoming, and Montana. Were the project to be built, 85 percent of the taxes necessary to pay for its construction would be raised in the States outside this area. Not only would these States pay for the bulk of the project, but it would in turn damage their economy. All the New England States are outside of the area which its proponents claim would be benefited by the waterway.

The commercial value of the waterway is also questionable. For 5 of the 12 months it would not be available to shipping because it would be frozen. It would be usable in the warmer months, when rail traffic which now provides the service for which it would be a substitute can best handle that traffic.

The President, using the defense excuse for the waterway, points to waterpower which would be an incidental development. If more power is needed for the current emergency then the way to get it quickly is to build steam plants, for which the country has ample coal, oil, and gas. They can be built in months, rather than years.

Ocean-going ships for defense could be built in the Great Lakes were the waterway constructed, say its advocates. Not in time for this war. Nor would such a fleet be of much use were the militarily vulnerable waterway to be bombed or sabotaged and egress to the sea interrupted.

As a matter of fact the Congress has the final say in this matter. It is not safe for the American people to assume that Congress will not be susceptible to public opinion in the matter, even though the President has repeatedly been able to persuade the Democratic majority to go along with his proposals. He has not done so in every instance and the St. Lawrence waterway should be another. It can be if the people of the Nation present their views to Congress.

The Government might as well resume the Quoddy development and the abandoned Florida ship canal as start the St. Lawrence waterway at this time. Both were projects which found favor with the President but which Congress finally stopped by withholding appropriations. Both were grandiose, but not nearly so much so as the St. Lawrence waterway, the cost of which would far exceed that of the Panama and Suez Canals combined and still provide for only 30 percent of ocean-going tonnage, and for that only 7 months out of 12.

There has been talk as the defense program has been accelerated of bottlenecks. There has been no talk that we have heard of a power bottleneck. So far as we can

discern the Government already has developed far more power than there is a ready market for in the Tennessee Valley, in the Northwest, and in Nebraska.

The President could provide national reassurance by issuing a statement to the effect that the desirability of the St. Lawrence waterway at this time is contrary to the primary needs of a nation arming itself with all possible speed. That he will do so we doubt. He has said something about planning a reservoir of public projects with which to cushion the national economy when the war and defense needs subside. We doubt if the St. Lawrence waterway can even be justified as such a made work project, but as such it would come closest to justification.

Undue Delay in National-Defense Program

REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1941

Mr. BECKWORTH. Mr. Speaker, every person who reads the newspapers or listens to the radio is aware that a number of delays in making national-defense materials is daily taking place. Despite the appointment of the Mediation Board, there seems to be little prospect at this moment that the delays will cease. In my opinion, there is far too much unnecessary hampering of the national-defense program. I sincerely believe the American people possess the same belief.

Although we occasionally receive figures which tend to show that there is less delay these days than there was in 1917 and 1918, still the fears of the American people are not allayed by such comparisons and their worries are not minimized because the American people are keenly aware that the dangers facing America now are many times more pronounced than they were in the World War period. Too, the American people are beginning to realize as never before what a little time lost in one plant can mean to the general program of preparation.

One of the most simple, yet salient illustrations along this line I have yet heard was mentioned to me by some friends of mine from Texas not long ago. A new North American Aviation plant is being built near Dallas, Texas, and the question of transferring materials, freight, and so forth from points of arrival of those materials in Dallas to the North American Aviation Plant which is located some 6½ miles from the city limits of Dallas was discussed. Incidentally, the plant when completed will manufacture airplanes under a national-defense contract it has received. It was stated by one in authority that a 2- or 3-hour delay in the delivery of certain materials or parts for the plant or production line could easily cause a 2- or 3-day delay when this 2- or 3-hour delay is felt by and exerts its influence on the sum total of the steps in the processing circuit, and in the last few days we are reading in various newspapers that defense materials cannot be delivered because some vital part, the manufacture of which was to have been consummated at some plant where a strike is in progress, is not available.

Every week I receive numerous letters from my district admonishing me to do that which I can to see that our defense program is not delayed. Apparently, many of the writers of letters to me feel that Congress is being derelict in its duty by not passing additional legislation to preclude the slowing-up of our defense program.

There seems to be considerable confusion as to whose responsibility it is to stop these various delays. Obviously until now—or until the new Mediation Board was named—the responsibility could not have rested outside the realm of the legislative branch of our Government, the authority of the Executive of the United States, or the authority of the Secretary of Labor, the Attorney General of the United States, the Federal Bureau of Investigation, the Secretary of War, the Secretary of the Navy, or the National Defense Commission. Certainly in the days, weeks, and months gone by it should have been the concern of one of these eight to prevent the delays, if possible, and it is somewhat interesting to endeavor to ascertain what position authoritative spokesmen for each of these divisions of our Government have taken. The chairman of the Judiciary Committee on November 26, 1940, propounded an inquiry to the proper authorities as to whether or not any legislation is needed to deal with delays. Thus far, according to the latest information I have received—and perchance it is not the very latest—he has received no recommendations from any division of the executive branch of our Government suggesting or requesting additional legislation other than that suggestion made by Mr. Knudsen as to the need of a cooling-off period. Since the latter part of November I have corresponded with various ones in the executive branch of our Government with reference to the delays. The letter I addressed to the Chief Executive was referred to the Secretary of Labor. The Secretary of Labor, in turn, insofar as I have been able to learn, offered no suggestions as to needed legislation, but did state in answering my letter the question is being studied.

The Attorney General stated, in effect, that the matter of preventing delays was largely one, with the exception of prosecuting where violations of a criminal nature are found, with which the War, Navy, and Labor Departments should deal.

The Director of the Federal Bureau of Investigation in answering my letter stated that the question of the adequacy of legislation to deal with delays should be referred to the Attorney General.

The Secretary of War gave no suggestions but stated the question is being studied.

The Secretary of the Navy commented on the question by saying, since the Congress has written into law as part of the Selective Service Act, a provision whereby a plant necessary to the national defense might be taken over by the Government when those in charge of that plant failed or refused to work reasonably harmoniously with the Government in supplying defense materials, that, in his opinion, the Government might be able to take over a plant manufacturing defense supplies. The Secretary of the Navy further commented:

> In view of the fact that this was a matter affecting not only the Navy Department but also many other branches of the Government, a coordinated recommendation could be expected in the near future from the National Defense Advisory Commission.

The National Defense Commission, through Mr. Sidney Hillman, expressed very keen interest in the problem of speeding up our defense program but did not suggest the need of any additional legislation, nor was I able to learn whether or not, in the opinion of the authorities of the Defense Commission, the Defense Commission is able to assure the American people that the policy of the Government "to keep plants engaged in filling defense orders open" will be observed and upheld.

It can be seen that it has been very difficult to ascertain, in the first place, whether or not there is authority to now deal with the delays; and if there be authority, who has the right and duty to exercise the authority.

I want to say that I base the foregoing statements on written communications I have received from the various heads of the departments mentioned above and the record as I have been able to comprehend it. I want to be fair in saying that letters and communications constituting the record which has been available to me have been written and recorded during recent months; the first letter to which I have referred was written about November 26, 1940.

In presenting these statements it certainly is not my purpose to embarrass or harass any person or group of people; nor is it my purpose to inferentially show that some person or some group of people has been oblivious to duty; but I am anxious to clearly portray the situation which has obtained in the last few months, and which still for the most part prevails.

Someone must assume the responsibility to see that the program which the Congress has inaugurated and instituted—a program which, in my opinion, is overwhelmingly approved by the American people—to make secure the defense of America is not scuttled and defeated. That the objective of all patriotic citizens is to move forward with great rapidity in our defense efforts admits of no question; and it seems to me, when we have instituted such a great and comprehensive program in behalf of democracy, and pursuant thereto appropriated billions of dollars, the payment of which will long burden the taxpayers of this Nation, that no time should be lost—not even a few hours when avoidable—in hastening with lightning speed the carrying out of the program.

Particularly does it seem there should be no laxity in our defense effort when American young men have so unselfishly

obeyed the summons to service and assumed the responsibility of providing American manpower, which must always constitute the spearhead and backbone and nucleus of any American defense effort. These young men are paid $21 and $30 a month and many of them sacrifice much more than these sums per month. The least a man or an industry can do—any man or any industry—is to cooperate fully, even though in so doing sacrifice ensues.

Food for France

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, March 27 (legislative day of Monday, March 24), 1941

EDITORIAL FROM THE NEW YORK DAILY NEWS

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an editorial by Capt. Joe Patterson, editor and publisher of the New York Daily News, entitled "Just Let France Starve?" This editorial appeared in the New York Daily News of March 11, 1941, and also in the Washington Times-Herald of the same date.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Daily News]

JUST LET FRANCE STARVE?

Senator ROBERT A. TAFT (Republican, Ohio), speaking Sunday on the passage by the Senate of H. R. 1776, commented on the vast powers the bill gives the President. "It practically," said Senator TAFT, "enables Mr. Roosevelt to run the British war effort from this side of the Atlantic"—though Mr. TAFT added that he hoped the President wouldn't go that far, because "he can't run the war as well as the British are running it."

Certainly the bill, which the President is expected to sign tomorrow, enables him to have as large a finger as he wishes in the shaping of British war policies. Having all that money and material to lend, lease, give away, or withhold, Mr. Roosevelt can swing enormous weight at No. 10 Downing Street.

With this prospect in mind, we'd like to discuss the question of food for France.

The British Embassy made public Sunday evening a long statement, in which it reiterated Britain's resolves not to let food shipments from the United States or anywhere else pass through the blockade into German-occupied countries, including the German-occupied part of France. This is the latest British reply to Herbert Hoover's proposals to feed noncombatant men, women, and children in those countries, with guaranties to call the whole thing off the moment the Germans are found to be grabbing any of the food.

The British Government bases its refusal on the same old plea—that such food shipments would help Germany indirectly if not directly. With regard to unoccupied France, the British reply to Hoover was silent, as far as we could make out. Apparently an occasional Red Cross ship carrying canned milk, vitamin concentrates, oatmeal, etc., is all the British propose to let through the blockade for unoccupied France.

Yet unoccupied France is in fully as unhappy a condition as is occupied France.

WHY STARVE THIS AREA?

The Germans are systematically looting occupied France, with its approximately 24,000,000 people. But unoccupied France, with about 16,000,000 people, has few factories, inferior railroads, a lot of mountains, and nothing to brag about in the way of integrated farming. The Germans took the best part of France while the taking was good.

Consequently the food situation in unoccupied France is very bad; and it is hard to see how it can be brought to rights this spring, summer, and fall unless Hitler turns loose a lot of his 2,000,000 French war prisoners so that they can come home and get to work on the farms. Hitler shows no intention of doing that any time soon.

HOW ABOUT SOME COMMON SENSE?

Unoccupied France is not at war. Yet the British insist, as far as their reply to Hoover shows, on trying to starve it along with the German-occupied territories. Why? How can that help the British cause or hurt the Germans?

Aside from the humanitarian angle (meaning the angle presented by children stunted or dying through lack of food), we think this British policy is unwise.

It can't build up sympathy in France for the British. It can be used by smart German propagandists to turn French public opinion against the British. Already vaguely worded warnings are coming from Admiral Jean Darlan, Petain's side-kick, that France may take to convoying food shipments with what is left of its Navy. That would inevitably lead to shooting somewhere on the high seas, which, in turn, might move the French to reenter the war on Hitler's side.

Up to now our Government has refused to lift a finger to influence British policy in this matter. We've sat by and acquiesced in anything Britain wanted to do through its blockade. Isn't it time for our Government to use some of its influence toward (1) persuading the British to give the Hoover plan a fair trial; or, if that is beyond its will, toward (2) persuading the British at least to permit food shipments to unoccupied France?

Strikes in Defense Industries

REMARKS

OF

HON. ALBERT G. RUTHERFORD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1941

Mr. RUTHERFORD. Mr. Speaker, much has been said in and out of Congress with reference to the strike situation in the various plants engaged in the manufacture of articles for our national defense. Every friend of labor realizes that the action of a few labor leaders is bringing all labor into disrepute and is causing the public to lose faith in labor as a whole. The President could settle this whole matter at once if he were inclined to do so, because he has the power to do it. Why does he hold back and let our national defense lag? Congress has given him all power and billions of dollars for defense and aid to Britain and the country expects that he will see to it that the money is properly spent and that nothing should be let to interfere with the steady flow of war materials. The newspapers of the country, both Democratic and Republican, are calling for quick action. As the Towanda Daily Review, Towanda, Pa., says, "It should not be permitted."

IT SHOULD NOT BE PERMITTED

Again the headlines bear the information that "millions for defense" are tied up by strikes. Apparently the C. I. O. is back of the move, and that, to any good American, fits into the charge recently made in Congress that un-American ideas are prompting a lot of this labor upset.

We don't pretend to know for sure just how far and how deep this element is trying to run industrial affairs. But we do know that whenever a disturbance occurs the C. I. O. is always mentioned. Just how long this condition will be permitted to go on it is hard to say, but already we have had too much of it.

By general consensus this country is in the midst of an emergency. Admittedly, this country is not prepared for any kind of a defense, except in a lot of plans that seem to get overthrown when a real start to prepare is made. If we have waited too long, it takes speed in production to catch up. The longer we wait the greater the need for speed. And then when all apparently is set for more speed ahead the leaders of labor, regardless, call a strike, and the whole works is tied up and thousands of laborers, willing and wanting to work, just sit idly by while their leaders bicker.

It would seem strange, wouldn't it, if any person drafted for military service had the right and enjoyed the privilege of calling his or her case before a tribunal of some sort, to argue that military service in that particular case was subject to discussion. But that can't happen. When, in that instance, the Government calls, it means business. The issue cannot be ducked. But an industrial worker, working for the Government, on a hurry-up defense program, can decide to sit down and quit, regardless of results. And every agency of the Government says, "Let's talk it over."

We agree that there should always be a time to talk, if the talk can be sensible. But under the present idea of free thinking or talking, or something, labor and industry seem to have a perfect right to talk over, where that same right is denied in almost every other controversy.

It's high time a halt to all this was made. We believe the rank and file of America believe this. Then why is this strike situation permitted to exist?

If the unions generally don't cure this evil themselves, it will not be long before the American rank and file will make a demand for correction that cannot go unheeded.

Communist Leadership in Labor Unions

REMARKS

OF

HON. MARTIN DIES

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1941

Mr. DIES. Mr. Speaker, the shocking revelation that the strike at the Allis-Chalmers plant was called as a result of

a fraudulent ballot should occasion no surprise. We have been calling the attention of this House to the Communist leadership in that strike. We have informed the House that Harold Christoffel, president of the Allis-Chalmers striking local of the Automobile Workers Union, has a record of Communist affiliation. There was nothing extraordinary in the fact that a trade-union local under such leadership cast 2,200 fraudulent ballots when the strike vote was taken. That sort of thing will continue to occur as long as Communist leadership is tolerated in labor unions. Fraud is one of the methods frequently employed by the Communist Party to attain its ends.

We have also called attention to the fact that the Communist Party is bent upon a course of obstruction to defeat the national-defense program for which this House is appropriating billions of dollars. We may expect a mounting wave of strikes in our key industries. We may expect a mounting wave of violence in connection with these strikes. We may expect repeated instances of fraud. These things are the natural fruit of Communist leadership in labor unions. For almost 3 years the C. I. O. has refused to take any action looking toward the removal of Communists from its leadership. On the contrary, the C. I. O. has defended its Communist leadership in a dozen of its constituent unions.

In this connection, it is pertinent to call attention once more to an organization which calls itself the American Peace Mobilization. A recent investigation by our staff convinces me that the peace mobilization is simply a front for the Communist Party. It is more completely Communist in its complexion and control than was the American League for Peace and Democracy. The American League flourished in the period of the People's Front, and was able, therefore, to conceal its Communist control more successfully than is the case with the American Peace Mobilization. This latter organization belongs to the period of collaboration between Stalin and Hitler, and this fact stamps it more clearly as an instrument of the foreign policy of the "red" dictator. The American Peace Mobilization has a single aim, and that aim is to defeat the program of national defense. That is likewise the aim of the Communist Party.

The thousands of innocents who were hoodwinked into aiding the American League for Peace and Democracy are not to be found in the American Peace Mobilization. The Peace Mobilization's objectives are too plain on the surface to allow innocents to be misled.

The outstanding facts about the American Peace Mobilization is the support which it receives from the Communist-dominated unions in the C. I. O. It is this C. I. O. support which makes the American Peace Mobilization a sinister force in the country today.

A few weeks ago the Daily Worker listed the names of the C. I. O. leaders who are backing the American Peace Mobilization. Those names belong in the RECORD. They go a long way toward explaining the wave of strikes and violence that now jeopardizes our national-defense program. Here are the C. I. O. leaders who are, according to the Daily Worker, behind the program of the American Peace Mobilization:

Reid Robinson, president of the Mine, Mill, and Smelter Workers of America, a man with a very long record of affiliation with the front organizations of the Communist Party. Robinson is a vice president of the C. I. O.

Michael J. Quill, president of the Transport Workers Union, about whose membership in the Communist Party there can be little doubt.

George C. Peacock, president of the National Association of Die Casters, whose union carried on the strike at the Harvill plant in Inglewood, Calif., under the leadership of Kenneth Eggert and Ralph Dawson, two Communist Party members of public record.

Lewis Alan Berne, president of the Federation of Architects, Engineers, Chemists, and Technicians, a union whose national organizer, Marcel Scherer, ran for office on the Communist Party ticket.

E. F. Burke, secretary of the National Marine Cooks' and Stewards' Association, a union under the complete control of Harry Bridges.

Abraham Flaxer, president of the State, County, and Municipal Workers of America, a man with a long record of affiliation with Communist Party front organizations.

Ben Gold, president of the International Fur and Leather Workers Union, an avowed member of the Communist Party.

Donald Henderson, president of the United Cannery, Agricultural, Packing, and Allied Workers of America, an avowed member of the Communist Party.

J. F. Jurich, president of the International Union of Fishermen and Allied Workers of America, another Bridges' union.

Mat Meehan, secretary of the International Longshoremen's and Warehousemen's Union, Bridges' own union.

Lewis Merrill, president of the United Office and Professional Workers of America, a union which our committee found to be under Communist control.

Frederick N. Myers, general organizer of the National Maritime Union, about whose Communist Party membership there can be no doubt, and a man with a serious criminal record under another name.

Grant W. Oakes, chairman of the Farm Equipment Workers Organizing Committee and leader of the strike at the plants of International Harvester, the man who so recently threatened wholesale violence in this strike.

O. M. Orton, president of the Woodworkers of America.

Joseph Selly, president of the American Communications Association. Selly has under his supervision at least half a dozen short-wave radio stations operated by members of his union. Selly has recently been appointed a member of the Labor Advisory Board for Defense Communications.

All of the foregoing prominent leaders of the C. I. O. are announced as supporters of the American Peace Mobilization. I reiterate the question: What are you, Mr. Philip Murray, going to do about this Communist leadership in the C. I. O.?

Answering Critics of T. V. A. and R. E. A.

REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 5, 1941

Mr. RANKIN of Mississippi. Mr. Speaker, if I may be permitted, with apologies, to paraphrase the language of our old friend, Bret Harte, I would say that—

Which I wish to remark,
And my language is plain,
That for ways that are dark
And for tricks that are vain,
Utility propagandists are peculiar.

Today, for the second time within a week, the gentleman from Pennsylvania [Mr. RICH] has gone just about as far from the Tennessee Valley as he could within the continental limits of the United States, to get information furnished by one of these utility propagandists, who are now filling the press of this country with misleading attacks on the Tennessee Valley Authority—the greatest agency for the protection of the American people who pay electric light and power bills that has yet been created.

Today he has inserted some silly fulminations of one Mr. C. M. Jansky, a superannuated professor in Wisconsin, who attacks the T. V. A. yardstick rates, or the rates paid by the ultimate consumers in the T. V. A. area, without touching side, edge, or bottom of the economic justification of those rates.

While Professor Jansky admits in other correspondence that he is a stockholder in several private power companies, which indicates that he evidently investigated them before he made any purchases, he merely attacks the retail rates now charged in the T. V. A. area, where the distribution agencies pay an average of about 4½ mills a kilowatt-hour for T. V. A. power wholesale and sell it for a maximum of 3 cents a kilowatt-hour to the ultimate consumer, whereas the private power companies, which he now defends, purchased this same power at Muscle Shoals during the Hoover administration at about 2 mills a kilowatt-hour and sold it to the ultimate consumers at a maximum of 10 cents a kilowatt-hour.

The professor also overlooks the fact that private power companies are now selling electricity to each other wholesale in that same area at a lower rate than the T. V. A. is selling it to the municipalities and cooperative associations. But when the private power companies retail it to the ultimate consumers their overcharges, compared with the rate the municipalities and cooperative associations sell T. V. A. power, amounts to about 100 percent. The professor does not seem to be in the least disturbed over the fact that in 1940 the people in Wisconsin were overcharged $23,598,000, according to the T. V. A. yardstick rates. He would probably attempt to justify this on the grounds of taxes, when, as a matter of fact, the overcharges in Wisconsin for that year

amounted to $26,053,000, according to the Tacoma, Wash., rates, and the Tacoma municipal system pays more taxes and cash contributions to the city, according to the electricity produced and consumed, than is paid by any private power company anywhere in the United States.

This power could be produced in Wisconsin with coal, gas, oil, or water power, and distributed at the T. V. A. yardstick rates or the Tacoma, Wash., rates, or the Ontario rates, without loss on legitimate investments. Reducing those rates to their proper levels would double the consumption of electricity in that area, and would enable us to electrify every farm home in Wisconsin at the T. V. A. yardstick rates. But Professor Jansky does not seem to be interested in the ultimate consumers of electricity in Wisconsin, or elsewhere.

In the Appendix of the RECORD page 689, there appeared a statement prepared by one Mr. H. T. Bennion, of New York City, and inserted in the RECORD by the gentleman from Pennsylvania [Mr. RICH] attacking the overcharge tables I have presented to the House.

It is interesting to note that in the absence of finding any errors in the method of calculations or conclusions of my tables, the writer of this statement resorts to side opinions and misleading statements, in an attempt to set up a fallacious reply. His whole statement is grossly inaccurate and misleading. It is the same old utility propaganda.

On several occasions I have pointed out the McCauley statement that if it were of pecuniary advantage to some men they would attempt to disprove the universal law of gravitation. The inserted statement I am answering falls in this category. Therefore, before identifying the fallacies in this presentation, it is necessary to cover the background of the author, in order to establish the motive.

The author of this statement is a graduate of West Point Military Academy and was assistant chief engineer of the Federal Power Commission from 1920 to 1924. He resigned from the Army in 1926 to become engineer director of the odious Insull controlled National Electric Light Association, and during 1932 and 1933 was assistant manager of that malodorous association. When this organization was forced to change its name in 1933, because of public opinion, Mr. Bennion became assistant managing director of the new Edison Electric Institute, the mouthpiece of the power trust. From 1933 to date Mr. Bennion has been connected with this organization as vice president and managing director. Naturally he speaks as a representative of the private power interests rather than an independent or neutral observer. His statement simply represents the inaccurate allegations of the private power companies which were originated by the National Electric Light Association and were contained in the Wyer report on Ontario Hydro. This manufactured propaganda was exposed some years ago as a result of the Walsh investigation, and public reaction was so strong that this organization was forced to change its name and solemnly promise the American people that it would desist from such evil practices.

It has not kept its promise. Only recently, utility hearings brought out the fact that this association and its members paid two eastern college professors over $150,000 for manufactured material going out under the names of supposedly neutral observers. I wonder if Professor Jansky got any of it.

Mr. Bennion could spend his time more profitably by endeavoring to stamp out the illegal and immoral practices recently brought to light by the Federal grand juries in Missouri, Illinois, and New York, and by stamping out such practices in his own organizations, as revealed by the Dorau testimony before the Securities and Exchange Commission.

THE ALLEGED ERRORS

Mr. Bennion alleges errors in the overcharge tables, based on eight matters of opinion, without pointing out any actual errors in the tables. The basic opinions of his allegations are: First, the rates of the private companies are just and reasonable; second, the prices of the cited public yardstick plants are arbitrarily set; third, these public plants are tax-eating subsidized enterprises; fourth, selection was made from better-than-average plants; fifth, cost of rendering electric service varies considerably; sixth, proved advantages of private ownership; seventh, public plants are inefficient; eighth, the economic significance of cost of electricity in home and in industry is grossly exaggerated. These allegations, and other presentations made, do not come from a neutral witness; therefore, it is in order to present the facts on all the points cited by him.

PRIVATE RATES

The rate actions of the private companies refute the first Bennion thesis. Since the publication of the T. V. A. yardstick rates showing what electricity is worth, the private power companies have been consistently reducing rates. When T. V. A. power at T. V. A. rates was extended to Tarrant City and Bessemer, adjacent to Birmingham, Ala., it broke the rates in Birmingham more than $1,000,000 a year.

When under pressure of competition private rates are always cut drastically—another notable example being the recent reduction in Spokane, Wash. By these rate actions the private companies have pleaded guilty. Anyone interested can verify the facts from the publications of the Federal Power Commission on net billings, rate reductions, and consumer savings. With the decrease in rates, consumption and earnings have increased, showing that it is good business to reduce rates.

In 1928 the industry had 22,319,000 consumers, sold 66,987,000,000 kilowatt-hours, and collected $1,784,309,100. In 1932, the year before the T. V. A. was created, these figures were 24,055,754 consumers, 63,710,000,000 kilowatt-hours sales, and $1,813,717,100 collections. In 1939 these figures had risen to 28,200,000 consumers, 106,087,000,000 kilowatt-hours sales, and $2,293,643,900 revenue. With a 24.3-percent reduction in average unit price, the kilowatt-hours sales increased 66 percent, and the gross revenue jumped from $1,813,717,100 to $2,293,643,900 revenue. Last year—1940—production was 118,560,000,000 kilowatt-hours and the total revenue therefrom amounted to $2,362,649,000.

I have pointed out on several occasions, by yearly tabulations, how the common-stock earnings of the local Washington, D. C., company increased from a fairly low figure up to a range of 64 to 75 percent, with sizable distributed rate reductions. This axiomatic principle, which, for short, I have called the law of increasing returns, is generally accepted. It is the application of this law which has made billions for the automotive industry, and has given the private companies increased returns, in spite of inefficient over-all operation and scandalous financial manipulations under inadequate rate cuts.

MORE ALLEGATIONS

His statement that the sale prices of the yardstick plants I have tabulated are arbitrarily set is ridiculous. He knows, as well as many other informed people, that the Ontario Hydro and Tacoma have operated for many years under low, scientific rates, have produced substantial earnings, set us sizable reserves, and have amortized their debt. The private power industry is deplorably weak by comparison on these points. His statement is only the opinion of those who have self-serving interests, and the annual reports of these two plants show the facts, which are completely at variance with his expressed opinion. Any fair statement should back up allegations with proof, which he fails to do. The T. V. A. resale rates were based on a scientific analysis of the Tacoma and Ontario operations, and the results in the T. V. A. cities, towns, and cooperative associations have demonstrated the soundness of their resale-rate policy.

His next point is the old, threadbare, and misleading statement that the yardstick plants are tax-eating, subsidized operations. Again this is a manufactured self-serving opinion, without foundation, and made without offering any proof. Ontario Hydro has been supported by its rates and not by taxes. The Ontario Hydro-Electric Commission was created in 1906 by the Provincial Government to generate, transmit, and wholesale current to municipalities and other governmental subdivisions at actual cost. Incidentally, the Provincial government at that time was conservative but able. Therefore, any analysis should point out the operating results of both the wholesaling agency and the retailing municipalities. Mr. Bennion fails to offer any proof to back up his misleading and deceptive allegation. Historically, the facts are that since 1906 no city or municipality in Ontario or the Provincial government has levied any taxes to support Hydro. They have paid their way out of earnings, with low rates and large net profits. Hydro started serving 14 municipalities in 1910.

If there is any validity in the Bennion statements, we would find the worst conditions in these municipalities which have been in business over 30 years. An ex-

amination of the reports show that 10 of these cities—Kitchner, London, St. Thomas, Guelph, Waterloo, Woodstock, Ingersoll, New Hamburg, Preston, and Herpeles—have paid off their entire debts. The remaining 4 original distributing cities are nearly out of debt and would be free if it were not for large growth and necessary resulting expansion of facilities. Each of these municipalities has built up large surpluses out of operating revenues. The financial history of the 14 founding municipalities and the other 270 communities served has been covered in the CONGRESSIONAL RECORD of June 15, 1938. The facts have been presented and are of record. These facts destroy the validity of the Bennion statements applying to Ontario Hydro. Ontario Hydro and its distributing municipalities are financially sound, with large surpluses, and the largest part of their debts amortized. The tax situation has also been covered in the record referred to.

TACOMA'S RECORD

Under the lowest electric rate in the United States, Tacoma, Wash., has paid for 87 percent of its electric property out of earnings, without any tax contributions. In addition, the electric property is paying annually $268,000 in taxes, has acquired for the city a clear investment of $21,842,847, and is saving its citizens over $1,000,000 a year in electric bills compared with the average "lower cost" private companies. Tacoma's outstanding indebtedness on its $25,078,847 plant is now only $3,230,000, which could be paid off completely in a short time if the bondholders would surrender their gilt-edge security before maturity. The electric system is netting $912,300 annually above all operating expenses, taxes, interest, amortization, and $475,000 for depreciation. The net earnings after all kinds of charges and expenses is nearly a million dollars per year, which could wipe out the entire debt in 3 years, leaving the city with a clear $25,000,000 revenue-producing plant. With the debt cleared, the lowest rates in America could be cut in half or the city could become a taxless community.

T. V. A. is operating on the same basis as Tacoma and will amortize its investment. The Bennion article fails to point out the true T. V. A. set-up and to differentiate between the wholesale agency and the distributing municipalities, the financial results, and comparative rates. If this had been given, his fallacious argument would have been destroyed.

YARDSTICK PLANTS

My tables represented comparisons with actual yardstick plants, which were selling current at actual cost. This has always been my thesis, as my purpose has been to show savings based on actual over-all costs rather than on any hypothetical cost basis. There are two types of public plants. The first type keeps rates high in order to turn in large profits to city treasuries for general uses. The second type sells current at low rates or at cost, and thus passes the benefits to the rate payer. In the first instance, the plant becomes a secondary tax collector, or subsidizer of other nonrelated functions, whereas, in the second case, the plant is operated for the benefit of the investor and the rate payer. Naturally Mr. Bennion and his associates would advocate a comparison based on pyramided cost plus more profits for the manipulating overlords. This is the nub of his allegations on selection, and cost variations. Actual cost variations are of minor importance in this problem, as has been shown on numerous occasions.

ADVANTAGES AND DISADVANTAGES

Bennion gives a general statement as to proven advantages of private plants and the inefficiency of public plants. He presents no proof and fails to give the true legal background governing the utility business. The few figures I have given on Tacoma refute his opinion on these two points. If Mr. Bennion wants to render a real service to the American people, he should interpret the significance of the few Tacoma facts I have presented, and to show how greatly inefficient are the private companies he represents, when compared to Tacoma or the Ontario system.

MOCK ADVANTAGES

The advantages of private ownership to which he refers has not been proved. In fact, he fails to offer any proof. The slush-fund uses, as brought out by the St. Louis and Springfield grand juries, might be considered an advantage by public officials who accepted money out of this till, whose books of accounts were kept under the carpet in a power company's vice president's office. The recent investigation of the Power Commission tells the story of the wicked influence of private power companies on the exercise of free democratic processes. In the light of these recent developments, the Bennion statement of "proven advantages" is a mockery. Whenever there has been a free election the people have answered by their votes his argument as to the economic significance of the cost of electricity. Translated into simple terms, this statement means that the price of electricity is so insignificant that the housewife, store owner, or small industrialist is content to pay an overcharge of 100 percent. An excess national electric bill of more than a billion dollars a year, or a quarter of all our export values, is not an insignificant economic item, as he would have us believe. These overcharges would liquidate our national debt within a reasonable time.

THE CRUX OF THE PROBLEM

Mr. Bennion fails to even mention the crux of the problem, which is amortization or debt repayment. The private companies he represents have collectively outstanding over $5 in securities for every dollar of public power securities in the hands of the public. Why did he not mention this significant fact in his discourse. The reason is obvious, as such a fact would knock the props from under his tax-subsidy argument. By reducing debts the public plant is making a real investment for the people. This equity, which is being built up for the people, through debt repayment, is never mentioned by the advocates of private power interests.

In addition to the eight major points I have covered, Mr. Bennion makes numerous other misstatements as to T. V. A., R. E. A., and bonded municipal debts.

T. V. A. FACTS

His statements as to the T. V. A. are just as inaccurate, absurd, and misleading as the rest of his statements. This point can be illustrated by citing his allegation that T. V. A. project cost $400,000,000, all of which should be regarded as power investment. Out of this sum he states, "T. V. A. acknowledges having received $306,000,000." To this amount he then adds $71,000,000 in back interest; $12,000,000 for the Sheffield steam plant; and another $10,000,000 which he says, "represents the difference between the cost of the Muscle Shoals plant and what T. V. A. put on its books therefor," in order to arrive at a fictitious value.

His $306,000,000 figure apparently was obtained by subtracting from the fixed asset item of $341,933,435 given in the T. V. A. balance sheet on page 54 of the 1940 annual report, the sum of $35,111,833 representing construction in progress. Included in this $306,000,000 figure are: $4,608,200 for the fertilizer plant, $10,170,000 for other general plants and properties not in any way connected with power, and $263,000 used for advance investigations and surveys.

The back interest item of $71,000,000 is fantastic. No supporting data are offered and manifestly it is impossible to identify the investment to which his calculation applies. Doubtless the nitrate plants and other properties outside of the power field are included. The fallacy of this Bennion back interest statement can be brought out by this simple analogy:

Assume that Mr. Bennion were to approach his banker for a loan of $1,000 and was told that the bank would gladly loan him the $1,000, but that this $1,000 had been idle in the bank for the last 10 years and there was an accumulation of $790 of compound interest against this amount and that Mr. Bennion, in order to have the $1,000, would have to pay interest on $1,790 and repay his note for that amount.

Mr. Bennion doubtlessly knows that the Sheffield steam plant is reserved for national defense and is not included in the investment of the T. V. A. The Authority has operated this plant at different times, during emergencies, largely to supplement private-utility generation. Since the creation of the T. V. A. this steam plant has been in operation a total of less than 6 months. Nevertheless, T. V. A. expense accounts have been charged rental and upkeep on this steam plant.

The $10,000,000 included by Bennion is roughly the excess cost of the Wilson Dam, resulting from hasty war construction. Congress directed T. V. A. to establish a present value for this plant. The present value of the Wilson plant appears on the T. V. A. books at around $31,000,000, which amount is less than the historic cost, but is way in excess of the value placed upon it by the private-power companies and other private interests in their offers to purchase or lease made during the early days of the Muscle Shoals legislation.

After having built up this fictitious figure, Bennion then makes the statement, "The T. V. A. allocated only $163,000,000 of this investment to power, disregarding 60 percent." This is also an erroneous statement, and anyone interested in the facts can find them given in Schedule B, page 62, of the 1940 Annual Report of the T. V. A.

Mr. Bennion's further reference to Pennsylvania conditions and the point that rate reductions would wipe out one-third of the investors and result in consequent wage reductions indicates that he is either intentionally misrepresenting the facts or is engaged in loose thinking. The utility earning figures given out by his own organization, which I have cited, refutes this allegation. His wage and investment allegations show that purposely he does not acknowledge or does not comprehend the effect of the principle of increased returns or the workings or the results of a low-rate policy. In making such a statement he ignores completely the combined experience of private companies which compose his organization. I am inserting a table showing how the law of increasing returns has worked with the private companies in the T. V. A. territory. This table shows that Mr. Bennion's conclusion as to Pennsylvania conditions and effect on wages and investments is totally in error. I might cite, for Mr. Bennion's information, that the total revenues from residential service in the T. V. A. area are now 20 percent higher than they were before the advent of the T. V. A., in spite of the fact that rates have been reduced by the T. V. A. yardstick, because the consumption of electricity under these low rates has grown by leaps and bounds.

TABLE 1.—*Comparative residential data*

1933

	Average consumption	Average rate (cents per kilowatt-hour)	Average bill	Total[1] residential customers
Alabama Power Co.	793	4.62	$36.64	76,676
Georgia Power Co.	805	5.16	41.54	114,332
Tennessee Electric Power Co.	612	5.77	35.31	87,278
Mississippi Power Co.	555	6.16	34.19	27,060
United States as a whole	595	5.49	32.67	16,296,709

1939

Alabama Power Co.	1,413	2.76	$39.00	123,597
Georgia Power Co.	1,446	2.84	41.07	179,331
Tennessee Electric Power Co.[2]	1,461	2.75	40.18	123,660
Mississippi Power Co.	954	3.78	36.06	28,740
United States as a whole	890	4.03	35.87	20,160,733

[1] As of Dec. 31. Includes farm and rural customers.
[2] Figures for the calendar year 1938, as this company operated only 7 months in 1939

Source: Electrical World Supplement.

I might cite also for Mr. Bennion's information, that the average residential use in Pennsylvania, as shown by statistics of his own organization, lags behind the national figure, despite the higher Pennsylvania wages and income. In 1939 the average annual consumption per residential electric consumer in Pennsylvania was 876 kilowatt-hours. The private companies surrounding the T. V. A., under reduced rates, have a comparative figure of 1,165, and in the T. V. A. system this figure is 1,231. For the same period the national average was 890 kilowatt-hours. By the end of 1940 the average residential use on the T. V. A. system had risen to 1,425. There are a number of projects in the T. V. A. system where cities and cooperatives report average residential use per customer above 2,000 kilowatt-hours a year.

T. V. A. EARNINGS

The Bennion statement that the T. V. A. power sales have made no contribution to the Federal Treasury is completely erroneous. If he is interested in the facts, he can find them on page 56 of the Annual Report of the T. V. A. which shows a net income for the fiscal year 1940, about $4,300,000. After paying the operating expenses of the navigation and flood control features of the program, there still remains a net income of nearly $3,000,000. The Federal Treasury was surely benefited by these earnings. The point at issue is not the actual present interest payments, but whether or not the revenues of the Authority are and will be sufficient to pay all overhead charges. The analysis on page 19 of the 1940 Annual Report shows that these revenues, on a liquidation basis, are sufficient to provide a return of 3.6 percent on T. V. A.'s power investment. This percentage certainly exceeds the cost of money to the Federal Government. If Mr. Bennion would analyze the true overall T. V. A. figures closely and be fair in his analysis, he could only state that the T. V. A. is a completely self-liquidating project which will not cost the taxpayers of the Nation 1 cent.

In addition, T. V. A. during the fiscal year ending June 30, 1941, paid more than a million and a half dollars in tax equivalents to counties and States. This sum, together with the tax and tax equivalent payments of the distributing agencies buying T. V. A. wholesale power, increases the total tax payments to more than $3,200,000. This sum is practically the same as the taxes formerly paid by the private owners to municipalities, counties, and States, when these electrical properties were under private ownership.

The $693,000 tax loss referred to in his statement as coming from Governor Cooper represents loss of franchise taxes formerly levied against the private companies. New business brought into the T. V. A. territory as a result of the new low-rate policy compensates for this so-called loss. What Mr. Bennion really states is that the total tax loss amounts to $693,000. This tax situation, which he mentions, was of so little consequence that the Tennessee Legislature has recently adjourned without passing any remedial legislation covering this item. I doubt that there has been any tax loss sustained, and if it has, it is a very small amount, and in no way compares with the annual savings made in the electric bills of some $7,600,000 in the State of Tennessee alone. The savings in the district I represent in Mississippi amount to more than $2,000,000 a year compared to the rates the private power company was charging us a few years ago.

The Bennion criticism as to capital costs and taxes is directed at the wholesale agency in an attempt to show subsidy. He ignores the distributing agencies which retail electricity at yardstick rates. Such an analysis is distinctly unfair, as he fails to mention the agencies whose rates he attacks. The distributing agencies, whose rates he dislikes, in the fiscal year 1940 earned a net income of $6,000,000, on an $80,000,000 average investment. After taxes and full depreciation allowance, this represents a 7½ percent return for a starting business.

These distributing agencies purchased wholesale power from the T. V. A. at prices conceded to be on a level with private power generating costs.

It is the distributing agencies which serve their consumers at the yardstick rates, but he ignores them completely, although making an attack on my tables, which clearly set out savings based on the sale prices of the distributing agencies. These distributing agencies purchase wholesale current from the T. V. A. at prices at least equal to or above the prices that the private companies are selling similar current. I have on several occasions placed these comparative figures in the RECORD and they are available for Mr. Bennion's inspection. On this point there is substantial agreement, and in fact the power companies introduced witnesses in the T. V. A. hearings who sustained this fact. Any fair-sized municipality can generate power at a cost within 1 or 2 mills of the price which T. V. A. sells wholesale power. Therefore, T. V. A. wholesale rates are removed from any factual discussion, as the private power companies operate on practically even terms with the wholesale prices of the T. V. A.

THE JOKER

Tennessee Valley Authority's wholesale operations form a self-liquidating project, and are therefore not subsidized. However, to demonstrate the fallacy of Mr. Bennion's analysis, let us remove this allegation from the argument, and start from the city gate. The cost up to this point will be approximately the same whether wholesale service is rendered by a private company or the T. V. A. Therefore the adequacy of the yardstick rates is determined by costs and profits between the city gate and the consumers meter. Just remember that T. V. A. is selling this power wholesale, at an average of 4.51 mills a kilowatt-hour, and that the Republican administration, under which Mr. Bennion served sold it to the private power interests at an average of less than 2.4 mills a kilowatt-hour. That is what he would call sound business.

During the fiscal year 1940, 106 municipalities and cooperatives distributed T. V. A. power to their consumers at a rate saving of over $9,000,000 per year in comparison with recent former rates. These retailing projects during this same year earned a combined net income exceeding $4,000,000, under an average

wholesale rate of about 4.5 mills per kilowatt-hour. If this average wholesale rate had been increased practically 50 percent, then some agencies could have still maintained the yardstick rates and would have made about a quarter of a million dollars net. In this same year Tupelo, Miss., had net earnings equal to 26 percent of its gross income. If the wholesale rate to Tupelo had been increased 40 percent, Tupelo's net earnings would have been 12 percent of the gross revenues. These facts and figures show the relative unimportance of the wholesale rate in the distribution picture, as these large percentage differences in the wholesale price amounts to less than one-quarter of a cent per kilowatt-hour. The joke in the Bennion submission lies in ignoring distribution and concentrating his entire attack on a cost component which could not exceed 10 percent of the consumer price, and would normally approach zero if the private companies sold electricty wholesale to municipalities at the same prices they sell to each other.

R. E. A. CRITICISM

Mr. Bennion made the statement that "Testimony of R. E. A. officials indicate that the average rate was about 5.7 cents per kilowatt-hour against an average rate for the entire utility industry for 1939 of 1.9 cents per kilowatt-hour." He knows, or ought to know, that the maximum rate to the farmers in the T. V. A. area is 4 cents a kilowatt-hour for the first 50 kilowatt-hours a month and that it scales down to 4 mills a kilowatt-hour, and that these rates include payments to amortize investments in the lines. As soon as they are paid out the rates will be reduced. Private power companies never amortize.

Besides, inquiry develops that no such testimony was given as that to which he refers. Mr. Bennion arrived at these figures from computations of doubtful accuracy, based on a very limited number of R. E. A. projects published in the Directory of Electric Utilities in the United States, 1940. Such averages are not fair representation, and should not be used, for the following reasons: (1) The service period of R. E. A. projects are too short to represent full utilization development; (2) the average quoted rate of the private companies include suburban consumers in the rural classification; (3) R. E. A. rates include items not included in the rates of the other cited utilities. The facts on these three items will now be given.

R. E. A. FACTS

First. The average time which rural consumers have been served on R. E. A.-financed lines is only 1.2 years compared with an average of more than 9.6 years for such consumers on the lines of other electric utilities. Assuming both classes of utilities render service in comparable territory under comparable conditions—which is not the case—the difference in average length of service alone would result in a larger proportion of minimum bill consumers and a lower average use per consumer on R. E. A.-financed lines. These facts operate to materially increase the average rate per kilowatt-hour for R. E. A.-financed systems even though they operate under identically the same rate schedules as the other utilities. Larger average use with the resultant lower average rates will accrue to R. E. A.-financed lines with the passing of time, as consumers purchase appliances and realize economies in the use of electricity. The older R. E. A.-financed systems have higher average consumptions and lower average rates per kilowatt-hour than the younger systems, the differences in the average running as high as 60 kilowatt-hours per month in average use and 3 cents per kilowatt-hour in average rates. Temporarily high average rates per kilowatt-hour for the youthful R. E. A.-financed systems therefore do not indicate relatively high typical electric bills.

The latest available statistics on densities on rural lines of electric utilities other than R. E. A.-financed systems indicate that 2.6 percent of "rural consumers" were served by utilities which reported over 20 "rural consumers" per mile; 39 percent were served by utilities which reported over 10 "rural consumers" per mile; and only 3 percent were served by utilities which reported 2.5 or less rural consumers per mile. Such densities definitely indicate service in suburban areas rather than rural areas as commonly understood in the United States. They are what are known as city farmers, who live "in the edge of town."

The majority of consumers on R. E. A. financed systems are dirt farmers living in areas where the density per mile is low. The other electric utilities serve suburban gentleman farmers, and call them rural consumers. In some instances these utilities, following census definitions, report all consumers living in communities of less than 2,500 population as rural consumers. These differences are reflected in the density per mile, average use per consumer, ability to pay, the average revenue per consumer, and other factors and thus do not permit a ready comparison of rates and service between R. E. A.-financed systems and rural consumers of other electric utilities.

With proper allowances for all of these factors a difference in the overall average rate per kilowatt-hour of as much as 50 percent in favor of rural consumers of electric utilities other than R. E. A.-financed systems would not be unfavorable to R. E. A. lines, and even Mr. Bennion did not claim these differentials.

The average rate per kilowatt-hour for R. E. A.-financed lines covers, in addition to all the usual costs, several important items not included in the average rate per kilowatt-hour for other electric utilities. On R. E. A.-financed systems the consumers are purchasing the plant on a 25-year amortization plan and these consumers, unlike rural consumers on the lines of most private utilities, were not required to make a large initial contribution of capital for building the line or to guarantee a minimum monthly or annual payment for extended periods of time. These items account for from 16 to 35 percent difference in average rates with at least 16 percent of the difference attributable to the amortization requirement alone.

R. E. A. PAYMENTS

Mr. Bennion added another inaccurate statement when he wrote:

It may be pointed out that according to the latest Budget of the United States Government, in spite of the rates these cooperatives are charging, they are having great difficulty to pay their way, because, though they borrowed up to June 30, 1940, $270,000,000, the Budget estimates that for the present fiscal year they will pay into the Treasury $18,000 in interest, and $72,000 as repayment of principal.

To correct such an erroneous implication it is necessary to insert at this point the facts which I have developed by inquiries.

Less than 2 percent of total repayments made by R. E. A. borrowers has been sent to the Treasury. Ignorance is the only excuse for such a gross misuse of data. No reasonable presentation of facts would imply that a new business should make interest and principal payments before the lines were constructed and energized or that the measure of interest and principal payments of R. E. A. financed systems is R. E. A. payments to the Treasury. The facts as of June 30, 1940, as reported by R. E. A. are as follows:

Allotments	$269,748,614
Miles, loan contract estimate	253,189
Consumers, loan contract estimate	856,182
Funds advanced	$220,513,614
Miles weighted construction	241,493
Miles energized	233,166
Consumers connected	567,998
Amounts due from borrowers	$4,489,748.68
Interest	2,346,393.33
Principal	2,143,355.35
Amounts paid by borrowers from revenues	$4,905,937.01
Interest	2,520,343.12
Principal	2,358,921.66
Paid within 30 days	26,672.23
Borrowers not paid within 30 days	25
Amounts not paid within 30 days	$79,837.01
Borrowers with advance payments	62
Amount of advance payments	$496,025.34

Thus with only 66 percent of the consumers anticipated under the $269,748,614 allotment actually connected—some of them for less than 1 month—the R. E. A. financed systems have paid nearly $5,000,000 from revenues. Payments were made to the R. F. C. from which R. E. A. has secured a large portion of its funds, and not to the Treasury.

Another misuse of data is the following Bennion statement:

Sixty percent of the farmers in Pennsylvania have electric service against 10 percent for Tennessee and 20 percent in Mississippi. The T. V. A. with all of its subsidies, has not equaled the record of the private utilities in Pennsylvania.

Mr. Bennion, if he so desired, could have found the facts from the data published by his own Edison Electric Institute Report on Farm Electrification, published February 27, 1941, which I present in table 2.

Table 2

Item	Pennsylvania	Tennessee	Mississippi
Number of farms, Apr. 1, 1940	169,027	247,617	291,092
Farms electrified:	*Percent*	*Percent*	*Percent*
Dec. 31, 1934	23.6	3.9	1.0
Dec. 31, 1940	71.4	17.1	10.7
Farms electrified by Rural Electrification Administration, Dec. 31, 1940	8.7	15.4	8.4
Farms not electrified Dec. 31, 1934, electrified by Rural Electrification Administration	11.9	16.0	8.5

The other 2.5 percent in Mississippi were electrified through T. V. A. before the R. E. A. entered the field.

This table shows, without allowance for R. E. A. stitmulating effect, that the Authority has been as effective in electrifying farms in Pennsylvania as it has in Tennessee and Mississippi.

Thus if Mr. Bennion's figures demonstrate anything, it is the failure of utilities other than the R. E. A. financed systems to develop rural areas comparable to those found in Tennessee and Mississippi; not the failure of R. E. A. to accomplish results comparable to those of private utilities.

TRUE REASONS

Again, Mr. Bennion, in one of his footnotes, states in effect that the weighted average rate is favorable to the public plants because of the dominatory influence of three large west-coast municipal systems with rates lower than the average. This inference does not tell the full story. The fact is that the weighted average rate is unfavorable to the private companies because of the excessively high rates in numerous New England and North Atlantic States served by the private companies, in addition to the low rates of the Pacific coast public plants. The dominating influence of 48 eastern cities of 50,000 population or over in the Federal Power Commission New England and North Atlantic geographic divisions, with rates exceeding the average, shows up in such an average. Naturally, Mr. Bennion leaves out all reference to high private utility rates.

TAXES AND BONDED DEBT

Mr. Bennion makes this statement, "Low taxes resulting from * * * leaving to private enterprise the business it can perform outweighs the influence of electric rates." He follows with a table comparing Tupelo, Miss., and Lock Haven, Pa., bond and tax figures. His motive is to attempt to prove that public plants symbolize high taxes and private plants low taxes. His statement and submitted proof are meaningless and deceptive if not fraudulent. In the first place, his table contains a substantial error. Secondly, the private electrical utility is not a private business either in law or in fact. In the third place, no discussion is offered as to tax and bonded debt comparisons.

His table contains a gross error as to the bonded debt per capita for Lock Haven, Pa. His tabular figure is $17.63. From Moody's Governments and Municipals, 1941, and the State and Municipal Compendium, published by the William B. Dana Co., I find that the gross bonded debt of Lock Haven is $372,500. This town's preliminary 1940 population figure is 10,799. From these two figures it can be seen that Lock Haven's bonded debt per capita is $34.53 instead of $17.63, as given by Mr. Bennion.

There are many considerations outside of power plants and distribution which govern municipal bonded debt. A great deal could be said on this subject and detail after detail given. It is sufficient to say and to summarize the municipal bonded debt is controlled by the topographic lay-out of the city, and the quantity, quality, and type of service rendered by the municipality for other functions besides power and the type and quality of municipal government. The following cities served by private companies have per capita bonded debt as follows, compared to Tupelo:

City	Gross bonded debt	Per capita debt compared to Tupelo
		Percent higher
New York City	$2,650,402,608	535.0
Pittsburgh, Pa	85,582,126	127.5
Chicago, Ill	321,379,245	67.3
St. Louis, Mo	76,044,000	66.2
New Orleans, La	56,131,000	66.2
Philadelphia, Pa	613,480,300	461.0

Above data from National Municipal Review, June 30, 1940, p. 396.

These private-utility cities have very much higher per capita debt than Tupelo. If I had used the method of Mr. Bennion, I could have presented the data above without description or qualification. The facts are that these high debts are largely due to the reasons I have given previously. Such facts collapse the Bennion inference that public plants bring high debts. He ignores all reference to revenue bonds.

Different cities have different assessment ratios, based on true values. These ratios vary from 37 percent to 100 percent. The only true tax comparison can be made by adjusting the used tax rate to the basis of 100-percent true value. The comparative tax rates of 301 American cities in 1940 have been made by the Detroit Bureau of Governmental Research and published in the Municipal Review for December 1940, page 792, reduced to a 100-percent adjusted rate. From this publication it can be seen that cities having municipal power plants rank favorably in this listing. Again this is not a complete measure, as the tax and debt situation is governed by the over-all factors I have given.

I have answered all of the various points presented by Mr. Bennion in his attempt to challenge my overcharge tables. His approaches were by indirection, and I have met these approaches squarely. As no direct approach was made against the accuracy of these tables, they stand untouched, as representing the overcharges paid by the American electric consumers, compared to actual "at cost" yardstick rates. Therefore, in the light of my answer, Mr. Bennion's article is nothing more than a check on my conclusion by the spokesman of the private power companies.

The fact remains that the American consumers of electricity were overcharged more than $1,000,000,000 for their lights and power in 1940, as shown by the tables attached to my remarks on February 12, of which these utility propagandists so loudly complain.

What I am trying to do is to develop the water power of this Nation and get it distributed at rates based upon the costs of generation, transmission, and distribution, so as to force reduction of light and power rates to their proper levels in every locality throughout this broad land, in order to make every community in America a better place in which to live.

Strikes Are Sabotaging the Country's Defense Preparations

EXTENSION OF REMARKS

OF

HON. HOWARD W. SMITH

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1941

Mr. SMITH of Virginia. Mr. Speaker, as strikes against the defense of our country continue to increase, and as the stoppages in production of arms becomes more frequent and more ominous, I again call attention to the series of speeches I have made to the House on the subject of strikes in defense industries and the amendments which I have repeatedly offered—and which have been repeatedly defeated—that would have prohibited the prevailing racket that compels free American citizens to pay tribute to a labor union in order to work for their country.

How much longer will the American people complacently permit the manufacture of vital munitions, planes, and ships to be delayed and hampered by strikes called by labor leaders for the purpose of forcing Americans to pay tribute to labor unions for the right to work as freemen?

How long will the boys you have drafted at $30 a month be compelled to wait for guns and powder and trucks and planes, in order that racketeers may ply their nefarious practices of extorting fees from American citizens in return for the right to work for a country that calls itself a democracy?

How long before the American people will realize the deadly parallel between what happened in France and what is happening in America today? Let us see that the awakening is not too late.

On November 25, I made the following statement on the floor of this House:

STRIKES ARE PREVENTING PROPER OPERATION OF OUR DEFENSE PROGRAM

Mr. SMITH of Virginia. Mr. Speaker, I wish to echo and enlarge upon the sentiments expressed by the gentleman from Georgia [Mr. Cox]. We all know about these strikes that

are preventing the proper operation of our defense program, and I want to talk about two of these situations for a very few minutes. Now, take the Vultee strike. That concern has the sole contract for the production of training planes to train the boys that this Congress has conscripted into the service of their country. Now, that in itself is pretty serious. Let us see what caused that strike. We now have the official statement from the Attorney General that behind that strike is the "red" hand of communism. I echo the words of the gentleman from Georgia [Mr. COX], What is this Congress, that is charged with responsibility, going to do about it? How do a few "red" Communists manage to stop the entire production of training airplanes for this country in its emergency?

Mr. GOSSETT. Mr. Speaker, will the gentleman yield?

Mr. SMITH of Virginia. I yield to the gentleman.

Mr. GOSSETT. The Congress is now coming in for some lambasting, it seems, and I want to ask the gentleman whether he does not feel that the executive and administrative agencies of this Government have not the power and the responsibility to deal immediately with this situation.

Mr. SMITH of Virginia. In all fairness, I am not sure that they have. I am not sure there is sufficient legislation on the books to do the business.

Mr. COX. Mr. Speaker, will the gentleman yield at this point?

Mr. SMITH of Virginia. I yield to the gentleman briefly.

Mr. COX. But does not the gentleman recognize the responsibility upon the heads of Government at least to express disapproval of what is going on?

Mr. SMITH of Virginia. I would wish they would do so, but coming back to the responsibility of this Congress, which was what I was getting around to, how do a handful of "red" Communists manage to disrupt and interfere with the entire program of this Nation for planes to train the boys you have conscripted into service? How do they do it? They do it because they are members of a labor organization, and under the cloak and under the protection of that radical labor organization they are able to interfere with and stop the program of defense of this country.

Then you will ask, How does any minority labor union exert such a power? How can the C. I. O. or any other labor union say to 140,000,000 people, "You shall not build airplanes to train the boys you have conscripted into service"? Because there is a law known as the National Labor Relations Act, which stands behind and protects the activities of labor unions, which time and time again, by its ukase, has said to the employers of this country, "You shall not discharge a Communist from your organization." Time and again that has happened, and I can cite you the cases where they have said that. I can cite you a case decided in the last 90 days where the Labor Board has said to an executive of the New York Times, "You cannot fire your confidential secretary because she is a Communist."

So they operate under the protection of labor unions, and the labor unions, in turn, operate under the protection of the National Labor Relations Act.

Under whose protection does the National Labor Relations Board come? It comes through this Congress. It comes through us who have put it into effect and have not seen to its proper administration and amendment.

So, Mr. Speaker, that brings us right straight back to the proposition of where this trouble lies. We cannot lay it on the administration. We cannot lay it on the labor unions. We cannot lay it on the Communists. It comes straight back to our door, and I repeat the question, What are we going to do about it?

Now, let us consider the aluminum strike for a moment. One of those strikes, I am informed, has been going on for a month, delaying the production of aluminum. Another strike, as the gentleman from California has just told you, occurred in the last few days because one man would not pay tribute to a labor union.

Now, he has paid that tribute but still the strike goes on because he has not been discharged. You will recall that in the last 60 days this Congress was called upon for an authorization of $25,000,000 to increase the facilities of the T. V. A. at the request of the Defense Commission. Why? Because we were informed that in our defense program if a bottleneck ever came in that work it was going to come in the production of aluminum, because we were informed that it requires 5,000 pounds of finished aluminum for every airplane, much to my astonishment. We were informed that we must have additional power at the T. V. A. in order to produce that aluminum.

Now, does it strike you as significant that this little handful of radical "reds" in these various key matters have been able to absolutely stop the production of necessary and essential materials in two of the most important things that this country has to deal with?

Mr. Speaker, I have concluded. I just urge the Congress again to wake up and get out of the class of Rip Van Winkle and let us do something about it. [Applause.]

Mr. Speaker, under permission to extend my remarks, I include the following statement from the Vultee Co., as to the situation in regard to their plant:

"Failure to reach a settlement of the strike at the Vultee aircraft plant, Downey, Calif., is due solely to the refusal of C. I. O. negotiators to protect national-defense production by agreeing to an arbitration clause in the proposed contract.

"No question of wages, hours, or working conditions remains between the company and the union. Full agreement has been reached on those points.

"The company, however, insists that for the term of the proposed contract—2 years—any differences arising between the company and the union should be adjusted by arbitration in case agreement by negotiation fails.

"Union officials, however, have refused to accept the arbitration clause. They insist on full freedom to strike in case of failure to reach a settlement by negotiation within 5 days.

"The 2-year period of the proposed contract covers the term of operations that will be necessary for Vultee to turn out basic training planes contracted for by the Army Air Corps and the fighter planes under contract by the British Purchasing Commission.

"The company submits that during this period of intensive production for national defense, public interest—even more than any interest of the company—demands that its aircraft production be protected against arbitrary strikes. Such protection would be afforded by the proposed arbitration agreement.

"The right to strike for better wages and working conditions is, of course, a prerogative of labor. But for union leadership to insist on reserving a right to strike during the period of a contract can mean only one thing in the opinion of the company. It means that the union desires to reserve an opportunity further to impede the progress of our national-defense program.

"The question of granting that right is one which no company engaged in defense production should be permitted to decide. That decision should rest with the Government and the people."

On January 24, 1941, I made the following speech on the floor of this House:

Mr. SMITH of Virginia. Mr. Chairman, I favor the objectives of this bill, and I expect to support it. I think we must all realize that when this war is over, whether we get into it or not, the world tonnage is going to be so reduced that additional tonnage constructed by this country will be very welcome.

I think we need speed in this program as we need speed in every program of national defense. With this end in view, I have in mind to offer an amendment to this bill when it is read for amendment which I think will be helpful not only in speeding production here but, if adopted in other appropriation bills, will be helpful in speeding production there, and at the same time will eliminate one of the most un-American and reprehensible practices I know of. I speak of the practice that prevails today in the construction of every cantonment in the United States, where before a man can go to work under a defense project for his country he must pay a tribute arbitrarily fixed by a labor union. I have talked to a great many Members of the House on this subject, and they have said something ought to be done about it. Every time I suggest doing something about it, however, about as far as I can get is that somebody suggests that that is not the right thing—that we had better do something else. I think the way to do this thing is to do it effectively, and the most effective way I can think of doing it is to put a limitation upon every defense appropriation providing that no part of this appropriation may be used where any condition of employment requires a person to belong or not to belong to a labor union.

I expect specific instances have come to your attention as to abuses of this nature. I am going to cite a few right in my own district. I notice the gentleman from New York [Mr. FITZPATRICK] has just arrived on the floor. Two of his constituents were in my office yesterday. They were men who belonged to a union in good standing and had their cards with them. They wanted to go to work at Fort Belvoir where painters are needed, yet they were not permitted to do so. I can cite you many instances. The other day there came to my attention the case of three or four common laborers in my district. We have all been sympathetic with their conditions. In the last few years we have given them W. P. A. help and have tried to create jobs for them. This cantonment building creates jobs, but these constituents of mine who were just common laborers wanted to get a job digging a ditch, but they were not permitted to handle a pick or a shovel until they paid to the common laborers' union a fee of $23.

I have a painters' union in my town. In the suburbs of that town is Fort Belvoir. This painters' union is a regularly chartered A. F. of L. union. Their initiation fee is $50. The initiation fee in Washington, I am told, is $150. What happens? Why, the big boys in Washington just go down there and by main strength and awkwardness take control of jurisdiction in a cantonment in Virginia which is in the jurisdiction of the Alexandria Painters' Union.

Mr. Chairman, those things the Members all agree are not right. No man ought to be compelled either to join or not to join any organization in order to work for his country. [Applause.] What happens?

We are drafting men at $31 a month and sending them to these cantonments in wintertime. The draft bill contained a provision which says that men may not be put into those camps until the camps are completed. We are drawing the boys in day after day and these camps are not ready for them. There are instances at these camps where the mud is knee deep and where the men are housed

in tents and where everything is in confusion. And why? What is the natural result of this practice? I speak of a man's having to pay a fee to work for his country. The natural result is that men go there who are inexperienced and incompetent. They pay their fees, work for a week or so, and then get fired. As a consequence there is a continual turn-over of labor that disrupts the whole organization. I can cite other cases that have come within my own personal knowledge of men who have been engaged in their particular trades for years, who are experts, who have come here and been compelled to join these unions, have paid their initiation fees, and after a couple of weeks' work, forsooth, when they have earned the money to pay the tribute, for some unknown reason they lose their jobs, and the next day a new crop comes in.

In conclusion, Mr. Chairman, I expect to offer this amendment to this bill. I expect to offer it to every appropriation bill that carries money for national defense. I agree with everything that has been said that we should have general legislation on this subject, but some of you may know the difficulty I have encountered in getting some legislation that two-thirds of the House thought was very essential on labor matters. If we cannot do it in one way, I think this Congress ought to do it in the other way and in the way they absolutely control—that is, by control of the purse. I shall offer this amendment. I hope the Committee will not object to it. I think it ought to be adopted, and hope it will be adopted.

Again, on the same day, January 24, 1941, I offered the following amendment to the pending defense appropriation bill, which was defeated, and, at the same time, spoke as follows:

Mr. SMITH of Virginia. Mr. Chairman, I offer an amendment, which I send to the clerk's desk.

The Clerk read as follows:

"Amendment offered by Mr. SMITH of Virginia: On page 3, after line 4, insert '*And provided further*, That no part of this appropriation shall be paid to any person, firm, or corporation that requires as a condition of employment of any employee that he either join or not join a labor union, nor shall any part of this appropriation be used to pay directly or indirectly the salary or wages of any person who advocates or belongs to any organization which advocates the duty, necessity, desirability, or propriety of overthrowing the United States Government by force or violence.'"

Mr. SMITH of Virginia. Mr. Chairman, I ask unanimous consent to proceed for 5 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Virginia [Mr. SMITH]?

There was no objection.

Mr. SMITH of Virginia. Mr. Chairman, this is the amendment which I discussed in general debate and which you have heard discussed pro and con in general debate by others. I listened with interest to the remarks of my good friend the gentleman from Georgia [Mr. RAMSPECK] for whom I have the highest respect and affection, but I think he totally misconstrued the amendment which I have offered.

He made the statement, if I recall correctly, that this amendment would prevent and destroy labor unions in defense industries. The amendment does nothing but say that no man who wants to work for his country in this time shall be required to pay tribute to any organization. That seems a proposition that no one ought to dispute. I cannot understand why the members of the Labor Committee, who have told us so often of their affection for the laboring man, should come to this floor and advocate a situation which many people say amounts to nothing short of a "racket" sanctioned and upheld by the Government of the United States.

Mr. Chairman, my complaints do not come from employers. They come from the man in the street, the laborer who for 10 long years has been struggling for a living, through conditions of Nation-wide unemployment.

Now that this manufactured prosperity has come to pass, with a demand for his services, he goes to a cantonment, where he expects to get good wages, and asks for a job. He is told by the employer, "I will hire you if the labor union will let me." He goes to the labor union and is told, "You may go to work if you pay a certain fixed, arbitrary sum."

I am informed reliably that in my district, for a common laborer to dig a ditch, before he can put his hand on a pick he must pay the union $23. If he wants to be a painter, I am told that he must pay the union, before he can put his hand on a paint brush, $150.

Mr. TABER. Mr. Chairman, will the gentleman yield?

Mr. SMITH of Virginia. I yield to the gentleman from New York.

Mr. TABER. A common laborer here in the District, I understand, has to pay $87.50 before he can work.

Mr. SMITH of Virginia. If he is a carpenter, before he can manipulate his saw he must pay the labor union $58.

My colleagues, when you say you do not favor this amendment, and when you go through the tellers, as you will a little later on on this amendment, are you going to say by that that you sanction and approve such a practice, that prevails—and you know it prevails—in every district in the United States where defense work is going on?

I have been told that I ought to do this by means of general legislation. My genial friend the gentleman from Georgia has assured the House that if I introduce such a bill—what is he going to do? He is going to give me a hearing. I do not want a hearing. What I want is action. I have been fooling with hearings on these labor matters for 2 years, and where do you get?

If you gentlemen think it is right that a man should pay tribute before he can work, then vote my amendment down. If you think this practice is wrong, I am telling you here today that this is the only chance you have to correct it and the only chance you probably ever will have to correct it. [Applause.]

Again on January 24, 1941, in debate on the same bill, I said:

Mr. SMITH of Virginia. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, we have had a very illuminating, useful, and helpful discussion on the amendment which I offered to this bill. I am glad to note that every one who spoke on the subject of the amendment which I offered expressed their approval of the objective of that amendment, but wanted it done in some other way.

It so happens that last December I offered a bill to do it in some other way, which bill was referred to the Judiciary Committee, and there died. In the hope that the situation would straighten itself out or that we would get some help, I have not reoffered that bill, but I am now going to accept the challenge of those gentlemen who opposed the amendment which I offered, and will this afternoon drop into the basket the bill which I have in my pocket. This bill will undertake by legislation to do the thing I have been unable to accomplish by an amendment to this appropriation bill. The bill, I believe, will be referred to the Committee on the Judiciary. I will follow that with a letter this afternoon to the chairman of the Committee on the Judiciary, inviting his attention to the RECORD of today and telling him how very anxious every Member who spoke on the subject this afternoon is to correct this evil practice which we all know exists. I hope you will all intercede with the chairman of the Committee on the Judiciary and urge that we get not only a hearing on this bill but action.

On February 27, 1941, I offered the following amendment to the then pending defense appropriation bill, and spoke as follows:

Mr. SMITH of Virginia. Mr. Chairman, I offer an amendment, which I send to the Clerk's desk.

The Clerk read as follows:

"Amendment offered by Mr. SMITH of Virginia: Page 3, line 8, insert a new paragraph, as follows:

"'No part of this appropriation shall be paid to any person, firm, or corporation who requires or consents to a condition of employment of any employees that he either be a member or not be a member of, or join or not join, a labor union.'"

Mr. SMITH of Virginia. Mr. Chairman, I ask unanimous consent that I may proceed for an additional 5 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Virginia?

There was no objection.

Mr. SMITH of Virginia. Mr. Chairman, the amendment which I have just offered is similar to the amendment which I offered to the appropriation bill for money to build ships, and that subject was debated quite fully in the House within the past 2 weeks.

The amendment is simply this: It withholds any of this appropriation from any person, firm, or corporation who requires any of its employees to join or not join a labor union. It brings to us again the troublesome and old subject that we have been dealing with since the defense program began, namely, the prevalent and universal custom throughout all of these defense industries that says to an American citizen, "You shall not work for your country unless you pay tribute to a labor union."

The amendment presents squarely this question. It is for this House to say whether it approves or disapproves of this practice. It is a practice that is prevailing in every district of every Member of this House, and I am wondering what we are going to say to our constituents who complain to us that "here I am competent to perform work for my country, and I have applied for a job; I am out of employment; I have been on relief, drawing the money that Congress has appropriated for relief; and here is a good job for me, and I am not permitted to take the job because I am not able to pay some labor union $50 or $100, or what have you."

This is the sole question presented here today, and I am going to ask the Members of this House to stand up and be counted on this proposition. It was suggested to me in the debate which we had on this subject 10 days ago that this is a matter that could be taken care of by general legislation. Mr. Chairman, you know as well as I do that that argument just begs the question. You know that before you can get legislation that is going to do away with this racket you have got to get a bill through a legislative committee—and I may say that the Judiciary Committee is now considering it, and considering it very seriously—but you have got to get a bill out of that committee, you have got to get a rule on the bill, you have to pass the bill through this House, you have to pass it through the Senate, and then you have got to get it signed by the President. All of you know the history of legislation that has anything to do with touching the sacred labor laws, and you know that it is well-nigh impossible, even though this House might vote for it 2 to 1, as it did on the amendments to the National Labor Relations Act. It is well-nigh impossible to jump all the hurdles that are going to confront you in attempting to secure legislative action unless you do put the limitation on an appropriation bill, as this amendment

proposes. This is a very simple way to do it. You have the power to do it right here this morning.

You may, by the adoption of this amendment, stop this racket right in its tracks. When you put a limitation on an appropriation bill that says no dollar of this money shall be spent in any form that puts up with such a condition as one that requires these employees to pay tribute to any private individual or organization, you kill that proposition there and then, and you do not have to get any more legislation enacted to take care of it.

This is the simple way to do it, and it is the practical way to do it. The question is whether or not there are votes in this House willing to stand up and do it; and that is the proposition I put up to you this morning.

I want now to call to your attention a newspaper clipping which I obtained this morning, consisting of only four lines. It is dated Gary, Ind., and says that the C. I. O. steel-union pickets refused to permit nonunion workers to enter the Carnegie steel and tin mill, which normally employs 9,000 men working to produce instruments for the defense of your country. A private organization has the assurance to say to American citizens that they shall not cross a line until they pay a price to this organization. Are you Members of the House going to stand for that indefinitely? That is the question I present to you today. Take the hearings of the Committee on the Judiciary, within the last 10 days, in which it was stated and proven that the glazier's union charge men $1,500 initiation fee for the right to work for their country, and the panes of glass that will protect your boys from the weather will lie there waiting until somebody can raise $1,500 to do that work. That is all the proposition is. It is, simply, you vote for it or you vote against it, and then make your explanation to your own conscience and to your own constituents.

Again, on March the 19th, I offered the following amendment to the pending defense appropriation bill and spoke as follows:

Mr. SMITH of Virginia. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

"Amendment offered by Mr. SMITH of Virginia: Page 5, line 9, strike out the period and insert a semicolon and the following: '*And provided further*, That no part of this appropriation shall be paid to any person, firm, or corporation that requires, as a condition of employment of any employee, that he either join or not join a labor union; except where prior to the effective date of this act, an employer is under a contract with his regular employees which contains such a condition.'"

Mr. SMITH of Virgina. Mr. Chairman, I ask unanimous consent to proceed for 2 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Virginia?

There was no objection.

Mr. SMITH of Virginia. Mr. Chairman, the sole and simple purpose of this amendment is to put a stop now to the unconscionable practice that has aroused the righteous anger and indignation of the American people and which has tended to slow down and sabotage our defense industries. It is the practice, which prevails in every congressional district in the United States, of requiring American citizens to pay tribute to a labor union for the privilege of working for their country. That is the simple proposition which I now present to you.

When I offered this amendment some time ago to a bill, my distinguished colleague from Virginia spoke against the amendment and based his opposition on the proposition that there were many industries now working on defense which had existing closed-shop contracts with their employees. In order to meet that objection, I have changed the amendment so that it will not apply to any firm that now has an existing closed-shop contract, but the amendment will tend to stop these organization drives which are paying more attention to union dues than they are to the defense of our country.

I will give you two brief examples. You have today a strike, about which the gentleman from Texas [Mr. DIES] spoke this morning, in the Harvill plant, which is making vital parts for airplanes. This is an organizational strike, a strike for a closed shop. When that particular supply of parts for airplanes, already manufactured, has become exhausted, as the Committee on the Judiciary was told the day before yesterday by an official of the United States Government, airplane production will have to stop until production of those parts is resumed.

You all know about the Allis-Chalmers strike, which has been going on for nearly 2 months in Wisconsin. In that plant they are making vital parts for battle cruisers. Until those parts are made, the cruisers cannot come off the ways.

It is going to be said that this amendment should not be adopted for some psychological reason that I have never been able to understand, in that we ought not to put any amendment on this bill. I want to say to you gentlemen that it is equally important that we get this work done as it is to commit the idle gesture of sitting here and appropriating $7,000,000,000, because appropriating $7,000,000,000 is not going to do a nickel's worth of good unless you get it into production.

I want to tell you in conclusion some of the things that are being done under this practice which I am seeking to prevent.

Competent men seeking employment even on direct Government work are required to pay unconscionable fees to union representatives under the guise of initiation fees. Instances of these fees in individual cases run from $23 to $1,500. I have evidence of many instances where inability to pay the required amount has foreclosed the worker from obtaining employment.

The payment of such fees, in many instances, does not admit the employee to membership in the union or to the rights and privileges of union members, but merely gives him a temporary license or permit to work on a single job.

In some instances, in lieu of the so-called initiation fee, he is charged a flat sum per day or per week for a permit to work, for which he likewise receives no union privileges or right of participation in union affairs.

In some instances of so-called jurisdictional controversies, one union, through arbitrary action, will prevent members of other equally legitimate unions from working on Government jobs.

Farm boys, from your district and mine, seeking temporary work as common laborers, are refused employment on Government projects in their own vicinities unless they pay the demanded tribute to a union representative.

Competent unemployed men, who are able to pay the required initiation fee, are refused work until all union men have first been employed.

Contractors, through voluntary agreements with unions, encourage these practices.

Closed-shop demands are at this moment preventing delivery to the Government of finished materials urgently needed, because labor unions have refused to permit the Government to enter and take them out of the factories.

Mr. COOLEY. Mr. Chairman, will the gentleman yield?

Mr. SMITH of Virginia. Yes; I will yield to the gentleman.

Mr. COOLEY. I would like to ask the gentleman where the information comes regarding the fee of $1,500.

Mr. SMITH of Virginia. It came, if I recall correctly, from Assistant Attorney General Thurman Arnold, in his testimony before the Judiciary Committee of the House of Representatives pertaining to a glaziers' union where the Government was seeking at that moment to put glass in the barracks during the month of February for the boys that you put into the Army at $30 a month.

On March 21, 1941, I made the following speech on the floor of the House of Representatives:

Mr. SMITH of Virginia. Mr. Chairman, I have tried on previous appropriation bills to obtain an amendment which would have stopped in its tracks the racket prevailing universally in this country of requiring a man to pay tribute to a labor union in order to work for his country. That amendment has been repeatedly voted down. I had intended to offer it to this bill, but on coming here this morning I find that it is a deficiency bill, running to the period of June 30, 1941, and I think it would be a futile thing to offer it after the money in fact has been spent.

There are a few things I want to say on this subject, now that I have a little time to do it. We did not have time the other day.

We all know the conditions that prevail. We know that they are interfering seriously with our defense program in the production of materials, the production of vital materials, that are delaying many things that you must have, and have at once.

When I offered this amendment 2 or 3 days ago, my godd friend, the gentleman from Georgia [Mr. RAMSPECK], in the heat of debate, was unkind enough to say that the purpose of my amendment was to destroy labor unions in this country. My good friend, the majority leader, was, I think, thoughtless enough, in the heat of that debate, to say that I was attempting to throw monkey wrenches into the defense program.

So far as the defense of my country is concerned, either in voting for appropriations or anything else, I stand on my record in this House, and I put it against the record of any man here. But let us see who is throwing monkey wrenches into the defense program and let us see who is threatening to break up labor unions in this country and set them back 25 years in the gains they have made under this Administration. Do you gentlemen who get on this floor and proclaim yourselves the friends of labor realize that 1 percent of those interested in the labor movement are rapidly destroying the gains of organized labor by their unwillingness to cooperate with their country in the hour of its greatest emergency? Do you suppose for a minute that the average workingman in this country is any less loyal to his country than you or I? If you do, you are wrong. Do you suppose that the average workingman in this country, who in many instances has been out of employment for years, wants to strike on these high wages and stop his work and stop the flow of the pay roll which is supporting his family? Of course not. He has to strike because somebody at the top of the union, for some reason that he does not know anything about, says to strike. When those leaders say "strike," whether there are underlying reasons of communism or fascism, or whatever they

may be, he must strike. A picket line is thrown around his place of work and he is not permitted to enter. If you gentlemen who claim to be the friends of labor would just realize what is going on in this country and stand up here and do something to stop this thing and see that the production for our national defense proceeds, you would be doing labor the greatest favor that has ever been done to it on this floor [applause], because I warn you gentlemen who claim to be the friends of organized labor that if something is not done in the next 30 days, and these strikes keep on, all of us who are real friends of labor and real friends of honest organized labor are going to have to stand on this floor and fight drastic legislation that would take away the proper gains of organized labor that it has taken them 25 years to bring about.

Now, let us see who is throwing monkey wrenches into the defense program. I am accused of throwing monkey wrenches into the defense program because I want to see that no man shall be required to pay tribute to a labor union in order that he may work for his country. If that is throwing a monkey wrench into the defense program, what is the Allis-Chalmers strike, brought about by a Communist, and preventing the production of vital defense articles that this country needs? What kind of a monkey wrench is that, and where is it being thrown? If the Members of this House would put their foot down on that sort of thing, they would take some of the monkey wrenches out of the machinery that have already been thrown there by others, and which I have been trying to stop. [Applause.]

I think this thing is too serious and too imminent and the time is too precious for us to hesitate to give voice to the words in our hearts, and the knowledge that we have in our minds, as to these things, irrespective of whom it may offend.

May I say a word about the Mediation Board? We looked forward with great hope that this Mediation Board just created was going to do something about this situation. Have you read the Executive order? I read it with great disappointment. Under the Executive order creating this labor Mediation Board, do you know that it has no functions? It cannot perform one single act to prevent a strike. It cannot operate at all until the Secretary of Labor, having exhausted every means within her power, having used all the facilities of the Conciliation Department, having gotten to the end of the rope, and the strike probably having been going on for some time, finally makes up her mind that she cannot do anything more about it; then she is permitted, if she so pleases, to invite the Mediation Board to come in and see what they can do about it.

Now, what does that mean? That means that this Mediation Board has but one function. That is, after the damage has all been done, and after the strike has been called and defense production has been stopped and your program destroyed in that particular part of the work that is going on, then the Mediation Board may come in and solemnly "view the remains." And that is about all it can do. I challenge anybody to say it can do anything else.

Now, gentlemen, in all seriousness, this program does not need an undertaker; it does not need somebody to come in and view the remains after it is all over; we can all foresee that; what we need is a physician—somebody to prescribe the remedy, somebody to prevent these stoppages in defense employment—and this Congress—this Congress, the representatives of the 130,000,000 people of the United States—is that physician. It is your duty to prescribe; it is your duty to enact legislation. You cannot abdicate your functions to an executive department. Your people and mine will expect us to perform our constitutional functions. How long are the American people to be subjected to the delay in their vital defense matters because this Congress refuses or fails to function? [Applause.]

[Here the gavel fell.]

Mr. WOODRUM of Virginia. Mr. Chairman, I yield 2 additional minutes to the gentleman from Virginia.

Mr. SMITH of Virginia. Just one or two little items of what is happening: In my State the Radford powder plant was built and completed in less time than the contract required. Only one-quarter of this plant can go into operation. Why? Because the machinery for the other three-quarters is tied up by the strike in the Allis-Chalmers plant, and this strike, as the gentleman from Alabama has just demonstrated very clearly to you, was called and fostered and brought about by communistic influences. Do we not realize that when we put these boys in the Army at $30 a month we have got to give them some powder to shoot with? Do we not realize that when we are training these boys at the risk of their lives every day to fly planes, that we must give them some planes to fly?

Then there is the Harvell strike, which was shown by the gentleman from Texas [Mr. DIES] yesterday conclusively to be engendered by the Communists. This strike is tying up the vital production of parts for airplanes, and you are advised authoritatively that unless this strike is immediately settled, the whole airplane-production program is going to be slowed up because they cannot get that particular part. I have several instances of similar character, and if I had a few minutes more, I could tell you about them. I wish I had the time.

[Here the gavel fell.]

On yesterday, strikes that have been delaying our defense preparations flared into violence amounting to civil insurrection. The recently appointed Mediation Board confessed its lack of authority or power to act in the premises. The Congress has so far failed to exercise its constitutional function to legislate in behalf of a nation facing the most critical period in its history.

Again I urge the Congress to enact legislation before it is too late that would put a stop to the racketeering, the strikes, and the threatened strikes that may cause us to face the crisis ill armed, ill trained, ill equipped, and ill prepared.

Defects in Education System

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, March 27 (legislative day of Monday, March 24), 1941

EDITORIAL FROM THE NEW YORK DAILY ENQUIRER

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have published in the Appendix of the CONGRESSIONAL RECORD a very able editorial entitled "Education in America Is Recreant." This editorial is by the pen of Hon. William Griffin, editor and publisher of the New York Daily Enquirer, published in the issue of March 3, 1941. This editorial is particularly timely in view of the widespread publicity given the fact that communist ideologies are creeping and seeping rapidly into some of the public-school systems of the country, as alleged by organizations which have for several years past made a very close study of the subject.

There being no objection the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Daily Enquirer]

EDUCATION IN AMERICA IS RECREANT

Education in America, public and nonpublic, represents a tremendous financial investment and burden for the taxpayers and all others upon whom it relies for its monetary requirements. In no land upon earth is so much cash spent upon education as is expended in the United States. But, despite the financial and other advantages enjoyed by education under the folds of Old Glory, American education is far, very far, from what it should be.

One of the primary functions of education is the development of good citizenship in those educated. By good citizenship we mean moral, patriotic, and intelligent citizenship.

Our American schools should be nurseries of sound patriotism. For the greater part, they are hotbeds of antipatriotism and pseudo patriotism. And, with the exception of certain denominational schools, the cultivation of real moral consciousness, which must be based upon a belief in God, is looked upon as out of date and not in harmony with the American concept of education.

The governing preoccupation of our American schools, in the ultramodern and degenerate period in which we live, is propaganda—propaganda for democracy, propaganda for internationalism, propaganda for this, for that, and a hundred things besides.

Patriotism, honest, active, uncompromising love of America, such as that love which burned in the souls and hearts of Washington, Jefferson, Franklin, Carroll of Carrollton, Hancock, Jackson, and Lincoln is absolutely essential to the survival of the United States of America.

Because of the manner in which genuine patriotism is scorned and outlawed in American classrooms, the thought of what the Republic will suffer in years to come, unless public opinion and popular action correct the situation in time, is anything but agreeable.

Nationalism is the bedrock of this Republic.

It was the impelling force which came from our God-given independence as a Nation among the nations, that exalted our forbears, expanded the Republic to ocean-to-ocean dimensions, and won for the names "America" and "American" a glory never matched in all history.

Our American schools—we should call them our so-called American schools—are engaged in classroom propagandizing which is destroying the sacred gift of American nationalism that is the birthright of every American boy and girl. This is a condition of things whose existence it is humiliating to have to acknowledge and whose existence is a direct challenge to the men and women of America who are still loyal to the American faith of their fathers.

Poison the minds of the children of today and you poison the minds of the grown-ups of tomorrow.

Answers to Questions About Steel in Defense

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, March 27 (legislative day of Monday, March 24), 1941

PAMPHLET PREPARED BY THE AMERICAN IRON AND STEEL INSTITUTE

Mr. DAVIS. Mr. President, steel is the backbone of our national-defense production. Iron and steel mills are working day and night, 7 days a week, to meet the needs of the Nation. The American Iron and Steel Institute has prepared a very informative pamphlet entitled "Answers to Questions About Steel in Defense," which outlines some very important questions and answers about steel in national defense and which will prove interesting to all who read it. I ask unanimous consent that this pamphlet be printed in the Appendix of the RECORD.

There being no objection, the pamphlet was ordered to be printed in the RECORD, as follows:

STEEL IN NATIONAL DEFENSE

1. How important is steel to national defense?

Steel is a necessity for almost every type of defense equipment—battleships, planes, guns, ammunition, tanks, and mobile equipment of all kinds, as well as the machines and tools with which to make them.

2. Are steel consumers who make products for the defense program getting preferences in deliveries?

From the outset of the defense program the steel industry has voluntarily given first call and right-of-way to orders devoted to that cause.

3. How has the steel industry organized itself to cooperate with the Army, Navy, and other branches of the Government on defense matters?

Acting upon the request of the Office of Production Management, the chief executives of close to 30 steel companies are organizing themselves as an iron and steel industry defense committee. That committee will work for close cooperation between industry and government, and help speed output. Another committee of expert metallurgists works with Government agencies in preparing and revising specifications for steel products, and also advises with steel consumers on specification problems.

4. How much steel can the Nation's steel industry produce?

The rated capacity of the industry was more than 84,000,000 tons of steel ingots and castings per year at the close of 1940.

5. How does our country's steel capacity compare with that for other countries?

World steel capacity outside the United States is estimated at 105,000,000 tons per year. The Iron Age estimates foreign steel production in 1940 as follows: About 42,500,000 tons were produced in continental Europe excluding Russia. Russia produced 21,800,000 tons, and the United Kingdom produced 15,000,000 tons. About 7,100,000 tons were produced in Japan, and 2,000,000 tons in Canada. Steel production in all other countries was estimated at 4,100,000 tons, bringing the total production for the world outside the United States to 92,500,000 tons. Output last year in this country was close to 67,000,000 tons.

CAPACITY TO PRODUCE STEEL

6. What percent of the world's steel-making capacity is in the United States?

About 44 percent.

7. How does our present steel capacity compare with that of 1918? Of 1929?

It has increased almost 40 percent since 1918, and fully 15 percent since 1929.

8. Has the increase in steel-making capacity kept pace with population gain?

Yes, it has far outstripped population gain. The Nation's present population is only 8 percent more than in 1929, and 27 percent more than in 1918.

9. Was any of this new capacity added last year?

During 1940 about 2,500,000 tons of annual capacity were added, and plans are now under way to increase capacity by another 3,400,000 tons during 1941.

10. Operations of the steel industry have been reported at over 95 percent of its capacity for some months. How long can they continue there?

So far there is no apparent strain on producing facilities. Actually some companies have recently been producing in excess of 100 percent of rated capacity. In 1917 the entire industry operated at 100 percent or over for 7 months.

11. How can any company operate at more than 100 percent of its rated capacity?

The reason is that the rated capacity of the industry is the sum total of maximum output attained in any recent year by each furnace in the industry, less about 11 percent which is taken off for shut-downs and repairs. Thus, the rated capacity is not the production ceiling. As a practical matter the industry could, by reducing the length of the shut-downs, lift output as much as 2.5 percent above its rated capacity in a year and for shorter periods it could probably operate at an even higher rate. It follows that the industry has a practical maximum capacity considerably higher than its rated capacity.

12. What could the industry produce if called upon to operate at its highest practical capacity in 1941?

If necessary, it probably could produce as much as 86,000,000 tons, not counting production from the new furnaces that are now being installed, and in 1942 it could produce approximately 90,000,000 tons. The maximum for 1941 would be about 20,000,000 tons more than the industry actually produced in 1940.

ABILITY TO CONSUME STEEL

13. Would 86,000,000 tons be enough for defense needs, for exports and for other needs?

It is estimated that when the defense program gets in full swing a total of 8,000,000 tons may be used for defense in a year, and another 12,000,000 tons for export to Great Britain, Canada, South America, and other countries—about 20,000,000 tons in all. That would leave at least 66,000,000 tons of steel which could be turned out for domestic civilian use.

14. How does that tonnage compare with what has been needed for ordinary commercial uses in the past?

In 1929, the best peacetime year on record, the domestic use of steel was equal to 57,500,000 tons of ingots, or 950 pounds per capita.

15. What does 66,000,000 tons represent on a per capita basis today?

It figures out to 1,010 pounds per capita, or 6 percent more per capita than was needed in the boom year of 1929.

16. What was peak production of the steel industry in the United States before, during, and after World War No. 1?

Before the first World War, the peak year of steel output was 35,057,000 tons in 1913. Biggest output during World War I was 50,468,000 tons in 1917. A later peak was 63,205,000 tons in 1929. All these earlier records were broken in 1940, when 66,993,000 tons were produced.

17. What was the rate of steel output in 1940 relative to capacity?

Steel output in 1940 represented 82 percent of the industry's rated capacity as of the end of 1939. It would represent less than 78 percent of present practical capacity.

18. Did steel output rise in response to the defense program in 1940?

Yes. Early in the spring of 1940 the industry was running at only 60 percent of capacity, while in the last quarter of the year the rate of operations averaged nearly 96 percent.

WHERE STEEL PRODUCTION GOES

19. Was this production for use in the United States alone?

In large part, although heavy shipments were made to England and her allies.

20. How much steel did we export during 1940?

Almost 11,000,000 tons of ingots were used to make steel for export last year. More than half of the exports went to the United Kingdom and Canada.

21. How do those exports compare with earlier years?

The 1940 total was over three times exports in 1939, about three times the 1929 total, and exceeded the previous 1917 peak by fully 25 percent.

22. What was done with the steel made and used in this country last year?

Preliminary estimates indicate that about 13 percent of the finished steel shipped to consumers was used in the construction of highways, cantonments, dams, bridges, and factories, including a good deal of defense-plant construction. About 18 percent went to the automotive industry to build passenger cars, trucks, and mechanized military equipment. The railroads took 10 percent, and another 10 percent was used to make tin cans, steel drums, and other containers.

23. That accounts for about half of the total. Where did the rest go?

To machinery and tool makers, to industries that press or stamp steel into various products, to ordnance makers, shipbuilders, and to a host of other industries from manufacturers of watches to airplane-engine producers.

DEFENSE USES FOR STEEL

24. How much steel is needed to make a battleship?

A big 45,000-ton battleship will require about 20,000 tons of ordinary steel, an aircraft carrier about 17,000 tons, a cruiser about 5,500 tons, and a destroyer about 700 tons. Those tonnages do not include the steel in the ship's guns and defensive armor.

25. Building a "two-ocean" navy will take how much steel, on that basis?

It has been estimated that, exclusive of guns and armor, the total number of naval vessels now under construction or appropriated for will require less than 1,200,000 tons of steel, spread over the next 4 years.

26. How does that amount of steel compare with what the automobile industry uses, for instance?

In 1940 the automobile industry consumed approximately 6,900,000 tons of steel.

27. How much steel is used in building airplanes?

To build one of the bigger planes like a transport or a heavy bomber requires at least 5 tons of high-grade alloy steels. Steel accounts for almost half the weight of both the fuselage and the engines. To build 50,000

airplanes of various types would require at the most 250,000 tons of high-quality steel.

28. Has there been any change in the types of steel used for military and naval equipment since 1918?

Yes. Better steels have been largely responsible for the faster ships, planes, and tanks of today, for the higher powered and more durable guns, and for the more effective armor plate.

29. What types of steel products are used for those purposes?

Almost every kind. To build a battleship, for instance, takes steel plates, structural shapes, wire, sheet steel, tubular products, bars—in fact, practically the whole range of products. Even tin plate has military importance in preserving food for military and naval use, while barbed wire likewise has a part to play in defense.

30. Can the American steel industry produce the high-quality steels needed for defense?

It has been producing them for years. With only a very few exceptions, such as armor plate, the steels which are used for defense equipment are also important in peacetime. Thus in the years before the present emergency the steel industry acquired the ability and equipment to produce in vast quantities the steels now needed for defense.

31. Do steel companies themselves make defense equipment, or are they primarily a supplier of steel to companies that make such equipment?

The steel industry is primarily a supplier of steel to other companies which fabricate it into defense equipment. Two of the larger companies in the industry are equipped to build naval vessels and merchant ships. Some steel companies also make armor plate and certain other heavy ordnance equipment.

DELAYS AND SHORTAGES IN OUTPUT

32. Have there been any shortages in particular kinds of steel?

The answer is "No" for the main body of steel products, but "Yes" for a few special kinds of steel, such as stainless steel and high-speed tool steel.

33. What caused these shortages?

One of the important alloys in stainless steel is nickel, and early in 1941 the supply of nickel became tight. In the case of high-speed tool steel, tungsten supplies also appeared somewhat inadequate.

34. Are most other steel products in ample supply?

Because of the great rush of orders, mills are booked ahead for some months on various products such as plates and structural shapes. Users are anticipating their needs well in advance and scheduling their orders accordingly. Instead of the "hand-to-mouth" buying which prevailed throughout the depression, the former practice of forward buying has returned. The present situation for the bulk of steel products is one of somewhat deferred deliveries, but that is not a shortage.

35. There has been talk of a shortage of aluminum. Does this bother the steel industry?

It does to some extent because the steel industry uses pure aluminum to remove gases from molten steel. Annual requirements of aluminum in steelmaking are not great as compared with consumption by other industries, but no completely satisfactory substitute exists today.

36. Have no bottlenecks appeared in any departments of the steel industry?

The nearest thing to a bottleneck was in electric furnace capacity. These furnaces make special quality alloy steels, and because of the sharply increased demand for these steels in the manufacture of airplane and tank engines and parts, and for other uses, the steel industry's former electric furnace capacity was inadequate. It is being expanded by 50 percent to a total capacity of close to 2,900,000 tons per year. From time to time expansions have been made in other departments to keep the various kinds of producing facilities in proper balance with each other.

EXPANSION OF STEEL CAPACITY

37. What about other types of equipment?

There was also a need early in 1941 for new coke ovens and blast furnaces, and these are being built, as well as new open hearth steel-making furnaces. Also a number of Bessemer converters recently retired from active service are being put back into use.

38. An expansion program like that must cost a lot of money. How much?

The steel industry is spending $282,000,000 for new equipment and construction during 1941. In 1940, it spent $171,000,000.

39. How much was spent in the preceding 10 years?

From 1930 through 1939, about $1,500,000,000 was spent by steel companies on new equipment and modernization.

40. Were those years poor ones for the steel industry?

They were. Over that whole decade the industry earned an average of less than 2 percent on its investment. Net earnings of the entire industry averaged $50,000,000 a year, or about one-third of its average yearly expenditures for new equipment and modernization. Earnings of previous years and borrowed money were used to meet the cost of new construction.

41. Was it wise for the industry to spend all that money to enlarge and improve its plants in bad times?

It was not only wise but it is most fortunate for the country that the steel industry was "geared up" for unprecedented production when the armament program appeared.

42. Is any considerable proportion of steel facilities outmoded or obsolete?

No. As a result of large expenditures in recent years, it is estimated that more than 90 percent of the industry's facilities are modern and up-to-date and capable of efficient production. Substantially all of the remainder is in operating condition, but is less efficient and economical.

43. You have mentioned electric furnaces. Are they more up to the minute than open-hearth furnaces?

They are not comparable that way because each has its own job to do. Electric furnaces are used chiefly to produce special kinds of alloy steel, while open hearths are used primarily to make the carbon steels which comprise the great bulk of total steel output.

44. What is the Dunn report on the steel industry?

It is a report to the President prepared by Mr. Gano Dunn, an eminent engineer on the staff of the Office of Production Management. The report concluded that the Nation's steel capacity is and will be adequate for all demands expected this year or next.

45. Is the industry spread out geographically or concentrated?

Its plants are spread from coast to coast, in more than 250 different communities in 28 States. The largest centers are around Pittsburgh and Chicago.

THE RAW MATERIALS FOR STEEL

46. Is the steel industry dependent on foreign sources for raw materials?

Certain essential raw materials must be imported, but these represent less than one-half of 1 percent of the total tonnage of raw materials consumed annually by the steel industry.

47. Which raw materials must be imported?

Among the more important materials that come from abroad are manganese, tin, chromium, cobalt, tungsten, and vanadium. Nickel is also imported, but principally from Canada.

48. Where do these imports come from?

Manganese from Russia, Brazil, Cuba, and Africa; tin from Malaya, the Dutch East Indies, and Bolivia; chromium from Africa, Cuba, Greece; cobalt from Canada, Africa, and Australia; tungsten from China and Malaya; vanadium from Peru and Rhodesia.

49. How are these other metals used in steel making?

In three principal ways: (1) To purify steel; (2) to impart special properties to alloy steels; (3) to serve as a corrosion-resisting coating on steel.

50. What steps are being taken to insure an adequate supply of the materials which have been imported?

The Government is purchasing reserves of some, like manganese and tin, and is also fostering domestic production. The steel companies themselves have also laid in larger than normal stocks of certain materials.

51. Do we have enough iron ore in the country to meet our present needs?

The Nation's resources of iron ore are more than adequate, as are its resources of limestone and coal, which are also very important in steel making.

52. You have said that the steel industry is made up of a number of companies. How many?

There are more than 200 companies in the industry, employing at the present time about 600,000 men and paying out almost $100,000,000 a month in pay rolls.

53. Has there been any shortage of labor in steel mills?

Thus far there has been virtually no shortage of steel workers, largely because of the job-training and apprentice-training programs which have been regularly conducted by companies in the industry. Another reason is that hourly wages paid by the steel industry are the highest in the history of the industry and average almost 30 percent higher than the average for all manufacturing industries.

54. Where may one obtain further information about the steel industry?

The American Iron and Steel Institute, 350 Fifth Avenue, New York, N. Y., endeavors to supply any needed information about the iron and steel industry.

Discrimination Against Negro Race at Kansas City Bomber Assembly Plant

EXTENSION OF REMARKS

OF

HON. U. S. GUYER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1941

RESOLUTION OF STATE LEGISLATURE OF KANSAS

Mr. GUYER of Kansas. Mr. Speaker, again I want to call attention of the Congress and the country to the undemocratic method of discrimination against the Negro race at Kansas City, Kans., with respect to the bomber assembly plant now being built in the Fairfax industrial district, where the builders declare they are not going to hire any Negroes except as janitors and in similar positions.

This is a defense project and such conduct violates not only the letter but particularly the spirit of the law which forbids such discrimination "because of age, sex, race, or color."

The House of Representatives of the State of Kansas has denounced this discrimination by a unanimous vote in passing the following resolution.

Under leave to extend my remarks I include this resolution:

House Resolution 43

Resolution condemning discrimination practiced by certain employers in Kansas, who are now or hereafter engaged in industries essential to the national-defense program

Whereas it is a fundamental principle of the American democracy that all American citizens are endowed with certain inalienable rights, among which are life, liberty and the pursuit of happiness; and

Whereas it is essential, in order to pursue happiness properly, that every American citizen be given an equal right to work so that he may support himself and family; and

Whereas it is the declared policy of the Defense Commission of the United States of America that "workers shall not be discriminated against because of age, sex, race, or color"; and

Whereas contrary to such announced policy on the part of our National Government, the president and general manager of the North American Aviation, Inc., which company is to have control and management of the Government-owned bomber-plane assembly plant, to be located in the Fairfax district of Kansas City, Kans., did publish in the daily papers of Kansas City, Kans., on March 17, 1941, the following statement, to wit:

"Regardless of Negroes' training, we will not employ them in the North American plant. It is against the policy of the company to use Negroes as mechanics or aircraft workers. We intend to maintain the same policy in Kansas City, Kans."; Now, therefore, be it

Resolved by the House of Representatives of the State of Kansas, That we go on record as condemning the unfair and un-American practice intended to be invoked against our Negro citizens of Kansas by the North American Aviation, Inc., at Kansas City, Kans., or any other city in Kansas; and further condemning any and all other discriminatory acts by any employer of this State, now or hereafter engaged in any phase of the national-defense program; be it further

Resolved, That we respectfully urge and request the President of the United States to investigate and to correct any and all such abuses; be it further

Resolved, That the secretary of state be directed to have copies of this resolution engrossed and to send a copy of the same to the President of the United States and a copy to each member of the Kansas delegation in the House of Representatives and in the Senate of the United States of America.

Adopted March 21, 1941.

CLAY C. CARPER,
Speaker of the House.
W. T. BISHOP,
Chief Clerk of the House.

The Cloakroom

EXTENSION OF REMARKS
OF
HON. WILLIAM P. LAMBERTSON
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1941

Mr. LAMBERTSON. Mr. Speaker, convoys mean "good-bye, boys"—the last step.

I love my country, and I hate to see it led astray.

Bringing England's cruisers into our ports for reconditioning is breeding scabs.

Painting our battleships to look like Britain's isn't insurance; it's an invitation.

One step at a time but still denying is our cumulative American way of life.

Suppose we will have to enter the war because it is April, and, too, because the 90 days is up.

This column does not waiver nor acknowledge that the die is cast till our soldiers are ordered in.

The supermediation board will be the fifteenth to settle labor disputes; they all encourage strikes.

Morale of the people generally is hurt for victory when signal failure of a domestic nature is undisputed.

The morale in our Army is hurt by the toleration given strikers in high brackets by the Government, when the soldier is sacrificing.

The President, while at sea, should be let down in a steel ball to the bottom, just to show him how deep it is.

It is a foolish and unsupported war if we are determined to whip Hitler over there in the final analysis, with men.

The miracle man of America will now please demonstrate how he is going to keep his promise to aid Greece.

Sic 'em, Russia; we are with you. We democracies have got to stand together. Sic 'em, Dictator Greece; we are praying for you in the arsenal.

The City of San Francisco With Its Bay and Adjacent Territory Is the Geographical Center of the Pacific Coast and Is of the Highest Strategic Importance to Any Adequate Defense of This Country

EXTENSION OF REMARKS
OF
HON. RICHARD J. WELCH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1941

Mr. WELCH. Mr. Speaker, the strategic importance of the city of San Francisco, its bay, and the adjacent territory to any adequate defense of the entire Pacific coast is beyond verbal description. San Francisco is the outlet for that vast empire embracing the San Joaquin and Sacramento Valleys, each of which is traversed its length by different large navigable rivers emptying into San Francisco Bay, and the Livermore, Napa, Sonoma, and Santa Clara Valleys, all rich and profitable land. The immeasurable importance of this empire to national defense is only limited by the adequacy of transportation facilities available.

San Francisco Bay is not only the geographical center of the Pacific coast, but it is the most important and finest harbor for naval and military purposes on the entire western seaboard. This important fact has been referred to on many occasions by the highest-ranking officials of both the Army and the Navy. Admiral Charles F. Hughes, while Chief of Naval Operations, testified before a committee of Congress that:

> San Francisco Bay is, as you know, the principal harbor of the Pacific coast. To my mind it belongs to the Nation; it is not the property of California nor of the cities that are on its shores. From its natural advantages and its location, San Francisco Bay is certain to be the major continental fleet base for any extensive campaign in the Pacific. It will be the point where the fleet will concentrate at the beginning of a war.

Within this vast area—the spearhead of Pacific coast national defense—are many of the principal military establishments on the Pacific coast. Within the city of San Francisco are the Presidio Military Reservation, Fort Winfield Scott, Fort Mason, the Army transport docks, United States Risdon naval plant, and the United States Naval Drydocks at Hunters Point. Outside of San Francisco proper, but within the bay area, are the Mare Island Navy Yard, the Oakland Naval Air Base, one of the largest in the world, the Oakland Naval Supply Base, the United States Army Moffett Air Field, Fort Barry, Fort Baker, and the United States Bombardment Base. Every single one of these military and naval establishments is essential to national defense, but from the lessons of modern warfare we now know their weakest link is inadequate highways. When the completed story of the battle of France is finally written it will show the battle was lost and won mostly on the highways.

The Federal Government, of necessity, is spending billions for proper national defense. In this program careful consideration must be given to strategic national-defense highways and to bridges which are an integral part of those highways. Particularly is this true in the case of San Francisco, with all of its military and naval activities.

San Francisco, one of our great seaport cities, has a population of approximately three-fourths of a million people. Thousands of men are now engaged in building naval and merchant ships in private shipyards for the United States Government. The city itself is built on the tip of a peninsula, with an area of approximately 40 square miles, one of the smallest areas of any large city in the country. This geographic location enhances its strategic importance, but there is but one approach from the easterly or continental side of San Francisco Bay—by way of the San Francisco-Oakland Bay Bridge, which is 9 miles long and 200 feet high. San Francisco Bay is 70 miles long, with an average width of some 8 miles. The only other approaches are by two roads entering the city from the south on the San Francisco peninsula and the Golden Gate Bridge at the extreme north. Thus the transportation of all materials and supplies over highways is restricted, and for purely military purposes in this defense program the Government must provide another approach. This matter has been favorably considered by military authorities already.

Several years ago the War Department approved a low-level bridge at Hunters Point connecting San Francisco with Alameda County on the east side of San Francisco Bay. Hunters Point extends well out into the bay; is 5½ miles south of the San Francisco-Oakland Bay Bridge and 11½ miles north of the next bridge to the south, the San Mateo Bridge. It is directly opposite Bay Farm Island, Alameda County, which is slightly south of the Oakland naval air base and the Oakland municipal airport. This provides an ideal location for another approach to San Francisco for the distance is only 5¾ miles from Hunters Point to the opposite shore and two-thirds of this distance is shallow water where a road could be built up by the same process as was used for the Oakland naval air base and for Treasure Island where the recent Golden Gate Exposition was held. They were reclaimed by the use of centrifugal pumps at a nominal cost. Following the type of construction used in the approaches to the San Francisco-Oakland Bridge and the San Mateo Bridge, the remainder of the road could readily be constructed on concrete piling.

A further defense requisite for adequate highways would be to provide such a bridge for the evacuation of San Francisco should that ever be necessary. In such an emergency the Golden Gate Bridge might by reason of its exposed location be of limited value and a single shell could put the 200-foot high-level San Francisco-Oakland Bridge out of commission for an indefinite period. Thus, without an additional approach, there are but two roads available—the ferry systems having been long since abandoned—and these are heavily congested even under ordinary conditions.

I was harbor master of the Port of San Francisco at the time of the great catastrophe in 1906 when 5 square miles in the heart of the city was reduced to ashes. The scene of its evacuation even at that early date beggars description. Picture another evacuation caused by shell fire from the air into a city principally of wooden construction, and the conditions will be beyond description.

The need for such a low-level bridge as an integral part of the defense program for the Pacific coast, has long since been established. It would make possible the extension of all transcontinental freight lines directly into San Francisco and the important military establishments to which I have referred. Lessons from the European war emphasize that need more certainly. National defense is predicated on the preservation of the Government and the lives and property of its citizens. The War Department approved the project years ago, and such a bridge should be immediately constructed extending from Hunters Point to the continental side of the bay, not only for the military and naval value it will be, but the great value it would be should such an emergency as necessary evacuation ever arise.

The Conquered Peoples of Europe

EXTENSION OF REMARKS

OF

HON. SHERIDAN DOWNEY

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Thursday, March 27 (legislative day of Monday, March 24), 1941

RADIO ADDRESS BY UPTON SINCLAIR

Mr. DOWNEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by Upton Sinclair to the conquered peoples of Europe in February 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I have been asked to speak over the radio to the conquered peoples of Europe, and to their kinsmen in other lands and on the sea. In the 46 years of my work as professional writer and speaker, I have never approached any duty with more humility of mind and spirit. I live in the sunshine of California, in a land of peace and freedom. I have my home and my garden into which no one intrudes. I read what books I please, I think what thoughts I please, I write what seems to me to be true and publish it freely. I have done this throughout my life, and although I have made many enemies none has ever been able to check me. Last November I went to the polls and cast a secret ballot for the persons I wished to have govern me, knowing that those favored by a majority of our voters would take office unopposed. In short, I am a citizen of a free, democratic society; I live under what Abraham Lincoln called a government of the people, by the people, and for the people; I enjoy what our Declaration of Independence calls the inalienable rights of life, liberty, and the pursuit of happiness.

Now I am speaking to people who have been deprived of all these rights; whose land has been invaded by conquerors, whose legal government has been driven into exile, whose liberties have been destroyed by one of the most wanton crimes in the world's long history. What can I say to such people that will be adequate to the situation? Words are so cheap in the California sunshine, but so dreadfully costly in the dark winter of oppression which has closed down upon the people of the conquered European lands.

As it happens, I am a novelist, and it has been my task to put myself by the power of imagination into the place of other people and to share their feelings. Also I have read history and know what men have endured in past ages. I know what liberty has cost mankind, what price has been paid for knowledge and enlightenment. Every step along the road of human progress has been cemented with the broken bones and the blood of human beings. Uncounted billions have been helpless victims; others have been heroes and martyrs, persons who might have saved their lives if they had been willing to keep quiet, to bow their necks to the yoke of the conquerors, to do what they were told—in short, to cease to be free men and women and become slaves. But they refused to do that; they steeled their hearts to resistance; they kept the sacred fires of revolt burning in their souls; they matched their brains against the brains of despots, and found ways, open or secret, to oppose them and in the end to overcome them.

I do not say that they have always succeeded. History would be pleasanter reading if that were true. The tragic fact is that many great civilizations have been destroyed, many truths have been rooted out and suppressed, genius and decency and kindness have been stamped into the mud by the hoofs of brutality and stupidity. But some of the good things have managed to survive, and it is obvious that none could have survived unless men had fought and struggled, first in their own souls, then in the world outside them. Such knowledge as we possess is ours because our forefathers were willing to suffer and to die in order to gain it and to spread it. Such democratic rights as are left in the world have survived because brave and good men won them and handed them on as institutions to us. Each of us who lives carries in his heart and brain a sacred treasure which it is his duty to preserve and pass on, unimpaired and if possible improved, to his children and his children's children.

For those who do not know my books let me say that from the beginning of my career I have defended the rights of the human personality against all forms of repression. Eighteen years ago, when fascism made its appearance, I raised my voice against this menace to freedom and enlightenment. I did the same against the vile Nazi creed from the first hour. As a lifelong Socialist I denounced its theft of the word "socialism"; for socialism has always been a free, democratic movement, and this Nazi thing is no kind of socialism, but the worst of state capitalism, a slavery which is not content to exploit the labor of men and women, but deprives them of that political liberty which gives them hope of economic progress.

The Nazi system robs human beings of their right to seek the truth and to speak what they have learned. Figuratively speaking, it cuts out the eyes of its followers, it breaks their eardrums it reduces them to mechanical slaves, eating ersatz foods, thinking ersatz thoughts, and making ersatz history. Such a creed is a product of depraved moral natures; and in these later tragic days the Fascists and Nazis have given overwhelming proof of the fact.

Can such cruel aggressors wreck the temple of civilization and set up their Moloch in its place? The moral life in us, the thing which we call our conscience and our God, refuses to believe it. I see a quickening of the democratic spirit in my own country, and I do not believe that the forces of so-called appeasement and of big money greed can overcome it. Certainly there has been an awakening among the free peoples of the British Commonwealth, and I am not indulging in wishful thinking when I tell the enslaved peoples of Europe that help is surely coming to them.

Your knowledge of your own souls and of the history of mankind tells you that freedom comes from within, that so long as it lives within the human soul it cannot be destroyed from without. The conquered peoples of Europe have an old culture and an old moral discipline. Steel your souls once more to endure, as heroes and martyrs have endured in your country and in mine, and in all others where there is anything worth living for. Guard the treasure of knowledge and understanding in your own minds. Make them into the food of both your body and soul. Make liberty into a prayer to be repeated day and night, a song to be sung in your hearts. Teach these prayers and songs to your children—for that is the most important thing of all, that the invading barbarians shall not be able to steal your youth and corrupt the soul of the future Europe.

Teach your children the truth about the invaders of your land, and save them from the mental degradation of nazi-ism. Teach them to be willing to suffer for truth and freedom—since it is their fate to be born in a time when they have to choose between defiance and enslavement worse than death.

We have an old motto in our country: "Rebellion to tyrants is obedience to God." Those who put this motto into action learn an important lesson of the moral life, that out of resistance comes strength to resist. You are, perhaps, still permitted to read the Bible in your captivity, so I close with a verse from the Book of Revelations: "Fear none of those things which thou shalt suffer; behold, the devil shall cast some of you into prison, that ye may be tried; be thou faithful unto death, and I will give thee a crown of life."

Investigation of Un-American Activities

REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1941

Mr. DICKSTEIN. Mr. Speaker, while we are investigating un-American activities, let the committee go the whole way. Let us not overlook any group or groups or organizations within the bounds of the United States who are practicing and preaching un-Americanism and who are seeking in some other form to undermine the Government. The newspaper PM on March 26, 1941, exposed the K. K. K. and the Legion of Death. The Legion of Death is the outgrowth of the Black Legion of Detroit. It is a strong organization within the bounds of our country, un-American, preaching destruction and race hatred. If the committee is going to make an investigation, let it go all the way. No American who has the right to call himself an American should be permitted to undermine the Government in any form.

The SPEAKER. The time of the gentleman from New York has expired.

Mr. DICKSTEIN. Mr. Speaker, I ask unanimous consent to extend my remarks, and to include excerpts from the newspaper PM.

The SPEAKER. Is there objection?

There was no objection.

[From the New York PM of March 26, 1941]

LATEST THING IN KLANNISHNESS: THE LEGION OF DEATH IN JERSEY

(By Leo Jay Margolin and John T. McManus)

Have you met the black sheep of the Ku Klux Klan yet?

Well, here it is—The Legion of Death—swishing around north Jersey, the land of Mayor Hague and the Jackson Whites, in coffin-black robes, and sworn by all manner of devil's-workshop oaths to the whole catalog of know-nothing knavery.

There's no cause for immediate worry. The Legion of Death has only about 100 members, and they're having the devil's own time getting anywhere, because the Klan itself is dead set against them—too nonsensical and too terroristic, according to Samuel G. Stouch, 3d, of Germantown, Pa., the Klan's regional director for these parts.

ARE YOU A PROTESTANT?

But just in case someone in a subway rush presses into your hand a leaflet, one of these days, all about how you will meet death, this story will explain all.

"Are you an American?" Death's leaflet asks. "Are you a patriot?" * * * "Are you a Protestant?" * * * "Are you a man of courage?"

If you are, then Death introduces himself, if you don't already recognize him: "The mysterious unknown, the secret force behind a mighty army of silent men, organized throughout (sic) our Nation to combat and destroy all things and conditions inimical (sic) * * *."

It turns out, if you read it all, that the main things "inimical" to the Legion of Death are labor, Catholics, Jews, Negroes, Communists, atheists, and rape (under some circumstances). Murder and arson are not particularly "inimical," if you get what we mean.

The way you get invited into the Legion of Death is something like being tapped for Skull & Bones. After you've been properly sized up, a Legionnaire in mufti sidles up to you and says, "Death calls you. Are you ready to face him?"

ENTER THE MORTICIAN

If you are, then come the magic words: "Keep a still tongue. * * * Wait for the mortician."

The mortician, who is the headman of the legion, is one Arthur H. Bell, a glib-talking, north Jersey man who used to be the Klan's grand dragon for New Jersey until he committed the faux pas of arranging that now-famous Klan-bund conclave and fish-fry at the bund's Camp Nordland, Andover, N. J., last August 18. Some 5,000 bundsmen and Klansmen and their women chummed together there that day for their common purposes. PM's Leo Lieb took memorable pictures, and the happy event got national publicity.

But the publicity boomeranged nastily, so Imperial Wizard J. A. Colescott, who had previously approved the meeting, disowned it and disrobed Bell, along with several other organizers of the affair.

TWO MASTERS

The Legion of Death is actually the illegitimate offspring of that Klan-Bund lovefest last August. It popped out just a month later, with Bell at the head. When Regional Director Stouch, a graying, Main-Line crockery salesman in business hours, heard about the new Legion, he summoned its organizers to his office, in his home at 6323 McCallum Street, in Germantown, Pa.

"What is this nonsense about a Legion of Death?" Stouch asked.

"It's not nonsense," Bell replied, zealously, "and what are you going to do about it?"

"You've got to choose," Stouch stated, with a ring of authority. "You can't be Klan and Legion of Death, too. Which will it be?"

There was a deathly silence. Then Bell spoke up.

"I'll take the Legion," he declared, "and you can go to hell."

AND A RAID

A short time after the meeting, on October 17, Stouch's home was entered, three doors battered down, two of them steel, and the Klan office raided of all correspondence relating to the Klan-Bund meeting. Six books containing names, addresses, and phone numbers of each of the 13 leaders in each of the 424 Klan units in Pennsylvania, 86 units in New Jersey, and 40 in Delaware were also taken. The intruders did not take a considerable bit of cash in the office, nor did they disturb a stamp collection of Mr. Stouch's valued at $8,000. They raised hob with the furniture, though, and the loss of the records has practically wrecked the Klan machinery in Stouch's area.

PM and the Nonsectarian Anti-Nazi League discovered the Legion of Death's existence simultaneously, and have thus far tracked it down together. One trail led to aging Alton M. Young, a former grand kliliff of the Klan's Realm of New Jersey, and one of those present when Regional Director Stouch and Mortician Bell had their argument in Germantown. Wan and chair-ridden with arthritis, old ex-Kliliff Young went even wanner when the investigators pressed him for details.

WANTS TO LIVE

"I can't open up," he said. "I want to live a little while."

When Mr. Young finally talked, it was pretty much in circles. First he said the Legion was a paper organization. Then he said it had held meetings in "the best-known hotel in New York." When he finally got warmed up, he said that the legion had a post-office box in Allentown, Pa., and that "the Legion of Death are dangerous men, and wouldn't stop at anything." Mr. Young stopped right there.

Another trail proved more productive. Mr. Young lives in a house at 294 Magnolia Street, Jersey City, in the basement of which some legion meetings are supposed to have been held. The house is owned by a Mrs. Elizabeth Cope, of 133 Garrison Avenue, Jersey City, where other legion sabbats have been held.

THE LEGION'S BETSY ROSS

The investigators knew Mrs. Cope, an ardent Klanswoman whose picture we got last August, on the platform at the Klan-bund convocation. She is a railway engineer's grass widow, and sews a fine seam, and the investigators had no trouble at all placing her in the legion scheme.

Mrs. Cope is the legion's Betsy Ross. She makes the black robes of the Legion of Death. Before she followed Mortician Bell into the legion, she used to make the ordinary white robes for the Klansmen.

The legion robes cost $4.50, a dollar more than the white ones. The extra dollar pays for the dyeing, and also for the special Legion of Death insignium, the letters L and D under a white skull and cross bones, worn in two places—on the visor of the mask worn with the hood, and over the right breast.

The Klan emblem, a white cross on a red background with a drop of blood in a diamond-shaped centerpiece, is worn over the left breast.

So far, Mrs. Cope has sold about 100 of the robes, and she had 8 or 9 waiting for customers when the investigator visited her.

This, then, is about the limit of the legion's spread thus far. That doesn't mean, however, that it can be laughed off as simply a racket to sell robes, or a protest group within the Klan. It has already been active proselytizing members among the workers in the American Can Co. factories in New Jersey.

REMEMBER THE BLACK LEGION?

Although it has thus far committed no known lawless act, or handed out anything but its comic-page mortician invitations, it has all the earmarks of the infamous Black Legion of Michigan, which started out just

as fantastically, and later committed at least a dozen murders before its 1935–36 reign of terror was ended.

The information gathered by PM and the Non-Sectarian Anti-Nazi League was placed in the hands of the New Jersey State police 2 weeks ago. We'll let you know when the Jersey cops do something about it.

The Philippines and the Export-Control Law

REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1941

Mr. STEFAN. Mr. Speaker, I note in the press that the Philippine Resident Commissioner [Mr. ELIZALDE] has said that the Philippine government is earnestly desirous "to cooperate with the United States in any form of export control that may be deemed effective in safeguarding the interests of national defense."

The occasion for the statement, as he himself states, is:

That there have appeared in several newspapers here reports of recent Philippine shipments to Russia, by way of Shanghai and Japan, of copra cargoes which may ultimately be used for war purposes.

Then he said the following significant words:

It must be understood, however, that foreign relations of the Philippines are under the direct supervision and control of the United States, so that any regulations or export licensing requisites on products from the Philippines must, of necessity, emanate from the Federal Government.

Mr. Speaker, this subject matter is not new to me. In fact, I have been exploring it for many months. As far back as March 19, when we were debating the $7,000,000,000 British-aid bill, I took the floor and warned this Congress that the objectives of our embargo on strategic raw materials to the Axis was being defeated because they were getting some of these materials from the Philippine Islands. I hope this notice came to the attention of the Philippine Resident Commissioner at that time. The Philippines is exporting not only copra and coconut oil to Russia through the port of Vladivostok but, more importantly, iron ore to Japan which last year imported iron ore from the Philippines valued at over $2,000,000. Manganese, a strategic mineral, is also moving in the same direction. The bulk of Philippine chrome, another strategic mineral, goes to the United States. Japan takes sizable quantities of manila hemp, a strategic material essential in the making of the best ropes for the Navy.

I am thankful to the Philippine Government for their expression of eagerness to cooperate with our Government in carrying out the objectives of the export-control law. And I am also grateful to the Filipino leaders in public and private life who have stated in no uncertain terms that the Filipinos are with the United States in any international emergency that may arise.

But, Mr. Speaker, the "act to expedite the strengthening of the national defense," whose section 6 relates to the export control, was approved on July 2, 1940, nearly 9 months ago. Pursuant thereto President Roosevelt placed a long list of articles under export control by a series of proclamations, and the list includes iron ore, manganese, copra, and coconut oil.

From the statement of Mr. ELIZALDE, we understand that if it is desired to have certain Philippine exports placed under export control it is up to our Government to make the move, as, according to him, under the Tydings-McDuffie Act, Philippine foreign affairs are under the supervision and control of the United States.

With this interpretation of the situation by the Philippine Resident Commissioner, with which I disagree, there will be no export control in the Philippines and the Philippine cooperation will be but nominal on that score, for I am sure our Government out of respect for the local self-government of the Philippine Commonwealth, which is the genius and the intent of the Tydings-McDuffie Act, will not disregard that independence and pass laws and regulations, or direct them to be passed, for the Philippine Government. I, for one, stand for the integrity in word and spirit of the Tydings-McDuffie Act, the Philippine organic law. Even an invitation from Filipinos would not lead me to budge an inch from that position.

Mr. Speaker, I believe that it is within the power of the Philippine Government to enact a law placing itself in line with our Government, as they have stated they are desirous of doing. I wanted to make myself doubly sure in this, and so I sought the opinion of Mr. Vincente Villamin, a distinguished Filipino lawyer and economist, who has studied Philippine-American problems—economic, political, international—in a profound, realistic, and objective manner. Mr. Villamin's opinion follows:

You can quote me as saying that the Philippine government, not the Federal Government, under the Tydings-McDuffie Act, takes the initiative in enacting legislation such as the export-control law. But before such law could go into effect it would have to be approved first by the President of the United States under section 2 (a) (9) of that act, for the matter relates to exports from the Philippines to foreign countries.

Once the law is passed by the Philippine government and approved by the President of the United States the matter enters then, not before, into the realm of foreign affairs, particularly in the instant case with its known motive and objective, and as such its incidence and operation will be under the direct supervision and control of the United States, under section 2 (a) (10).

To elucidate the point, if the Philippine government, for instance, were to engage in foreign affairs, such activities will be under the supervision and control of the United States Government, but the initiative for the enactment of the enabling act resides in the Philippine government.

When Congress, on July 2, 1940, passed the "act to expedite the strengthening of the national defense," whose section 6 provides for the export-control plan, it was not made operative in the Philippines out of respect for the local self-government and independence of the Filipino people.

I repeat, the Philippine government on its own initiative and volition is empowered to pass an export-control law, and then send it to the President of the United States for approval or disapproval.

Mr. Speaker, the soundness and clarity of Mr. Villamin's opinion is obvious. I must say that the opinion was given to me at my request weeks before Commissioner Elizalde's statement appeared in the press. I wish again to commend the Philippine government for its expression of cooperation with our Government in national defense and it is meet and proper now to expect that they will take the requisite legislative action to implement their proffer of cooperation with the United States.

Soybeans

EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1941

LETTER FROM G. G. McILROY, PRESIDENT OF THE AMERICAN SOYBEAN ASSOCIATION

Mr. BROWN of Ohio. Mr. Speaker, one of the greatest crops produced by the American farmer is that of soybeans. Soybeans, and the products derived therefrom, have found markets throughout the world and are serving the needs of mankind in many ways.

Producers of soybeans in this country are represented by the American Soybean Association, an organization of those interested in the production and utilization of the soybean. As president of this association, the American producers of soybeans have elected and reelected a resident of my district—G. G. McIlroy, of Irwin, Ohio—a gentleman whom I am proud to call my friend.

Under date of March 25, Mr. McIlroy sent me a letter, which I believe will be not only of interest to the soybean producers of the United States but to the Congress and to all of the people of this country and of England as well. With the hope that those in charge of our foreign policy and the lease-lend program can and will follow the suggestions made by Mr. McIlroy, to the mutual benefit of American farmers and the English people, I am herewith inserting, as a part of the official RECORD, the letter I have received from G. G. McIlroy, president of the American Soybean Association:

AMERICAN SOYBEAN ASSOCIATION,
IRWIN, OHIO, *March 25, 1941.*

Congressman CLARENCE J. BROWN,
House of Representatives,
Washington, D. C.

DEAR MR. BROWN: Recently the American Soybean Association has had two urgent re-

quests from English sources asking that we, the soybean growers' organization, do everything in our power to secure an allotment of soybeans or soybean products for export to England under the provisions of the lease-lend bill. One radiogram from England stated "our stocks exceedingly low."

It appears to me that this situation, if taken advantage of, offers something to American agriculture. Here is a class of products which apparently is needed by the English and which cannot be procured any other place in the world except China and it is impractical, at this time, to consider going there for any food product which can be secured from this country.

With all the talk about the loss of foreign markets for the American farm crops, here we are suddenly confronted with a situation indicating that there is one crop for which England now has an urgent need. Millions of pounds of soybean oil and thousands of tons of soybean-oil meal, or shiploads of soybeans could well be supplied to our British friends in their hour of need. And at the same time we might conclude that the establishing of such an outlet now might develop into a continued demand for these products.

Also whenever the product from one acre of a grain crop is sold abroad it immediately tends to reduce by one acre the production of other crops of which we already have a surplus with prospects for a greater surplus. In other words, the movement of soybean products into export will almost directly relieve surpluses of wheat and corn just as the sale of corn and wheat products might accomplish.

Let us furnish in abundance, to England, a food product which Germany has used to such good advantage through the years, and now can secure only in very limited quantities.

I believe you will agree that these are logical statements. If so, I am sure we farmers can depend on your substantial assistance.

Very truly yours,

AMERICAN SOYBEAN ASSOCIATION,
G. G. MCILROY, *President*.

John J. Dillon, Editor and Publisher of the Rural New-Yorker, Has Fought a Lifelong Battle to Secure Economic Justice for the Dairy Farmer

EXTENSION OF REMARKS
OF
HON. FRANCIS D. CULKIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1941

EDITORIAL FROM THE WATERTOWN (N. Y.) TIMES

Mr. CULKIN. Mr. Speaker, Mr. John J. Dillon, editor and publisher of the Rural New-Yorker, has just published a book entitled "Seven Decades of Milk." Coming from his pen, this publication is a painstaking and penetrating review of the economic trials and tribulations of the Northeast dairyman, and particularly those resident in the State of New York.

In the foreword to the book, Mr. Dillon states:

I have seen selfishness and greed dominating our dairy industry from its beginning; producers and consumers of milk have been continually and ruthlessly exploited. These abuses can be corrected without hardship to anyone or any class and with justice and profit to all.

This extract furnishes an index to the theme of this most revealing publication.

Mr. Dillon's spear "knows no brother" where economic injustice to the dairyman is concerned. For many years he has stood foursquare against the exploitation of the dairymen by the "milk monopoly."

The book tells in graphic detail the story of the dairy farmer from the time when he was an independent producer, down to the days when milk marketing monopoly destroyed his economic independence and robbed him of his proper share of the consumer's dollar. It offers a cure for the dairyman's condition which is the acme of simplicity. Mr. Dillon's formula is to restore to the dairyman through producer-owned and controlled cooperatives the right to fix the price of his product, free from dictation by the "milk trust."

Speaking for the congressional district I represent I extend to Mr. Dillon my hearty appreciation of his long, useful life. A life which has been a continuous protest against economic injustice to the dairymen. A life that has been lived bravely and unselfishly.

Pursuant to the permission of the House, I append hereto an editorial on Mr. Dillon's book that appeared in the Watertown (N. Y.) Times on Monday, March 24, 1941:

[From the Watertown (N. Y.) Times of March 24, 1941]

SEVEN DECADES OF MILK

Mr. John J. Dillon, editor and publisher of The Rural New-Yorker, has written another book. It will be published within a few days. The title is Seven Decades of Milk. It is an invaluable history of New York State's dairy industry. The Times will review it extensively later on. No other person in the State is so well qualified to write the story of milk as is Mr. Dillon.

He was born 5 years before the Civil War began. He is now 85 years of age, still strong, and vigorous of mind and body. He has been connected with the milk industry since his boyhood. He began life as a rural school teacher when he was 18 years of age. As a youth he became associated with the old Orange County Farmer, a celebrated dairy paper of its time. In 1890 he went to The Rural New-Yorker. He has been its editor and publisher since 1892, and no man has been closer to the milk industry of this State for 70 years than he. It is well that he has written the story. Much would have been lost had it not been for his painstaking care in recording the history of the industry as he has observed it. Two years ago he wrote his Milk Memoirs, but the present volume goes into the story more extensively.

Mr. Dillon has always been a militant force for justice to the farmer, and his paper, The Rural New-Yorker, is one of the three or four outspoken, brave, and logical agricultural publications of the country.

A Sound and Able Discussion of the Duties of Citizenship

EXTENSION OF REMARKS
OF
HON. FRANCIS D. CULKIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1941

RADIO ADDRESS BY FRED BRENCKMAN, WASHINGTON REPRESENTATIVE OF THE NATIONAL GRANGE

Mr. CULKIN. Mr. Speaker, during my 12 years' service in Congress I have been frequently in touch with Mr. Fred Brenckman, Washington representative of the National Grange. I have ever found him to be an able, clear-headed, and fearless proponent of agriculture. Mr. Brenckman believes in agriculture as a way of life as well as a way of making a living. He has been a deep student of the Constitution and has a keen appreciation of the respective duties of the citizen to government and government to the citizen.

The following radio address entitled "Duties of Citizenship" was so outstanding in character that I deemed it worthy of publication in the RECORD. I hope every member of the House will take time out to read and consider it.

It was delivered by Mr. Brenckman over the stations of the National Broadcasting Co. on the Grange Hour from Washington, D. C., March 15, 1941.

The address follows:

THE DUTIES OF CITIZENSHIP

In the days of old Rome it was esteemed a great honor to be a Roman citizen. It was with some degree of just pride that St. Paul declared, "I, too, am a Roman citizen."

But it is a still greater honor to be a citizen of the United States of America, the greatest nation upon which the sun ever shone, and which has long been a beacon of hope to all the world.

It is merely stating a sober fact to say that no people in all history ever possessed a heritage comparable to that which is ours. The land in which it is our good fortune to live was generously endowed by nature, which gave us a healthful climate, a fertile soil, abundant mineral resources, and the greatest forests in the world. But the fact remains that the preeminence of the United States in the family of nations must be largely attributed to the freedom and security we have enjoyed for more than a century and a half under the form of government established by the founding fathers of this country.

SAFEGUARDING OUR NATIONAL HERITAGE

Every American worthy of the name should be eager and willing to do his part to safeguard our national heritage and pass it on unimpaired to our posterity.

While no form of government is perfect, it cannot be denied that democratic institutions are far superior to any others, providing the people have the virtue, the intelligence and the capacity to make them

function. With armed brutality and totalitarian might striving for the mastery, popular institutions of government throughout the world are today facing the supreme test. Under these circumstances, it behooves us to look to our foundations and to conduct ourselves as free men and women should when confronted with such conditions.

First of all, it should be remembered that hand in hand with the rights and privileges of citizenship go certain duties and responsibilities. One of the first duties of every able-bodied citizen is to do his part toward supporting the Government; any attempt to reverse this process, asking the Government to support the citizen, cannot fail, in a short time, to end in disaster.

During the course of his second inaugural address, Grover Cleveland gave utterance to some fundamental truths regarding the duties and obligations of citizenship that are just as applicable today as they were then. He said:

"The man who takes the oath to preserve, protect, and defend the Constitution of the United States only assumes the solemn obligation which every patriotic citizen—on the farm, in the workshop, in the busy marts of trade, and everywhere—should share with him. The Constitution which prescribes his oath, my countrymen, is yours; the Government you have chosen him to administer for a time is yours; the laws and the entire scheme of our civil rule, from the town meeting to the State capitals and the National Capital, is yours. Every voter, as surely as your Chief Magistrate, under the same high sanction, though in a different sphere, exercises a public trust. Nor is this all. Every citizen owes to the country a vigilant watch and a close scrutiny of its public servants and a fair and reasonable estimate of their fidelity and usefulness. Thus is the people's will impressed upon the whole framework of our civil polity, municipal, State, and Federal; and this is the price of our liberty and the inspiration of our faith in the Republic."

WORKING WITH ORGANIZED GROUPS

In the discharge of the duties of citizenship our efforts can often be made doubly effective by working in harmony with organized groups dedicated to the same principles and striving toward a common goal. As society is organized today, that is the best way to get things done. In the words of Edmund Burke, one of the greatest orators who has spoken the English tongue, "When evil men combine, the good must associate, lest they fall, one by one, an unpitied sacrifice in a contemptible struggle."

Those who are members of the Grange will testify that it has aided them in many ways to become better and more effective citizens. We seek to promote the greatest good for the greatest number. To make a list of the measures which the Grange has supported in the development of its program for the improvement of the conditions surrounding rural life would be to enumerate practically every forward step that has been taken in this connection during the past two-thirds of a century. Without organization these good results could not have been accomplished.

Years ago I heard the late Joseph W. Folke, who was then Governor of Missouri, make an address on citizenship that made a lasting impression upon my mind. He said it was a fine thing to have the kind of patriotism that in the hour of the Nation's need would lead men to walk up to the cannon's mouth and lay down their lives. However, he rightly declared that the kind of patriotism which leads men to discharge the ordinary everyday duties of citizenship with clean hands and honest hearts is just as necessary.

It will be recalled that Mr. Foulke first came into public prominence as a prosecuting attorney. During the address to which I refer he related that on a certain patriotic occasion he stood beside a prominent public man of St. Louis, and as the band played the Star-Spangled Banner, this man was so overcome by emotion that he ejaculated, "Oh, that I might die for my country." A short time afterward Mr. Foulke had occasion to prosecute this man, and found him guilty of having bribed a whole legislature. He was anxious to die for his country, but he was not willing to live for it.

EVILS OF OVERCENTRALIZATION

Devoted as it is to the fundamental principles of Americanism, the Grange has long looked with disfavor on the growing tendency toward overcentralization of government. I believe that every time the National Government takes over some function that properly devolves upon the people of the local community, or that belongs to the States, we commit a crime against American institutions.

We are all familiar with the argument that science and invention have annihilated time and distance, that the United States today is a seamless economic web, that State boundary lines are obsolete, and that in the interest of efficiency and economy, the whole job of running America should be turned over to the Federal Government at Washington. This is both a delusive and destructive doctrine and it should be resisted to the utmost by all the friends of good government.

While it is true that science and invention have eliminated time and space, all this has not changed human nature, which is the same today that it was a thousand years ago, and the same as it will be a thousand years hence.

When we put too many people under one unit of government, it destroys the local and individual sense of responsibility, upon which good government rests.

As a rule, where popular government has broken down and become a reproach, a byword and a mockery, it has been in the great centers of population. On the other hand, where popular institutions have functioned with a reasonable degree of success it has usually been in the small towns and the rural districts.

I am not setting up the claim that the people in the small towns and the rural districts possess a superior brand of civic virtue when compared to the people in our large centers of population. The trouble is that with millions of people sharing any particular responsibility, what is everybody's business becomes nobody's business. All too often the tendency is to say, "Let George do it." In other words, the personal and local sense of responsibility has become atrophied; it no longer functions, and the cause of good government suffers as a result.

I am firmly persuaded that the United States, with its vast expanse of territory, its many diversified interests and its huge population cannot be wisely and democratically governed, down to the most minute details affecting the daily life of the people, like one unbroken empire, from the Nation's Capital at Washington.

The way to get the best results is for each unit of government, national, State, and local, to stay within its proper sphere, with each faithfully and efficiently performing the functions devolving upon it, and with none encroaching upon the rights and prerogatives of the rest.

MORTGAGING THE NATIONAL CREDIT

If as citizens we have erred in permitting an unhealthy and un-American centralization of authority at Washington, we have likewise been guilty of acquiescing in policies that have plunged the Nation head over heels in debt.

During recent years many people, imbibing the teachings of a false liberalism, have deluded themselves into thinking that the reckless and profligate expenditure of public funds should be regarded as a virtue.

In pursuing these misguided policies the credit of the Nation has been mortgaged to an extent that places us at a great disadvantage in financing our national-defense program, which, with the aid we shall extend to England and other nations opposing the totalitarian powers, will necessarily call for the greatest expenditures in our history.

Counting the $7,000,000,000 for which the President asked Congress a few days ago, together with the thirty-two billions already authorized, recommended, or appropriated for national defense, we arrive at a total of thirty-nine billions. According to Senator O'MAHONEY, chairman of the Temporary National Economic Committee, the total assessed valuation of the 22 States west of the Mississippi River is only $34,720,000,000.

This is the final day for filing income-tax reports. The Bureau of the Budget estimates that income taxes paid by individuals, as distinguished from corporations, this year will total $1,222,000,000. Interest on the national debt is placed at $1,100,000,000. At that rate we may well ask how long it will take to pay off the debt itself rather than the interest on the debt.

In view of the tremendous burdens of taxation with which we are faced, the people should register an emphatic demand for proper economy in nondefense expenditures. Let us not forget that one of the most hopeless forms of slavery is the slavery that goes with debt.

Speaking of our American heritage, which should be guarded and prized by every citizen, let me quote to you the rules that Patrick Henry declared would have to be followed in the preservation of free institutions. He said:

"No free government, or the blessings of liberty, can be preserved to any people but by a firm adherence to justice, moderation, temperance, frugality, and virtue, and by a frequent recurrence to fundamental principles."

Investigation of Life Insurance Companies by Temporary National Economic Committee

EXTENSION OF REMARKS

OF

HON. HERMAN P. KOPPLEMANN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 26, 1941

ARTICLE FROM BRIDGEPORT (CONN.) HERALD

Mr. KOPPLEMANN. Mr. Speaker, under leave given me to extend my remarks, I ask permission to insert in the RECORD the following article from the Bridgeport Herald reporting on various phases of the investigation of life-insurance companies by the Temporary National Economic Committee:

[From the Bridgeport (Conn.) Herald of March 2, 1941]

INSURANCE RACKET IS PLAYED BY PROBER—REPORT SHOWS GRIP ON UNITED STATES BUSINESS—"SQUEEZE PLAY" BY OCTOPUS MAY BRING FEDERAL CRACK-DOWN ON ALL COMPANIES

WASHINGTON, March 1.—At last a responsible Federal official has ventured to make definite recommendations to a congressional committee for a modified form of national

supervision of life-insurance companies engaged in interstate business.

That means just about the entire industry.

In what many regard as the most comprehensive, intelligent, and constructive analysis of the life-insurance industry ever expressed in 40 pages of mimeographed copy, Sumner T. Pike, former Wall Streeter but now a member of the Federal Securities and Exchange Commission, submitted proposals to the so-called Monopoly Committee Friday for the purpose of effecting reforms and eliminating abuses in the vast insurance industry for the benefit of the policyholders and the public.

This report touched upon and condemned many of the insurance practices disclosed by the T. N. E. C. probe.

Several things render the Pike recommendation of special significance.

They are made by a man whose background is that of conservative business, thoroughly familiar with Wall Street and its methods, and a newcomer to the S. E. C.

Not by the widest stretch of imagination can spokesmen for the insurance business term him a hostile, uninformed, or irresponsible critic of America's biggest industry.

Moreover, the suggestions and analysis of what is wrong with the industry are handled in such a restrained and impersonal manner that exponents of radical changes, on the other hand, will find little in it to feed demands for a wholesale invasion of the business by the Government.

Pike speaks in the tone and language of a sincere student of the business who wishes to help it to save itself from the future bad effects of its own excesses and errors.

After reviewing the entire industry and before summarizing his conclusions, Pike has this to say about fire, casualty, and marine insurance:

"Finally, it is recommended that the appropriate committee of Congress or some designated agency of the Federal Government be directed to conduct a thorough investigation of all forms of fire, casualty, and marine insurance."

He sums up his conclusions on the subject of life insurance as follows:

"First. That the respective States make strenuous and prompt efforts to strengthen their existing machinery for regulating and supervising life-insurance companies.

"We have offered several specific suggestions to guide State commissioners and State legislatures. In most cases, if not all, the commissioners will, we believe, be ready to accept the proposals, provided they receive adequate financial support and backing from their respective legislatures.

"Second. That the Federal Government assist the States in their efforts to strengthen their existing regulatory machinery by giving advice, disseminating information, and exercising some slight supervision over certain primarily interstate aspects of the business.

"The Federal Government should render such assistance without supplanting the basic jurisdiction of the States.

"Third. That the gradual disappearance and eventual elimination of industrial insurance be encouraged by developing a plan for paying lump-sum death benefits under social-security programs or by making arrangements for the sale of insurance providing such benefits through the facilities of the Postal System.

"We do not recommend or suggest any form of strict, all-inclusive Federal regulation. On the contrary, the entire purpose of our proposals is to demonstrate that such regulation can be avoided by strengthening the existing State regulatory machinery.

"If realistic steps are taken by State officials, State legislatures, and company managements acting in cooperation with the Federal Government, we may expect not only the continuance of State regulation but may look forward to increased efficiency and public usefulness in the life-insurance business."

The S. E. C. Commissioner believes the Federal Government can assist the States in making supervision of insurance companies more effective in many ways.

Among his suggestions are the following:

That the Government be empowered to act as adviser and distributor of information on insurance operation.

That it have power to eliminate "phantom" companies and insurance "bootlegging," by preventing the sale of insurance in States by companies not having a legal right to do business in such States.

That interstate companies be required to furnish the Government, through the agency set up for the purpose, with information on mergers, etc.

That the National Bankruptcy Act be amended to permit State commissioners or a designated Federal agency to go into Federal court and seek to bring about liquidation or reorganization of a company, if, after hearing, it finds the company's reserves impaired.

That the Government be empowered to prevent payment of surrender values for a period of 90 days during a time of national economic emergency.

That officers and directors of interstate companies be prevented by statute from using their positions for improper personal gains, either directly or indirectly.

That the Government be given visitorial powers over interstate companies to permit it to examine companies and determine if an impairment of reserves exists in the case of any particular company.

That an insurance advisory council be set up to cooperate with any Federal agency designated or created to supervise insurance.

On the score of the advisory body, Pike says:

"This insurance advisory council might consist of three representatives of the designated Federal agency, three State insurance commissioners elected by the National Association of Insurance Commissioners, three company officials, and three policyholders.

"The annual reports from the Insurance Advisory Council to the Congress should be of great value in many different respects.

"First, such reports would serve to point out to insurance company managements conditions requiring their attention, thus providing an opportunity for correcting abuses from within the business itself.

"Second, the reports would serve to call attention to areas where State supervisory activities could be strengthened in order to promote the efficiency of the insurance regulatory process generally.

"Third, the reports might be used on occasion to call attention of the Congress and policyholders generally to conditions in the life-insurance business considered harmful, and possibly requiring legislative correction.

"It is clear that the activities of the Insurance Advisory Council would not only do much to obviate the necessity of additional legislation, but also they would be of great value in the determination of many matters of national policy where the interest of insurance companies are vitally, though sometimes indirectly, affected.

"The Insurance Advisory Council would also serve to strengthen State regulation."

Pike makes 10 recommendations for strengthening State regulation, as follows:

"1. Insurance commissioners be appointed by a responsible executive, subject to confirmation by the proper State body, on the basis of experience and qualifications only.

"2. The tenure of office of the insurance commissioner should be increased substantially, and, insofar as possible, competent commissioners should be continued in office, regardless of their political affiliation.

"4. Insurance commissioners should not be obliged to undertake any duties other than the regulation and supervision of insurance companies.

"The employment of special outside examiners should be discontinued. The development of a civil service in State insurance departments is highly desirable.

"7. State insurance supervisory officials should strengthen examination procedures particularly in respect of companies domiciled within their State.

"The desired improvement would include more frequent examinations in some States, more competent examiners, greater publicity to and full release of all examination reports, and the undertaking of examination which would give greater attention to the insurance operations as contrasted with the purely financial aspects of the business.

"8. Closer regulation and supervision of agency practices is required. Present laws for licensing agents all too frequently administered purely as revenue measures.

"Agents should be required to show more adequate training, better prospects for financial success, and greater knowledge of the life-insurance business.

"Furthermore, State supervisory officials should give more attention to such matters as company training courses, sales contests, compensation arrangements, etc.

"9. The number of policy forms should be reduced and greater attention given to establishing standardized policy forms or policy provisions acceptable in all States. The present confusion in this field is most undesirable.

"10. State supervisory officials should more closely scrutinize activities of officers and directors and generally make more thorough checks on the competence and activities of company managements."

Three problems specifically treated by the S. E. C. member, include the necessity of liberalizing the laws governing life-insurance companies' investments, the desirability of placing State supervisory authorities in a position to police intercompany agreements restricting competition or resulting in price fixing, and the development of techniques for giving policyholders greater representation on the boards of stock and mutual companies.

On the controversial subject of company investments, Commissioner Pike says:

"The aggregate size of life-insurance companies is such that their investment activities vitally affect the credit and financial structure of the country.

"The funds which companies invest are trust funds, and it is not surprising that State laws regulating life-insurance companies have traditionally followed a broad pattern of permitting investments in bonds and forbidding investments in common stocks.

"As was demonstrated in the hearings, as well as through the Securities and Exchange Commission's special studies, the life-insurance companies are experiencing great difficulty in investing their funds.

"Their problem in this regard is threefold. The amount of money they must invest has steadily increased.

"The available supply of industrial bonds, on the other hand, is gradually decreasing."

"The interest rates to be earned on all types of debt are inadequate in many cases when measured against the earnings which the reserve requirements of the companies make necessary.

"On the other hand, certain other circumstances must be recognized. The life-insurance companies, by far our most dynamic savings institutions, are by their operation directing an increasing amount of capital away from semi-speculative or what might be called in the broadest sense of the word venture enterprises.

"Recognizing that life-insurance funds should not be recklessly invested in highly speculative securities, there does appear to be

room for the long-term investment of a portion of their funds in common stocks of substantial corporations with an established record of earnings.

"The continued flow of funds to life-insurance companies which are prevented from purchasing common stocks is certain to have serious effects on the economy.

"Common stock of substantial corporations with an established record of earnings are clearly as 'safe' as many bonds. A liberalization of investment laws to permit life-insurance companies to invest a relatively small percentage of their funds in common stocks would stimulate healthier financial structures and have a wholesome effect on the economy.

"Accordingly, it is suggested that the respective States give serious consideration to liberalizing in this direction their laws governing life-insurance investments.

"The life-insurance business is such that much good can be done through occasional intercompany conferences at which technical problems confronting the business may be worked out on a standardized basis. Mortality tables, for example, represent such an endeavor."

* * * * *

"Of course, no agreements should be permitted where the effect of those agreements is to prevent any one company from developing new services and new sales techniques which are actuarially sound.

"Similarly, life-insurance companies should not be permitted, as they have been in the past, to fix rates through direct or indirect arrangements of any kind. The life-insurance business should be conducted on a competitive basis, with emphasis on management efficiency rather than sales technique.

"It will be recalled that various intercompany agreements were reached at meetings where no State officials were present, and in most cases the basis of understandings arrived at were neither publicized nor first submitted to State authorities for their approval.

"Under the circumstances the continuance of this type of clandestine conferences should be prevented.

"Policyholders must be given assistance so they may participate more directly in the management of their companies," he says.

"It is not necessary to recall here the voluminous testimony on this subject. The self-perpetuating character of the life-insurance boards of directors is apparent, and the practical difficulties which confront policyholders who seek to elect directors of their own selection are well recognized.

"Indeed, the problem is one which permeates the entire American corporate scene.

"As we have pointed out in our report, the policyholders of stock companies contribute the great bulk of the assets, and it is to their interest that they be represented directly on the boards of the companies.

"Possible steps to be taken by the States to give policyholders greater representation on the boards of mutual life-insurance companies would include: The development of a more adequate system of notifying policyholders of their right to make nominations and of the actual results of elections held.

"Permitting policyholders to have access to policyholder lists and to examine the books and records of their companies under restrictions similar to those placed upon stockholders.

"The possible development of arrangements to assure that some directors, particularly those serving on boards of larger companies, be selected with due regard for their knowledge of and residence in different areas of the country.

"The elimination of staggered directors' terms.

"Permitting policyholders to have cumulative voting privileges.

"Requiring companies to hold annual policyholders' meetings if possible in a regional basis.

"Adopting schemes patterned on the policyholder advisory committee arrangement used by the Northwestern Mutual Life Insurance Co. under provisions permitting State officials to have some general supervision over methods used for selecting the committee.

"Requiring all directors to be policyholders of the particular company on which they served.

"Giving greater publicity to State examination reports.

"Requiring the submission of more complete and revealing company reports to policyholders.

"And finally developing schemes for the appointment of one or more public directors to life-insurance company boards of directors by the Governors of the States in which such companies are domiciled.

"Nothing should, of course, be done in this field which would enable irresponsible groups acting from improper motives to seize control of life-insurance companies."

The subject of the size and scope of the business leads Pike to make the following observations in his report to the T. N. E. C.:

"The national scope of the insurance business is one of its outstanding characteristics.

"Many of the largest companies operate in every State of the Union.

"There are on the average 82 companies operating in each State.

"Seventeen companies operate in over 40 States.

"Although there are 365 companies engaged in the business, two companies control 32 percent of its $28,000,000,000 of assets.

"Five companies control 54 percent of the assets, and 26 companies control 87 percent of the assets.

"While these larger companies control the bulk of the assets, we must not fall into the all too frequent error of considering all the other life insurance companies as small.

"There are 32 such companies, each with assets of more than $100,000,000 and at least 40 of which are as large as companies included in the group of 200 largest nonfinancial corporations which were the subject of special study by this Committee.

"Companies with offices in New York City and Newark, N. J., control 56 percent of the assets of all insurance companies.

"Companies in the New England and Middle Atlantic States control 77 percent of the assets. Of the 26 largest companies, only 3 have their main offices west of the Mississippi.

"It is, indeed, difficult to comprehend the tremendous size and the scope of the influence which insurance companies exercise.

"In 1938, the leading companies purchased 47.7 percent of all corporate bonds and notes issued in that year.

"In the 10-year period from 1929 to 1938, inclusive, over $42,000,000,000 were taken in by the companies, of which thirty billion represented premiums from policyholders.

"The principal companies' assets are so large they include securities representing 11.6 percent of the total Federal debt, 6.7 percent of the total State and local debt, 17.4 percent of the railroad debt, 11.7 percent of the industrial debt, 18.2 percent of the public-utility debt, as well as substantial amounts of the farm and urban mortgages outstanding.

"The companies are growing very rapidly, and with the growth their economic power increases.

"Principal companies show an increase of over 50 percent in their assets in the last 10 years. Thus, whereas in 1930 these principal companies controlled only 2.5 percent of the industrial debt, in 1937 they controlled, as has been indicated, 11.7 percent of that debt.

"In the farm-mortgage field the companies controlled 19.2 percent of the farm-mortgage debt in the West North Central States in 1939, and in that year actually owned 8.1 percent of all the land in the State of Iowa.

"Some idea of the extent of the companies' influence in farming communities may be indicated by the activities of the largest life-insurance company which is the biggest farmer in the United States today.

"This company operates over 7,000 farms, ranging in size from 200 acres to as high as 2,000 acres, and extending into 25 different States.

"During the year 1937 the company harvested 50,000 bales of cotton, 10,000,000 bushels of corn, 5,000,000 bushels of wheat, 6,000,000 pounds of peanuts, and 1,000,000 pounds of tobacco.

"The amount of money invested by life insurance companies reaches tremendous proportions, one company alone investing over $2,000,000 each business day.

"Principal companies are members of 65 different bondholder protective committees, and own and operate many apartment houses, hotels, and private dwellings.

"The extent of the companies' influence may be found not only in their investment activities but elsewhere. The number of their policyholders is significant in itself.

"One company alone insures every fifth man, woman, and child in the United States, and actually sells a policy on the life of about one out of every fifth child born before the child reaches 1 year of age.

"Concentration is increased through interlocking directorship, the 5 largest companies interlocking with 780 corporations, including 145 banks, and 100 other insurance companies, mostly fire and casualty.

"By intercompany agreements the larger companies have increased their influence in many fields, entering into rate agreements and other combinations restricting competition.

"Their influence in the field of State legislation is also worthy of note.

"The activities of their powerful Association of Life Insurance Presidents, which represents companies controlling 85 percent of the business will be recalled in this connection.

"This association is active in every State.

"Here, indeed, is a picture of the concentration of economic power which is not equalled elsewhere in the American economy.

"The committee will recall that the Armstrong report with its customary foresight recommended placing restrictions on the future growth of life insurance companies.

"These restrictions were in effect for a short time and eventually almost entirely abandoned.

"Since 1906, when the Armstrong report was released, the total assets of insurance companies have increased 800 percent.

"There is no need to discuss here the desirability or undesirability of the Armstrong report proposal. Had the restrictions on size prevailed, however, this much is clear. Not only would a different type of State regulation have developed, but it is safe to say that the pattern of our entire economy would be different from what it is today.

"We do not mean that the size of the principal life insurance companies alone has brought about all of the economic ills.

"Certainly the size of these companies has, however, been a contributory factor as far as certain of our economic problems are concerned.

"The entire question of size in the life-insurance business should be further studied by an appropriate agency of the Federal Government, which would be directed to make a report to the Congress on specific aspects of the problem.

* * * * *

"Among the steps which might be taken to limit the size of life-insurance companies or dilute their concentrated economic power are—

"Placing restrictions on insurance companies in respect to the sale of annuities and

other policy contracts when the saving element is predominant.

"Encouragin gthe development of savings-bank life insurance.

"Enacting tax legislation which would make growth beyond a certain point undesirable from a business point of view.

"Restricting the amount of assets which a company may control.

"Limiting the amount of new business which a company may write, encouraging the growth of smaller companies.

"Prohibiting various types of interlocking directorships, restricting continual development of private placements which are rapidly concentrating many security issues entirely in the hands of the largest companies, preventing insurance companies from organizing subsidiary companies.

"Preventing investment in interlocking companies or limiting the amount of money any insurance company may invest in the securities of another corporation.

"All such steps are drastic. The extent to which they would reduce concentration of economic power in the insurance business is problematical.

"As to whether all or any of them should be adopted is a matter of broad national policy which only this committee with the results of all its studies before it can undertake to decide."

Pike says, in discussing industrial insurance:

"The committee will recall that industrial insurance is a type of life insurance sold in small amounts primarily to persons of little means. Premiums are paid weekly or monthly to collectors who call at the homes of the insured.

"For many reasons, including its high agency expenses and mortality experience, this type of life insurance is the most expensive form of life insurance sold. It is sold almost entirely to low-income families.

"When sold by stock companies it has resulted in enormous profits many times over the shareholders' original investment.

"Many agents selling this type of insurance are untrained, or, for other reasons, unqualified to deal with the public. Because of their high cost and the selling practices employed, industrial policies are rarely kept in force long enough to accomplish their essential purpose. In the 10-year period ending 1937 only slightly more than 5 percent of the policies terminating terminated by death or maturity.

"The selling procedure is characterized by a 'squirrel cage' operation where the public is sold policies which lapse only to be sold again.

"State laws for this form of insurance are inadequate.

"Industrial endowment policies, for example, though outlawed in New York, are still frequently sold by companies not subject to the jurisdiction of that State.

"Finally, the number of policy forms available and variations in policy provisions are highly undesirable and conducive to misrepresentation and misunderstanding on the part of the policyholder.

"The three largest companies selling this type of insurance and several smaller companies have, partly under the pressure of public opinion and partly at their own volition, instituted many industrial insurance reforms.

"The quality of their service in this field is far better than the other one-hundred-odd companies, and indeed many of the abuses indicated above are less apparent in their operations.

"About 50 percent of the new business is being written by companies not in this category, however, and as to all companies the evils apparently of necessity inherent in industrial insurance remain.

"The Armstrong report stated over 30 years ago that from its study of industrial insurance there remained but two alternatives, to permit the continuance of that type of business with the weaknesses inherent in the system or to prohibit its sale altogether by private companies.

"The alternatives which were then so frankly recognized remain in our opinion the only alternatives today.

"The question is again presented as to whether the sale of industrial insurance should be prevented, since the number of reforms in this field which might be made by the States would, though desirable, be insufficient in our opinion to eliminate the basic difficulties.

"In this connection it should be acknowledged that if industrial insurance is to be eliminated, satisfactory substitutes must be found.

"In spite of its high cost, excessive lapsation, maldistribution, and other evils, industrial insurance now provides a type of protection earnestly desired by great segments of the population. Private companies cannot provide a substitute.

"It appears to us the only adequate substitute can be obtained either through extension of Federal and State social-security programs to provide a lump-sum death benefit for all the populace in an amount sufficient to cover burial and to compensate for expenses attendant upon the illness, or through the development of a system for selling burial benefits through the facilities of the postal system.

In the light of these considerations, we recommend the extension of social-security benefits or the development of some other program such as the sale of insurance through the Postal System to the end that industrial insurance would gradually disappear.

Nothing should be done to cancel existing policies, to cause a serious dislocation in the insurance programs of policyholders now holding this type of insurance. Furthermore, the plan should not be so drawn that it would place the Federal Government in competition with those companies selling ordinary life insurance.

Extension of the Bituminous Coal Act

EXTENSION OF REMARKS

OF

HON. JOHN KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1941

Mr. KEE. Mr. Speaker, the House has had under consideration H. R. 4146, providing for the extension of the Bituminous Coal Act of 1937 for a period of 2 years.

The coal operators of this country usually view with alarm any legislation touching the management or control of their business. They are jealous of their prerogatives, and rightly so, for at its best the coal business has long been uncertain and precarious. When, however, legislation proves meritorious these men do not hesitate to approve it. Coal men looked with doubts and misgivings upon the National Recovery Act, but before the course of that act had been ended the National Coal Association was on record approving it and urging its continuance.

Four years ago, when the Bituminous Coal Act was passed, it had the opposition of practically all coal producers. Today the pending resolution for the extension of the act for an additional period of 2 years is not only endorsed by the National Coal Association but it has the approval of over 90 percent of the coal operators of the United States. These careful businessmen believe in the wisdom of the advice, "Prove all things and hold fast that which is good."

Joining with the coal operators in asking for this extension of the Coal Act, we have that greater body of men who have an interest in the measure equally as vital. I refer to the half million or more laboring men, the coal miners of the country, who depend upon the industry for a living for themselves and their families. Not only is the extension of the Coal Act asked and endorsed by the great organization of the miners, the United Mine Workers of America, but individual miners are pleading for this action.

The same can be said of that large body of citizens made up of home owners and household consumers, especially those who have been made aware of the fact that for many years the small consumers have been penalized to enable the large consumers to purchase their coal at prices below the cost of production. The users of coal for domestic purposes, who buy in small quantities, recognize the fact that under the Coal Act they will be able to purchase their fuel at the same fair price as that charged buyers of greater quantities.

The only serious criticism of the Coal Act we have yet heard offered has been directed at the long delay of the Commission in establishing minimum prices. This was indeed a grave problem and a task of magnitude. But the task has at last been completed, and minimum prices equal to the cost of production were established and made effective October 1, 1940. Since that time the act has been and is now being effectively administered. The old practices of cutthroat competition, under which bituminous coal of all grades was sold to purchasers at fluctuating prices, frequently far below the cost of production, have been entirely eliminated.

This act has breathed new life and health into a sick industry.

It is giving security and protection to a tremendous investment of capital in an industry necessary to the comfort and welfare of the Nation.

It is protecting the livelihood of and assuring a living wage to hundreds of thousands of hard-working, substantial American citizens.

It is a standing insurance against strikes and wage disputes and shutdowns in a basic American industry producing one of the commodities most essential to national defense.

It is operating to insure to all coal consumers a steady supply of an essential commodity at a fair and equitable price.

It is being administered without any cost or expense whatever to the Government, nor does it involve or contemplate the payment of any awards or subsidies.

Endorsed by mine owners, approved by the miners, favored by the public, there is certainly no valid or substantial reason why this, the pending bill, should not be enacted and the Bituminous Coal Act extended for a further period of 2 years.

Roosevelt To Reside in England, the King and Queen of England To Live at Mount Vernon, and the United States Congress To Meet in Bermuda

EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1941

EDITORIAL FROM THE SATURDAY EVENING POST

Mr. TINKHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following from the Saturday Evening Post of March 22, 1941:

[From the Saturday Evening Post of March 22, 1941]

A VISION OF UNION

Federal Union World is the organ of Anglo-American unionists in this country. It is published under the chairmanship of Clarence K. Streit, the author of Union Now. In the February number, as A Vision of Union, there is a dream by G. Ward Price, of the London Daily Mail.

He was going through the newspaper files for something on President Roosevelt's election to a third term when he fell asleep, or into reverie, and imagined that he was looking at newspaper clippings of the year 1944. He was struck by one from the London Times, headed Good Out of Evil, and he read:

"Since the second great war ended with the collapse of Italy in 1941, closely followed by that of her sinister German accomplice 6 months later, no news has given more satisfaction to the British public than last night's intimation that President Roosevelt intends to take up his residence in England for the concluding 2 months of his third term of office before handing over to his Republican successor next January. President Roosevelt, whose name will be forever associated with the overthrow and extinction of the authoritarian challenge to the principle of political freedom, has accepted Their Majesties' invitation to himself and Mrs. Roosevelt to spend Christmas at Windsor Castle. The chief figure of the great democratic state, with which the future fortunes of Britain are now linked in permanent federation, will spend the last 2 months of his term of office at Chequers, that historic Tudor mansion which was formerly the country seat of the British Prime Minister and which Mr. Churchill, in a well-timed gesture, presented to the President of the United States, our Federal partner, as his official residence in England."

He went on with the clippings of 1944. Their Majesties the King and Queen of England had been invited to live in the George Washington home at Mount Vernon, and the next meeting of the British-American Parliament was going to be held in the new Federal Council Building at Bermuda.

Britain Always Realistic in International Affairs

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1941

ARTICLE FROM THE NEW YORK ENQUIRER OF MARCH 10, 1941

Mr. MARTIN J. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Enquirer of March 10, 1941:

BRITAIN ALWAYS REALISTIC IN INTERNATIONAL AFFAIRS

Citing Great Britain's cold, realistic attitude regarding the North's struggle to save the Union during the American Civil War and her blatant hostility and contempt for the military efforts of the North's foremost generals, John Knox, prominent Chicago attorney with the firm of Loesch, Scofield, Loesch & Burke, of 10 South La Salle Street, Chicago, declares in a frank appraisal of Britain's past actions on foreign events that she guides herself solely on selfish self-interest motives.

Declares Mr. Knox, in a letter to the New York Enquirer:

"If the British Isles are actually invaded this spring, the resultant hysteria in this country may overwhelm all who oppose our entrance into the war. Though we all hope that England will win and beat back any invasion that may come, let us not forget what England's attitude was when our own Government was last threatened with invasion.

"During our Civil War period the London Times, then called simply the Times, commented editorially that England was enjoying considerable prosperity at a time when the United States was tottering on the brink of destruction. By June 1863, General Lee was moving northward with one of the largest armies ever assembled on this continent.

"Following is a typical editorial comment of that day, taken from the Times for Saturday, July 4, 1863:

" 'What is America today? How is she keeping the annual festival which she consecrates to her own glorification and the vilification of all the rest of mankind? * * * The signal failure of five successive invasions must, we should hope, have done something to shake northern confidence in the skill of their generals and the invincibility of their army. The deity of size and magnitude, so often and so devoutly worshipped, has fatally deceived her ardent votaries. Big guns, big ships, big threats, and bulletins replete with statements more enormous than any of them, have all been tried in vain, and the North finds itself the object of that very invasion with which it has so continually and so vainly menaced its antagonists. * * * These are the military prospects for the Fourth of July 1863 * * *.'

"As the war progressed a group of English citizens formed the Society for Obtaining the Cessation of Hostilities in America. A year later (July 15, 1864) they called on Lord Palmerston, then Prime Minister. Palmerston was not interested. On July 18, 1864, the Times applauded Palmerston's attitude, and its editorial for that day concluded by saying:

" 'The best service the Government of this country can render the cause of peace is to let events run their course and not interfere in American politics by word or deed.'

"It is not difficult to imagine what the attitude of 10 Downing Street would have been had President Lincoln requested Lord Palmerston to supply us with munitions and loans to beat off the Confederate invasion.

"As late as 1939 Britain exhibited the same attitude when the duly elected Government at Madrid was faced with the invading army of General Franco. Upon the fall of Madrid the London Times said editorially on March 29, 1939:

" 'The British Government, beset for so long by the clamor of those who would urge them to support of one or the other of the Spanish contestants, now reaps, after much contempt and obloquy, the reward of their resolution to commit themselves to favor neither side in a quarrel irrelevant to British principles and interests. * * * Hard things are always spoken of neutrals while war rages, but an honorable and consistent neutrality comes to be appreciated when peace is won.'

"In short, Britain's attitude has been to ignore invasions of foreign capitals if such invasions did not directly concern British interests. But what a cry of 'Uncle Shylock' would arise if we maintained a similar attitude and said:

" 'Dear Mr. Churchill, we feel that the best service America can render the cause of peace is to let events run their course and not interfere in European politics by word or deed. The American people, beset for so long by the clamor of those who would urge them to support Great Britain, will certainly reap the reward of their resolution to commit themselves to favor neither side in a European quarrel. Eleven billion dollars of defaulted debts from the last quarrel reinforce this resolution.' "

Grand Coulee Dam

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1941

BUREAU OF RECLAMATION PRESS RELEASE OF MARCH 17, 1941

Mr. MAGNUSON. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to include the following release of the Bureau of Reclamation of the Department of the Interior for March 17 relating to the Grand Coulee Dam:

Grand Coulee Dam, which, on March 22, begins providing power for national defense, didn't just grow to be the "biggest thing on earth." It was built by man and will remain a monument to the engineering genius of this day for generations to come.

"It is so big you cannot see it. Can an ant see an elephant?" was the reaction of one well-known writer to this plug in the Columbia River 90 miles west of Spokane.

It is 550 feet high and 4,300 feet long, and its purpose is to store 10,000,000 acre-feet of water in a 151-mile reservoir for the irrigation of 1,200,000 acres of dry land, for the generation annually of 12,000,000,000 kilowatt-hours of electric energy in the largest power plant in the world, for flood control, river regula-

tion, navigation improvements, and downstream power benefits.

Who built this colossal structure? An army of men reaching a maximum of 7,455 in the front rank working on the site day and night for more than 7 years makes it possible for 2 generators to begin operation 2 years ahead of schedule.

Behind the lines was an even larger army of supporting troops, which could not be seen from the vista houses on the rim of the Columbia River Canyon. These worked in forests providing lumber; in mines producing raw materials; in steel mills providing pipe, piling, reinforcement bars; in foundries and factories making machinery and equipment; on farms producing the food for those men; and on railroads which poured the products of all their labors through the funnel and into Grand Coulee Dam.

At the site of the dam 52,919,945 man-hours of employment have been given. Off the site, in more than 40 States, approximately 89,305,000 man-hours—70 percent more than at the site of the structure—of work have been required.

Under President Roosevelt's program for meeting unemployment, construction of the dam was begun in 1933 by the Bureau of Reclamation, an agency of the Department of the Interior. The President approved an allocation of Public Works funds by Administrator Harold L. Ickes to begin construction.

To the engineers of the Bureau of Reclamation goes the credit for planning, designing, and supervising this harnessing of the country's second largest river.

To the contractors, who marshaled thousands of workers on the job, there is due commendation for the efficiency of their organizations. The results justify the confidence reposed in them.

Secretary of the Interior Harold L. Ickes said today in commenting on the start of power generation 2 years ahead of schedule: "The Bureau of Reclamation has again justified its international reputation for outstanding engineering. Its work in planning and supervising the construction of Boulder Dam was an engineering landmark. Now a still greater achievement is added to its list, compilation of which began nearly 40 years ago. To the technical and administrative staffs of the Bureau, from the Commissioner and Chief Engineer down and to the many other loyal employees who have served with them on the Grand Coulee job, I say: 'Well done.'

"I cannot let this opportunity pass without saying a word for the thousands of men who actually made the great dam. They accepted their difficult tasks with the fine pride and good humor that are the trade-marks of American labor, and they set and broke records for preparing and placing concrete with such monotonous regularity that eventually little attention was paid to new ones. The American laboring man, from the steel mills of the east to the sawmills of the west and on the dam itself, has built himself a monument."

Dr. Elwood Mead was Commissioner when Grand Coulee Dam was begun. He died in January 1936, and was succeeded by John C. Page, who was promoted out of the ranks after more than a score of years of service with the Bureau as surveyman, engineer, project manager, and office engineer during the construction of Boulder Dam.

The construction activities of the Bureau are directed from the office at Denver, Colo., and there the designs were perfected which have been translated into the climax dam of the Bureau's long record. In Denver were:

Raymond F. Walter, Chief Engineer from 1925 until his death in 1940. He was succeeded by Sinclair O. Harper, who had been Assistant Chief Engineer under Mr. Walter. Both had long records with the Bureau in construction of irrigation projects and supervising the building of 165 dams.

Designing Grand Coulee was John L. Savage, Chief Designing Engineer of the Bureau, recognized as an authority on high dams. Mr. Savage has designed more than 55 major dams, numerous smaller structures, and canals.

L. N. McClellan, chief electrical engineer, designed the electrical installations and the powerhouses.

In command at the scene of construction activities has been Frank A. Banks, supervising engineer, in the service of the Bureau for 35 years. During that period he has supervised the construction of American Falls Dam on the Snake River in Idaho and the Owyhee Dam in Oregon, the highest dam in the world when it was completed in 1932. In addition to his duties at Grand Coulee, Mr. Banks served as acting administrator of the Bonneville Power Administration from May until September 1939.

Major contractors on the construction of Grand Coulee have been:

David H. Ryan, San Diego, Calif., removal of 4,200,000 tons of overburden earth and rock.

Mason-Walsh-Atkinson-Kier Co., comprised of the Silas Mason Co., Inc., New York; Walsh Construction Co., Davenport, Iowa; and Atkinson-Kier Co., San Francisco, for construction of the first half of the dam.

Consolidated Builders, Inc., for the construction of the high dam and power plant. It was made up of 10 firms, including the 3 companies in the MWAK Co., and the following: Morrison-Knudsen Co., Boise, Idaho; J. F. Shea Co., Los Angeles, Calif.; McDonald & Kahn, Los Angeles; Henry J. Kaiser Co., Oakland, Calif.; Utah Construction Co., Ogden, Utah; General Construction Co., Seattle, Wash.

Thumbnail sketches of the men who have planned and executed the work that has brought Grand Coulee Dam into being follow:

Elwood Mead, born in Switzerland County, Ind., January 16, 1858; graduate civil engineer of Purdue University; State Engineer of Wyoming 1888–99; Chief of Division of Irrigation and Drainage Investigations, Department of Agriculture, 1899–1907; chairman of State Rivers and Water Supply Commission, Victoria, Australia, 1907–14; professor of Rural Institutions, University of California, and chairman of State Land Settlement Board, 1914–23; Commissioner, Bureau of Reclamation, 1924–36. He died in office in January 1936.

John C. Page, born Syracuse, Nebr., October 12, 1887; graduate civil engineer, University of Nebraska, 1908; specialized at Cornell University in hydraulics and civil engineering; Bureau of Reclamation, topographer to project superintendent, 1909–30; office engineer, Boulder Dam, 1930–35; head of Engineering Division, Washington office of the Bureau of Reclamation, 1935–36; commissioner, Bureau of Reclamation, 1936 to date.

Raymond F. Walter, born Chicago, Ill., October 31, 1873; graduate Colorado Agricultural College; civil engineering practice until 1903; engineer, supervising engineer, assistant chief of construction, assistant chief engineer, Reclamation Service, 1903–25; chief engineer, Bureau of Reclamation, 1925–40. He died in office in June 1940.

Sinclair O. Harper, graduate of University of California, 1907; civil-engineering practice, 1907–8; engineer, Bureau of Reclamation, 1908–17; superintendent, Grand Valley project, Colorado, 1917–25; general superintendent of construction, 1925–30; assistant chief engineer, 1930–40; chief engineer, 1940 to date.

John L. Savage, born Cooksville, Wis., 1879; graduate civil engineer, University of Wisconsin; civil-engineering practice, 1899–1903; engineer, Bureau of Reclamation, 1903–8; consultant, 1908–16; chief designing engineer, Bureau of Reclamation, 1916 to date.

Frank A. Banks, born Saco, Maine, 1883; graduate civil engineer, University of Maine; rodman to construction engineer, Bureau of Reclamation, 1905–33; supervising engineer, Grand Coulee Dam, 1933 to date.

L. N. McClellan, born Middletown, Ohio, 1888; graduate electrical engineer, University of Southern California; electrical assistant to chief electrical engineer, 1911–24; and chief electrical engineer since 1924.

Bituminous Coal Act of 1937 Should Be Extended for an Additional 2-Year Period

---

EXTENSION OF REMARKS

OF

HON. LAWRENCE E. IMHOFF

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1941

Mr. IMHOFF. Mr. Speaker, it is indeed a privilege to again be serving in Congress as the Representative of the Eighteenth Congressional District of Ohio and to have an opportunity to voice my absolute approval for the extension of the Bituminous Coal Act of 1937 for a 2-year period. When the Bituminous Coal Act was up for consideration before the Seventy-fifth Congress, I strenuously recommended its enactment, and now, after having had an opportunity to witness the Coal Act in operation, I am more than satisfied that the Coal Act of 1937 has accomplished the purposes for which it was intended, and that if the financial stability and economic security of the bituminous coal industry is to be maintained at a par with American industry in general, then H. R. 4146, which is now being considered by the Members of this House, must be approved.

The chaotic conditions existing in the bituminous-coal industry prior to the enactment of the Coal Act of 1937 are not new to the Members of this House. For many years Congress has held hearings and made investigations of the bituminous-coal industry, and each and every time these hearings and investigations revealed without exception that year in and year out our coal industry was operating at a loss amounting to millions of dollars and ranging anywhere from a $7,000,000 deficit to the unbelievable sum of a $51,000,000 deficit in 1932. This continual financial drain on the coal industry has had far-reaching effect and undoubtedly constitutes the basic cause for the social and economic disorder existing in the industry.

I deem it not necessary to go back and review the hardships which prevailed in the operation of the bituminous-coal industry prior to the enactment of the Coal Act of 1937 because those conditions should be fresh in the minds of all of us, and especially in the minds of those of us who come from the

various areas in the United States which produce the Nation's basic fuel.

Mr. Justice Douglas, in presenting the majority opinion of the Supreme Court in the case of Sunshine Anthracite Coal Co. against Adkins, Collector of Internal Revenue, which case established the constitutionality of the Bituminous Coal Act of 1937, properly and accurately described the precarious situation existing in the coal industry in the following language:

> And if we undertook to narrow the scope of Federal intervention in this field, as suggested by appellant, we would be blind to at least 30 years of history. For a generation there have been various manifestations of incessant demand for Federal intervention in the coal industry. The investigations preceding the 1935 and 1937 acts are replete with an exposition of the conditions which have beset that industry. Official and private records give eloquent testimony to the statement of Mr. Justice Cardozo in the Carter case that free competition had been degraded into anarchy in the bituminous-coal industry. Overproduction and savage competitive warfare wasted the industry. Labor and capital alike were the victims. Financial distress among operators and acute poverty among miners prevailed even during periods of general prosperity. This history of the bituminous-coal industry is written in blood as well as in ink.
>
> It was the judgment of the Congress that the price fixing and the elimination of unfair competitive practices were appropriate methods for prevention of the financial ruin, low wages, poor working conditions, strikes, and disruption of the channels of trade which followed in the wake of the demoralized price structures in this industry. If the strategic character of this industry in our economy and the chaotic conditions which have prevailed in it do not justify legislation, it is difficult to imagine what would.

Let us consider for a moment exactly what was intended to be accomplished by the Bituminous Coal Act of 1937, and whether or not its functioning now justifies extension of the Coal Act for an additional 2-year period. The Coal Act was approved on April 26, 1937, and for many months following, the National Bituminous Coal Commission conducted the work of establishing minimum prices. However, on July 1, 1939, pursuant to the provisions of the Reorganization Act of 1939, the National Bituminous Coal Commission was abolished, and in its place was created the Bituminous Coal Division, which division, together with the Consumers' Counsel Division, worked untiringly carrying on investigations, compiling data, doing extensive research work and conducting public hearings in order that these agencies might be properly apprised of existing conditions in order that they might be able to establish minimum prices and marketing rules and regulations that would make possible the stabilization of the marketing of bituminous coal produced throughout the entire United States.

During the past several years both labor and the operators in the coal industry have worked together in an effort to bring forth the benefits assured by this legislation, and these two groups should be complimented upon their willingness to cooperate with the Bituminous Coal Division. The primary interest of labor and operators has been to insure the elimination of cutthroat competition and price warring in order to assure the operators a fair return on the sale of their product, and at the same time guarantee or make possible for labor the payment of a fair wage for its services.

Since its very inception the Coal Act has been a cooperative measure, and at no time has it appeared to be an attempt on the part of the Government to operate the industry, as some of the opponents to this legislation would have you believe. But what it really amounts to is an administrative effort on the part of the Government to help regulate the industry in order that the interests of the operators as well as those of the workers and the consumers may be best served and at the same time lend financial stability and economic security to the coal industry. There can be no objection on the ground that this legislation entails the expenditure of large sums of money on the part of the Federal Government, because the record conclusively shows that the income derived by a special tax levy under provisions of the act upon the coal produced exceeded the appropriations for administration of the Coal Act by more than $2,000,000. Nor can it be said that producers are being taxed too heavily under the operations of the Coal Act for 1937, because this past year, with the Coal Act having the benefits of the minimum prices under the act for only a 5-month period, still, for the first time in over 20 years, the coal industry has been able to realize a profit on the sale of its product.

Today more than 12,000 producers, who mine substantially all of the bituminous coal produced in the United States, have become code members. The combined production of the few producers who have not become code members will have little or no effect upon the coal market, because their total production is negligible. Of course, it must be borne in mind that the nonmember producers may sell their coal at whatever price they choose, but they will be subject to the 19½-percent tax on each and every sale as levied under the provisions of the Coal Act.

During the past 5 months the code members have shown a willingness to sell their coal at not less than the established minimum prices and in accordance with the marketing rules and regulations. However, such a short period of only 5 months has not been sufficient to give the coal industry time to rehabilitate itself and to take its place with our other industries which are now operating on a sound financial basis. It has taken many, many months of hard labor to bring about the encouraging results which are now being produced under the Coal Act. We are just beginning to reap the benefits of this legislation, and it would be a foolish move on the part of Congress to terminate the Coal Act at such an early stage, especially when its operation appears to be so encouraging. The industry must be considered, and we cannot be unmindful of the fact that their contribution in taxes levied by the act to defray administration expenses represents an investment of over $15,000,000, to say nothing of the thousands of dollars of expenses incurred and expended in retaining counsel to represent them at hearings, and so forth. In all fairness to the coal industry, this act should be continued in order to give industry an opportunity to realize the full benefits of its investment. The actual operating period of only 5 months under minimum prices and marketing rules and regulations has not been sufficient time to make possible and to insure permanent stability in the bituminous-coal industry.

The consideration of the extension of the Bituminous Coal Act of 1937 coming at such a momentous time in our Nation's history, we cannot be unmindful of the ill effects the termination of this Coal Act would have upon our national-defense program. Bituminous coal is still the Nation's basic fuel and furnishes approximately one-half of the Nation's total of all energy derived from mineral and water power. Bituminous coal also supplies over 85 percent of all the fuels and energy consumed by the railroads, and it furnishes some 49 percent of the fuel used by electric public-utility power plants; and, yes, over 75 percent of the total fuel used by all our general manufacturing plants. There can be no doubt but that bituminous coal has been and still is the basic material used in the manufacture of steam; and today, when many of our shipping lanes from across the Atlantic are closed to our import trade, we find that many commodities necessary and needed for national-defense production, and which commodities were previously imported, now must be synthetically manufactured from bituminous coal. Without the proper flow of bituminous coal it would be impossible for our manufacturing industry to operate at full capacity.

Bituminous coal spells for defense as much as guns, airplanes, and battleships, and at a time such as this, when all of us are vitally concerned in the future welfare of our Nation, we cannot afford to gamble on the future of the coal industry. We cannot abandon what has proven to be a godsend to the coal industry. We now know that the coal industry has become somewhat stabilized, and this has come about chiefly through the administration of the Coal Act. We should, and we must, continue to maintain the stability and security now existing in this now more than ever important bituminous coal industry.

I am more than satisfied that the Bituminous Coal Act of 1937 has been the deciding factor in stabilizing the coal industry in my district, as well as in the entire United States. I am satisfied that the economic security which is now being enjoyed by the thousands of miners could not have been made possible were it not for the enactment of the Coal Act of 1937.

I am very much alarmed over the possible ill effects which may come to our national-defense program in the event that this Coal Act is not continued.

Therefore, because of these facts, I intend to support House Joint Resolution 101, and call upon the Members of this House to give this bill their utmost consideration and support in order to insure immediate enactment of this legislation which will make possible the extension of the Bituminous Coal Act for an additional 2-year period.

Oil May Assure Defense—Long Beach Helps Again

EXTENSION OF REMARKS
OF
HON. WARD JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1941

EDITORIALS FROM THE PRESS-TELEGRAM, LONG BEACH, CALIF.

Mr. JOHNSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein two short editorials from a recent issue of the Press-Telegram of Long Beach, Calif. One points out that the oil industry, privately owned and operated, is sincerely cooperating to the fullest extent with the national-defense program and is in a position to meet all emergencies that may arise demanding oil and its byproducts.

The other editorial points out the fact that the city of Long Beach is cooperating with the Navy Department in selling it surface rights to more than 100 acres of valuable ocean frontage for the sum of $1, the same to be used for a naval base. Long Beach is the home port of the Pacific Fleet and the city is cooperating in every way in supplying the children of the Navy personnel with free public-school educations, including books and supplies, and also vocational training to young men for work in building airplanes and steamships.

The editorials follow:

[From the Long Beach (Calif.) Press-Telegram]

OIL MAY ASSURE DEFENSE

So far as oil supply is concerned, the United States is safe in the air, on the water, on the highway. Experts vouch for these statistics:

There is enough petroleum in reserve in western America to fill a 65,000-gallon tank in every backyard in 11 Western States.

In England, and in Europe generally, every family is limited to a few gallons of petrol a week, if, in fact, any at all is obtainable for private use.

On the Pacific coast alone there is an estimated 3,500,000,000 barrels of petroleum on tap. Daily production could be doubled, if not multiplied many times, whenever curtailment orders are removed. As well explained in recent public discussion, California oil men regulate production by voluntary agreement, while most of the other petroleum States entered into a compact for official control. The industry in California quite generally prefers the plan in vogue here.

Oil is doing more than supply fuel for defense. A process has been perfected for the conversion of oil into rubber; and the statement is made without reservation that, if the present reserve supplies of crude rubber should be exhausted, the United States can be made 100-percent self-sufficient with rubber from a petroleum base.

Another interesting point: The petroleum industry has entered into a contract with the War Department to produce 60,000,000 gallons a year of toluene, the basic ingredient of TNT. Glycerine is being made in even greater quantities. Both of these products can be supplied in unlimited quantity, and with no delay.

Many other products also have been developed, but the two here mentioned are of special concern to national defense.

America's high-quality aviation gasoline will carry planes faster, permit them to climb quicker, and move more bombs than any other petrol in the world; another interesting factor of defense as this Nation is equipped with regard to oil.

The country's oil reserves, moreover, are held in natural reservoirs so far below ground that no bomb can reach them.

In brief, thanks to oil, its producers, refiners, and shippers, America is in A-1 condition with reference to a vital asset that may turn the fortunes of war, should there be one involving the United States.

LONG BEACH HELPS AGAIN

For all of $1 Long Beach sold to the United States Navy surface rights on more than 100 acres of Terminal Island land for a naval base. Long Beach, years before that, built a model shore landing for small Navy boats for the convenience of the officers and men of the fleet. In many other ways this city has endeavored to express its appreciation for the friendship of the Navy and its personnel.

Long Beach has scored in the support of national defense along another important line. The public-school system of this city leads other California communities in its contribution to vocational training for defense purposes. Classes in aircraft trades and in shipbuilding have been in operation here since last July. This local leadership obtains both in scope of the training and in number of workers actually placed in defense employment.

Let it be understood, of course, that this is not all Long Beach's doing. It is Long Beach's cooperation with the Federal Government, the State department of employment, and with the various manufacturers who have plants here.

Since the work was initiated 9 months ago Long Beach vocational classes have supplied 1,716 trainees to industrial plants engaged in building airplanes and steamships. The next best record is San Diego, with 1,631 placements. Los Angeles has placed 670 trainees from its vocational classes in nearby plants.

Long Beach is rapidly expanding its vocational-training activities, with special buildings being transformed into classrooms and shops and with aircraft executives furnishing both latest equipment and faculty members. The newly opened Olive Vocational Center, at Olive Avenue and Third Street, will provide training for 3,000 men on a 24-hour basis, with 3 shifts of 8 hours each.

One of the significant results of this enterprise in cooperating for national defense is that young men are being drawn to Long Beach from both nearby and distant localities, and in some instances trained men have come here to enroll at the local headquarters of the State department of employment. In 1 case 233 graduates of the Frye Training Schools of Omaha and Kansas City have reported to that office in this city and every one of them has found work in nearby plants.

It is encouraging, if not inspiring, to contemplate what this trend means to the growth and future development of Long Beach.

St. Lawrence Waterway Treaty

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1941

LETTER FROM HON. SAM H. JONES, GOVERNOR OF LOUISIANA

Mr. HÉBERT. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include herewith a copy of a letter received from the Honorable Sam H. Jones, Governor of Louisiana, in connection with the proposed St. Lawrence waterway treaty:

STATE OF LOUISIANA,
EXECUTIVE DEPARTMENT,
Baton Rouge, March 24, 1941.

Hon. F. EDWARD HÉBERT,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR MR. HÉBERT: Recent press reports indicate that the President has sent to the Congress the text, or a summary of the text, of the proposed agreement with the Government of the Dominion of Canada relating to the construction of the joint international facility known as the St. Lawrence River-Great Lakes Navigation and Power Project. These reports also are to the effect that legislation approving the project on the part of the United States will be introduced in the Congress in the near future.

With all deference to His Excellency, the President, my study of the matter leads me to the firm conviction that not only is the project, considered either as a facility of navigation or as a power facility, or both, without economic justification from the standpoint of the United States as a whole, but its construction will most adversely affect the ports of the South, the South's industrial development and its agricultural and rural population. I think I am safe in asserting that in no State of the South will this adverse economic impact be more keenly felt in all of its phases than in Louisiana. It is unnecessary, I think, for me to go into detail in this communication as to the broad reasons why every interest in Louisiana should oppose this legislation. You have been furnished, I am informed, with a copy of a recent resolution adopted by the board and the director of the department of public service which summarizes the high lights of the Louisiana objections.

I indulge the hope that you will find it consistent to oppose any legislation which may be offered having for its objective the ratification and approval of the proposed agreement, and to use your best influence toward that end with your colleagues irrespective of sectional considerations.

With personal regards, I am,

Sincerely yours,

SAM H. JONES,
Governor of Louisiana.

The New Labor Mediation Board and the Roosevelt-Perkins Strikes

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1941

EDITORIAL FROM THE CHICAGO TRIBUNE

Mr. MASON. Mr. Speaker, two strikes have been marked up against the new Labor Mediation Board before it has even gone to bat. The Conciliation Service of the Department of Labor must act and fail in the settlement of a labor controversy before the Labor Mediation Board can act. Then Madam Perkins must certify that the strike threatens to obstruct the production of materials essential in national defense before the Board can assume jurisdiction. Those of us who know Madam Perkins know how reluctant she will be to turn over any labor case to the new Board by certifying that a strike is holding up national defense. Why appoint a Labor Mediation Board and then handcuff it? The following editorial from the Chicago Tribune of Wednesday, March 26, on the new Labor Mediation Board and the Roosevelt-Perkins strikes is so timely and pertinent in this connection that I submit it for publication in the RECORD. The editorial follows:

[From the Chicago Tribune]

THE ROOSEVELT STRIKES

The strike at the Bethlehem Steel works has caused much concern throughout the country. Bethlehem has a billion and a half of war orders. There is little doubt that some men in the administration, of whom Mr. Knudsen may be taken as typical, are genuinely disturbed. It would be remarkable if the responsible officers of the Army and Navy were not of the same mind, knowing, as they do, how provocative our diplomacy has been at a time when we have almost no modern weapons and the bulk of our production is being sent overseas.

For the rest the administration seems content. So far as the Allis-Chalmers strike is concerned, evidence is now available to show that the walk-out was authorized in a referendum in which many hundreds of fraudulent ballots were cast. The fraud is admitted by the union spokesmen themselves. Nevertheless, the strike continues to halt work on $45,000,000 of defense materials, and neither the National Labor Relations Board, nor any of the half dozen mediation services, has dared to denounce the perpetrators of the fraud. Men who have followed closely the events in Milwaukee are convinced that official intervention has served rather to prolong the disturbance than to end it.

That is what might have been expected. The C. I. O. unions which are responsible for most of the more serious tie-ups exist today by virtue of the administration's support; the New Deal was midwife at their birth. Mr. Roosevelt and Madam Perkins give every encouragement to Communists to gain control of tens and hundreds of thousands of factory workers. The organizers were allowed to commit acts of violence, seize property, interfere with the movement of the mails. As a reward for tolerating such conduct, former Governor Murphy, of Michigan, was made Attorney General and later elevated to the Supreme Court.

The strikes which are now halting production in many sections of the country can properly be called the Roosevelt-Perkins strikes. The unions which are causing the trouble have long enjoyed the protection of the administration and, so far as can be seen, still enjoy it. Mr. Roosevelt himself was so little disturbed over the situation that he has gone fishing. He is supposed to have immense influence over organized labor, but he has chosen deliberately not to exert it.

Is the United States Doomed To Follow France?

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1941

ARTICLE FROM THE SOUTHERN LUMBER JOURNAL

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD I include an article entitled "The Workers Fiddle While World Burns" from the Southern Lumber Journal of March 1941:

[From the Southern Lumber Journal, March 1941]

THE WORKERS FIDDLE WHILE WORLD BURNS

Democratic France lost its war against totalitarian Germany in exactly 39 days. It lost the war because the people of France were more interested in maintaining a 40-hour week than in saving their freedom by winning a war. For the next 100 years, historians and novelists will present many reasons why France lost the war but those who record the truth must always admit that France lost the war because her people would not work the long hours necessary to produce the fighting equipment and maintain the morale necessary to win.

France lost the war to Germany in 39 days because the German people worked long hours without complaint so that they might defeat France. But not even to save their country and their personal liberty would democratic Frenchmen work 12 or 10 or even 8 hours a day for 6 days per week. Forty hours per week was their limit. They were more concerned about maintaining politicians in power who would protect their 40-hour week than in putting their trust in statesmen who insisted that all France must work night and day to stem the invader.

A slow-moving Hitler gave France a year or more to put its people to work. Instead, the French put their trust in an obsolete Maginot Line that had a wide, undefended gap through which modern, mechanized regiments of Germany poured like the rushing of waters through a lifted sluice gate.

No wonder France was unarmed and untrained. Its people were wholly undisciplined. They were unarmed and untrained because undisciplined. No country can produce armies of trained men and huge quantities of surplus war materials, from fighting machines to foodstuffs, whose people use less than 25 percent of their time for productive work.

The loss in morale is as great as the failure to secure capacity production. For those who are mentally and physically idle 75 percent of the time have little inclination either to think or to struggle to do the things that must be done to save a nation and those who inhabit it. That was the situation in France before war was declared in Germany. That was the situation that existed in France until the day of its doom. Its army was untrained. It had but a few planes and few trained fliers. Its army was pitifully lacking in mechanized equipment. Its soldiers were soft and badly led. All this but reflected the softness of the French people who had gone soft because of their willingness to follow the philosophy preached by labor racketeers and the politicians who protected them in their destructive efforts.

In the United States we are now losing 104 days a year per worker by not working Saturdays and Sundays. And we are losing the equivalent of another 104 days per year by short hours and voluntary slow-downs. Our workers and our politicians are following the French method. Nothing must disturb the 40-hour week established by labor, nothing unless the pay check carries time and a half for any time worked over 40 hours. And men who work in national-defense jobs must join a union, regardless of the cost, and pay millions of dollars monthly into the treasuries of the labor racketeers.

No one who thinks believes that the United States has sufficient reserves of labor and materials to do the job ahead of us. We know we must help England win this war or yield to a world economy dominated by Prussians. Yet short hours continue, and strikes are Nation-wide and constant.

Men who manage industries producing goods for the national defense are working long hours, many of them long days and far into the nights. Men in responsible Government positions are also burning the candle at both ends trying to get greater production, trying to get organized for the war they believe to be inevitable.

But the 40-hour-per-week factory workers, and all the rest of us, are just playing along as though the whole world were at peace. We have 148 hours left each week for sleep and play, and we are sleeping and resting far less than if we worked another 20, or even 10, hours per week at the job of producing what it will take to help Britain win the war, and thus save our own hides.

Democracy in labor—the rights of individual contract, the right to employ the efficient, and to fire the drone—has given way to the autocracy of the worst gang of labor racketeers that any country has endured since the world began.

Labor strikes are rife in this country at a time when there should be peace in labor and capacity production of factories. Drunk with power because they have forced the reduction of the workweek to 40 hours without loss of income, labor leaders are now determined to force the closed shop upon all major industries before the national emergency ends.

The open-shop principle of employment is the American way of life. The closed-shop principle is the way to regimentation and the European way of life. The right of labor to organize is not even debatable. But the right of labor to so organize as to rule by force those who must work and those who have the responsibility of ownership and management cannot be supported by any form of reasoning.

I have thought that the President would try to do two things: Stop labor racketeering on a wholesale scale and increase the workweek to 48 hours, without overtime pay, during the national emergency. But the only man in the United States who could do anything about the present unsavory situation has done just nothing.

The Nation continues to drift and to suffer from labor troubles which threaten to become worse. Will it take another war to restore the American people to their senses? I fear nothing less will do it.

Put Jobless to Work Developing Irrigation

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1941

EDITORIAL BY HARRY E. POLK

Mr. ROBERTSON of North Dakota. Mr. Speaker, under leave to extend my remarks in the RECORD, I call the attention of my colleagues to an editorial by Harry E. Polk, publisher of the Williston Daily Herald, which clearly sets forth the problems of the unemployed throughout the Middle West, and recommends that these jobless people be mobilized to develop irrigation projects and other public works.

The editorial follows:

[From the Williston (N. Dak.) Daily Herald]

NO JOBS FOR THESE

Hundreds of job inquiries, but no jobs to offer.

That's the experience of the Williston office and all other branches of the State employment service these days, as the country engages in a tremendous shift of labor population as result of the defense program.

The job seekers in North Dakota are the common-labor type of worker, the men on W. P. A. who would like to get back into higher-paying private employment, the odd-jobs men who would like steady work, the men now working who hope to find better jobs under the huge program of national defense.

But there is nothing for these men in the newly expanding industries. Wherever in the industrial East there is construction—and there is plenty of that under the broad program of factory expansion—there is plenty of common labor available. There is therefore no need of transporting labor of that kind from North Dakota into the work centers of the East and middle East, and consequently the job seekers of this State are merely told there is no work for them.

In hearing the report of the employment service that hundreds of North Dakota workers have applied for defense jobs, we find therein cause for praise of our working population. Of these hundreds, a large part undoubtedly is W. P. A. labor, men now employed on public projects but hoping for something better, men who have accepted the help of W. P. A. to tide them over, but who now feel a surge of hope that better jobs are available, and that they can get them. We feel a justifiable pride that these men are eager to better their condition and are applying for these defense jobs, and therefore feel all the more keenly the tragedy of the situation which finds no jobs for them even though the Nation is now taking an inventory of labor because of a shortage of the kind of workers that are most needed.

Because of the defense program, which is expected to put thousands and millions of men to work, the Government has already begun to cut down on W. P. A. appropriations and cut W. P. A. workers off the pay rolls. That program of curtailment, however, should not be extended to such States as North Dakota, whose workers, even though they apply for these new jobs, can find no place in the defense effort. There is rather plenty of argument here for the continuation of a Public Works program to keep these men employed on public projects because there is nothing else for them.

As far as we are concerned, the public projects most desirable and useful to this section are those which have to do with irrigation and other water uses—from the huge Missouri diversion project on down to irrigation wells or stock-watering dams on individual farms. Our working population needs them, our farmers want them, and the whole countryside will benefit greatly if they are carried out.

Colonel Lindbergh, Expert on International Affairs

EXTENSION OF REMARKS
OF
HON. E. HAROLD CLUETT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1941

Mr. CLUETT. Mr. Speaker, 14 years ago the world was amazed at the extraordinary exploit of Col. Charles A. Lindbergh in flying alone nonstop from the United States to Paris—a feat never before accomplished. He was honored, and the recipient of more gifts than probably any man in history, and in the years following conducted himself as a modest, unassuming, intelligent citizen. In late years his criticism of this country's conduct of its international affairs has been rather severe, and thousands of fellow citizens who have hitherto been his ardent admirers have objected to his outspoken writings and addresses, and criticisms on vital topics of our national affairs, concerning which he was hardly considered a competent authority. No one can belittle his expert knowledge of aeronautics: but when he reaches beyond these problems, he is treading on dangerous ground. The fact of his outstanding popularity has induced those who may profit by it to drag him into the political arena for the purpose of pulling the isolationist chestnuts out of the fire. Instead, he has pulled himself into a controversy which is certain to reflect on his uniformly good judgment. Certainly, he has the right, as any other citizen has, of expressing himself on any subject. That is a constitutional right; but at this most critical time in our history, when free speech and a free press can under certain conditions be very harmful to our national and international conduct of the affairs of this country, I say that every one of us, hero or plain citizen, politician and public servant, should be careful by word and deed not to interfere with the processes of national defense in every form.

In discussing bill H. R. 1776, no one could have been denied the right of self-expression. It was a problem that tried the hearts and judgments of every one of us upon whom the responsibility of decision rested. The Congress deliberated and acted in a constitutional manner, and, as the representatives of all the people, voted for the enactment of this legislation by an overwhelming majority. I believe this vote was in accordance with the wishes of a large majority of the American people. The opponents of the measure made a desperate fight and lost. Some Senators and perhaps Representatives threaten now to again take the decision before the country and by radio, mass meetings, and other propaganda attempt to tell the American people that the judgment of Congress was wrong; that the enactment will endanger us; and that all this costly preparation for aiding friendly nations and our own national defense, was a ghastly error; that this country is not now nor ever will be in danger; that our help abroad is too late and cannot be effective. This is the philosophy of Colonel Lindbergh. I cannot help but believe that propaganda of this sort will not only give encouragement to the Axis Powers, but will have a tendency to slow down all our preparation for national defense.

The article by Colonel Lindbergh in the March 29 issue of Collier's should be widely read, especially by Members of Congress, and it is because of my resentment to his conclusions that I address myself to this House. While many of us took serious objection to his testimony before the Senate and House committees, that was his right, but now he and his isolationist friends are flaunting the law of the land and rendering a flagrant disservice to the country. I do not mean that any law is not subject to criticism, and perhaps some to repeal, but a law passed by us in the greatest crisis of all our history, and backed by the largest peacetime appropriations we have ever known, must not now be held up to the ridicule and resentment of the American people with the underlying principle that a great mistake has been made and that it is not too late to retrace our steps. I was one of the few Members of the minority in this House who voted for H. R. 1776. Not long after, when the people recognized its full meaning and the Senate voted its approval by a 2 to 1 majority, we joined with them in a vote of 317 to 71. Now, the Senate has approved the $7,000,000,000 appropriation to carry out the provisions of the lend-lease law, by an overwhelming majority of 67 to 9.

I doubt that the people will be willing as long as the war lasts to reject or materially change any provision of this act, notwithstanding the hue and cry from the defeated isolationists. I now predict that any attack from any source will meet with contempt and disfavor.

May I call your attention to an editorial appearing in the New York Herald Tribune under date of March 23? I quote:

The letter (in Collier's) also shows rather strikingly how far the colonel is allowing

himself to be driven into the methods of unwarranted innuendo, of sweeping distortions and misrepresentations of fact, and of attacks upon the sincerity and patriotism of those who disagree with him.

Allow me to quote a few passages from his letter to the American people:

We in America are being led to war by a group of interventionists and foreign interests, against the will of a majority of our people.

Here is another interesting comment. I quote:

How can we be expected to cross the Atlantic Ocean and invade the Continent of Europe?

The case which Colonel Lindbergh has presented to the people is as unfair as it is ridiculous. He has set himself up as a superauthority over these grave questions in opposition to the best minds in our Army and Navy and the Department of State. As a holder of the Iron Cross of Germany, I do not accuse him of nazi-ism, but let him beware that some of his utterances do not give aid and comfort to the enemy. I fear and will protest any such propaganda as has been intimated in the press, that a contest will be waged before the country on the merits and demerits of our recent action. Both parties to the dispute have called for unity. Without unity and the immediate carrying out of our fixed purposes, our program of aid and defense will be seriously impaired. Our whole Nation is girding itself to carry out a great purpose, and we in this House of Representatives intend that that purpose shall prevail.

In analyzing Colonel Lindbergh's message we are forced to certain conclusions. He wishes all aid to Great Britain and friendly nations discontinued. He does not believe this Nation can be successfully attacked. We not only do not propose to stop our aid as outlined, but we propose to construct ships and tanks and other war material as fast as human skill and ingenuity will permit, and when these are completed, ship them from these shores and see to it, with the help of Britain's Navy, that they reach their intended destinations, and no power of Hitler can prevent it. If Britain is defeated and their Navy lost, and God forbid any such eventuality, an invasion of South America is certainly in the realm of possibility. Germany would not overlook such a prize. Eminent Army and Navy officials are fully aware of these dangers, but apparently our friend the Colonel knows better. So repeal our appropriations, shut down our munitions works, disband our Army, close our shipping ports. Lo and behold, there is no further use for any of them and we can go about the construction of dam sites and super highways, ship canals, and Passamaquoddys, with business as usual, and with joy in our hearts that at last we are alone, without a friend in the world, and above all, safe from danger without and within. That is the program of the Lone Eagle.

This whole controversy may be aptly summed up by using the words of the late President Theodore Roosevelt:

To start something and then go soft is the one certain way to destruction.

London Paper Asks United States to Convoy War Supplies to Britain

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1941

Mr. REED of New York. Mr. Speaker, step by step, foreign and domestic propaganda is doing its deadly work in bringing this Nation into active participation in the bloody war abroad. Under leave to extend my remarks I insert the following dispatch from London:

LONDON PAPER ASKS UNITED STATES TO CONVOY WAR SUPPLIES TO BRITAIN

LONDON, March 24.—For the first time a London newspaper today urged the United States to convoy war supplies to Britain in view of the menace of the German spring sea offensive, backed up by her powerful battleship raiders, the *Scharnhorst* and *Gneisenau*.

The newspaper was the Daily Sketch. Other papers have proposed that the United States take measures to assure that American supplies reach Britain but none heretofore had asked for convoys.

"We need every enemy neutral ship that now lies idle in an American harbor," said the Sketch. "We need every American ship that America does not need herself. We need every American captain, every American ship, every engineer, every American seaman who can be spared from America's own war effort.

"We cannot afford to wait nor can America afford to wait for public opinion in the United States to mature while Germany acts with such concentrated force on our maritime resources.

"What we need most urgently is American convoys for American supplies."

Observers agreed that Britain's sea lanes are now menaced as never before by German submarines, operating in "wolf packs," the commerce-raiding battleships, and long-range bombers.

In Reply to the Toast: "The President of the United States"

EXTENSION OF REMARKS

OF

HON. LE ROY D. DOWNS

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1941

ADDRESS BY HON. FRANK KNOX, SECRETARY OF THE NAVY

Mr. DOWNS. Mr. Speaker and my colleagues, under permission granted me, I take pleasure in inserting in the CONGRESSIONAL RECORD an address delivered by the Honorable Frank Knox, Secretary of the Navy, before the Hibernian Society of Baltimore, Md., on March 17, 1941:

We have just drunk a toast to the President of the United States.

There is nothing unusual in that. It is a tradition among good Americans, but in such a gesture of respect and affection in which we have just participated, there is, right now, an exceptional and unique quality. We were, all of us, drinking a toast not only to the President of the United States, but to the Commander in Chief of the Army and Navy. Of course, under our system, the President is always the Commander in Chief, but in times of tranquillity and peace, we rarely think of him in that capacity. We think of him thus tonight because our country is in deadly peril, and every good American holds himself ready for any call for his services which the Commander in Chief may make. This readiness to respond by the free men who comprise the real defense of the country is without limitation. It may call for minor sacrifice of income. It may mean longer hours of labor. It might involve drastic changes in occupation. For some, it may means the rupture of home ties, the enlistment in the armed forces, the incurring of grave danger, and for some, it may mean cruel wounds or sudden death.

These are a part of the obligations of citizenship in a free country when that country is in danger.

The man who can summon us to fulfill these obligations, up to and including the supreme sacrifice of life itself, is the President; every American's Commander in Chief.

What sort of man the President is becomes of vast importance when national peril impends and ultimate sacrifice may be required. I speak to you, not as a member of the party which nominated and elected him President. As you all know, I have been a lifelong member of the opposition party. What I have to say of the President as our Commander in Chief, therefore, is not the fruit of a long-time political association with him. The basis upon which my estimate of him is made is found in 9 months of close association with him in a common effort to promote the national defense, to buttress the national security, and to keep alight the "fires of liberty" in a war-torn world.

First of all, I have found President Roosevelt a sincere, earnest, and patriotic American, who understands what Americanism is and is ready to make any sacrifice to preserve it. He has completely forsworn partisanship and is animated by as high and fine a purpose to serve his country in an hour of danger as any man who has ever filled the Presidential office and discharged the arduous duties of Commander in Chief.

I have found him one of the best informed and most understanding students of American history and of American institutions with whom I have ever come in contact. He is devoted to the cause of the common man, and can appraise the reaction of the average citizen under conditions of stress and strain better than any man of his generation.

While not a professional military man, the President thoroughly understands the essentials of high strategy, and in the disposition and employment of naval military power he is probably the equal, if not the superior, of any naval authority now living.

The prime quality required of our Commander in Chief in a time of grave danger I have left to the last. That quality is courage. Franklin D. Roosevelt is a courageous Commander in Chief. I speak whereof I know, for I have seen him repeatedly in crises which call for courage—courage to pursue the right course, regardless of consequences. If a man had every other attribute of great leadership and lacked courage, his leadership would be vain in times like these. A bold, resourceful, clear-visioned leadership has characterized the Presidency of the United States throughout the present world

crisis—the gravest in world history. It has wrought an unexampled unity in America. It is rallying our potential might for our defense. It has given assurance that our free way of life will be preserved. But it has done and is doing more than this. The courageous leadership which President Roosevelt has supplied has provided a rallying point for men who love liberty the world around. His daring and his prompt cooperation in the dark days which followed Dunkerque saved the last rallying point for democracy in all Europe. The successive measures which the President has taken to bolster the cause of democracy in the world has provided at last a reasonable hope that the march of totalitarianism can be halted and its foul champions driven back to the caves of the Dark Ages from whence they came.

This, then is my estimate of the man whose health we have drunk and who now beckons to America to fulfill its destiny as the unshakable bulwark of human freedom and individual liberty.

May we turn from a contemplation of the qualities of a Commander in Chief to the characteristics of the people—people like you and me, who fill the ranks of the battalions who loyally follow the President's leadership?

First of all, it seems to me, must come for all of us the effacement of personal and political animosities. In a moment of grave national peril a spirit of national unity must be summoned. When we are dealing with domestic questions in a democracy the airing of differences, the debating of issues, and the clash of party are necessary and admirable. The honest and sincere championship and pursuit of political purposes held to be wise and useful constitute a moral obligation under the democratic way of life. But when the danger comes from without, when some enemy threatens to destroy the very institutions under which we enjoy the privileges of democracy, then the voice of party must be hushed, the shrill tones of political conflict must be stilled; the ranks, broken by internal differences, must be closed up. To a foreign foe we must present an undivided front.

My fellow citizens, never in your lifetime or mine could a plea for an undivided solid front be made more justifiably than right now. To pursue partisan purposes and to selfishly calculate upon the effects of political action is to be guilty of adding to the perils which confront the Nation.

Modern war is not fought with guns, ships, and planes alone. It has entered into the world of the spirit. The swift advance of the means of instantaneous communication over vast distances has made of propaganda a weapon as much to be feared as the products of Krupp and Skoda combined. What we do here to meet the present situation is made known in every unfriendly totalitarian capital instantly. Evidence of disunity and excessive displays of partisanship, acrimonious debate which descends to the level of personalities, supply encouragement to those who would destroy us and impair the confidence of those struggling democratic peoples who rely upon us for help.

In a time like this, in the presence of a world movement which has for its announced purpose world domination, we cannot live unto ourselves alone. We cannot be indifferent to the effect of our actions upon others outside our borders. We must remember that our words are weighed across the oceans. We must not forget that some wavering nation under the cruel pressure of a dictator may be gobbled up for totalitarianism because of loss of hope of help from us. We must not fail to recognize that British morale more than British weapons has saved Britain for democracy, and that an obvious and unmistakable unity here strengthens that morale and renders the fall of Britain less likely. Most important of all, we must not ignore or underestimate the destructive voice of a flagrant partisanship upon our own people when the minds of the people must be concentrated upon the dangers of the hour and the imperative need of swift all-out defense.

This is no time to worry or feel concerned about the preservation of the party spirit. In legislative halls from now on division should should not be along party lines. It should only grow out of honest differences of opinion among men who desire to promote the same object—that is, the successful defense of the Nation and the preservation of our way of life. I will take a chance, readily, on the preservation of party government if we can first make sure that we preserve the institutions under which party government can flourish.

From this time forth, until this evil thing which has reared itself up to challenge all of the things that free men hold dear has been destroyed, we ought, all of us, to count ourselves just Americans.

There are some other qualities that must be found in a united America. We must recognize that our comfortable modes of life and our accustomed habits of work are subject to drastic change for the sake of common safety. If we would protect ourselves against the horrible changes which the peoples of Europe have had to endure, then we must willingly suffer minor changes not to our liking in order to be safe against that. We may have to work harder. We may have to work more hours per day and more days per week. We may have to give up wholesome pleasures and desirable recreation. We must be ready to devote more and more of our income to support the frightful cost of modern defense. There is no such thing as business as usual if our country is to be safe. The workingman and businessman alike must submit to things which are distasteful. Some forms of business not essential to national defense must be restricted, and all excess profits that flow from defense measures must go back into the common Treasury. The use of force by labor union or employer in industry vital to the national defense must be rigorously restrained, and resort must be had to the processes of conciliation and arbitration. No group, class, trade, or profession must seek unusual and selfish advantages because of national necessity.

I am convinced that popular response to these needs is well-nigh universal. Those few malcontents who would challenge this movement for national solidarity and unity will speedily be swept aside by an aroused public. I conceive these things to be essential to the forming of an invincible army of freedom with which we may challenge successfully the brutal sweep of organized barbarism toward world dominion. This is a changing world, a world in which the battle line will not be the same tomorrow as it is today.

It is not the same today as it was a year ago. Then our people were seeking congressional approval for an expanded Navy in the interests of national defense. Today, because of this law of change, they are seeking ways to help others defend themselves—people whose principles of life follow the pattern of our own, and who are engaged in open warfare to continue their life as they wish to live it, and not according to the dictates of aggressors.

Standing adamant against a war lord more ruthlessly proficient than any this earth has ever seen are millions of men and women who still would rather die than come under his rule. It is these that we would help, partly because they are fighting our battle, but more because they are fighting the battle that mankind has fought since history began to be written—the battle for the preservation and continued flowering of enlightenment, the battle for freedom of thought and speech and deed, the battle for the Sermon on the Mount.

Some foolish people have asked: "What is it they are fighting for?" When man is forced to burrow underground at night, to carry a gas mask and a gun by day, to turn his own hearthstone and plot of ground into an armed fortress, surrounded by a trench, he has not much time for statements. He has only time to think and find ways and means of driving the murderer out. He may awake to find the bodies of his wife and children submerged under heaps of rubble; he may hear their cries and be unable to answer them; he may be killed himself while they live on, pitiful victims, left destitute by the blast that destroyed their provider. There is only one answer to those who, living in peace and plenty, dare ask what such people are fighting for. That answer is to help to destroy the inhuman forces that have caused their awful plight.

These embattled peoples did not want war. Their very unpreparedness was proof of that. They did everything they could to prevent it. Did the Hollanders and the Belgians sign treaties of self-defense or even plot against the Axis Powers? They did not. Did Norway, the most advanced democracy known to man, want war? Did Denmark? They did not. Did Czechoslovakia, proud of her new-found freedom and prosperous because of it, want to come under the iron heel? It did not. Did the people of France, of Britain, of Poland, of Abyssinia, and Greece want war? Did Bulgaria wish to capitulate? Did Rumania? They did not. But nothing succeeds like success. And the successes of Hitler, like those of Alexander, Genghis Khan, and Napoleon, must spread to the seven seas and the four corners of the world, if they are not stopped by those who would die rather than see them continued.

The British Empire is at war. Its effects reach India, Canada, New Zealand, Australia, and Singapore. In Indochina a defeated France must give up its right to free trade. In China itself a bewildered people fight on with the richest of their possessions stripped from them. In the Netherland Indies the Dutch carry on under ever-advancing storm clouds that may rain death down upon them at any moment.

What could be more natural than that these forces of evil which brought all this about beyond both our wide oceans should join hands together? Are not their lack of principles the same? Was not the fate of Manchuria but the beginning of an attempt by fire and sword to seize the whole world for purposes of exploitation and mass enslavement?

In the middle of this hurricane of destruction, with its winds of death ever increasing in violence, lies ours, the only hemisphere that is still unravaged by its monstrous breath. The man you have toasted tonight saw it coming in 1933. In that year he began a naval building program, the units of which, thank God, are operating with our fleet today. We are still building, and will go on building until this storm of violence has at last run its course.

Every President in time of crisis has been opposed. Washington was accused of wanting to be king; Lincoln was a warmonger to his opponents; Franklin Roosevelt has been given too much power in the minds of his. But these same voices that would disparage our leadership are the ones which would lull America to sleep with assurances that nothing can disturb our tranquillity. Oh, no; we have nothing to fear. All we have to do is build up our own defenses. We don't need to even be in any great hurry to do that. If we are strong enough, no hurricane can touch us. We are too far removed from its vortex. By our position alone we are exempt from all that has happened to others. A few planes will do the trick.

Well, this is how exempt we are. No matter who wins this war, our way of life is going to be changed. What then will it be if

the Axis Powers are completely victorious? Hitler, in control of Europe, will dominate all its trade. Our greatest market for surplus, Great Britain, will be gone. South America, with its natural European market, will be invaded by Axis colonists, developed methodically with true German efficiency. This colonization will be followed by Nazi political conquests, the latter by military domination, and the invasion of the last outpost against world domination under dictatorship will have begun.

Once entrenched, totalitarianism will spread like a plague. And we will be powerless to stop it. For with Axis domination of the whole of Europe will come the control of vast shipyards with seven times the building capacity of our own. To what might be left of the British Navy will be added the French, the Italian, the German, the Japanese, with their combined powers of enlargement far greater than are our own. With the loss of trade in the Atlantic will come similar losses in the Pacific. The markets of Japan, China, and Australia will be closed. The Netherlands Indies and the strategic materials for war without which we may become paralyzed will fall under this same rule. And in the United States could come the greatest depression in all our history. One hundred and thirty million people, raised to the highest standard of living the world has ever known, slowly strangled, to be catapulted to destruction as the tentacles of an organized world hegemony, bent on choking this Nation's breath, finally is successful in erasing the last vestiges of freedom and liberty from the face of the earth. The burning of Magna Carta and the Constitution of the United States would make the biggest bonfire the world has even seen. Then would come the dark of human slavery.

This is not a pleasant picture. The propaganda movies of the German Government that have been on view are not pleasant pictures. Like it or not, this Nazi military colossus is the most powerful land machine of death that man has ever conceived.

Fortunately, when it meets up with salt water it is forced to pause in its mad rush. It can stand and look at the British Isles a few miles away, but to date it has failed to penetrate them.

And so, with Ireland lying to their west, what would be the fate of Ireland were Britain to go down? Could it stand alone in this Nazi hierarchy? It could not. The heroes of its fight for freedom would be buried in the ashes of liberty, just as have other heroes in other lands. I am afraid the German manacles would be much more difficult to remove than were the bindings of a Cromwell or the lashings of an English aristocracy, and driving the Germans out of Ireland would be a task more difficult than any the good St. Patrick ever tackled. With an Axis victory, the garments of Irish freedom would be something to hang on the basement wall, with the penalty death if any Irishman wearing them ever emerged to tempt the light of day.

I have just returned from anotner of many inspections I have made since becoming Secretary of the Navy. It has been my good fortune to be able to fly to our many strategic points of naval defense since accepting this post and learning for myself just what we can expect in case of attack. In the Pacific I am sure we have the most powerful, straight- and hard-hitting fleet afloat. It is ready for any eventuality. It is measuring up to the finest traditions of the United States Navy and there is no cause for alarm in what it will be able to do in case of war.

A short time ago it was found advisable to reestablish the Atlantic Fleet as a major force under its own commander in chief. Our expanding Navy will find more and more units added to this already formidable force. The two-ocean fleet is no longer a thing on paper. Though not due to be completed until 1945 or 1946 under the present program of construction, vessels are being commissioned far ahead of schedule and as fast as is humanly possible. Next month another battleship, the *North Carolina*, will be placed in commission, to be followed shortly by its sister ship, the *Washington*. We are building destroyers in less than 1 year instead of more than 2 years, and will improve on that record as time goes on. We are acquiring auxiliaries for this fleet as fast as we can convert them to our uses. Minelayers and sweepers, net tenders and motor torpedo boats are being constructed and converted at a tempo unheard of in World War I.

The immediate future though not happy in its outlook has much in it that we can be thankful for. We can be thankful that we have throughout our history crushed intolerance and bigotry, and given to every immigrant who has come to our shores the right to improve his lot. We can be thankful that because of the Bill of Rights, our people today, though living in Baltimore or El Paso, Maine or Virginia, understand each other and believe in the same rights and privileges for all. We can be thankful that we have the right to say what we think, to read what we wish to read, and to believe in God in whatever manner is our choosing. We can be glad that we still live without blackouts, without breadlines, with hope in our hearts and not destitution written into our souls. We can be thankful that we are strong, that we are a credit to those who have gone before us and given to us these benefits that have made of us a great country. We can be thankful for our leadership, and be assured that it is true and forthright. And we can be glad that if the time ever comes when we must once more defend this bright land of ours, we will not be found wanting, but will prove to the peoples of the earth who look to us as the last hope of deliverance from a war-enslaved world, that we are their friends, and that we will achieve for those that came after us, a finer, better, more peaceful way of life.

Importation of Meat

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1941

RESOLUTION BY THE SENATE AND HOUSE OF REPRESENTATIVES OF THE STATE OF MINNESOTA

Mr. O'HARA. Mr. Speaker, under leave to extend my remarks, I include the following resolution adopted by the Senate and House of Representatives of the State of Minnesota, not to repeal or modify the Embargo Act of 1927 relating to importation of meats from foreign lands:

Joint resolution memorializing the President and the Congress of the United States not to repeal or modify the Embargo Act of 1927 relating to importation of meats from foreign lands

Whereas as a result of repeated outbreaks in this country prior to 1927 of the dreaded cattle disease known as rinderpast, or foot-and-mouth disease, there was enacted in that year a congressional embargo upon the importation into this country of dressed meats and meat products from any country where said disease exists; and

Whereas prior to the imposition of the embargo the spread of that disease in this country demoralized the domestic livestock industry, seriously jeopardized the public health, and resulted in the expenditure of millions of dollars by Federal and State Governments, and by the livestock industry for the eradication of that evil; and

Whereas the wisdom of that congressional embargo, embodied in the Smoot-Hawley Tariff Act, has been indubitably justified as attested by the fact that since January 1, 1927, there has been only one minor outbreak of that disease—in the State of California in 1929—which outbreak has since been traced directly to a violation of Federal regulations relating to the unloading of certain materials; and

Whereas there is increasing evidence from authoritative sources that a serious attempt is now under way to influence the President of the United States and Congress to circumvent or remove the embargo upon the importation of dressed meats and meat products for the benefit of certain foreign nations in which the said livestock disease is prevalent; and

Whereas any modification of that embargo would be inimical to the best interests of this Nation, and would cause a recurrence of the evils existing prior to 1927 as enumerated above; and

Whereas the agricultural and livestock industry of this Nation is playing, and must continue to play, a vital and indispensable part in the program of national defense, and nothing would more seriously affect that burden and the program of national defense than a relaxation of the existing barriers to the importation of infected livestock: Now, therefore, be it

Resolved by the Legislature of the State of Minnesota in regular session assembled, That we hereby respectfully and earnestly importune the President of the United States and the Congress of the United States for reasons herein stated, to resist any attempts, and to refrain from any action, designed to repeal, circumvent, or modify the embargo act of 1927 relating to the importation of dressed meats and meat products from foreign lands in which there is prevalent the livestock foot-and-mouth disease; be it further

Resolved, That the secretary of state of the State of Minnesota is hereby instructed to transmit a copy of this resolution to the President of the United States, to the presiding officers of the Senate and House of Representatives of the Congress of the United States and to each of the Senators and Representatives from the State of Minnesota in the Congress of the United States.

LAWRENCE M. HALL,
Speaker of the House of Representatives.
C. ELMER ANDERSON,
President of the Senate.

Passed the House of Representatives, the 5th day of March, 1941.

HARRY L. ALLEN,
Chief Clerk, House of Representatives.

Passed the Senate, the 21st day of March 1941.

H. Y. TORREY,
Secretary of the Senate.

Approved March 24, 1941.

HAROLD E. STASSEN,
Governor of the State of Minnesota.

Filed March 24, 1941.

MIKE HOLM,
Secretary of the State of Minnesota.

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. J. ROLAND KINZER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1941

RESOLUTION OF THE SENATE OF THE COMMONWEALTH OF PENNSYLVANIA

Mr. KINZER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the Senate of the Commonwealth of Pennsylvania:

Whereas it appears that the present Congress of the United States will be called upon to pass upon the construction of the St. Lawrence seaway: Now, therefore, be it

Resolved, That the Senate of the Commonwealth of Pennsylvania is opposed to the proposed St. Lawrence seaway because of its economic impracticability, its entire lack of advantage as a defense measure, and its detriment to business in the Commonwealth of Pennsylvania; and be it further

Resolved, That the Senate of the Commonwealth of Pennsylvania hereby memorialize the Congress of the United States not to approve or authorize the construction of the proposed St. Lawrence seaway; and be it further

Resolved, That a copy of this resolution be transmitted to the Secretary of the United States Senate, the Speaker of the House of Representatives, and to each Senator and Representative elected from the Commonwealth of Pennsylvania.

I certify that the foregoing is a true and correct copy of a resolution adopted by the Senate of Pennsylvania, the 25th day of March 1941.

[SEAL] W. J. RIDGE,

Chief Clerk, Senate of Pennsylvania.

Citizenship Day

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1941

Mr. WASIELEWSKI. Mr. Speaker, on May 3, 1940, the President of the United States approved a joint resolution of both Houses of Congress, setting aside the third Sunday of May of each year as Citizenship Day.

The purpose of this act was to give recognition to all those who, by coming of age or naturalization, have attained the status of citizenship. In accordance with this proclamation, cities and States throughout the United States are preparing to observe this day with the proper ceremonies.

I wonder, however, how many people in this country really know the true story of the origin of this day. I wonder how many people know that a simple act of charity and kindness of a foreign-born citizen was the motivating spark which has set in motion this movement to teach all citizens to appreciate the great honor and privilege which has been bestowed upon them when they assumed their sovereign rights of citizenship.

In 1923 Mrs. A. B. Vajda came to this country in search of religious and poltical freedom. Grateful to her adopted country for the opportunities granted to her, she felt it her solemn duty to know all there was to be known about her country. She immediately started to study English and become a naturalized citizen within the shortest possible time.

Her newly acquired knowledge of her adopted country was soon to prove of great value. In 1931 a man came to her for assistance. He had applied for county relief for himself and his family but had had trouble in making himself understood because he knew no English. Instead of taking the easy way out and helping him obtain the relief he desired, she helped him find a job. He, of course, passed the word on to his friends and soon Mrs. Vajda was besieged with similar pleas for assistance.

One man complained that he was not able to obtain employment because he was not a citizen. She quickly decided that the simplest answer to this problem was to encourage and to assist aliens to become citizens. Thus, through that simple act of kindness and charity, Mrs. Vajda started a movement which has received the support of Congress and the United States.

Within a short time there were so many aliens who wished to become citizens that working 8 to 10 hours a day she could not satisfy the many requests. She thereupon called on those whom she had trained to be citizens to help her in this important work. Soon she had 32 coworkers, representing 19 nationalities. They called their organization the Americanization League of America.

On May 18, 1931, the Common Council of the City of Milwaukee recognized the splendid work of the Americanization League of America and appropriated a sufficient sum of money to defray the rental of the Milwaukee Auditorium for the first citizenship day to be held in the United States.

The first Citizenship Day was held on October 5, 1931, and was attended by approximately 500 people. Each year thereafter the Americanization League of America and the city of Milwaukee has celebrated Citizenship Day on that same date. Last year 10,000 people attended the ceremonies, and thousands were turned away. It is estimated that the Americanization League of America has helped more than 12,000 aliens become good American citizens.

The purely voluntary work of one woman has resulted in the growth of an organization with thousands of members in the city of Milwaukee, each one sworn to be a better citizen than the man who was born here. Each one has taken the pledge that he is not a member or affiliated with any organization, association, society, or group that advocates, teaches, advises, or believes in overthrowing by force or violence the Government of the United States or any form of law thereof.

And now on May 18, 1941, the various cities of the United States will observe their second Citizenship Day, just 10 years after the city of Milwaukee first recognized the splendid work of Mrs. Vajda and the Americanization League of America and established its own Citizenship Day. I am proud to be a Representative in Congress of the city of Milwaukee. I am also proud to be a member of Mrs. Vajda's Americanization League of America. As long as this democracy can develop such citizens, we need have no fear of our democracy becoming decadent.

Military Highway Construction

EXTENSION OF REMARKS

OF

HON. CLARENCE E. KILBURN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1941

RESOLUTION BY THE NEW YORK STATE LEGISLATURE

Mr. KILBURN. Mr. Speaker, under leave to extend my remarks, I include the following resolution by Assemblyman Leslie G. Ryan, of Rouses Point, N. Y., and adopted by the New York State Legislature:

Whereas the President of the United States in a recent broadcast to the Nation has warned that conditions abroad and lack of military preparedness at home constitute a menace to the safety and security of the people of the United States; and

Whereas the Government of the United States is now intensively engaged in preparation for hemispheric, North American, and national defense, and Congress has appropriated large sums of money for this purpose; and

Whereas an adequate system of military highways over which troops, artillery, mechanized equipment, and other materials of war and supplies may be moved without interruption and with the utmost dispatch is one of the essentials of modern warfare and a necessity in the defense of this country; and

Whereas the State of New York, one of the most important of industrial, commercial, and financial areas of the United States and a section in which arms and munitions are being manufactured and concentrated in enormous quantities, and in which army posts and military training camps are established, is located, in part, upon the eastern seaboard, while its northern frontiers bordering the Dominion of Canada, a country now at war, are entirely unfortified; and

Whereas in the event that a hostile power or hostile powers should overcome Great Britain, its naval vessels and transports might steam through the Gulf of St. Lawrence, capture Quebec and Montreal, and, in the latter city, be in a position to strike at the rich industrial and commercial centers of the northeastern United States, and hurl its armies upon Albany and New York; and

Whereas, should such events threaten, it would be of vital importance to the United States to be in a position to move troops and military equipment and supplies to our northern frontier in great numbers and in enormous quantities for use in repelling the invader; and

Whereas, if such a situation should develop, the safety and security of our entire country might depend upon the ability of our Government to move defense forces and equipment to our northern frontier, to the Atlantic seaboard, and between strategic points in the State with the utmost speed; and

Whereas our present highways are unsuited to the purpose because many of them are narrow and run through congested metropolitan districts and some are not sufficiently substantial to carry the fleets of heavy transport vehicles, motorized artillery, and other vehicles which would make use of them in the event of war; and

Whereas the Joint Legislative Highway Survey Committee has recently made a report to this body in which its members assert that, with the present contemplated allocation of Federal funds, at least 4 years will be required to improve the 3,200 miles of New York State highways considered vital for defense purposes; and

Whereas it is the considered opinion of this body that New York State, because of its geographical location and because its entire northern frontier is unfortified, would be among the first to be invaded if Great Britain and Canada should be defeated and there should be an attempt by an aggressor nation or nations to conquer the United States: Now, therefore, be it

Resolved (*if the senate concur*), That the Legislature of the State of New York hereby petitions the Federal Government of the United States to make available from funds appropriated, or to be appropriated, for defense purposes, a sum adequate to carry out a program of military highway construction to the extent considered imperative for the safety and security of the State and Nation; and be it further

Resolved (*if the senate concur*), That a copy of this resolution be immediately transmitted to the President of the United States, the Secretary of the United States Senate, the Clerk of the House of Representatives, and to each Member of the Congress elected from the State of New York.

By order of the Assembly.

ANSLEY B. BORKOWSKI,
Clerk.

In Senate, March 18, 1941.
Concurred in, without amendment.
By order of the Senate:

WILLIAM S. KING,
Clerk.

Jackson Day Dinner Address

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, March 31, 1941

ADDRESS BY HON. ALBEN W. BARKLEY, OF KENTUCKY

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the able address delivered by the distinguished majority leader, the Senator from Kentucky [Mr. BARKLEY], to the Democrats of Massachusetts at the Jackson Day banquet, held in Boston on Saturday evening, March 29, last.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Toastmaster, ladies and gentlemen, I appreciate the honor of being assigned the great pleasure of addressing the Democrats of Boston and Massachusetts on the occasion of this Jackson Day banquet.

We meet in honor of one of the great heroes of American history. Not only was he a great military figure, but he was a great statesman. He was a Democrat in the broad and fundamental sense of the word and not merely as a member of a political organization, although he was a member of the Democratic organization of his day and fought grimly to preserve and to advance the principles for which it stood.

Andrew Jackson was a man of superb courage. Without this courage he could never have become the great hero of his own day and of ours. The whole history of American democracy is filled with the deeds of men of courage. It has not always been merely physical courage. Physical courage is necessary in the advancement of any great cause, and Andrew Jackson possessed it in a superlative degree, not only in his dealings with the public but in his private enterprises as well. But in addition to physical courage, moral and intellectual courage were necessary a century ago, and they are even more necessary today.

We have lived in the atmosphere of democracy for so long a time that it has been difficult for us to realize that there are parts of the world in which it has never existed, or that in those parts where it has existed it could be easily overthrown. We are confronted today with the stark realization that the democracy of Jefferson and Jackson and Tilden and Cleveland and Woodrow Wilson is under attack on a wider front throughout the world than has been true in more than a century, and that it is under attack in our own country as well as in others.

I do not wish tonight to speak simply as a partisan. Although we meet to commemorate the heroic achievements of Andrew Jackson and to keep alive the spirit of that democracy which he fought to preserve and advance, we feel no compulsion to speak merely as partisans. The things for which we are fighting today are not partisan in any sense of the word. We are fighting today to preserve for ourselves, and if possible, for the world, the right of human beings to freedom and the enjoyment of equal rights under a government of laws devoted to justice and fair play.

But I am sure I will not be misinterpreted when I say that during the entire history of the party which Jefferson organized and Jackson strengthened, it has been devoted to the advancement of the welfare of the great masses of our people. It has advocated and labored for such political and economic justice as will enable them to share in the great benefits which Almighty God has bestowed upon America.

Particularly has this been true during the past 8 years. The defense of democracy is not accomplished by military power alone. Armies and navies are necessary. But without the approving spirit of the people behind the armies and navies, the principles of democracy would be short-lived.

Eight years ago it would have been fantastic for any responsible American to have prophesied that in the year 1941 we would be required to train our manpower and expend billions upon billions of dollars for the purpose of defending the freedoms which we have enjoyed for a century and a half and which we are guaranteed by the Bill of Rights. It seems almost providential, therefore, that during these 8 years the activities of our Government have been largely concentrated on defending and strengthening the social, moral, educational, and economic foundations of our own American democracy. We have been seeking to inaugurate a greater degree of social justice. We have recognized the obligations of any true civilization toward its workers and to its aged. To bring this about, we have sought a degree of social security.

We have recognized the indispensability of a satisfied agricultural background. In order to obtain it, we have strengthened the ability of the farmers to supply the rest of the nations with the necessities of life.

We have recognized that financial investment is futile without the confidence of the people in the financial stability, not only of our Government but of our private enterprises. To improve and to strengthen this stability, we have given the American people the means not only to regulate financial transactions but to learn the truth concerning the wisdom of financial investments in which they may be interested.

We have recognized the soundness of the Biblical adage that "the laborer is worthy of his hire" and we have provided for labor the right to bargain collectively with its employer in the adjustment of the conditions under which men may labor.

We have recognized that a sound and stable banking system must be maintained because when the people lose confidence in their banking institutions the foundation of banking inevitably collapses.

We have strengthened to a greater degree than ever before the confidence of the people in the banking institutions of the country and today we have the soundest and the most stable banking system in the history of the United States or of the world. Depositors no longer fear for the safety of their deposits because they are guaranteed by a Government in which the people have confidence.

We have recognized the fact that interstate corporations are the creatures of the States and the Nation and that they must be held accountable to the people for the manner in which they perform the trust which has been bestowed upon them by government. Because of this theory and necessity we have enacted legislation protecting the people from unnecessary pyramided holding companies enjoying monopolies within their respective fields in the distribution of power and light and comforts and conveniences to the people.

We have recognized that no great commercial nation can prosper long without the ability to sell its surplus products to the nations of the world. Following the first World War, insurmountable barriers were erected by nearly every nation in the world against the reciprocal flow of trade across national boundaries. In order to mitigate to some extent these harsh measures, this administration, under the guidance of Secretary Hull, has entered into trade agreements with most of the important nations of the world in order to facilitate the sale of our surplus products with advantage to ourselves. This program has been handicapped by the outbreak of the World War now in progress.

Recognizing that in times of stress, business enterprises have found it difficult to obtain that credit necessary to their continuance, the Federal Government has put at the disposal of business throughout the country, the credit of the National Government, not meaning to substitute itself for banking institutions, but that it might render them a service which private institutions were incapable of rendering.

These are but a few of the things which have been done by the American Government under the leadership of President Roosevelt that insure a greater degree of

social, political, intellectual, and economic justice to all classes of American people. This program, which I can only refer to in a small degree because time forbids that it be discussed in any great detail, has given evidence of how a great democracy can work for those who live under it. I do not claim that this program, if permitted to have proceeded without interruption, would have been the final word in the solution of all our problems, but I do claim that this program constituted a bold and necessary step in the exercise of the Government's functions in order that democracy itself might not collapse in the midst of economic disaster. I care not to what class or group men may adhere, whether in business, in agriculture, in labor, in the schoolroom, in the pulpit, in the counting house or wherever men are engaged in normal and lawful enterprises in working out our methods of life, the activities of our Government during recent years have brought benefits without which the Government itself would have found it difficult to weather the storm.

The wealth of our people has been increased in the past 8 years by more than $100,000,000,000. The income of our people has increased from thirty-eight billions in 1932 to seventy-four billions in 1940, and probably more than eighty billions in 1941. This increase in the earning power and the purchasing power of the American people must go far in enabling them to undergo the burdens now so necessary in preparing to defend the very democracy under which we live.

So I repeat what I said a moment ago—that it would have been fantastic for any responsible American 8 years ago to have predicted the conditions which we face today. It is undoubtedly true that the progress which we have made during these years to make the American people and the American families feel that their Government had an abiding interest in their daily welfare has strengthened our people to withstand the assaults now being made upon their conceptions of liberty and their methods of pursuing life, liberty, and happiness.

So as we meet tonight we find all the things for which our country has stood the object of sinister attack by the most ruthless and brutal form of dictatorship ever devised by the diabolical perversion of the human intellect.

And the question which faces America today is the question of self-preservation. We are not an aggressor nation. No other nations possess any territory or any rights which we desire to take from them. We wish to live in peace and accord with every nation and every race on this earth. And we regret that there are any nations whose conceptions of grandeur are such as to delude them into the belief that they can dominate the entire world through the exercise of brutal military force. But while we are a peace-loving nation and while we desire to live in peaceful relationship with every other nation, we do not desire it sufficiently to permit ourselves to see the liberty which we have inherited and which we enjoy destroyed or undermined by either military power or by economic or intellectual infiltration or by the subversive activities of enemies within our own gates.

It is because of these conditions that we are today training more than a million of our young men to defend their country. It is because of these things that we are spending and will spend 30 or 40 billions of dollars in the manufacture of equipment necessary to our defense. It is because of these things that we have just appropriated $7,000,000,000 for the procurement of military and other defense articles for the purpose of assisting other nations who are engaged at closer grips with this enemy of democracy, and whose defense is vital to the defense of our own country.

One hundred and seventeen years ago James Monroe announced a great doctrine. That doctrine was that the United States would regard as an unfriendly act the efforts of any European nation to gain a foothold in the Western Hemisphere. If James Monroe could have foreseen the conditions which now prevail he would have enlarged his restrictions so as to include not only Europe but Asia or any other part of the world that might seek to undermine the American theory of democracy, by which I mean the theories which have been proclaimed and are in effect in all the Western Hemisphere.

If the Monroe Doctrine was essential to our protection and to the preservation of our theory of democracy in 1823, it is infinitely more essential today. We have not and do not purpose to interfere with the internal affairs of any nation. It has a right to be or to become a pure democracy, a republic, or monarchy. The people of every country have the right to determine the form of their government. What we insist upon is that every nation has the right to reach its own determination without the interference of any dictator or any international marplot, from whatever quarter he may come.

In the preservation of the things that are dear to the American people, we might as well prepare to make sacrifices. Comparatively speaking, we have made none so far. We have undergone no hardships comparable to the hardships that are being endured by the conquered nations of Europe or Asia or by the people yet defending themselves and their institutions. It is our hope and purpose to keep war away from the American Continent and it is our belief that the best way to preserve the American Continent from the physical ravages of military warfare is to aid those nations yet able to fight to stop the aggressor in his tracks. In the accomplishment of this purpose and in the preservation of our sacred heritage of freedom the American men and women of today are no less courageous and no less determined than were our forefathers who won our independence in the beginning and who have preserved it from that day until this. As President Roosevelt said a few days ago in his remarkable address to the dinner of the White House correspondents in Washington, "all of our people must make sacrifices." We must give up something that we enjoy. We must give up something of our time. We must endure the scars which may result from the battles which democracy must fight. Let us pray that these scars will not be physical, that they may be only financial or economic. Let us hope that this struggle for democracy may be won without the sacrifice of an American life or the devastation of a single American home. It is my opinion that we can best accomplish this purpose by assisting in every material way the nations that are now undergoing the terrific onslaughts of brute force in every part of the world. We cannot pay for these enormous expenditures necessary to our defense on borrowed money alone. We must be prepared to endure heavy taxes that the burden of our defense may not be entirely passed to future generations. If we can preserve the citadel of democracy, wherever it exists and wherever it fights for its existence, it will be worth all that it costs us in sacrifices or hardships. And even though we may be compelled to pass some of these burdens on to future generations, they will rejoice at our courage and foresight in handing on to them a nation still free and still strong.

We meet here tonight in the enjoyment of the freedom of speech, the freedom of assembly, the freedom of worship, the freedom of the press. These freedoms have been obliterated in vast areas of the world peopled by men and women who love these attributes no less than we love them. If we can pass this Nation and other nations to whom we are obligated, and, in fact, the entire world, through our example and assistance, to future generations with the assurance that these blessings have been preserved and guaranteed to them, then these future generations will accept whatever obligations and commitments we may find it necessary to pass on to them.

Let us revive the spirit of Andrew Jackson as we assemble in his name. Let us reassure ourselves of the nobility of his character and of his great work, and let us take into our own hearts that superb courage to fight our battles today which enabled him to fight his battles and the battles of others in the day in which he lived.

Investigation of Defense Expenditures

EXTENSION OF REMARKS

OF

HON. TOM CONNALLY

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, March 31, 1941

RADIO ADDRESS BY HON. HARRY S. TRUMAN, OF MISSOURI

Mr. CONNALLY. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address by the junior Senator from Missouri [Mr. TRUMAN], the chairman of the Senate committee appointed to investigate national-defense expenditures.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen of the radio audience, this great country of ours is facing a great emergency, perhaps the most serious in its history. This condition was brought about by factors over which we had no control and which we tried strenuously to avoid. The dictator countries have brought about a war in the Eastern Hemisphere which has an effect on every person and country on the globe, no matter how remote they may be from the center of the conflict.

To show how anxious we are to stay at peace, we enacted the Neutrality Act, voluntarily giving up some of our rights for which we had fought bloody battles. It became necessary for us to amend that Neutrality Act in order to help the democracies maintain their independence, and finally to declare ourselves the arsenal of democracy.

We suddenly decided in the spring of 1940 that we were totally unprepared to face a world at war and began a frenzied attempt to remedy that appalling situation. We decided to build a two-ocean Navy, and to train and arm a million men a year for a period of 5 years. We have begun to spend money by the billions to accomplish those two purposes. We propose to give all-out aid to Great Britain, Greece, and China, and are getting ready to spend more billions to do it.

Our national-defense machinery, never adequate nor very strong, has had to be suddenly expanded to enormous proportions. Contracts for construction, for supplies, and for munitions have been negotiated in desperate haste. Washington has been filled with people seeking contracts—some sincerely desiring to be of help to the Government, others seeking to serve only their own selfish interests.

It has become necessary to let enormous contracts for expansion of airplane plants

and for the construction of new ones. Munition plants are being constructed throughout the Nation. Clothing, supplies, munitions, battleships, airplanes, land, and everything necessary for the defense program are being purchased at a rate never before dreamed of except in 1917 and 1918. Some sixteen and one-half billion dollars in appropriations have been authorized and appropriated for defense. This does not include the appropriation of seven billions for aid to Britain or the four billions for the Army now pending in the Senate. When these appropriations are completed and authorized defense expenditures will exceed $25,000,000.

Rumors are rife questioning the manner in which contracts and the immense purchases have been handled under these appropriations. It has been charged that the contracts have been let to friends and associates of the men in charge of the national-defense program; that plants have been located on the basis of personal interests, friendship, and favoritism; that land purchases have been made at outrageous prices and that camps have been located in swamps; that in the name of speed many of the safeguards usually observed in Government transactions have been thrown aside and overlooked, although these safeguards would in no way have slowed up the program.

It has been charged that certain lobbyists have the inside track on purchases, contracts, and plant locations. Rumors of enormous fees paid to these gentlemen persist around the hotel lobbies of Washington. Purchases have been concentrated among a few manufacturers of supplies, and in some instances more money has been paid per unit on large contracts than on small ones.

It has been charged by Members of Congress that the manner proposed for Government financing of certain plants would result in the Government making a gift to the contractor or manufacturer.

Some years ago the War Department, working on a plan for an expected emergency, inaugurated what they termed an educational order. This was an order given to a manufacturer to make a few gas masks, for instance, or some other product not ordinarily manufactured in peacetime; the idea being that for this practically outright gift the manufacturer would install extra machinery to be used later on in an emergency. There have been charges that this educational order dodge has been used to make some very large gifts to the richest and most powerful manufacturers in the country since the emergency started. The time has arrived, in my opinion, for educational orders to be placed only after careful scrutiny. What we need now is actual production, and if manufacturers can't do the job, the Government itself should set up the works to do it. I would much rather see these gentlemen patriotic, however, and do the job. I do not want to see the Government operate these businesses or factories when these strenuous times pass.

There are in this great United States large numbers of small machine shops and small factories. All over the country these little independent shops and factories have made farm-machinery parts, cream separators, manure spreaders and products for the great mail-order houses. In nearly every little town there is a factory or a machine shop that keeps from a half-dozen to a hundred men employed. We want to find out whether these small shops and factories can be used in this great program. Of course, the big fellows want to buy and requisition their machines and move them out. That makes a concentration and a housing problem when they are moved, and it makes a vacant housing problem where they leave. Bulletins come out of the National Defense Advisory Commission saying they will be used, and then bulletins come out of the Office of Production Management saying that the patriotic duty of the owners is to sell them. We want to find out why they can't be used and left at home.

Subcontracts have been talked about as a method of distribution of work and profits in the program. But the big contractor wants all he can get, and he usually comes into the local set-up from some distant point, and if he lets subcontracts he brings the subcontractors with him. That is what is to be expected. Contracts should be let locally, as far as it is at all practicable.

This cannot always be true of engineering and architectural facilities. In using professional services, the best is none too good for public use, and naturally every effort should be made to get the best. It is a question, however, whether engineering firms should be made constructing contractors also. This has been done in many cases. It is also charged that one or two engineering and architectural firms have been used to the exclusion of many others just as competent and efficient.

The Senate has decided to go to the bottom of all these charges. It has created a special committee, "to make a full and complete study and investigation of the operation of the program for the procurement and construction of supplies, matériel, munitions, vehicles, aircraft, vessels, plants, camps, and other articles and facilities in connection with national defense, including (1) the types and terms of contracts awarded on behalf of the United States; (2) the methods by which such contracts are awarded and contractors selected; (3) the utilization of the facilities of small business concerns, through subcontracts or otherwise; (4) the geographic distribution of contracts and location of plants and facilities; (5) the effect of such program with respect to labor and the migration of labor; (6) the performance of contracts and the accountings required of contractors; (7) benefits accruing to contractors with respect to amortization for the purposes of taxation or otherwise; (8) practices of management or labor, and prices, fees, and charges which interfere with such program or unduly increase its cost; and (9) other such matters as the committee deems appropriate." The committee is directed to report to the Senate, as soon as practicable, the results of its study and investigation, together with its recommendations. I call particular attention to the breadth and scope of the Senate resolution authorizing the investigation. We shall be able to cover the subject thoroughly and completely.

This committee is a bipartisan one and has adopted a policy of making a thorough inquiry of the subjects it undertakes to investigate, without prejudice or bias. There will be no attempt to muckrake the defense program; neither will the unsavory things be avoided. The welfare of the whole country is at stake in the successful conclusion of our national-defense policy. Where there has been so much haste in the expenditure of such enormous sums there are bound to be leaks and mistakes of judgment. Many people believe in both patriotism and profits, but sometimes, unfortunately, profits come first with them. My experience with the public contractors is that they must be carefully checked on Government construction.

There has been much conversation about the distribution of plants and contracts on a more equitable basis as regards military safety and the stabilization of population, but very little has been done about it. Less than 120 contractors have received well over 80 percent of some eleven billions in contracts. A great concentration of plants and contracts is very noticeable in many areas. Tremendous housing problems have been created, both from the standpoint of empty homes caused by migration of labor from an area and by a lack of houses at the concentration point. The Senate committee will try to find what the facts are and what the reasons therefor are. The committee wants information on housing.

We want to know if we have really made speed by all this haste. Have we really accomplished our purpose? We know that the cost has been tremendous. We want to know if there has been waste in an attempt to speed up. How much excess cost has been due to speed and how much to willful or avoidable waste?

We want to know if the job is being done with minimum dislocation of the normal economic structure of the country. Is the little manufacturer, the little machine shop, the little merchant, being squeezed out in the name of national defense? Is economic power being further concentrated in a few hands? Are the big fellows being made bigger and more powerful at the expense of a democratic economy? We don't want to lose the very principles for which we stand, by a short-sighted or selfish policy in handling contracts and Government buying.

We recognize the importance of conducting this investigation so as not to add delay and confusion to an accelerated defense program; yet a properly conducted investigation now can be valuable both for its deterrent effect on those who might otherwise go wrong, and for constructive suggestions which it can offer to the Congress for legislative action and to the Executive for administrative improvement. So that instead of being a witch hunt after the mistakes are made and the crimes committed, this committee can be of immense constructive help in bringing the defense program to successful accomplishment. It is fairer to judge the conduct of the program in the light of conditions existing today, rather than in the light of conditions that may exist after the emergency has ended.

One of the most effective brakes on the insistence of private individuals and pressure groups in dealing with the Government unfairly, is the fear of immediate exposure and public criticism. If particular transactions and certain contracts are publicly labeled as undesirable by the Senate committee, it would unify administrative action and strengthen the bargaining position of the Government.

If our young men are being drafted for training and are forced to go to prepare against a real emergency, then these gentlemen who are acting for the Government must be made to be extremely careful in their handling of the preparations, the camps, and whatever else these young men may need. There should be no profiteers. Manufacturers, contractors, bankers, labor, and everyone else must be patriotic enough to do their part for the country with the same morale and the same willing spirit that these young men show in the camps. If there is profiteering, it will be exposed.

When people create delays for profit, when they sell poor products for defense use, when they cheat on price and quality, they aren't any different from a draft dodger, and the public at large feels just that way about it.

The Senate committee will start its public hearings on April 7 by first trying to obtain a clear picture of the national-defense program, how it is handled, and who is responsible for its operation. When we have that picture clearly before us we shall go into whatever details that seem to us to need adjusting. Any citizen who has information of irregularities based on facts where the Government's interests have been violated should inform the Senate Special Committee on National Defense. The committee's address is the Senate Office Building, Washington, D. C.

We shall make a thorough, complete, and exhaustive study of the program, and all of its ramifications. The members of the committee are Senators CARL HAYDEN, of Arizona; TOM CONNALLY, of Texas; JAMES M.

MEAD, of New York; MON C. WALLGREN, of Washington; RALPH O. BREWSTER, of Maine; JOSEPH H. BALL, of Minnesota; and HARRY S. TRUMAN, of Missouri, chairman.

Our hearings will be public, and we shall make prompt reports to the Senate on pertinent information as the investigation progresses.

Jackson Day Dinner Address

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, March 31, 1941

ADDRESS BY HON. LISTER HILL, OF ALABAMA

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the RECORD the address which I delivered on the occasion of the Jackson Day dinner at Indianapolis, Ind., on March 29.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I bring you the greetings of my colleagues and your senior United States Senator, that able Democrat and the distinguished chairman of the Senate Committee on the Judiciary, FRED VAN NUYS.

I rejoice to be with the militant democracy of Indiana. I am happy to be in the State of that charging cavalryman of democracy who for 6 years stood on the floor of the United States Senate, an accepted leader, fighting valiantly and brilliantly the battles of democracy—your friend and my friend, Sherman Minton.

I am happy to be in the State that has given to Democracy one of the finest soldiers that has ever served in our ranks and one of the great Demcorats of our day—Paul V. McNutt.

With the unswerving support of loyal Democrats such as are gathered here tonight, the national Democratic administration saved the Nation from economic chaos and financial ruin, blazed the trail of new pathways for social justice and human welfare, elevated the worth and the dignity of the individual citizen, won immortal victories for the economic rights of man, gave to the people a New Deal and a new hope, and opened the doors that common men throughout the land might enter into their inheritance.

It gave to the Nation a leader who will stand in history side by side with Washington, Jefferson, Jackson, and Lincoln—a leader whose services to our country's cause have been so great that the Nation cast aside a tradition so deep seated as to be almost a part of the organic law of the land and drafted this gallant leader to continue at the helm of state—Franklin D. Roosevelt.

On this Jackson Day we Democrats can well rejoice as we contemplate the brilliant achievements, the incomparable record of the past, for the past is indeed secure. As we celebrate Jackson Day we know that "Thomas Jefferson was the founder and philosopher of democracy—Andrew Jackson was the crusader and the sword." Jefferson thought primarily of freedom—freedom of speech, freedom of the press, freedom of religion, and the greatest possible freedom of action consistent with the preservation of stability and order.

"Andrew Jackson led the people to a victory that literally preserved freedom and popular government for posterity and gave reality to the democratic philosophy of Thomas Jefferson." Andrew Jackson with his resolute courage and his indomitable will was a mighty warrior and a mighty leader and he fought great battles and wrought wonders and won immortal victories for the people, but he lived in no such ominous hour as we live in today and his democracy was confronted with no such challenge as confronts America today.

Adolf Hitler has proclaimed a world revolution to make the Germans the master race, with all other races to be in subserviency, if not in slavery, to the Germans. Adolf Hitler would live by the sword. He has but one creed and that is the doctrine of force, of conquest, of death, and of destruction. He has declared, "Can a dynamic revolution stop at a sharing of the world? Must not the struggle continue until the final world dominion of a single nation? At the back of Germany's continental empire stands the will of absolute dominion of the world, the technical means of which are no longer lacking as hitherto."

Adolf Hitler has said: "The first condition of success is the unceasing and unending use of force." He is the sworn enemy of all that we proclaim as humanitarian and Christian. He scorns every right that we hold dear and despises the very idea of freedom for men and women. He would deny every principle proclaimed by Jefferson and fought for by Jackson. He speaks of the United States as the decadent democracy of the west and predicts our early destruction. He publicly warns the countries of South America that he will hold them to a strict accounting, remembering those who are for him and those who are against him.

All the trade routes of the world, all the sea lanes, all the separate centers of production, agricultural and industrial, Hitler would weave into one web with Berlin the center and the control. If Britain goes down Adolf Hitler and the Japanese imperialists would dominate all of Europe, Africa, Asia, and Australia. The trade of the United States would be so reduced that it would force a disastrous reduction in the standard of living of our people. Regimentation of our economic and national life and more regimentation would be necessary to the end that the liberties of our people would be more and more shorn from them.

With Hitler commanding a navy greatly superior to our own, with him possessing a capacity for shipbuilding seven times our own, the burden of armament that our people would have to bear would be staggering indeed. All America would be an armed camp. The United States would find itself within the jaws of a gigantic pincers movement—one jaw in Japan and the other jaw in world-conquering Germany with South America the handle through which the pressure would be applied to us.

With South America almost entirely dependent upon Europe for the sale of its export products, its vast agricultural surpluses, Hitler would move into South America economically, politically, and militarily. The United States would stand alone isolated without trade, without commerce, and without friends. She would be an island surrounded by a cordon of economic and military pressure and Hitler has declared that there are no longer any islands.

With such a situation confronting the United States and with the United States desiring to do all within its power to remain out of war we could follow one of two courses. Either we could do what the democracies of Europe, 12 of them, did when they indulged in the false hope and deluded themselves with the thought that Hitler would not attack them and did little or nothing to protect themselves from the Hitler menace, or we could be wise enough not to indulge in false hopes or delude ourselves but to see, to understand, and to face the situation intelligently and resolutely.

We chose the latter course. We embarked upon the latter course when we passed the Selective Service Act and the lend-lease bill, but the mere enactment of legislation and the appropriation of great sums of money, no matter how huge these appropriations may be, only start us on our course. They of themselves do not and cannot take us to our goal. To reach our goal requires a united nation—a nation in which every man, woman, and child places America and her cause first and does one thing and that one thing the thing which will contribute most to America reaching her goal.

History shows that in the past it has been practically impossible for democracies when they were still at peace and not under the compulsion of war to marshal their forces and to command their strength and meet the situation as the needs of the hour required.

This time we must change the course of history. To build our defenses in the air, on the land, and on the sea as strong as we need them, to pour out the munitions and supplies of war and to become in truth the mighty arsenal for the democracies, to reach our vast productive capacity in the shortest possible time, to do all that would become a great people and the mightiest nation on this globe is the great challenge that confronts every citizen in this Republic today. This challenge knows no party lines. It knows no factions, no classes, no groups. It summons every American under the flag to his full duty.

During the World War we organized an Army of 5,000,000 men and to the surprise of all the world placed over 2,000,000 of them on the battle lines 3,000 miles across the Atlantic. But although we were the greatest industrial nation on earth we failed in our industrial production to such an extent that the airplanes, the artillery, many of our guns and most of the ammunition that we used in those guns had to be supplied us by our Allies. If we fail industrially today as we failed in 1917–18 Britain cannot survive and our armed forces cannot be properly or adequately equipped and supplied.

We are told that the profiteering of the World War gave us a crop of 22,000 millionaires. This is no time for profiteering. This is no time for gouging the Government, be it the individual, the manufacturer, or the munitions maker. This is no time under the guise or the demands of the emergency to filch the public or rob the soldier who wears his country's uniform. There must be equal burdens and equal sacrifices for all and special privileges and special profits for none.

If the Democratic Party now in control of the Government does not exercise the taxing power and every other power at its command to prevent profiteering it will stand in default before the Nation. As we strive to eliminate profiteering we must also make every effort to eliminate strikes. I believe that labor is loyal; that labor is patriotic and I summon the rank and file of labor to charge their leaders to give their fullest and best cooperation to the National Mediation Board which has been set up by the President.

The vast wheels of American industry must turn at the fastest possible speed without the profiteering that invites and so often causes strikes and without the delay incident to strikes. The fate of our Nation may well depend upon the cooperation and the sacrifice of both capital and labor. If this cooperation and this sacrifice be not forthcoming an aroused public will demand the enactment of legislation which may take from labor some of the most precious rights for which many of us have fought through the years and which may mean the commandeering of industry.

There is no place in America today for communism, fascism, or nazi-ism, or any other isn but Americanism. Imagine, if you can, a "fifth columnist" insinuating himself into Jackson's army to sow the seeds of dissension, to sabotage or to undermine and ever living to report progress to the enemy who sent him.

As there is a difference between liberty and license so there is a difference between those who would bring about changes in our Government through orderly constitutional procedure and those who would bring about changes through sabotage and violence. The right of the former class to speak fully and freely is a right that should be preserved at all costs but there are no rights possessed by the latter class to engage in treason.

This is no time to give ear to the propaganda of those who would destroy us. There is no place in our land for the timorous or the time server or for those who would divide our people or weaken our efforts by engendering racial prejudice or class hatred. We must forget the things that may have divided us in the past and stand together as Americans, all loving and serving America.

We must build our two-ocean Navy. We must build the greatest air power in all the world. We must build an Army adequate to meet any emergency and every need. We must send every possible ship, every possible airplane, every possible gun, and all possible supplies of every kind to Britain. We must give the best that we can to the long-suffering and unconquerable Chinese, to the heroic Grseks, and to the indomitable Yugoslavians.

I pause in tribute to the valiant sons of Greece who like unto their fathers stand today at a new Thermopylae and hold the pass of civilization against the hordes of brutality and of barbarism.

I pause in tribute to the brave and sturdy Yugoslavians who thwarted a great betrayal and stand ready to fight and, if need be, to die for their liberty and for the faith that is within them.

As we pay tribute to the courage and the fighting qualities of other peoples, let us hope that the Japanese imperialists will not forget the valor and the spirit of the American people as exhibited all the way from Yorktown to the Argonne and be led into the miserable fate of the jackal of Italy, one Benito Mussolini.

I have seen the ships of our Navy in their might and their glory proudly riding the crested waves. I have visited the campfires of our selective service trainees, of our men of the National Guard, and of the Regular Army; they are the heirs in blood of the soldiers who followed Grant and Lee; they are the men and the sons of the men who two decades ago broke the arrogant and ruthless power of another conqueror dreaming of world domination, smashed his proud legions and scattered them in dismay and in defeat.

Let the Japanese imperialists, with their feudalistic sense of prowess and of vain glory, look back and remember that Japan has never met in conflict a first-rate power, and let them also look back and remember that ours is a navy and ours is an army that have known the sternest test in conflict but that have never yet known defeat.

It was written long ago, where there is no vision the people perish.

A great English statesman said on one occasion that the fortune of America lay in the fact that in the hour of her need God Almighty always raised up a man to lead and guide her. Fortunate indeed is our country that at this hour the President of these United States is a leader of unerring vision and of incomparable leadership.

From the day he took his high office he has labored to build our Navy and our defenses in the face of vigorous and at times paralyzing opposition in Congress. If his advice had been followed in 1937, when he suggested a quarantine of aggressor nations, Germany could never have received the matériel and supplies necessary to the building of her gigantic military machine. If his appeal had been heeded in the early summer of 1939 and the arms embargo repealed at that time, Germany might never have dared go to war. He of all men has divined the world situation and foreseen the dangers in it to our country.

We are witnessing today the greatest naval war in all history, and the President comprehends and understands every stratagem and every phase of such warfare. When other men could not see, he has seen with clear and definite vision; when others have doubted and dallied, he has stood forthright and foursquare; he has dared to anticipate the situation and to act and to do.

Franklin D. Roosevelt has met superbly the great trust reposed in his hands. Whatever the disagreements or differences of the past, he is the President of all the people, and for our country's cause we must rally to him as the Commander in Chief and sustain and support him.

If Britain goes down there will be another Munich but it will not be a Munich this time for Europe alone. It will be a Munich for the world with all its humiliation, its tragedy, its trials, its burdens, and its dangers for the United States.

Before our very eyes this hour there stand in ghastly and tragic relief the examples of Czechoslovakia, of Poland, of Norway, of Denmark, of Holland, of Belgium, of Bulgaria, of Rumania, of France, and of England. These nations refused to see; they failed to appreciate the task before them; they failed to recognize the danger that confronted them.

Germany was making ready, openly, arrogantly; yea, contemptuously for 7 years while the prospective victims of that preparation gave it insufficient heed. The democracies never grasped the terrible meaning of that tireless preparation. They were all too tardy in their counter preparations—all too short of vision to combine their strength while they were free people that they might continue free.

The path of destiny was clear for them to see and they glimpsed it dimly or not at all. They heard but did not heed the rumblings of the storm. Those rumblings now come to us. Shall we heed them while yet there is time or shall we disregard them and invite by default the destruction of all that we cherish?

As has been well said, Adolf Hitler has built his world picture and his world ambitions on the conviction that something which was once great in France and England and America has come to an end. The miracle of Dunkerque where a whole people rose to save its fighting men from a hopeless situation, the calm courage of the common people of London, arising daily from their air-raid shelters to find their homes destroyed and grimly planting little placards in the smoldering ruins reading "There will always be an England"; the stand to the end of the *Jervis Bay*, outarmed and outgunned, defending and saving most of its convoyed ships; and finally the Royal Air Force, whose boys willingly and smilingly engage in combat any number of enemy planes and without regard to the odds, has proved that for England at least that conviction is wrong.

As Americans we must prove that conviction wrong as to America. As Americans who would make America strong and keep America free, who would think first of America, her peace and her security, let us close ranks and, tireless and sleepless, let us march united all one way, militant and unafraid. Whatever the cost, whatever the sacrifices, as Americans let us march as Andrew Jackson would have us march. "The hour has struck. The duty is imperative and sacred. No time for discords now on nonessentials—and no possible palliation."

"Now has come the time for action,
Clear away all thought of faction
Out from vacillating shame
Every man no lie contain.
Let him answer to his name—
Call the roll."

Washington in History-Making Days

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, March 31, 1941

ADDRESS BY HON. ALEXANDER WILEY, OF WISCONSIN

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix a speech which I delivered on March 24, 1941, before the Republican women of Pennsylvania, at the Barclay Hotel, Philadelphia, Pa.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Madam Chairman, distinguished guests, and my friends of the Republican women's organizations of Pennsylvania, it is a great privilege for me to speak before your group this noon, because in speaking to you I am privileged to address outstanding women leaders. You have a direct and personal stake in the future of this country, and in your capacity as leaders you can make a distinct contribution to sane and intelligent thinking throughout the entire Nation.

After all, in the ultimate sense of government, government and the policies of government are determined to an appreciable degree by leadership throughout the Nation rather than by an arbitrary determination in Washington.

CITY OF WASHINGTON NOT ULTIMATE SOURCE OF GOVERNMENT

Washington, or the District of Columbia, is an area of about 70 square miles lying between the long stretch of the Potomac and the Anacostia Rivers. The population in this small area is about three-quarters of a million, and for the past 6 months the War Department has been adding an additional 10,000 employees a month and is today adding at the rate of 1,500 a month to its civilian staff in Washington.

These 70 square miles are probably the most important 70 square miles in the world today, and yet the city of Washington is important only because it represents the sovereignty of 131,000,000 people throughout the entire United States.

The 130 Federal commissions and agencies do not constitute the Government. The 133,000 employees of the executive branch of the Federal Government employed in the District of Columbia do not represent the Government. In its ultimate sense, government has always resided in the people themselves. What Washington thinks is important, but it is important only to the degree that it represents the authority of the people back home.

I regard the concentration of all of the affairs of Federal Government in Washington, D. C., as unhealthy, cumbersome, unwieldy, inefficient, and economically unsound. I am a strong believer in decentralization. I can see no reason for the Department of Agriculture being housed in the largest office building in the world, in Washington, D. C. It would be infinitely more logical and a great deal more efficient and economical to shift that Department of Agriculture to the agricultural section of the country. There is no reason why that portion of the Agricultural Department which deals with cotton could not be located in the Cotton Belt; that portion of the Department which deals with wheat in the Wheat Belt, etc.

When we allocate all of the construction of a certain type of navy vessel to the Great Lakes, there is no reason on earth why that portion of defense activities cannot be shifted entirely to the Great Lakes region.

WASHINGTON—A BOOM TOWN WHICH SHOULD BE DECENTRALIZED

What would happen if we would decentralize Washington in this manner? First of all, we would break down the unhealthy concentration of men and power in Washington. Washington today is essentially a boom town—the largest in the United States and the largest in history. There aren't enough living quarters in Washington for all the people who work there. Many Washington employees have to locate at some distance from the Capital. Like every boom town, this concentration of people has resulted in a shortage of office and residential space, and frequently in excessive rents. The Government recently erected $200,000,000 worth of office space and still there aren't enough office buildings for the Government's needs. All of this means that the cost of government has increased.

The Federal Government pays excessive rates for more space. Rents go up, and consequently salaries must go up. Bureaus continue to multiply and with them the amount of "red tape." Available land is being occupied so rapidly that the Navy had to go as far south as Arlington, Va., when they made plans to construct a new, $3,000,000 office building. Other Government offices have been forced to shift to Baltimore.

Regardless of where any problem relating to government originates, the citizen whom it affects is forced to deal with Washington headquarters. I have always contended that many of these problems could be handled better by officers located in the fields. Such a break-down of centralization would undoubtedly result in greater economy, because Washington is one of the most expensive spots in the country to carry on Federal business.

If Federal employees are shifted out of Washington into different portions of the country, they would become part of taxpaying communities which support Federal activities, and their expenditures would be shot back into the economic blood stream of the Nation in the areas where it would be most needed, rather than into boom-town spendings.

For these reasons, particularly now, when there is such an unhealthy and tremendous expansion in Washington, I shall continue to urge decentralization of big government.

FEDERAL GOVERNMENT NOT RUN AS A BUSINESS SHOULD BE

My second criticism of the Government in Washington relates to its conduct as a business. No private business in America could be run on the haphazard, hit-or-miss, crazy-quilt pattern of Federal spendings. No business in America can continue to spend indefinitely more than it takes in. In Washington there is no correlation whatever between the revenue-raising department of Government and that portion of Government which spends the funds. There is no relation whatever between income and outgo. I contend that no business could continue to exist on such a basis. This is not only true now during the defense period but this condition has obtained all along.

WASHINGTON ACTIVITIES INFLUENCE FUTURE COURSE OF THE WORLD

Not only the eyes of all America, but the eyes of all the world, are centered upon Washington. These are indeed history-making days—history making in the sense that we are now influencing the future course of the whole world.

In a sense, Washington is no different from other cities. It is made up of people—people who think, and people who don't think; rich and poor; educated and uneducated; young and old. There is this difference, however. In this city there are centered the three coordinating branches of your Government—the executive, the legislative, and the judiciary—and the men who constitute the personnel of these branches make up the machinery of government in a real sense.

The attention of the executive and the legislative branches of Government right now is concentrated largely on matters of foreign policy and national defense. The judiciary, of course, is determining the questions which come before it, but the judiciary also, as its latest decisions indicate, is cognizant of the changing world we are living in. Many of the old-established ideas have been discarded. The court is plowing its way into new fields, for better or worse.

The lend-lease bill, which caused so much disturbance in the country—that issue has been settled. While Washington was the vortex of the fight, immediately after the bill had passed the Senate, the storm subsided there. I hope that such is the case throughout the country.

I was one of those Senators who was in favor of assistance to England, but not in favor of the lend-lease bill. The President, in his recent speech, has informed the people as to what "all-out aid to Britain" means.

NEED FOR UNITY

The next day after its passage, I rose in the Senate and stated: "As one member of the minority who opposed this legislation, I want to say, today, that I believe that if this bill is sanely administered and if the totalitarian powers do not force us into this conflict, we may remain at peace. * * * This bill must be accepted by all the people as the law of the land. * * * Our job now is to forget our differences and to mold public opinion into constructive channels, which will direct and guide the administration of this legislation on a sane course. * * * We do not see things differently on the subject of love of America, the need of perpetuating our great freedoms and institutions. We do not see things differently in relation to 'fifth columnists,' unpatriotic Americans, and foreigners within our midst who would dissipate our courage and our love of country and our unity."

Of course, all thinking people realize that by this legislation we have entered upon a new field in our foreign policy. In Washington we are wondering how far it will take us, and where we will wind up.

We know our yesterdays are gone with their smugness and snugness and complacency. Yes, the old days are dead. We are entering upon a new era in world affairs. We know that the Nazi philosophy and the Nazi war methods are disintegrating forces. We want to keep America safe within and without, from those dangers.

However, history demonstrates that there have always been marauders abroad, but there have been, and will also, thank God, be constructive forces.

We know that Hitler has come to the top like froth. We cannot evaluate now all the various causes of his appearance. Much of the philosophy of Germany in the last 100 years has been a factor, and economic conditions have been another.

FACTORS WHICH DETERMINED OUR INTEREST IN WORLD ORDER

Every thinking person knows that great changes are taking place in the world's economics, politics, religious, and moral thinking. There is no question but what our present entrance into the international poker game was precipitated by the following factors:

First. Hitler's pronounced statement that he was out to conquer the world.

Second. His breach of treaties.

Third. His invasion and occupation of the small democratic nations.

Fourth. His cruel and barbarous treatment of those nations.

Fifth. His philosophy which is thoroughly anti-Christian.

Sixth. A knowledge of the detrimental effect upon our life if Hitler should subjugate Britain and dominate the Atlantic.

Seventh. His express plan for taking over South America.

Eighth. The triparty treaty between Mussolini, Hitler, and Japan involving the domination of the East by Japan.

Ninth. A partial understanding of what the subjugated nations are undergoing by having Hitler's way of slave existence imposed upon the people of those nations.

Tenth. His utter ruthlessless; his Machiavellian tactics; his utter disregard of international law and treaties and the moral code, resulting in the reestablishment of the law of the jungle, that brute force is the only law.

Eleventh. A realization that if Britain were to go down and Hitler were to dominate the world, our way of life would be jeopardized and our standard of living reduced.

Twelfth. A belief that if Britain were to go down, the Monroe Doctrine would be challenged and that would mean war.

Thirteenth. Putting it generally, Washington feels, what I believe the large percentage of the people feel, that in extending aid to Britain, making it possible for her to survive, the world will be safer and a more pleasant place in which to live, and I say this as one who favors aid to Britain but opposed the specific administration bill.

PRESENT ATTITUDE SHAPES FUTURE

There are some of us folks in Washington who are concerned about this future problem. We are trying to anticipate that period when the dove of peace will fly over the horizon, when all the industry of the world will have to change its course to a peacetime basis, when men who have been seared and crippled mentally and physically by the ways of war seek to establish themselves again in an ordered society, when the debt of this country will have reached the $150,000,000,000 mark, when all the other nations of the earth will be bankrupt, when the emotional and hate spree will have run its course—we are trying to plan for our tomorrow.

The old era will be dead. The underprivileged and the aged, the crippled and the maimed, and the tremendous number of unemployed will make their demands heard and obeyed.

Right now some of us are wondering how long this internal appeasement will go on—appeasement of the "fifth columnists"—and I define a "fifth columnist" as follows:

First. There is the actual "fifth columnist," the paid agent of a foreign government, or the loyal follower of a foreign philosophy. This man is a threat to American security, but at least he knows that he is such a threat, and we know it.

Second. The second kind of "fifth columnist" is the unwitting "fifth columnist." He is not an alien. He is an American who believes that he is a good American citizen, but he does things which shatter morale just as effectively as any of Hitler's "fifth columnists." In one sense he is the more dangerous of the two types of "fifth columnists" because he does not realize that he is a menace to American morale, nor do we realize it in every case.

Who are these unwitting "fifth columnists"?

First. They are the defeatists. They are the people who say that now that the lease-lend bill is passed, war is absolutely inevitable. They may be right, but that is no reason for us to preach that philosophy. If there is a possibility for the patient to live, the doctor does not send the man to his grave by refusing to give him hope. Instead, he encourages him to live; and sometimes he is successful.

In other words, the defeatists who refuse even to consider the possibility that we can stay at peace are doing their bit to create hysteria and to shatter morale. I refer again to the communications I have received since the bill was passed by this body. These same defeatists tell us that our American economy is no match for totalitarian efficiency. They tell us that in order to match that totalitarian efficiency we have to adopt totalitarian methods and disrupt our traditional system to an even greater degree. I call them vipers in our midst who do not know they are vipers. The person who spreads that kind of doctrine is also a "fifth columnist" and does his part in shattering American morale.

In this group of defeatists there is another type of "fifth columnist": He is the extremist who says that our security and our safety is dependent, not merely to a large degree on England's survival but that it is entirely dependent upon England.

That man is also a "fifth columnist" because he makes our morale entirely dependent upon England, so that if England should collapse our morale would collapse with it.

Mind you, I say these people are perfectly well-intentioned; certainly, but hell is paved with people who had good intentions; and I say that in their intemperate presentation of their viewpoint they are effectively serving Hitler's purposes in corroding American morale.

Second. The second group of unwitting "fifth columnists" are the pressure groups.

A pressure group is any group which places self-interest over national unity. You know to whom I refer—pressure groups that in this crisis of America place self-interest above the interest of the Nation.

Third. The third unwitting "fifth columnist" group is the intolerant group.

This group may be perfectly sincere and may have the most commendable motives. Like the other unwitting "fifth columnists," its membership may be composed of people whose patriotism, loyalty, and devotion to our country are unquestioned, and whose motives are of the highest. That, however, merely serves to make them more dangerous, because we accept the sincerity of their objectives, and are accordingly inclined to overlook the damage which they may inflict on American morale.

These intolerant groups are extremists. They are the people who set neighbor against neighbor, class against class, race against race. They are the men who say that anyone who favored the lease-lend bill is an out-and-out Anglophile and a traitor. They are the men who say that those who opposed the lend-lease bill are Nazis and traitors.

These people say these things in the fervent conviction that they are right. They say them, not from any bad motives, but because they believe it is their duty to do so.

I repeat, that has been my experience since the bill was passed by the Senate from talking with people who thought they were in contact with omniscience, that they alone knew what was right. I say they are "fifth columnists" because they create divisions, classes, and "isms" in our midst.

If this situation in Europe brings us into the maelstrom, we will all be asked, even as English men, women, and children were asked, to give up our old concepts of ease, our old ideas about certain privileges, and think in terms of duty and obligation.

Some of us in Washington know that this time may not be far distant. What this country needs now is production—accelerated production.

There is only one way to get it, and that is by work and sacrifice, not by falling asleep on the job, not by coddling the coddlers and appeasing the appeasers.

I wasn't in favor of becoming an arsenal for all the democracies of the world. I wasn't in favor of attempting to be the guardian angel of other peoples. But if the passage of the lend-lease bill is to be interpreted to effectuate that purpose—the President's message says just that—then I want Uncle Sam to do a job—a real job. What do I mean? Just this.

DEMOCRACY MUST GIRD FOR SACRIFICE

I was reading a book the other day wherein this idea was brought out—that the future historians will credit Hitler with being the savior of democracy, in that he challenged democracy. Democracy was becoming flabby, disorganized, soft, unworkable, run by charlatans and loose-thinking mountebanks. Its citizens were thinking largely in terms of pleasure and leisure, unaware of the fact that its great treasures—free thought, free worship, free speech, the right to own and control property and hold office, trial by jury—were purchased by the stress and battle and strivings of humans for a thousand years.

Democracy's educational process had put a false complexion on truth. The hunger for knowledge—real knowledge—was disappearing. There was simply the thought of satisfying the senses. The weakening process was on its way. Dissolution of a nation often follows such a weakening process.

But Hitler appeared, and with his appearance there suddenly dawned upon the people of England and of this country that the modern way of life had to go and that the new way must come in its place. They realized that whether it was to be good or evil depended upon them.

And so, now we are in the process of developing a new formula in which we hope that the rights of man will be included in the new way, together with a constitutional form of government. I say we hope, because we have not yet succeeded in downing the false philosophy rampant in Europe and the totalitarian powers are still in the saddle there.

Historians, I hope, will say that the citizens of America awoke—they thought for themselves—they realized that they were the last great democracy on which countless millions of homeless, distracted people of the world depended.

As long as freedom of thought, of speech, and worship remain in this country, and they can only be sustained by sacrifice and work, so long will this land be a torch for the benighted peoples of the earth.

It is up to all of us to do a real job for America.

UNITED STATES MUST CONTINUE TO STAND FOR MORAL WORTH OF MEN AND NATION

We in Washington know that this Nation is now in the international poker game. The hope of all America is that we can play it effectively, without getting into war—losing our chips.

Will Rogers once said, "We never lost a war, but we never won a conference."

We are not accustomed to the Machiavellian nature of Europe's diplomacy. We have stood for law and order—for the inviolability of contracts and treaties. We have stood for the moral worth of men and a nation.

In my opinion, we should continue, even though we are in this game, to stand for those virtues. We should see to it that we hold the cards. There is no need of this country engaging in a bluffing game. Let all the world know that now—now that we are in the game—that we are not bluffers. We mean what we say.

Some of us in Washington know that this means not simply voting $7,000,000,000—it means throwing American production into high gear. This means putting our industries into shifts, working each industry that is engaged in national defense 24, 22, or 20 hours a day.

It means tightening our belts and getting rid of our superficial living. It means getting rid of racketeers in industry, in labor, in every branch of our economy. It means imposing a tax bill that will bring America up short, to a realization that appropriating money is one thing—paying the bill is the real thing.

It means getting rid of the fettered, closed minds that have been running a lot of the show. Such minds did not anticipate the need of air defenses, the need of exploring intc new fields of defense and offense.

It means bringing into leadership, men with vision—men like Billy Mitchell, who was cashiered because he tried to teach the gold-braid artists something about war.

I have already mentioned that there are those of us in Washington who are thinking about the challenge which will confront us when the aftermath of war is here.

DEFENSE DEPENDENT UPON MORALE

The other day, in speaking to a Government official about the Government putting out of business certain manufacturing concerns, which were the economic backbone of communities—the Government was putting these concerns out of business because they were utilizing material that was needed for the war industries—I said to him, "Defense is something more than simply creating airplanes and guns and matériel. Every real defense," I said, "was built upon the strengthening of the fiber and the morale of our people. You are putting these industries out of business, thereby you are draining the lifeblood of those communities, because their pay rolls provide the economic life of those communities.

"Therefore, Government has the responsibility of cooperating with those industries to see that these concerns continue production. If they cannot get on the preferred list for war materials, then it is the business of the Government to cooperate with industry and show what that industry can be converted into, in order that jobs may continue, in order that fear or want and distress do not creep in, in order that men and women and children may not become the targets of those forces and those people who are always ready (now that Germany has prescribed the technique by her 'fifth columns') to sabotage the morale and strength of a people."

I reiterate that some of us in Washington see the menace of centralization, not only of power, but that form of centralization which drains the hinterland of men—of men who should, in that section, be producers of wealth and who should spend their earnings there. All over this country there are communities which have been drained of individuals who have been called into these other centers. The result is that in these communities the economic current has become stagnant, economic problems have multiplied. Business values, home values, farm values have literally been decapitated—all because of lack of vision.

Not in centralization, but in decentralization, can we get the production that is imperatively necessary for this program.

Not in centralization, but in decentralization can we maintain values, material, economic, and spiritual.

This is not theory, England in her magnificent program, whereby she rejuvenated not only the spirit of a nation but multiplied her efficiency and her production 500 fold, has seen the imperative necessity of decentralization. She has seen that it is necessary because of the nature of this war, and she has found the road to economic health in so doing.

Some of us in Washington are thinking that right now is a period for an appreciation of what love of country means. It is a period for sacrifice in material things. Talk is cheap, but the man and the nation who is going to come out of this holocaust whole and cleansed—as I believe England will—is the man and the nation that will forget self (that is, forget the profiteer's concept, one's strictly legalistic rights), and think of the duty and obligation which he owes to this Nation.

Our way of life cannot go on as usual. The old idea that the show must go on is outmoded and antiquated. This new era calls for something different from the fleshpots.

We are asked to appropriate $7,000,000,000. Two days before this request was made we passed other appropriations totaling about three and a half billion. That means debt. Do we realize the significance of it? As has been said, it is just the beginning. How much longer do we have to go on without being awakened to its real meaning?

The passage of the bill and the President's request for $7,000,000,000—this news was flashed around the world. It heartened the endeavors of all liberty-loving people to resist the aggressors. In Britain and throughout her domains, in the Netherlands and Scandinavia, Poland, Czechoslovakia, France, Greece, Turkey it helped bolster their morale.

DEFENSE APPROPRIATIONS MUST BE IMPLEMENTED BY PRODUCTION

That was fine; that was the first trump card that we played, but let us make it good. Hitler knows that talk is cheap; that it is easy to appropriate money in America. What he wants to know is: Will this Nation respond to the imperative need of this hour, tighten its belts, and get down to work and sacrifice?

He knows that the President's order, issued after the lease-lend bill was signed—his order whereby it was said he started material for Britain and Greece—Hitler and his agents know that Britain has been getting 95 percent of our planes and what material we could spare. What Hitler is interested in is to know whether we can back up our stage show with production.

If we can do that, we will put the fear of God in him, but I repeat—in order to do that there must be sacrifice. We cannot do it on a 40-hour week. We cannot do it by talk. We have got to do it by getting results.

It is time for the leaders of this Nation to stop internal appeasement; it is time for the leaders of this Nation to demonstrate to the taxpayer that in every dollar that is spent in this endeavor the Nation is going to get 100 percent in value.

There is no need of our posing as a good Samaritan for our friends across the sea and then being profligate in relation to spending the people's money back home.

I should like to see a campaign of education put on in this land whereby our people would be taught the joy and the need of sacrifice for country. There are too many who look upon this war-spending spree as an opportunity to take the public for a ride.

All over the British Empire men of great wealth have made great personal donations to the Crown. All over the empire men and women are engaged in a great spiritual crusade, are working night and day, to the end that their freedom might be kept intact.

Let me summarize; we should—

First. Write a tax bill which will bring America up short, catching its breath, so it will recognize what war costs—even as England is doing. Let no individual become a great profiteer out of war. In England it is said that the Government takes every individual's income over $20,000.

Second. Let nothing—I say nothing—interfere with our getting production.

Third. Stop internal appeasement and get rid of racketeers and saboteurs and "fifth columnists."

Fourth. Talk America up and not down. Have a thorough inventory made of her education resources and liabilities and get rid of the liabilities.

Fifth. As far as possible immunize America against foreign "isms." Check up on all who have come to these shores in the past 10 years, and if any of them are here as termites, saboteurs or "fifth columnists," put them in concentration camps.

Sixth. Hereafter watch immigration to our shores. We know what happened to every invaded country in Europe. We know Hitler's philosophy and his technique. Now, let us keep our eyes open and keep the doors of America closed to any possibility of a future infiltration of any of his agents. If we keep his agents out, we will keep his ideas out.

WE MUST UNITE OUR COMMON STRENGTH

It is not in a spirit of narrow partisanship that I address you today. These are sober days—days for straight thinking. The world is aflame with the holocaust of war, and to protect our beloved America we must unite our common strength, our common abilities, our common resources. This does not mean that we cannot have healthy differences.

It does mean we must use all the light and reason that we can muster to clarify our differences.

I am speaking today to leaders—leaders in thought and leaders in action.

I said you were leaders. Many times we do not appreciate that fact, and yet in your church groups, in your lodges, in your homes, in your business, in your social contacts others are looking to you for the word that will give guidance and direction to their actions.

The American Government must be great because of the greatness of its people. The people do not become great solely because of the Government.

Our problem today is to build a national defense so impregnable that no nation nor combination of nations will ever think of challenging us. A Republican, Teddy Roosevelt, once said, "Speak softly, but carry a big stick." We have consistently of late done the other thing. His wisdom was ignored, and now we find ourselves face to face with two additional serious problems: (1) How can we make America impregnable? (2) How can we now do those things which will minimize the problems of the post-war period?

Teddy was speaking about two phases of a national defense. He was practical and sensible to international conditions. He knew that there were two kinds of weapons—the material weapon of war and the great moral weapon of a people. In the latter class he recognized the vitality of Napoleon's statement, "Moral force is to the physical as 3 to 1." He felt that inherently this people, or any people that was to survive, had to feel the vitality of purpose in its own veins. He sensed that the first line of defense was the integrity, the courage, the vision of the American people, and he knew with this intact the material means would be sufficient and available.

When I think of integrity I would have you bear in mind that this applies to all four phases of our American life—the economic front, the moral front, the social front, and the military front.

While I have no intention of minimizing the importance of the role which Britain plays in preserving our way of life, I do believe that we must reassert the fact that we ourselves have to preserve that way of life. We cannot afford to create in ourselves a sense of dependence on any other nation.

I believe that a large proportion of our difficulties in recent years have arisen from the fact that we "let George do it."

Ladies and gentlemen, these are historic days. It is vital that our citizens maintain their mental poise and that they think clearly. So long as they do so, the Congress of the United States will not be stampeded by hysteria, whether it be on matters of foreign policy or domestic economy.

The men in Washington are the servants of the citizens of the United States. Those citizens must remain the masters rather than the servants of government.

There is a great crying need for maintaining a healthy minority party in Congress and a great articulate minority throughout the Nation.

The founding fathers in this very city saw the need for a system of checks and balances so that no man could become too strong and no party could become too powerful. They foresaw the need for a healthy minority group curbing the growth of one set of ideas which represented only one party—the majority party. They foresaw that any one philosophy of government administered largely under the direction of one party needed to be tempered by the constructive criticisms and the vigilance of a minority party. They foresaw that legislation dictated by the beliefs of the majority must be forged in the fires of minority discussions so that possible flaws might be exposed.

We must not forget that in other lands the ideas of democracies and the hopes of republics died when minority parties were crushed and government was taken over by one-party rule and one-man leadership. That this shall never happen in America, we must keep forever burning the flame of a minority party perpetually crusading for those things it believes to be right and perpetually fighting those things it believes to be wrong.

There must be a rebirth of a spirit of unity in the United States. We have seen other lands go down to defeat before the fierce onslaught of totalitarianism. We know that they failed to withstand the onslaught because they had been torn apart by class hatreds and philosophies which fail to find a common ground in their common need.

A great leader once said: "He only is fit to command who has learned to serve." It must be our obligation—our sacred obligation—each of us—to serve as vigilant Americans in this difficult hour of the world's history.

Parity Prices for Farm Products

EXTENSION OF REMARKS

OF

HON. ED GOSSETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

Mr. GOSSETT. Mr. Speaker, from Baylor County, Tex., I have just received

a copy of the following letter addressed to the Vice President and to the Speaker of the House, jointly:

SEYMOUR, TEX., *March 25, 1941.*

UNITED STATES SENATE,
Care of Hon. Henry A. Wallace,
UNITED STATES HOUSE OF REPRESENTATIVES,
Care of Hon. Sam Rayburn,
Washington, D. C.:

The farmers of our country have contributed to national defense a 2 years' surplus of food and fiber for which they have received far less than parity prices. They are now carrying a huge surplus at their own expense and will continue, with no thought of sabotage of production, to maintain an amount sufficient for all needs. They will join you in your efforts to encourage a wider and less costly distribution of these products to the end that the consuming public might have them at a fair price.

They do not ask the press or radio to sing their praises or parade their virtues, as is being done for those whose contributions to national defense carry a mandatory guaranty of cost plus a big profit, but they do, in the name of fair play and simple justice, ask that you provide sufficient appropriations to meet the promises of parity set up in the farm program.

FARM BUREAU FEDERATION,
By L. BRIGGS, *President.*

Two hundred and fifty-three present, second annual farmers'-businessmen's banquet.

Mr. Speaker, I have always favored and voted for parity prices for farm products. I have done this because I thought it necessary to stabilize and preserve the family-sized farmer in this country. His preservation is a social as well as an economic necessity.

Agriculture is the oldest and most fundamental of all human enterprises. The tillers of the soil have since the beginning of time been the backbone of every stable society. It was the embattled farmers at Concord Bridge who fired the shots heard around the world—shots that resulted in American independence and in the formation of the democratic government under which we have enjoyed more than a century of unparalleled prosperity and progress.

Agriculture has always been the most important activity of the American people, and our farmers have been since the beginning the bulwark of American democracy. It has always been thus with every great people. Emerson once said:

The first farmer was the first man; and all historic nobility rests on possession and use of land.

Cato testifies:

The agricultural population produces the bravest men, the most valiant soldiers, and a class of citizens the least given of all to evil designs.

We could even cite Thomas Jefferson as an authority in this instance. He once said:

Wherever there is in any country uncultivated lands and unemployed poor, it is clear that the laws of prosperity have been so far extended as to violate natural rights. The earth is given as a common stock for men to labor on * * *. The small landowners are the most precious part of the State.

The home owner, especially the landowner, the man who lives upon and gets his living from the soil, is never a radical or a revolutionist. He is a man of sturdy character, of high ideals, of unquestioned patriotism. He is a lover of liberty and of justice; he is a defender of all the worth-while institutions. It is said that the late Pancho Villa, of Mexico, whose escapades you will remember, and against whom there was sent an American expeditionary force under the command of General Pershing, when given a ranch by the Mexican Government, completely changed his way of living and his philosophy of life and became a stanch defender of the rights of private property.

If the farmer receives parity prices for his products he still would not receive parity income because of reduced acreage. The farmer does not want anything to which he is not entitled. He does not like the idea of subsidies out of the Federal Treasury. He hopes the day will soon come when such will not be necessary. But he claims the right to equality with all other groups and individuals in this country. The Declaration of Independence and the Constitution were both born of this spirit—equality of opportunity, equality of privilege, equality of protection.

Each time I pass the new Supreme Court Building I take off my hat and raise my eyes to that matchless maxim of democracy so appropriately carved in white marble above the entrance to that beautiful edifice:

Equal justice under law.

The universal application of that principle to all its citizens is all the American farmer asks or expects from his Government.

Exportation of Strategic and Critical Materials

REMARKS
OF
HON. JOHN Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

Mr. ANDERSON of California. Mr. Speaker, this country is presently embarked on an all-out program of national defense and a policy of all-out aid to Great Britain and her Allies. Unwittingly, perhaps—and certainly unwisely—we find ourselves placed in the anomalous position of aiding England on the one hand while, at the same time, giving aid and comfort to her enemies on the other. With this in mind I am today introducing a resolution calling for the creation of a special committee to investigate to what extent supplies of strategic and critical materials are being exported to the Axis Powers through Russia, Japan, or any other potential future enemies. It seems to me that it is high time that our right hand found out just what our left hand is doing.

Under leave to extend my remarks in the RECORD, I include the following tables listing some of the strategic and critical materials that are being imported into and exported from the United States. Particular attention is invited to those items in which a shortage already exists in this country.

Imports for consumption of selected commodities which may be used as war materials, 1939 and 1940

Commodity	1939		1940	
	Quantity	Value	Quantity	Value
Raw cotton, pounds	103,577,664	$8,292,048	131,779,941	$10,630,634
Petroleum and products		43,540,828		70,109,506
Iron and steel scrap, tons	29,492	301,513	2,026	48,291
Steel ingots, blooms, etc., pounds	1,654,737	94,916	2,395,846	151,492
Tinplate pounds	157,028,803	70,590,764	279,575,365	128,294,410
Tinplate scrap	None		None	
Copper, refined, pounds	5,138,880	551,981	65,164,762	7,100,241
Copper, scrap pounds	264,068	23,334	269,322	25,635
Motortrucks	None		None	
Aircraft and parts		38,834		43,424
Firearms and ammunition		414,008		145,189
Machine tools		663,496		436,919
Total		124,511,722		216,985,741

Source: Monthly Summary of Foreign Commerce, Bureau of Foreign and Domestic Commerce.

Exports of certain commodities to Japan, 1939 and 1940

Commodity	1939		1940	
	Quantity	Value	Quantity	Value
Raw cotton, bales	829,000	$42,498,000	521,000	$29,566,000
Petroleum and products		45,285,000		54,600,000
Aviation gasoline:				
In bulk, barrels	64,217	498,013	199,540	327,911
In containers, barrels	491,239	4,515,601	576,959	2,892,642
Iron and steel scrap, tons	2,035,000	32,732,000	963,000	17,082,000
Steel ingots, blooms, etc., tons	144,000	5,639,000	285,000	8,763,000
Tin plate, pounds	642,000	29,000	21,216,000	1,112,000
Tin plate scrap, tons	10,699	200,497	4,269	79,689
Copper, refined, pounds	249,277,000	27,567,000	233,897,000	24,621,000
Copper scrap, pounds	9,882,000	983,000	6,815,000	715,000
Motortrucks, busses, number	2,427	969,000	58	198,000
Aircraft and parts		3,306,000		933,000

A National Disgrace

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

"THERE IS NO RIGHT TO STRIKE AGAINST THE PUBLIC SAFETY BY ANYBODY, ANYWHERE, ANYTIME"—CALVIN COOLIDGE

Mr. PLUMLEY. Mr. Speaker, Messrs. Knox and Knudsen apparently fumbled the ball. All set to make the basket that would have won the game, somebody slipped.

Do any of you recall that statement that "there is no right to strike against the public safety by anybody, anywhere, anytime"? We need more men with Calvin Coolidge's intestinal fortitude.

These strikes against national defense, which is the guaranty for public and private safety, must be outlawed. They must stop. Congress, apparently, will have to legislate to stop them.

I am no labor baiter, nor do I fail to appreciate all that is involved. The best thing that could happen to organized labor and to employers engaged in national-defense contracts would be for the Government to take over the plants and operate them pending the determination of the rights of all parties involved.

Take the Allis-Chalmers situation: Here is a plant engaged in making absolutely vital and necessary equipment, without which—and those directing the strike from Russia well know it—we are stopped in our tracks. The Radford plant, which needs the Allis-Chalmers product, makes powder. It cannot produce a sufficient quantity for our actual present needs so long as the strike continues. There you have it.

If, as alleged by the President and by the heads of the several executive departments, there is plenty of law now, why do they not take advantage of it and use the law and stop talking? What we want is action. We have a right to take it. We insist upon it. We will take the next necessary step. I mean Congress.

As the editor of the Washington Evening Star said yesterday, this strike is a disgrace to unionism:

DISGRACE TO UNIONISM

By refusing to return to work despite an urgent request from Secretary of the Navy Knox and William Knudsen, Director of the Office of Production Management, the Allis-Chalmers local of the C. I. O. United Automobile Workers has placed itself beyond the pale of legitimate unionism.

This union, through its members, was engaged in work of vital importance to the Nation's powder-making and destroyer-building programs before going on strike more than 2 months ago. The strike was engineered by left-wing leadership and, it has since developed, was fraudulently and illegally called by "stuffing" the ballot boxes with 2,200 forged strike votes.

It was after the true character of the strike had been disclosed that Secretary Knox and Mr. Knudsen demanded that work be resumed immediately at the plant. The company agreed to resume operations, but the union, through its president, Harold Christoffel, not only refused to work but tried to browbeat other employees into staying away from their jobs by threatening to have them fired when "we, the union members, win this strike."

And now this same union, with a conduct record which is a disgrace and an affront to organized workmen, renews its refusal to work unless and until it receives "the union security" which the "United States Government has promised us." The term "union security" presumably relates to a controversy, if it may be assumed that there is any bona fide labor dispute involved in this strike, over a clause in a tentative settlement concerning the adjudication of disciplinary issues at the plant. The union claims to have received assurances from a subordinate of Sidney Hillman, associate O. P. M. director, that this clause could be interpreted as providing for maintenance of union membership. Mr. Hillman, however, issued a memorandum stating that the clause should not be construed as providing for a union shop, nor as "a device by which a man's job would be dependent on membership in the union."

This position taken by Mr. Hillman, labor's representative on the O. P. M., cannot be lightly dismissed. On the whole record of this strike, it is clear that the union, instead of being entitled to press any claim for a closed shop or Government protection, has been utterly irresponsible and faithless in its obligations, and that it has no claim whatsoever to protection or respect from the Government or any other source.

We have heard it on the floor and we have been besieged by those who insist that the laborer "must have his cut." We have been told about the huge profits that big business proposes to make out of war contracts. Well, let us look at it for a minute. If the employers think they are going to make a huge profit for themselves out of the war contracts or if the employees think this is so, they are wrong.

Owen Scott analyzed it forcefully and correctly when he said:

Labor demands at this time are based on the premise that corporations will get rich out of armament production and workers should be given a big cut of these riches.

Actually that premise is wrong.

And he goes on to say:

It is wrong because corporations are facing a tax bill that will check sharply any get-rich-quick prospect. Corporation income after taxes is likely to be no greater in 1941 than in 1940. There was an important 1940 increase owing largely to the fact that armament industries—such as steel and mining—started to make profits after they had been running deficits for many years. These corporations are not likely to make profits that correspond with those made in the last war.

High-income individuals, too, are confronted with taxes that limit their opportunity to gain riches.

This time labor is in line to reap riches. But labor, in reaping riches, can cause the country a great deal of trouble by setting under way a spiral of price increases that will become increasingly difficult to control.

Industry is being asked to avoid a raising of prices. There has been restraint in price increasing until now. But wage increases are becoming rather general, and these add to costs. As costs go up there is pressure to increase prices. Then, as prices are raised, workers demand more wage increases to maintain the purchasing power of their pay envelopes.

The result can be an inflationary price spiral. Pressures that lead to spiraling prices are beginning to be evident and are to be accentuated in the period ahead. They may become irresistible when the demands of armament industries for material make it impossible to produce goods enough both to supply the war machine and the wants of individual consumers with a record amount of money to spend.

Workers who are being encouraged by Government to demand higher wages will want new cars and refrigerators and houses. Yet the supply of those and of other commodities may be limited. There then will be competition for the available supply. Out of that competition would come a price rise difficult to control.

Consequently, Government even now is laying plans to take away from workers through taxes and forced saving part of the wage increase it is encouraging these workers to demand. Inflation control plans are having to go hand in hand with evidence that wage demands are leading to so great an increase in purchasing power that industry cannot for long produce goods in volume large enough to fill the wants of holders of that purchasing power.

Out of this situation is to grow a vast extension of Government controls, and some of those controls may extend to the labor organizations whose demands are helping to make more Government regulations necessary.

Looking at it from another angle, he says:

Labor remembers that in the last war many industries and individuals became rich. This time, workers are starting on the premise that if anybody is going to get rich

they should be the ones. War preparation is being viewed as a vast pump-priming enterprise that will produce the riches for workers the New Deal didn't succeed in doing.

The result is that three situations are giving trouble.

First, there is a wage-demand situation. Hourly wages of labor, on the average, are higher than ever before in history. An hour of work today will yield an American worker on an average about 7.5 percent more in the way of goods than 2 years ago. There are many more hours of work, assuring much bigger pay envelopes. Yet Sidney Hillman, a close adviser of President Roosevelt and codirector of the O. P. M., is setting the pattern for new wage demands by having the union he still heads demand a sharp increase.

Second, there is the situation growing out of the desire of unions to get rich quick. The Government is encouraging labor organizations to take hold in defense industries. Officials, who should know, say labor unions are collecting in initiation fees and in dues a total of $80,000,000 on construction projects alone. Congressmen are being inundated with letters from individual workmen who complain of union practices in forcing them to pay large fees for the right to work.

Third, there is the situation developing as a result of the battle between unions for the right to cut in on the defense business. This fight for jurisdiction is the most difficult of all to compose. It comes about when two A. F. of L. unions fight each other for the right to do a job or where an A. F. of L. and a C. I. O. union battle for the right to organize an industry.

The fact is the New Deal gave to labor a grant of Government power that should make most strikes unnecessary.

The Wagner Labor Relations Act gives Government protection to workers while they are organizing into unions. It requires that employers bargain with these unions after they are organized. Here is machinery that should end all thought of strikes called to organize the workers in an industry. Yet strikes for the purpose of organization still are being called in defense industries.

Strikes continue, often encouraged by high union leadership and condoned by Government officials, even when the strikes occur before the machinery afforded by Government has been utilized. It all adds up to a growing prospect that the Government which gave new powers to labor will require labor organizations to meet definite standards and submit to some regulation.

GOVERNMENT PROTECTION FOR UNIONS

Unions organized with Government protection are required to conform to no standards. Leadership is self-perpetuating. There is no requirement for an accounting of union funds. Officers of a union, unlike officers of a corporation, are held to no standard of conduct. The result is that when there is evidence of an abuse of power during a national emergency—as at present—the public is increasingly aware of the great power wielded by union leadership and of the slight responsibility that leadership is required to carry. Out of this situation can grow Government regulation of the unions it has helped to create.

Now the fault does not lie with labor or with employers alone, but with both. What they both need is to face the fact that democracy aroused is as terrible as an army with banners.

They need to have the fear of an understanding people put in their hearts. This is our land that we are undertaking to defend. If we are ever to demonstrate our ability to defend it against the subversive sabotage planned and directed and evidenced by these interferences with the orderly progress of our program to save our own governmental and individual lives, the time has come. The hour has struck. Obviously it is the burden of the responsibility of the representatives of the people to act, and that right speedily.

Did you read what Channing Pollock had to say yesterday in the magazine This Week?

He titled it "Our Lives, Our Fortunes, and Our Sacred Honor," and I commend it to your consideration:

Our newspapers these days are reporting two wars. In one, democracy fights for its life on the seas, in the air, and along a battle-front that stretches from Europe to the deserts of Africa. In the other, and what may be the decisive struggle, democracy fights its own weaknesses—crooked thinking, apathy, treachery, and venality more dangerous than tanks and planes. As the armies in Europe and Africa clash, so do front-page headlines on my desk: "War must be won in our factories," says Roosevelt—"Strikes stop defense work at three plants"—"Volunteers swelling huge draft army"—"Labor racket slows building at Fort Devens."

Luckily, so far, America is not actually engaged in the first of the two conflicts. We are definitely in the second, through our race to achieve national security and total defense in a war-torn world. If we are to be victorious, united and wholehearted effort is needed as never before. But while all over the world one kind of men and women are dying or stand willing to die for their countries, another kind are ready to betray their countries, and their fellow men, for 30 pieces of silver.

There have always been people like this; Judas was not the first, nor Benedict Arnold the last, of their tribe. Through long and bitter experience, governments have learned to ferret out and fight the spies, and saboteurs, and salesmen of military secrets. But the World War produced, and this war has multiplied and made more effective, a new and even more dangerous type of traitors. They are ordinary, everyday citizens—employers and workers—who exploit national emergency for their own selfish ends. Most of them are unaware alike of their effectiveness and their danger, but, as an eminent statesman and labor leader said recently, "every bit of grit they can put in the wheels of industry helps Hitler." That help takes many forms. It includes graft like that at Fort Devens, where the press reports pay-roll padding and other large-scale chiseling; it includes jerry-building of defense camps, scheming combinations to profiteer on defense contracts, and hasty strikes in vital industries—strikes that mght have been prevented by arbitration. The majority of these sappers of our safety would be the first to resent and the last to admit selling their birthright for a mess of pottage.

A GREATER MENACE

The truth is that they are a greater menace than any foreign foe. In some measure, the conquest of every democracy that has fallen before dictatorship may be attributed to a conscious or unconscious break-down of character among common everyday citizens of the democracies themselves. Neither unconsciousness nor any other reason excuses them. Benedict Arnold had served with valor and distinction under George Washington, and his plot to deliver West Point to the British was induced chiefly, perhaps, by resentment of his treatment by state officials. The resentment may have been justified, but the treason was not. No desire for gain, no struggle for personal or group advantage or rights, no justified or unjustified resentment or quarrel can be allowed to interfere with national security. To that, once more, an overwhelming majority of us have pledged "our lives, our fortunes and our sacred honor." Lives and fortunes can be of small avail without ships, guns, tanks, and planes. These we must have, and quickly, and we cannot afford to let anyone, of whatever group or minority, check the flow.

Every responsible authority believes that the survival of democracy in the world, including our own, depends upon the productiveness of our factories. German hopes now rest on superior equipment. Our billions for defense, our willingness to be taxed to the utmost, and, if necessary, to bear arms against an enemy, will be useless if we haven't the arms. Last January, when Hitler boasted of having more than 30,000 combat planes, Secretary Stimson was telling Congress that our Army has 650. Plainly, the situation calls for everything we can muster, not only physically but mentally, morally, and spiritually; in unity, and loyalty, and selflessness, and common striving in the common cause. The delivery of West Point to the British would have been a trifling setback compared with the possible—even probable—consequence of a paralysis now of any part of our defense effort, and whoever diminishes that effort may be a more effective enemy to democracy than any soldier in an invading army.

More than ever before, perhaps, we have reached the point where no one must do that which, if it were done by everyone, would be destructive of the common good. Every American has become a vital and essential part of the structure that is America. Greed, dishonesty, loafing, and quitting that wouldn't matter much in normal times can be our undoing now. And, make no mistake, America's foes are not only quick to detect such weaknesses, but eager and ready to aggravate and profit by them. Methods and examples are to be found in scores of published confessions. Page after page of Jan Valtin's startling new book Out of the Night tells of strikes and civil disorders engineered by Nazi and Soviet agents. Almost always the plots were carried out by unsuspecting citizens who could not understand that they were preparing the ruin of their own countries. As Valtin says, they have no inkling of the dark forces egging them on.

But whether the interruption of our national defense be alien-contrived, or only the result of human desire for gain and personal rights, this is no moment for monkey wrenches in our machinery. The unthinking may ask, "Why such a fuss if two or three armament plants do close down for a few days?" The answer is that even 1 day's delay might send hundreds of men into action ill-trained and ill-equipped; secondarily, and not so very secondarily at that, it is that each grafter and racketeer and chiseler and shirker and deserter is spreading corruption, subtracting from the average of morale and efficiency, contributing his bit to what Hitler had in mind when he said he expected America to destroy itself. Each of them is giving truth and force and effect to Hitler's indictment of all democracy.

The punishment will not be the firing squad. No one shot Benedict Arnold. It may not be the loss of ill-gotten gains. Arnold died a comparatively rich man. The penalty he paid was not death but the fact that he had to live with himself. His crime was his executioner. A broken man, Gen. Benedict Arnold died a victim of his own conscience and of public scorn and neglect.

Whether or not they are sent to prison, I should not want to be among the malefactors at Fort Devens. I should not want to be one of those who put the brakes on defense. I should not want to listen to what something within me would be saying whenever I read of a child killed by a bombing plane against which there had been insufficient preparation. I should not care to take

the chance, however remote, of seeing what I knew to be needlessly long casualty lists of my fellow citiens, or of standing alone with myself while the flags of my country's conquerors passed by. I should dread hearing spoken in America the requiem Marshal Petain pronounced over France: "Our spirit of enjoyment was stronger than our spirit of sacrifice. We wanted to have more than we wanted to give. We tried to spare effort and met disaster."

SUSPEND A CONFLICT

I ask you, during this emergency which of the two conflicts are we going to suspend: The right, which they never had, of unions to strike against the national safety, or the right of 130,000,000 Americans to national defense?

And now comes another answer by Ernest K. Lindley, who tells the whole story. The question before Congress is: "Do we Members constitute a coordinate branch of this Government, or must we wait to be burned alive with Rome while the executive branch is fishing and fiddling?"

Mr. Lindley says:

Now Knudsen and Army and Navy officials want labor to forego or postpone its unquestionable right to strike. In this, they undoubtedly have the backing of public sentiment. And this should be the first rule of the new Mediation Board.

But if the time is critical enough to ask labor to forego or defer its most powerful weapon—in fact, the source of all its strength—the time is critical enough also to cut short the tedious processes by which such employers as Ford and Bethlehem are made to comply with the indisputable law of the land.

Labor cannot be expected to defer the right to strike if the result is to fortify antiunion employers. The opportunity to organize must be assured. If, after a fair opportunity, a union fails to win a majority in a craft, or a plant, or an industry—whichever the N. L. R. B. holds to be the proper bargaining unit—it must abide by the decision.

If the employer fails to provide the fair opportunity, or refuses to bargain with the union which wins the majority, the obligation of the Government is forthwith to take over and operate the plant or industry.

If the Government is willing to do this, it should not have too much trouble with strikes due to jurisdictional disputes or to demands for higher wages.

If Congress is a barometer, the public is in no mood to tolerate strikes due to jurisdictional controversies between unions—whether between C. I. O. and A. F. of L. unions or within the A. F. of L.

Obviously, the public is in no mood to tolerate the extortion of high initiation fees for union membership. Senator NORRIS has proclaimed his dissatisfaction with William Green's reply to his letter on this point. When the patience of so long and faithful a friend as Senator NORRIS is worn thin, organized labor is on dangerous ground.

To put it bluntly, all organized labor is on dangerous ground unless strikes in defense industries stop. More than $30,000,000,000 already have been appropriated for defense. Men are being drafted into service where the pay is small and the ultimate risk is life itself. The country is overwhelmingly of the opinion that its security rests, in the first instance, on the successful resistance of Great Britain and her fighting allies. It will not stand for stoppage in production.

Labor can insist that if it defers strikes powerful employers must observe the law. If such employers are brought to time—if need be by Federal troops—labor cannot, except at its own extreme peril, close its ears to an appeal to produce—and keep on producing—while its disputes with management on other questions are heard and adjudicated.

AMERICAN REPUBLICANS

Mr. Speaker, there should be no partisan politics in this matter, but every Republican should be on his toes to cooperate to see that strikes are outlawed. He should do more. He should vociferously insist that it be done—and today. As an oppositionist, every Republican should be a constructionist. We built this country. Obviously, we will have to save it, if it is not too late.

The Strike Situation and Congressional Responsibility

EXTENSION OF REMARKS

OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

EDITORIAL FROM THE ALMA (MICH.) RECORD

Mr. BRADLEY of Michigan. Mr. Speaker, the public is becoming increasingly concerned about the strike situation in our defense industries. Editors all over the Nation reflect this alarm on the part of the American people. There is an increasing demand for congressional action or action on the part of the administration to insure a continuous flow of defense materials unimpeded by labor disputes. Under leave to extend my remarks in the RECORD, I include herewith a very timely editorial from the Alma (Mich.) Record of recent date:

[From the Alma Record]

CONGRESSIONAL RESPONSIBILITY

Elton Eaton, editor of the Plymouth Mail, member of the legislature, and private secretary of ex-Governor Alex Grosbeck, has always been a clear thinker and careful analyst of public questions, and he assumes that Congress should assume some real responsibility instead of delegating all power to someone else.

In a recent editorial he says:

"We have always believe that our Congress possesses almost unlimited powers. In fact, a study of our Constitution and of our Government provides plenty of reason for that belief.

"Congress has the right and Congress has the power to terminate conditions it does not believe to be good for the country, there is no question about that. It can and does regulate every phase of our business existence.

"The other day during the debate on the President's lend-lease bill, Senator HOLMAN, of Oregon, who said he once voted for President Roosevelt, made some startling assertions that for some reason or other did not make the first pages or even the inside pages of any of the newspapers about here.

"He declared:

"'English financiers, together with some in our own country, financed the rearmament of Germany for the present war. The ironmasters and merchants of France supplied Germany with essential mineral elements and needed materials for the rearmament of Germany for the present war. Ironmongers and merchants in our own country have supplied Japan, and are now supplying Russia, with essential war materials and supplies. The result of this inconsistent national policy is that American taxpayers must now be made bankrupt, and possibly American youth slaughtered, because commercial greed provided a madman with the destructive weapons which already have annihilated many of the governments of peaceful peoples in Europe and threaten the destruction of modern civilization there, if not in the world.'

"It is evident from this paragraph that the distinguished Senator from Oregon would place upon 'financiers,' 'ironmasters,' and 'merchants' of this country and England the responsibility for Hitler's amazingly successful rearmament program.

"Dictator Hitler came to power in Germany the same year that President Roosevelt came to power in our own country. Hitler immediately tore the veil of secrecy that had previously surrounded Germany's rearmament efforts.

"He told the world that he intended to make the German army and navy the most powerful force in the world. He declared further that it was his intention to make Germany the ruling power of the world.

"Openly and with brass-band propaganda, he immediately proceeded to build up a great army, a great air force, and as much of a navy as he could with Germany's limited naval yard facilities.

"Not only did he carry on the most extensive rearmament program civilization has ever known, but he constantly flaunted the fact before the other nations of the world and he told our own Government and every other government just what he was doing and he sent pictures to America to show our people proof of the progress he was making.

"And still our Washington administration permitted Hitler to come to America and purchase such supplies as he needed and did nothing to stop him or to even build up our own forces to meet his threat.

"Power to check the sale of war materials to any nation lies absolutely within the control of the Congress of these United States. Congress could and can at any time pass legislation which would prevent any 'financier,' 'ironmonger,' or 'merchant' from selling anything to any other country in the world.

"And what did Senator HOLMAN try to do about it? What did Congress try to do about it? What did the President try to do about it?

"The record is too well known to the public to be retold.

"We sold Hitler everything that he needed. We fiddled along, made light of his repeated declarations of world conquest, and now comes along a western Senator who would place responsibility for it all upon a group of citizens who haven't a single right or power in the world other than that bestowed upon them by congressional decree.

"But this is no time for argument. We are confronted with a live-or-die task. Let us do the job that is before us and then after it is over, relegate to obscurity in the American way, those who are responsible for the plight we are facing."

Mr. EATON has not gone far enough in his discussion of the responsibility of Congress, so I will go on from where he left off and call attention to where Congress has been entirely indifferent and almost criminally negligent of its responsibilities.

Every day we hear or read about a strike somewhere in a plant that is working on material for defense. Plants are being closed down, thousands of men are out of work, others are picketing the plants and absolutely defying the police and the courts, and thus

interfering with production of defense material simply because Congress has delegated its powers to some board or bureau.

How any Member of Congress having a teaspoonful of common sense can give his approval to a law which puts into the hands of labor-union agitators the power to absolutely dictate how industry shall be controlled is a mystery which the common people and the taxpayers cannot solve.

There is not, at the present time, a single industry producing material for defense of this country and aid to democracy that is not being hampered and interfered with by strikes, and forms of sabotage, and Congress stands by and approves this outrage which burdens the people with tax and more tax, while the Congressmen who draw $10,000 a year, duck their sworn responsibility and betray the people who foot the bills.

It would seem as though if a man had any gray matter at all, he could see the rank injustice of sending the young men of the country to war to put up their heads for machine-gun fodder and draw a dollar a day for this work, and then letting the men who are supposed to furnish them with guns, tanks, planes, ammunition, and boats sit down or walk out and refuse to work even when drawing $10 a day.

If a young man resents going to fight for his country, and most of them are willing and glad to help, he is branded as a deserter and traitor and severely punished, but a member of a labor union can sit down and refuse to work or let anyone else work to produce defense material and Congress provides no punishment for that sort of a deserter or traitor. No matter how important the work or how necessary the continued production is to defense, Congressmen delegate their authority to boards and bureaus who approve a do-nothing policy.

Work on airplanes, on tanks, on guns, in steel mills, and manufacturing plants of all kinds is being delayed and interfered with and the welfare of the country is being endangered and the lives of the young men placed in jeopardy simply because Congress lacks the vision and the courage to say to laboring men making these things to protect the country, "You work and keep right on working or be branded as a deserter and take the consequences."

The two things that seem to be most needed in Congress are common sense and courage. If the young men of the country have the courage to go to war and fight to save the Nation, the laborers should have the courage to go into the plant and work night and day to help the soldiers protect the Nation and save democracy.

Grand Coulee Dam Mightiest Man-Made Thing

EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

ARTICLE BY RICHARD L. NEUBERGER

Mr. LEAVY. Mr. Speaker, on Saturday, March 22, the formal ceremonies were held at Grand Coulee Dam, which is located in the State of Washington, one end of it being in my congressional district and the other in the Fourth Congressional District, so ably represented by my colleague the Honorable KNUTE HILL.

This structure is almost completed now, and the celebration was held in connection with the generation of the first hydroelectrical energy in two of the smaller generating units. This giant project has many times been referred to as "the eighth wonder of the world." Its completion makes a reality of what was only a vision in the minds of a few far-sighted men 25 years ago, when "Billie" Clapp, a young lawyer at Ephrata, Wash., first proposed it. His proposal was enthusiastically supported by Jim O'Sullivan, a lawyer and engineer, who lived in Ephrata, and Gale Matthews, a businessman there. This vision was communicated to Rufus Woods, the editor and publisher of the Wenatchee (Wash.) Daily World, and he likewise being a man of vision, gave the suggestion publicity. All of these dreamers of that time were laughed at and called visionaries. Indeed, it must be a real joy and satisfaction to them, as they are still alive and active in that region, to see their dreams come true.

Under date of March 16, 1941, there appeared in the New York Times magazine section a pen picture of this marvelous structure that is so accurate and so well within the facts, as I know them, that I feel justified in making it a part of my remarks and extending it in the CONGRESSIONAL RECORD.

The article by the Honorable Richard L. Neuberger appears under the caption "Mightiest Man-Made Thing" and is as follows:

[From the New York Times of March 16, 1941]

Athwart the Columbia River, where it twists across the gaunt uplands of the State of Washington, a mighty structure stands. This structure is the most massive edifice ever reared by man. Soon it will be the world's greatest single source of hydroelectric energy. Most important of all, it heralds the promise of a new day in a vast American region—the Pacific Northwest.

This stern battlement of steel and concrete is Grand Coulee Dam. Construction began nearly 8 years ago in a desolate wilderness of granite cliffs and sagebrush flats. Today the dam is virtually completed; only the leveling of the parapet remains. Next Saturday a pair of 20,000-kilowatt power units will be switched on. This will be the first production of electricity at the great plant. Symbolically, in these tempestuous times, the energy will be poured at once onto a 220,000-volt line for delivery to factories turning out national-defense orders. In July the first big generator will be hooked up to its full 108,000-kilowatt output. Eventually 18 such machines will be in operation at the dam—generators 1 of which a 50-car freight train hauls across the continent disassembled. They will throw onto a network of transmission lines power to light farms, turn factory wheels, and pump water. The staggering ultimate capacity of Grand Coulee will be 10,708,000,000 kilowatt-hours.

For two decades men and women of the Northwest have awaited this moment. To the region, Grand Coulee symbolizes the passing from a frontier stage of development to a well-balanced industrial economy.

It is a multiple-purpose project. It means the irrigation and reclaiming of 1,200,000 acres of arid but fertile land. It means tapping the mightiest source of water power ever surveyed. It means improved navigation on the country's second largest river—the Columbia—and it means new farms, new homes, new industrial plants, new factories, and new cities in the Northwest.

In the autumn of 1933 Bureau of Reclamation engineers jounced across the uplands in an old touring car and began surveying the site of Grand Coulee. At that time the Great Pyramid of Egypt was still the most massive structure in the world. Now the pyramid has been surpassed. Not once, not twice, but three times. Grand Coulee, spearhead of America's last nudge at the frontier, represents a new era in engineering achievement.

The dam contains 11,250,000 cubic yards of concrete. This is enough to pave a standard automobile highway from Jersey City to Seattle and back by way of Los Angeles. Over the spillway of Grand Coulee this spring will crash a sheet of water half again as long as the American Falls at Niagara and twice as high. On the crest of the dam four liners the length of the Queen Mary might be placed end to end.

Sufficient water will flow through Grand Coulee each year to provide New York City's water supply for a century. The foundation of the dam covers 35 acres. Each of the twin power houses will produce as much electricity as Muscle Shoals and the Dnieperstroy Dam in Russia combined. Behind the dam will be a man-made lake with 2,000 gallons of water for every person on earth. There will be a dozen irrigation pumps, each of them adequate to take care of the water requirements of two communities the size of Chicago.

These comparisons might be endless. So much energy will be produced at Grand Coulee that the power houses will have to be operated by remote control. Other dams assume the proportion of toys when contrasted with Grand Coulee, which will spin out more kilowatts than all seven dams in the T. V. A. combined. Grand Coulee has more than three times the bulk of Boulder Dam.

Here is an ambitious attempt to duplicate the wonders of nature. Ages ago a finger of the Cordilleran ice cap blocked the Columbia River and forced the stream to carve a different canyon. For countless years this new chasm was gouged out at right angles to the river's original course. Then the glacial sheet retreated into the Arctic. The second canyon was left dry and silent.

This dry abyss is known as the Grand Coulee. Where the fabulous barrier of ice once stood Grand Coulee Dam now blocks the Columbia. The immense pumping plant will heave water back into the Grand Coulee, and through the gorge this water will flow to bring life and fertility to a high plateau as large as the State of Delaware. Only two other dams, Boulder and Dnieperstroy, are powerful enough to move the pumps, yet this prodigious mass of machinery will require only a fourth of Grand Coulee's output.

The dam which will accomplish these amazing feats is 4,300 feet in length, 500 feet thick at the bedrock base, and 560 feet in height. Because the Columbia River gnaws its way to the Pacific with savage fury, construction of Grand Coulee involved countless problems. Huge temporary cofferdams had to be constructed. Great ice plants were necessary to freeze slides of mud and shale. The river clawed at these devices with cold and hungry talons.

Many engineers did not believe that a dam two blocks thick at the foundation could be built across the Columbia. Grand Coulee proved it could be done. Anchoring the foundation to the living granite was accomplished within the protecting barricade of immense cofferdams. The concrete was poured incessantly 24 hours a day. A dragon-like belt brought gravel from a hill 2 miles away.

Records were broken in almost every phase of construction. Auxiliary jobs were huge tasks in themselves. Towns far upstream had to be moved out of the reach of the rising waters. Bridges 100 miles north had to be

raised and highways and railroads relocated. Innumerable trucks rolled across the Inland Empire, bringing potatoes, flour, hams, and beans for thousands of men. On one Sunday the mess hall fried 3,000 hot cakes and roasted 2,400 pounds of turkey. Everything from oatmeal to marshmallowed sweetpotatoes has been cooked in similar quantities.

Grand Coulee Dam is the key with which the Government hopes to open the last great frontier of continental United States. When construction of the dam was started, only an old pioneer named Sam Seaton lived in the area. He ran a rickety little ferry across the Columbia, which took sheep herds to their mountain pastures and Indians to the Nespelem Agency.

Sam Seaton has many neighbors now. Where his ferry threaded the river, the tailrace of the dam foams and hisses. Model bungalows for thousands of workmen and engineers are spread out in the canyon. Grass and shrubbery have unrolled on the lava rock like a great green carpet. Shack towns full of hangers-on sprawl over the uplands.

Four hundred thousand tourists a year drive from Seattle and Portland and Spokane to see the dam. And not all who come intend to depart after a sightseeing tour. Settlers and migrants are moving in. Men looking for farms to buy have got off westbound trains at Spokane and Wenatchee and gone by bus to Grand Coulee. And at the order of the President survey parties are mapping the land to be irrigated, marking where orchards should be, where alfalfa should be planted, where railroad spurs should be run in, where settlements should be. Soil and engineering experts are performing this task under the direction of Dr. Harlan H. Barrows, head of the geography department at the University of Chicago.

New industries are moving westward; a vast aluminum plant has been built on the Columbia not far from the town of Vancouver; another aluminum factory is soon to be commenced. It will be somewhere on the Grand Coulee network of electric lines. Soon airplanes patrolling democracy's lifelines over the Caribbean Sea and the English Channel will be byproducts of hydroelectricity spun out in America's greatest dam.

Since Grand Coulee Dam was begun there has been more industrial activity in the Pacific Northwest than ever before. Army engineers consider improvement in navigation one of the significant results of Grand Coulee, especially in view of the crisis in foreign affairs. They say that an emergency would impose impossible burdens on the region's twisting single-track railroads. Mountain sidetracks would clog with troops and material. But the Columbia River is a thoroughfare of unlimited capacity, and Grand Coulee will control the flow of the river all the way to the sea.

Bonneville Dam, 340 miles downstream from Grand Coulee, contains the world's largest set of lift locks. Government dredges are deepening the channel and removing gravel bars. Wheat barges and other vessels will be able to navigate the Columbia's main tributary, the Snake, all the way to Lewiston, Idaho, where they will be at the bottom end of Hell's Canyon, deepest abyss on the North American Continent.

Not far from Grand Coulee are the tumbledown farms which pioneers abandoned long ago because of lack of water. Lacy transmission towers go past some of those farms now. Irrigation canals soon will follow. The first delivery of water will be made in 1942. Thereafter 50,000 acres of land will be reclaimed each year, until the entire 1,200,000 acres of sagebrush have been transformed into a checkerboard of orchards and gardens and fields.

Power lines stretching by those spectral, deserted farmhouses tell in one silent tableau the story of Grand Coulee and the story of a new day in the Northwest.

Washington a Large Dairy State

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

REPORT OF THE MILK INDUSTRY FOUNDATION OJ NEW YORK

Mr. SMITH of Washington. Mr. Speaker, I desire to call attention to a recent report of the Milk Industry Foundation of New York, which sets forth the facts showing that Washington holds an important position as a dairy State.

The report reads as follows:

WASHINGTON LARGE DAIRY STATE, NEW FOUNDATION FIGURES REVEAL

NEW YORK.—Washington's ranking position in the dairy industry is vividly depicted in a new handbook issued by the Milk Industry Foundation. According to the book, Milk Facts, 345,000 cows, valued at $20,010,000, produced $26,039,000 in cash farm-milk income for Washington farmers in 1939. Production of farm milk in the State for the year totaled 931,000,000 quarts; creamery butter, 35,838,000 pounds; Cheddar cheese, 9,557,000 pounds; ice cream, 3,768,000 gallons.

The United States is one of the ranking milk-using nations in the world with per capita consumption of fluid milk totaling 153 quarts a year, pictographs show. Milk and its products comprise over 25 percent of the 1,500 pounds of the principal foods consumed each year by the average American, the book says, with 45,000,000 quarts of milk delivered daily to homes and stores.

Pictorial charts and figures show the importance of the milk industry to the country's economic picture and illustrate how milk costs less in the United States in minutes of labor. Diagrammatic charts illustrate how the annual milk supply of some 51,000,000,000 quarts is utilized.

Fluid or fresh milk for cities and villages, providing the farmer's highest cash return, acounts for 29.9 percent of the country's yearly production. Creamery butter takes 31.6 percent; farm butter, 9.2 percent; while 11.7 percent of the milk is used as fluid milk on farms where produced. In making cheese 6.3 percent of the total milk is used; ice cream, 3.1 percent; and canned milks, 4.5 percent, according to charts.

A chart of the distributor's milk dollar shows 52.31 percent going to dairy farmers for milk; 19.24 percent to delivery labor; 8.21 percent to delivery expense; 6.33, plant expense; 4.94, plant labor; 2.78, administrative labor; 2.18, administrative expense; 1.68, office labor; and profit, 2.33 percent, representing only a fraction of a cent per quart of milk.

"The production and utilization of milk have so increased in this country," says the booklet, "that today we are the greatest of dairy nations. Milk, butter, and other dairy products annually create an output valued at three and one-half billion dollars.

"Facts about the cows and the farmers that furnish the milk, the distributors whose efficiency has made wide usage possible, and the consumption of this 'most nearly perfect food' should lead to a clearer understanding of milk economics.

"One out of every fifteen families in the United States is dependent on milk for a livelihood. Milk is the largest single source of farm cash income, larger than cattle, twice cotton, three times wheat, five times tobacco. There are 25,000,000 cows on three-quarters of the Nation's 7,000,000 farms.

"Americans enjoy the best milk in the world and economical distribution, meticulous sanitation, pasteurization, and other safeguards have made our milk supply a world standard."

Drive Against Poll Tax Gains Headway in the South

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

ARTICLES BY JENNINGS PERRY

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I am inserting in the RECORD a series of three articles by Mr. Jennings Perry on the poll tax. The articles appeared in PM on March 20, 21, and 23, 1941.

[From the New York PM of March 20, 1941]

DRIVE AGAINST THE POLL TAX GAINS HEADWAY IN THE SOUTH

(By Jennings Perry)

NASHVILLE, March 20.—The gentlemen have been lying down here and getting away with it. It's been going on a long time. A long time too long. But the lie plays out

The gentlemen I mean are those perfervid political orators who from festooned stumps have been singing us to sleep all our lives with the glories of "our democracy." They have freely taken the name of Jefferson and of Jackson in vain. They take the name Democrat in vain.

THERE ISN'T ANY DEMOCRACY DOWN HERE

We send some of these gentlemen up to Washington and there they keep up the appearance. Their adoration is the most strident. Their tears for the "pore little democracies" of Europe, for the plight of the "democratic way of life"—chased from peak to peak along the Alps—are the greatest and most glistening tears of all. And, from here, pure glycerine.

They haven't got democracy where they come from, or anything that decently passes for it.

Democracy in the eight States hereinafter named succumbed a generation ago. Its beautiful corpse and classic raiment still lie about the place. But democracy, the political form, is dead. Only its imperishable spirit squirms.

The form lies here with a knife in its heart and the name of the knife is poll tax.

Democracy may be having a hard time keeping alive its blessed spark in poor Czechoslovakia, poor France, poor Denmark. But

there the flame was beaten down by a brutal conqueror.

In Tennessee, Virginia, South Carolina, Georgia, Mississippi, Alabama, Arkansas, and Texas it was struck down by the hand of the people themselves—a political suicide of the first magnitude.

A PROGRESSIVE FAILING

I take it democracy means popular rule. I take popular rule to mean participation by at least a majority of the people in the public decisions. In Tennessee 7 of 10 of the people live, and love (I hope), and die without ever marking a ballot or seeing the inside of a voting booth

In Texas it is the same thing. In Virginia it's worse. In Georgia it's 4 of 5. In South Carolina less than 10 persons out of 100 voted in 1940—though the vast majority panted after Franklin D. Roosevelt as the hart after water.

There's no mystery about the decline and demise of democracy in these States. It was a progressive failing whose sad course, from cause to result, may be charted plainly. Take a case history—take Tennessee.

In 1888, for the last time expressing their choice freely, 90 percent of the adult male population of Tennessee cast a ballot for President. In 1890, by act of legislature, payment of the poll tax was made a prerequisite to voting. In the next Presidential year, in 1892, the voting percentage dropped 20 percent.

By 1904 it had fallen to 58 percent.

By 1920 to 46 percent.

By 1928 to 34 percent.

And in the fateful year of democracy's greatest test on the face of the earth—1940—less than 28 percent of the adult population of Tennessee had a voice in choosing the President of the United States—or the Governor of their State—or the sheriff of their county—or the mayor of their town.

What these figures paint is simply disappearance of government of, by, and for the people—a galloping retreat from those precious political principles sometimes named, I believe, the American dream.

The minority is ensconced, and that dwindling.

A DREADFUL MISTAKE

Now the people of these poll-tax States are neither morally corrupt nor politically depraved. They made a mistake.

It was a dreadful mistake. They compromised a principle and lost a right. Their power lay in a free ballot. They put a little price, $2, on this freedom. Their freedom sickened and their people's power drained away.

Now, awakening, our people face a tremendous task, crippled. Having abandoned democracy, how shall they restore democracy by popular mandate? How shall they recapture power for the people by the exercise of a power the people no longer hold?

A few years ago the people of Arkansas sought to break free from the poll tax by constitutional amendment. In the "popular" referendum held under the poll-tax requirement, 13 percent of the population voted.

ELOQUENT HYPOCRISY

Nevertheless the tremendous task is undertaken. A generation, shaken to the bottom by the political revival of the New Deal, brought up short by a world-wide attack on the democratic ideal, is fed up with the gentlemen's eloquent hypocrisy. It begins to demand the substance for the shadow of democracy at home.

Free America well may watch the struggle in these apostate but penitent States. It is the contemporary battle of the American Revolution.

In Virginia three of the four announced Democratic candidates for Governor have declared for a free ballot. This has not happened before.

In Georgia this year the legislature has been forced to face a proposal to repeal the poll tax. This has not happened before.

Louisiana threw off the poll tax in 1936, Florida in 1938.

In Tennessee the recent assembly, under the desperate knout of Boss Ed Crump, of Memphis, beat down poll-tax repealers and split the State wide open. Such a war for enfranchisement is on as these hills and valleys have not looked upon—not even when women drove for political equality—in this century. The fair name of democracy has won back its sense.

It is a war to the finish. Its echoes rumble through the Southland from the Potomac to the Gulf.

[From the New York PM of March 21, 1941]

POLL TAX HAS HELPED MEMPHIS BOSS, BUT IT WON'T MUCH LONGER—MEMPHIS BOSS GIVES LIP SERVICE TO DEMOCRACY WHILE TENNESSEE MOVES TO GET IT

(By Jennings Perry)

NASHVILLE, March 21.—The poll tax which disfranchises the great majority of the people of eight Southern States hangs on by more than inertia. It has the help and protection of the bastard political system it has created. It has its boss ———'s—the Boss ———, and all the lesser noise of his tribe throughout these States, who have known how to make capital of the restricted vote.

Boss ——— of Memphis is one of the few remaining big-name bosses of the land. He is called "picturesque." He has "made the trains run on time" in his city. I don't know whether Boss ——— thinks he believes in democracy or not. I realize that a great many people who don't believe in democracy ardently believe they do. He makes the profession of faith, like so many other of our gentlemen down here, with a straight face. He has spoken piously of the "poor men and women" the poll tax bars from the vote. He quite well may again.

But now in fact and in act he has been smoked out of his pretense. He has loved to pose as a philanthropic leader. He stands now exposed as a frog who is big merely because his pond has been kept pitifully small.

CONTROL OF PARTY

For Boss ——— throttlehold on the political life of Tennessee rests solely on the constricted vote (averaging less than 400,000 of an adult population of 1,800,000), which gives his tight Shelby County machine, with 100,000 of the 250,000 Democratic votes, control of the party.

The showdown was forced in the recent session of the Tennessee Assembly on the clear democratic issue of the right to vote. For the first time in this State, it was a legislative question of outright repeal of the poll-tax prerequisite, which in 50 years has dragged down the vote in Tennessee from 90 percent of the eligible electorate to less than 25 percent.

Repeal would have reopened the way for the return of majority participation in government in Tennessee—for the return of democracy. And for, as none better than ——— is aware, the end of ———.

For Boss ——— has no personal popularity in the State at large. In 1,000,000 votes—if even 1 Tennesseean of 2 might cast the ballot— ——— could not swim.

A truly touching circumstance of the showdown was that ——— himself had advocated poll-tax repeal. It was a promise that had been given artfully, to be sure, a bait—a little buttering of the people the people could be depended on to forget, and hence to be forgotten. Only the people were in earnest, it turned out. The repealer measures were planked down before the legislature the day the session opened.

Beautiful to behold then was ——— scurrying desperately to rescue ———'s scepter from ———'s promises.

It was done, as these things are done—with the connivance of a subservient governor, the barefaced rigging of committees, a lavish distribution of patronage. Boss ———'s personal strawbosses, Sheriff Joyner of Shelby County, and City Attorney Gerber of Memphis, posted to the capitol to ride herd on the restive representatives. The legislative session was drastically cut down from the constitutional 75 days to 41. The poll-tax repealers were stopped in the Senate, without hearing and without debate. Democracy was postponed in Tennessee.

Not for long, however, by the signs that fly. ——— and all the shoddy flummery that has passed for popular rule in Tennessee since the World War have snatched a reprieve. But at the dear cost of opening the eyes of the people to the full measure and consequence of their disfranchisement.

It had to be shown in open daylight to the people of this State that their legislature is without independence, that their political parties (which had pledged repeal) are impotent. Boss ——— bludgeoned repeal, but a generation that has grown up under the poll tax, hardly noting its corrosive effect on the elective system, now beholds the tragedy of its political circumstance, now understands the mechanics of vote restriction by which government has been taken from the many by the few.

PRESS ACTIVE

Ordinarily defeat of reform legislation is followed by a lull. Not so with this fight. The press of the State, which 2 years ago fervently denounced Gov. Gordon Browning's attempt to hamstring ——— by importing the vicious Georgia county-unit system into Tennessee, as vigorously and as unanimously has turned upon ——— methods and motives in staving off poll-tax repeal. The campaign is candid and unremitting.

Anti-poll tax organizations blossom throughout the State, uniting civic clubs, women's clubs, farmer federations, ministers, schoolmen, humanitarian societies, and all of labor. The battle will go headlong into the primary and general elections of next year.

Tennessee will be the next Southern State to return to democracy. "Pay a poll tax to kill the poll tax," is a rising and powerful slogan among a people who belatedly perceive how by this pernicious handicap they are deprived of a right lovers of freedom down through the ages have given their lives to win and to defend.

[From the New York PM of March 23, 1941]

SOUTH FIGHTS TO KILL POLL TAX—WHAT IS CONGRESS WAITING FOR?—THE DRIVE TO GAIN FREE SUFFRAGE AND REAL DEMOCRACY PROGRESSES ON MANY FRONTS

(By Jennings Perry)

NASHVILLE, TENN., March 22.—Democracy, the faith, is the conviction that the liberty of the individual and the welfare of the community are most secure in the hands of all the people. It is a jealous and uncompromising faith.

Democracy, the way of social life, rests on the chastity of certain basic rights—the right of suffrage being foremost. To democracy the vote is a breath to existence.

In the eight poll-tax States there are more young men registered for the draft—to be trained to defend democracy with the sword—than there are people who enter upon democracy with the ballot. In all, some 10,500,000 Americans down here are deprived of the vote.

This has come about, insidiously, in 50 years. If it had been done by law suddenly, there would have been, we may be sure, violent revolt. If it had happened some-

where else in the world, we by now should have been sending an expeditionary force to liberate the oppressed.

PREPARE BALLOT BATTLE

And what is being done about it as it is? I will tell you that:

The democrats of the South are preparing to win back what they have lost. I do not mean the Democrats. I mean the "democrats." It is a political renascence. It portends the next battle of the American Revolution.

In the van are young newspaper editors like Chess Abernathy, of the Cobb County Times in Georgia, a virile voice crying in that Hoke Smithian wilderness; like George Carmack, of the Knoxville News-Sentinel, and Virginius Dabney, of the Richmond Times-Dispatch, and Edward Meeman, of the Memphis Press-Scimitar. And older men of strong political morality, like Editor Julian LaRose Harris, of the Chattanooga Times. And democratic publishers like Barry Bingham, of the Louisville Courier-Journal, and Silliman Evans, of the Nashville Tennessean, who has come to all-out grips with Boss Crump on the issue and whose paper each morning demands that the poll tax be killed so that democracy can rise again.

There are courageous men in political life like Maury Maverick, of Texas, who has preached the Jeffersonian precept of the just and equal vote from San Antonio to Birmingham, and CLAUDE PEPPER, of Florida, who soon will introduce in the United States Senate a companion piece to Representative LEE GEYER's Federal anti-poll-tax bill now under committee veto in Representative HATTON SUMNER's House Judiciary Committee.

There is the Tennessee Committee for Majority Rule, an outgrowth of the Tennessee League of Women Voters' energetic fight for free suffrage, whose sole purpose is poll-tax repeal; and the new Tennessee Commonwealth Federation, launched by the A. F. of L., the C. I. O., and the railroad brotherhoods to fight against the poll tax and for civil rights. And the Southern Conference for Human Welfare, sponsor of the Geyer bill, whose Pirtle case—a test of the poll tax by the constitutional guaranties—is now on its way to the Supreme Court of the United States, following the recent adverse decision of Cincinnati given by Judge Xen Hicks, of Knoxville, whose associate on the sixth circuit appellate bench is Judge John Martin, of Memphis.

And there is the Southern Electoral Reform League, organized last month at Richmond to head up a south-wide drive on the poll tax and other electoral abuses, and which met again in Washington, Saturday, further to develop its program. It was at the Richmond meeting that Mrs. Roosevelt, well aware, as is the President, of the political apostacy of these Southern States declared removal of the poll tax "essential to the restoration of popular rule—doubly essential in times when this Nation should be setting an example of faithfulness to democracy before the world."

These are some aspects and fronts of the free suffrage movement in the politically blighted areas of the South. The poll tax is a large issue in the Virginia elections this year. A new referendum on the poll tax is being initiated in Arkansas. Meanwhile the issue also is before Congress which might well, in its efforts for democracy, begin at home.

ENFORCEMENT GUARANTIES

By article IV, section 4, the Federal Constitution guarantees "to every State in this union a republican form of government." Congress is not without means to enforce the guaranties of the Constitution by appropriate legislation.

Furthermore, and more specifically, the Constitution declares (art. XIV, sec. 2) that when the right to vote in Federal or State elections is in any State denied to any adult citizen of the United States, or in any way abridged," save for conviction of crime, the basis of congressional representation in that State shall be reduced in proportion to the disfranchisement.

In these eight States the right to vote is most drastically abridged. In these States the vote is so conditioned as to be denied to millions of citizens of the United States of America year after year, generation after generation.

Thus, while the people of the South, all but hog-tied by the poll tax, struggle to rejoin the democracy of the Nation, what is Congress waiting for?

Foodstuffs in Our Export Trade

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

Mr. CARLSON. Mr. Speaker, as aid to starving nations is now assuming much attention at home and abroad it is timely that we examine the status of foodstuffs in our export trade. Since the European war broke out in September 1939 our exports of foodstuffs have steadily declined while our food surpluses have increased.

Normally, Europe is our largest market for foodstuffs, but today that market is closed, due principally to the British blockade, and should be opened to absorb some of our ever-increasing food surpluses.

January 1941 is the latest month for which export figures are available. While one month may not be a fair line of measure, yet it does show the trend when compared with prior similar months. On this basis, I have made an analysis of our export trade of January 1941, as shown in the following table from reports issued by the United States Department of Commerce.

This analysis shows a steady decline in our exports of raw materials and foodstuffs, while increases are steady for manufactured products, principally munitions and war materials.

In the case of foodstuffs—crude and manufactured—total exports decreased from $40,310,000 in January 1938 to $13,746,000 in January 1941. This decrease was coupled with a shift in markets but not enough to benefit our farmers and producers of foodstuffs. For instance, in January 1941 Latin America, principally Cuba, became our leading market for foodstuffs.

This analysis covers more particularly Europe, our best market for foodstuffs. In January 1938 our exports of foodstuffs to Europe amounted to $30,069,000; by January 1941 they declined to $3,242,000. It is interesting to note in the table herewith the position of the European belligerents in January 1938 and January 1941. The United Kingdom, Ireland, Finland, and Sweden got most of the foodstuffs in January 1941; while Germany, Italy, and their occupied countries were cut off.

Position of foodstuffs in United States export trade, January 1941

(NOTE.—The war in Europe broke out September 1939

[Value in thousands of dollars—000 omitted]

Export items	January 1938	January 1939	January 1940	January 1941
Total exports of:				
Crude materials[1]	67,925	36,391	82,356	16,092
Foodstuffs [2]	40,310	31,051	27,705	13,746
Manufactures [3]	177,529	142,817	250,522	288,115
Total exports	285,764	210,259	360,583	317,953
Foodstuffs,[2] exports to—

National Conference of Christians and Jews

EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Monday, March 31, 1941

ADDRESS BY HON. JAMES A. FARLEY

Mr. O'MAHONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a notable address delivered by Hon. James A. Farley before the Massachusetts committee

of the National Conference of Christians and Jews, at the Boston Chamber of Commerce, on Thursday, March 27, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Never in our history has a conference like this had greater significance. The National Conference of Christians and Jews, proclaiming as its purpose adherence to the principle of religious liberty and the promotion of that liberty, has a special meaning at this time, when democracy is being attacked all over the world. America, to a greater extent than ever before in history, is called upon to defend democracy in terms of clear thinking and vital action. It is seeking once more to prove democracy to be that form of government which has done most for the individual and most for humanity.

I shall not attempt to define the concept of democracy in exact terms. I merely wish to call attention to one or two of its aspects which are fundamental to the purposes for which we are gathered here.

If democracy means anything, it means the equality of men. That does not mean equality in all those capacities of mind and body which in the nature of things can never be equal. They cannot be equal for the simple reason that human beings are not identical. It does not apply to moral equality, for there will be some who are more kind, more charitable, and who live their lives more completely in obedience to the moral law. When the Declaration of Independence speaks of the "self-evident truth" that "all men are created equal and endowed by their Creator with certain inalienable rights" it speaks of equality in a vastly more fundamental sense. It means that no human being shall be so poor or so unfortunate or so incompetent, even so unworthy, that he is not deserving of recognition as an individual. Beyond that it means that, as an individual, he has certain rights that no one is justified in destroying or denying him. It means that so far as possible he deserves equality of opportunity—an equal chance—as an individual. It is the glory of this country that it has fought to maintain the principle that every man and woman deserves a share in the benefits of our society.

When we consider this principle of equality as the basis of our democratic faith, we must recognize two other major points. The first is that, when we proclaim that equality, we are granting the truth of a fundamental religious teaching. The belief in the political equality of men springs from the belief in the essential equality of men before the common Father. This idea of equality is part and parcel of the belief in the existence of a human soul in every individual person. More, it is part and parcel of the religious assertion that the soul is an immortal soul.

Unless it is, why should human personality be sacred? Unless it is, what inalienable rights could the individual possess? Unless it is, why do individuals give of their goods, their efforts, and their lives for the sake of principle? If the individual soul is a thing that vanishes like a spark falling in the water, then it is hard to see how men can be so indifferent to their personal comfort and interest as to make any sacrifice at all for principle. Democracy, therefore, fundamentally recognizes the necessity of religion and of the teachings of religion as a guaranty of its own vitality and its own perseverance in a world of danger. The equality to which we pay reverence when we dedicate ourselves to the principle of democracy, is the equality of the human soul. To paraphrase a great American thinker, it is because the human being has moral powers, because he carries a law in his own breast and was made to govern himself, that we cannot endure to see him become another person's slave or tool. It is because we see in him the Divine image, that we demand for him means of self-development, spheres for free action, and that we call society not to fetter but to aid his growth.

The second aspect of democracy is the principle of tolerance. It is the principle of respect by the individual and for the individual. It is the principle of the many living together in a common life, maintaining peace with each other, upholding justice in their relations and, above all, actively working together to protect those who need protection in the exercise of their legitimate rights.

It is interesting that tolerance became established only slowly, only in spite of the many forces that denied the possibility of tolerance. Take the word toleration—which, I need not remind you, has a slightly different definition than tolerance. Toleration, as a national principle, came after centuries of conflict. It came after nations stood exhausted, broken up into factions and clashing armies. It was not until blood had drenched the soil of Europe that people began to recognize the essential fact that two or more religions could exist in the same nation at the same time. This principle of toleration is another name for the principle of religious liberty. It is not only the mark of a great aspiration but the mark of a very definite legal concept.

Briefly, religious liberty manifests itself in three ways.

First, it gives to the individual the right to choose his own creed, his own church, his own form of religion, so far as the exercise of that right does not impair the fundamental rights of others.

Second, it grants autonomy to a religion as an institution. It gives a religious institution the right to the pursuit of its own purposes, so far as these purposes conform with those expressed laws of the land which are designed to protect one religion as against the other. Basically, as this principle operates in America, it means that religious institutions are free to gather new members and to grow, to own property, to carry on their legitimate religious services and ceremonies, and to speak freely in the forum of public opinion.

The third characteristic of religious liberty is a recognition by the Nation of the essential equality of the different religions. That means that a small religious institution with 50 members stands within the great principle of freedom with the same rights and privileges as the largest religious institution.

It is interesting that as the nations of the world slowly came to the principle of religious freedom over past generations, the nations have differed in their ways of maintaining what they have called religious freedom. In many nations, some of them on the continent of Europe, the state actively sought to regulate religions in order, it claimed, to maintain equal status among religions. The state exercised a definite supervision over religious institutions, and, in some cases made grave mistakes and committed serious injustices in exercising this supervision.

America, however, has worked on a different principle. It seeks to maintain religious freedom by the entire separation of the church and state. We are proud, here in America, that without the active interference of the state, religions have grown, have cooperated, have recognized one another's rights, and have achieved a vital and commanding place in the great community of America.

But these formal, legal, technical aspects of toleration exist because basically the principle of tolerance is a principle that is cherished in every community that dares to call itself a civilized community. Tolerance is an expression of one of the most profoundly important qualities of a civilized human being—the capacity for self-restraint. I want to stress the word "civilized" in this connection. I want to say as strongly as I can here that the absence of tolerance is characteristic of the barbarian. I know you will understand to what I refer, for I know that all Americans feel this deeply. Tolerance is that admirable thing in a human being that makes him restrain his own power in order that others may enjoy the exercise of theirs. It is the principle that permits him to grant to his fellow man the right to be heard, that recognizes the virtue in the man on the other side of the street or in the other street or in the other town. It is the principle that prevails so magnificently in every manly sport—the thing we call sportsmanship—which, despite keen competition, restrains those who participate from a ruthless and unfair exercise of temporary advantage. It is the principle to which, in these serious days, we must rededicate ourselves.

Now that the great struggle for the existence of democracy in so many parts of the world is reaching a critical stage, the ideals of this conference assume a new—a unique—importance. They are essential to the defense of our Nation. They are also essential to the playing of our proper part in world affairs. The reason they are important to our national defense is that they are an outward sign of the principle of true unity. Only a nation that is thus united can effectively survive. Of course, there is another kind of unity in the world. That is the hard, enforced, cruel unity of dictatorship. It is a false—an artificial—unity. That is why it can be only a temporary and passing manifestation. No unity enforced in a nation by arms and power has ever survived. Such a unity is the unity of the jailer and the hangman. It is the unity of the prison and the grave. Human beings will not long submit to so vicious a denial of the simple dictates of humanity.

The unity that endures is the kind of unity we have in America. It is the unity of free people recognizing that only as others are free can they be free, recognizing that only as others are permitted to speak can they be permitted to speak, recognizing that only as others have rights can they maintain their own rights. That is the unity that quickens the heart and lifts the head of an American when he sees the flag. It is the unity of free men and free religions in a free nation.

I need not remind you that those nations that maintain unity by persecution would seek and are seeking to destroy our kind of unity by dividing us among ourselves. You and I know too well how they proceed. Intolerance is the poison they use. By pamphlets, by speeches, by whispering campaigns they try to set group against group, religious believer against religious believer, neighbor against neighbor. Lying stories of the most revolting kind—from simple slander against one or two persons to elaborate fabrications involving whole groups—are spread among the gullible. These are efforts to divide us, to destroy our unity, to sap our strength, to throw us off our course, to render us ineffective; and these efforts are rewarded whenever an American says or does an intolerant thing. Whenever we make a distinction between men because of their religion or race, whenever we impute to a whole religious or social or economic group the sins or failings or the political beliefs of some of its members, whenever we spread slanderous whispers about a religion or those who believe in it—whenever we do these things, we are helping those who wish to shatter our American unity. Intolerance is the deadliest enemy of true unity. It is the destroyer of democracy.

As I have lived and grown older in this world, I have learned not only the ethical value of tolerance but its practical necessity. Whenever, in dealing with another man, we have to stop to think of that man as a Catholic or a Jew or a Protestant and shape

our methods of dealing with him in accordance with a conception of something in him peculiar to his own religion, we fail in the practical purposes for which we all deal with each other. We cannot think straight and we cannot think effectively and we cannot get results when we have to stop and gear ourselves to supposed religious differences. Effective dealing with neighbors and friends and political and business associates means dealing with them as human beings and Americans, subject to the same fundamental desires and purposes. I have found that tolerance is not only a good moral principle; it is the only sound, practical means of successful living.

But much as we love our liberty and much as we extol the virtues we have learned over the generations in America, we must always be aware that there is such a thing as tolerance in our dealing with the world. Let us be proud, but not conceited. Let us avoid the self-deception practiced by the Pharisee who stood in the temple and thanked God that he was not as other men. Let us rather approach our national problems and responsibilities with the quiet assurance that our light will shine in the darkness around us because of what we are rather than because of what we say we are.

In the task before us, we must prevail in the spirit of our institutions. In combating intolerance in others we must not become intolerant ourselves. If we do, those against whom we struggle will have achieved the ultimate victory over us. They will have made us become as they are. They will have transformed us into the evil thing we set out to oppose. Let us, in fighting for tolerance, observe among our own people, among our own religions, the finest, greatest, most enduring unity—the unity of free men and free religions.

Oil Conservation

EXTENSION OF REMARKS

OF

HON. TOM CONNALLY

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, March 31, 1941

ADDRESS BY GEORGE A. HILL, JR.

Mr. CONNALLY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by George A. Hill of Texas, relative to oil and petroleum production.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We are gathered here under the auspices of a great commercial and industrial association—the South Texas Chamber of Commerce—to celebrate an annual occasion that is happily described as the Oil Men's Jubilee; and it is, perhaps, appropriate that we, in these troubled times, should ask ourselves, by way of critical self-examination, the realistic question just what is the present and basic justification, if any, for our spirit of jubilation?

In olden times a jubilee was usually the celebration of the fiftieth anniversary of some epochal event; and inasmuch as State regulation in relation to the conservation of oil and gas had its important beginnings in the Gay Nineties, it is fitting that we, in these turbulent and vexatious forties, reappraise the progress that we have accomplished.

In an address before the Natural Resources Round Table of the Chamber of Commerce of the United States in Washington during the past year upon the subject of State regulation, I observed that "the accelerated pace of the petroleum industry's advance along technologic, economic, and social lines is such that constant periodic reexaminations are necessary, even for those engaged in the industry, to comprehend the significance of its broad general advance."

The number and variety and the effectiveness of such conservation processes under State regulation have been so improved, and so vast, in the immediate and very recent past, that the industry itself has largely overlooked the important public duty of, first, making known the elaborate pattern of our conservation laws and regulations; and second, recording in a more informative way, for better public understanding, the conservation results achieved.

It shall be my purpose to here review advances made in oil and gas conservation in the State of Texas—as being typical of the oil-producing States—and the beneficial results accomplished thereby, in simple terms understandable by the layman. The objective is to secure greater public appreciation of the infinite precaution in method, and of the vast minutia in detail, that has been developed in our State regulatory procedure, with the general approval of the public and the industry.

Likewise the endeavor shall be to make more apparent the resulting prevention of physical and economic waste that would not have otherwise resulted, and to make clear to all concerned that the oil and gas industry, now preeminent among all industries in its readiness and ability to serve the ends of national defense, achieved this special fitness, not fortuitously and by accident, but by painstaking method and wise design.

Early conservation legislation dealt with casing wells, prohibiting flambeau lights of natural gas, closing of wild wells, and the plugging of abandoned wells; but present conservation laws and regulations are designed to prevent waste in the production, transportation, refining, and marketing of oil and gas, and, by the application of scientific methods, to eliminate or greatly restrict underground waste, and to promote the greatest ultimate recovery.

What are the initial steps required to be taken before the commencement of the drilling of a well?

DRILLING REGULATIONS

To begin with, the operator must file with the State regulatory commission (a) an application for a permit to drill, (b) accompanied by a map drawn to prescribed scale, (c) showing ownership lines, and (d) the distance of the proposed location from boundaries.

Drilling cannot be actually commenced until a permit to drill has been issued by the regulatory commission, after checking conformance of the location with the Statewide order now in force prescribing a spacing pattern of 1 well to a 20-acre unit.

These requirements assure orderliness in the commencement of a wildcat operation.

If the application to drill is upon acreage located in a field already partially developed, such application must conform to the spacing pattern provided in the field rules governing the oil or gas field in question; and if the location sought is in violation of the general State-wide order or the local field rules, a hearing must be held upon such application after prior notice to parties interested or affected by the proposed application.

These spacing rules, as the result of progressively wider spacing, have resulted in the promotion of conservation in (a) the conservation of reservoir energy; (b) the increase in ultimate recovery; (c) the restriction of underground waste; (d) the limitation of fire hazards; (e) the diminution of danger of blow-outs; (f) with the consequent lessening of development costs; (g) a more orderly pattern upon which to allocate production; and (h) a better opportunity for the recovery by the operator of the oil originally in place.

After a discovery well is drilled, a hearing is held by the regulatory commission after notice to all parties at interest, following which there is prescribed by the commission the field rules pertaining to subsequent operations in such field. Evidence is heard with respect to the type of field, the formations encountered, and all other available data upon which to predicate sound conservation rules and regulations, including the spacing pattern. Either the laws or the rules and regulations having general application and/or the field rules and regulations prescribe—

(a) The weight and types of casing to be used (which are necessary precautions against high gas pressures and the elimination of the danger of blowouts).

(b) The methods and depths to which such casings are to be set in the casing program for such field (which are necessary precautions against damage to water sands, danger of blowouts, etc.).

(c) The manner of cementing and the approximate amount of cement to be used (in order to more carefully conserve the water resources of the State).

(d) Provisions for testing of casing and the casing settings before drilling ahead, below the casing, or completing the well (in order to protect against the dangers above referred to).

(e) The weight and viscosity of drilling muds that may be used in a given field or area (in order to lessen the hazard of blowouts in high gas pressure areas, etc.).

(f) Provisions for proper and separate slush pits for the making of mud fluid for rotary drilling.

(g) Precautions for the prevention of fire hazards.

(h) Precautions for the prevention of waste either at the surface or in the strata containing gas and/or crude oil.

(i) The requirement of the use of proper well head connections of a type and pressure test capable of controlling the producing well.

(j) Requirement of the use of specified blowout preventer and braden-heads.

(k) Procedure in relation to withdrawing drill pipe in order to prevent swabbing effect and danger of blowout.

(l) Provision for access to drilling wells by authorized agents of the regulatory commission who may supervise testing of well, casing, and settings, and with the right to inspect the records pertaining to such well.

In certain cases where, because of blowouts or other conditions, waste is being created by an operator, the regulatory commission may intervene and take charge of drilling or completion operations or for the plugging of a well, and may even require an operator to kill a blowout well by the drilling of a directionally controlled well for such purpose.

PRODUCTION REGULATIONS

Present rules provide for proper engineering practices in the production of oil and/or gas. They include—

(1) The prohibiting of the use of sweet gas for the manufacture of carbon black without first having extracted the natural gasoline content therefrom;

(2) The wasteful burning of any natural gas well;

(3) The drowning of any productive strata with water;

(4) The operation of an oil well with inefficient gas ratio;

(5) The wasting of gas into the air from a well producing oil and gas in excess of efficient operation;

(6) The production of natural gas in excess of transportation or marketing facilities or in excess of 25 percent of the open flow capacity of the well;

(7) Prohibiting the waste of reservoir energy;

(8) Prohibition of surface waste such as open-pit storage;

(9) Prohibiting the production of crude oil in excess of market facilities or reasonable market demand;

(10) The prevention of waste of oil or gas from tanks, wells, containers, or pipe lines;

(11) Prohibiting of the transfer of natural gas from one reservoir to another, i. e., when gas is extracted from one stratum and the gasoline content taken therefrom, such dry gas much be returned to its original reservoir unless used for lighting or fuel or under other orders of the Commission;

(12) Prohibits the use of sweet gas in flambeau lamps;

(13) Prohibits the operation of wells in such a manner as to afford an injury to adjoining property or property owners;

(14) Requires that Commission shall be notified of any fires, breaks, leaks, or blowouts;

(15) Requires that a separating device be used when oil and gas are produced from the same stratum;

(16) Prohibits connecting of well to pipe line until owner has secured certificate of compliance with conservation laws;

(17) Prohibits swabbing of wells except under certain conditions;

(18) Prohibits the use of vacuum pumps unless specifically permitted by the Commission;

(19) Defines marginal wells and the amount they may produce;

(20) Requires that potentials of wells be taken and reported to the Commission;

(21) Requires that the amount of oil and/or gas produced be reported to the Commission;

(22) Provides that shooting or treating of wells shall be done under direction of the Commission;

(23) Requires that wells, tanks, etc., shall be identified as to ownership by proper signs; and

(24) Provides that when any well is plugged it shall be done in a manner to effectively prevent the intercommunication between sands of oil, gas, or water.

The effects of these requirements and prohibitions are to assure that the maximum possible amount of natural gas and/or crude oil will be recovered with the minimum of waste from all of the reservoirs within the State.

TRANSPORTATION REGULATIONS

Transportation of gas is by pipe line and of oil may be by pipe line, tank cars, barges, trucks, or other motor vehicles.

Waste is prevented in the transportation of gas and of oil and its products by—

(1) Providing for permits, tenders, and other evidences of permission for the transportation of oil and/or natural gas;

(2) Prohibiting waste and surface seepage from tanks and pipe lines;

(3) Prohibits waste by elimination of open-pit storage;

(4) Prohibits the laying of pipe lines along or across public roads where such pipe lines will cause an interference to traffic or where breakage of a line might result in hazardous conditions to the welfare of the public;

(5) Provides for inspection of tanks, pipe lines, meters, and other equipment;

(6) Providing for bonds to be filed with the State by all public utilities or common carriers;

(7) Providing for authority to the Commission to fix rates and charges and make rules to govern common carriers by pipe lines to be assuring transportation facilities to the small independent operator;

(8) Providing for authority to the Commission to require extensions or enlargements of facilities of common carriers where market demand exceeds such facilities;

(9) Prevents discrimination in the purchase from others of oil and/or gas by common carriers;

(10) Provides for penalties to common carriers where the products transported are produced in violation of orders of the Commission;

(11) Provides for the keeping, by the common carrier, of such reports as will reflect the amount of crude or refined oil in the custody of the carrier, the amount of the crude or refined oil received during any month by the carrier, the available empty storage controlled by the carrier, and the amount of crude or refined oil held by the common carrier for the account of itself or parent company;

(12) Flow lines leading from more than one well into a common line to a common battery of tanks shall be equipped with proper check valves.

The above provisions relative to transportation assure outlets to market facilities and individual wells, leases, and fields, and that oil will be transported and delivered efficiently to refining facilities and assure that waste will be minimized in such transportation.

REPORT REQUIREMENTS

Assurance that waste will be eliminated and conservation practices adhered to and conservation thereby accomplished, is given and secured through the authority vested in the oil and gas commission to require reports of all kinds and character and for all purposes relative to and incidental to drilling, production, transportation, marketing, and any other phases of the oil industry. Some of the many and varied reports which are required and made available to the commission (in some cases becoming public knowledge) are as follows:

(1) Records of wells drilled;

(2) Records of the completion of wells and records of plugging when abandoned;

(3) Well status reports showing depth of well, location of well, producing horizon, amount of production, gas-oil ratio, water percentage, method of production, and whether or not the well makes its allowed production;

(4) Reports by the producer showing the allowable assigned to the well and the actual production;

(5) Reports relative to the cleaning of tanks;

(6) Reports of production of condensate and/or oil from gas wells;

(7) Gas-oil ratio reports;

(8) Reports of gas lift operation of wells;

(9) Reports showing to whom oil was sold and how delivered;

(10) Reports of purchase of oil, where secured, and disposition afterward made of it;

(11) Reports of purchase, transportation, and disposition of oil products;

(12) Reports of stocks on hand in tanks, pipe lines, and lease storage;

(13) Reports as required by the Commission as to open-flow capacity and rock pressure of gas wells;

(14) Reports of oil refined, processed, reclaimed, or blended;

(15) Reports of residue gas distribution for light and fuel at natural gasoline commingling plants.

In addition to the above-enumerated reports, many of which are made by the producer, the transporter, and the refiner, the Commission may require such other reports as it deems necessary and the Commission is to be furnished with copies of reports made to the State comptroller in connection with taxes on production and sales of gas and oil and its products.

These reports are so arranged and coordinated that it is possible to trace the movement of gas and oil from the well to the ultimate consumer within the State or to the State line in interstate shipment, thereby making certain that the production from any well is not unlawful nor produced in violation to Commission rules and regulations nor injurious to the normal production practices of any field or stratum. The production and movement of "hot oil" is eliminated and waste incidental to "hot oil" production accordingly eliminated.

MISCELLANEOUS CONSERVATION REGULATIONS

Included under this heading are certain practices, such as recycling and the manufacture of carbon black, which are calculated to prevent waste and increase recovery of natural resources and also included are certain procedures calculated to accomplish such results.

Recycling: Recycling comprises the production of natural gas in its original state from a productive horizon or stratum, from any reservoir, the extraction of natural gasoline or other heavier hydrocarbons from such natural gas and the returning of the dry or residue gas to the original reservoir from which it was withdrawn. In practice, it is essential that a knowledge of the structure be known in order that the points of inlet and outlet of such gas can be best determined on the basis of sound engineering principles. Recycling has been the outgrowth of the production practices evolved in the development of conservation since certain productive sands, although known for many years, have been nonproductive because conservation laws, rules, and regulations would not permit the withdrawal of that gas and the wasting of the residue into the air or into carbon black plants. Most of the principal recycling plants in the State of Texas have been developed within the past 5 years and there are now in operation approximately 40 plants.

Carbon black: The production of carbon black is secured by the imperfect combustion of natural gas in which the hydrocarbons are left as a residue in the natural carbonaceous state. Its production, in order to utilize waste gas in north Texas, has subsequently been increased and is now actively carried on, particularly in the areas of sour gas production. The sour gas (sulfur gas) is unfit for fuel, and modern conservation practices restrict and prohibit the use of sweet gas, except in specific instances and under exceptional restrictions.

Secondary oil recovery: In order to secure additional production from fields which would be otherwise abandoned, certain practices have been adopted and are known as secondary recovery methods. They include:

(a) Water flooding of the oil-producing horizon to effect a flushing of the oil from the interstitial spaces of the sand, and

(b) Repressuring of the original reservoir by the introduction thereinto of natural gas from some other horizon.

In the latter case, conservation has established certain rules and regulations which prohibit the introduction of natural gas into a reservoir as a repressuring agent until the natural gasoline content has been extracted from such gas.

Bottom-hole pressure surveys: Experience has shown that maintaining, as near as possible, the original pressure existing in a reservoir results in maximum efficient recovery of oil and operation of the field, and the practice of making bottom-hole pressure surveys has therefore been undertaken by the Commission and by many of the operating companies. Such surveys make it possible to produce the field at the most efficient rate to secure the maximum ultimate

production and the minimum amount of waste due to water encroachment and subsequent flooding or drowning of productive areas. Failure to be properly informed of bottom-hole pressure data may result in the partial or complete sealing of a portion of the subsurface strata and production which might be expected from that zone or area will be forever lost. Bottom-hole pressures are now accorded their proper position in the scheme of conservation and some of the more important fields in Texas are now prorated and produced on the data from these surveys. The most notable example of the above is the east Texas field. These surveys also assist the operators to maintain the proper pressure in the reservoir so that a gas cap will not be formed above the oil from gas previously in solution in the oil, thereby rendering the oil more viscous and less free to migrate to the well bore.

Proration: Proration is the apportioning of the market demand for oil among the fields of the State in an equitable manner and in accordance with sound engineering principles so that waste due to excessive production from any individual reservoir will be eliminated. The many factors which go into the formula for the ascertainment of the proper proration schedule are:

(a) Acreage or size of drilling units.

(b) Potential productive capacity of the well.

(c) Depth of the producing horizon.

(d) Gas-oil ratio of the well.

(e) Bottom-hole production or bottom-hole decline curve of the producing stratum.

(f) Thickness of the producing oil and/or gas sand.

(g) Market demand for the type of oil produced.

(h) Location of field with respect to transportation, pipe-line facilities, etc.

(i) Foreign markets.

(j) Type and quality of oil, including, among other things, the octane rating of the oil so produced.

(k) Method of production of well.

(l) Type of structure on which such productive wells are drilled, i. e., whether fault type, normal anticlinal, or dome type, or salt dome type.

(m) Percentage of water being produced with the oil.

The proration schedule, as now developed by the Railroad Commission of Texas comprises, in their engineering features, one or more of the factors above outlined.

The allowable schedules issued by the commission are issued after hearings held before the commission, at which data are presented as to physical characteristics and conditions of the fields and market demand for the oil so produced from the various fields. Each and every operator, whether small or large, has the same rights prescribed by law for a hearing to determine any inequity in the proration schedule. In arriving at market demand (which is essentially the demand at which undue storage will not accumulate), the commission considers nominations as filed by the purchasers, local conditions surrounding inland refineries, reports of stocks of oil on hand and estimates of the United States Bureau of Mines.

Cooperative development: Cooperative development has advanced rapidly within the past 10 years, under the guidance and restrictions imposed by conservation measures. As its name implies, it is a cooperation by the owners in a field or a localized area to so space and produce the wells as to secure the maximum recovery with a minimum of waste. An excellent example of this type of operation in Texas is the Van Field.

Development of cracking process: The greatest conservation accomplishment in the history of the oil industry has resulted from the development of the cracking process, by which the average gasoline yield of a barrel of crude oil has been enormously enhanced, resulting not only in much greater quantity yield, but also an increase in power and mileage in excess of 40 percent. In addition many byproducts, formerly subject, in whole or in part, to waste can be utilized (as Dr. Egloff has recently explained) for the manufacture of defense products such as "butadiene and styrene for synthetic rubber, toluene for TNT, ethylene, ethyl alcohol, glycerine, and cyclopropane for medicinals, phenol and formaldehyde for plastics, and many other hydrocarbons of wartime value. The American petroleum industry is able not only to supply abundant quantities for the United States of America and Britain of gasoline of all grades, fuel oil, and lubricants, but also a whole line of products never before commercially made in quantity from petroleum, such as those listed."

SUMMARY

Four years ago I had occasion, in a public address, to summarize the accomplishments and achievements of the oil industry. Such achievements were the direct result of the combined effect of private initiative, capital, and direction, supported by the State regulation of conservation practices. Bear in mind that these observations long preceded the advent of war and our present national-defense program. I still adhere to those conclusions then expressed and which I now repeat:

First. Private capital, individual initiative, and free competitive enterprise have achieved the highest degree of development in exploration, exploitation, and in the advancement of such of the associated sciences involved in petroleum technological progress, which have resulted in cheaper prices to the consuming public in the United States.

Second. Helpful functions of government (the State and Federal Governments acting within their respective constitutional spheres), in regulation and in aid of petroleum industrial progress are recognized in the promotion of conservation, in the prevention of physical and economic waste, and in the scientific ascertainment of consumptive demand.

Third. In the foreign field, associated private enterprise has extended the field of American industrial power and prestige, with substantial benefits to the American Government, and without the involvement of the United States Government, as such.

Fourth. Government control, whether effectuated through Government monopoly, governmental expropriation, or through the nationalization of petroleum and other natural resources, has hampered, obstructed, and restricted petroleum industrial development as compared with or measured by the achievement of private capital, private initiative, and private management.

Fifth. Foreign exploration, production, and refining of petroleum have been dependent, to the greatest extent, upon the advances made by the petroleum industry in America in production and refining technology, and in the improvements made in the art of oil finding and in American manufactured equipment and supplies. No major development has resulted from purely governmental activity in any part of the world, and no Government-controlled branch of the industry in any foreign country has been able to keep abreast of the progress made in the industry by private capital and enterprise.

Sixth. National defense and national welfare are best promoted and served by the extensive and efficient development of petroleum (an essential and indispensable weapon of national defense) through the media of private capital, initiative, and management in a free competitive system, susceptible of quick mobilization for emergent national service.

Our Part in Peace

EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, March 31, 1941

ADDRESS BY HON. HERBERT HOOVER AT NEW HAVEN, CONN., MARCH 28, 1941

Mr. McNARY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a recent address by former President Hoover as to our part in the peace which will follow the present war. The address was published in the New York Times of Saturday, March 29, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I have been asked to speak to you, and through you to a large group of young people, on some of the moral and spiritual problems which now confront our country. Any discussion of them in these days involves questions of war and of the peace to come. And now they are the transcendent problems before youth.

I shall therefore discuss for a few moments some of the moral, spiritual and social questions that dominate modern war and the making of peace.

Today we are pledged to give Britain the tools of war and our full economic aid. That is settled and done. Our national duty is to unite in making a good job of it, and to do it with good will.

The action of Congress has, however, enormously changed the shape of things. The aid to Britain combined with our own preparedness program forces us a long way into a war economy.

Apart from these steps, our indignation at gigantic wrong to the democracies, the repugnance of freemen for the whole totalitarian ideology, the steady impact of foreign propaganda, the constant agitation of a minority of our own citizens for all-out war—all press upon us the mental and spiritual attitudes of war.

In a fog of emotions and appeals we are fast driving into the psychosis of war.

"THREE POSITIVE APPOINTMENTS"

Whether we take the final fateful step or not, we have already made three positive appointments with destiny.

One is that we will sit at the world's peace table. Another is that we face the problems of war emotions and war psychosis. The other is that we shall meet the financial, economic, and social aftermath of a war.

America yearns for peace in the world. The freedom of men comes only in peace. It diminishes in war. The abolition of poverty and want comes only in peace. Poverty and want increase in war.

Yet the world does not know, and we do not know, how world peace can be made and maintained. The world does not know, and we do not know, how in the face of steady world impoverishment we are to abolish want.

We do not see our way. Today, over these questions, we are frustrated, confused, unhappy, and fearful.

Our unity of ideas extend only to a resolve to defend ourselves and a fervid wish that the struggling democracies shall win.

My purpose here is not to offer you a panacea for these confusions and problems. I wish to stimulate your thinking. For now is the time to think hard and think fast. We cannot wait until the appointments with destiny are upon us.

EXPERIENCE OF WORLD WAR

We joined in an exactly parallel war 25 years ago for the same purposes and under the same impulses. Even with victory, we failed to get either military, economic, or spiritual peace.

The failures of the last war to achieve peace root not only at Versailles but also in the forces generated in the war itself. They rooted deeper than that. They rooted in age-old hates and in the fires of imperialism.

But we can get some light and some guidance from the experience and failures of that war and that peacemaking.

It is over 22 years since that World War ended. The youth of America today does not know of that war from its own experiences.

I am perhaps one of the few living Americans who had full opportunity from high places to see intimately the moving tragedy of the last World War.

I saw it from its beginnings in 1914 all the way down through the long years which have not yet ended. I saw it not only in its visible ghastliness but I lived with the invisible forces which moved in its causes and its consequences.

My country and foreign countries have honored me greatly over these years. There is nothing more in office or honor that the world could give to me. I can therefore add objectively to those experiences. I favored our entry into the last war so that I speak as neither a pacifist nor a militarist but rather as an analyst.

If we would see what the moral and spiritual forces are that we have to meet, we must consider the nature of total war.

The World War was the first total war of modern history. It was the first great war after the mechanical age. Prior to that time wars were more nearly contests between armies and navies.

Civilian life proceeded with little interruption except near the actual scene of battle. The armed men represented a small part of the whole population. Their equipment was comparatively simple. Its preparation involved the energies of only a small part of industry.

The last world war was the first time that the complete energy of the whole civil population on both sides was mobilized to fight and provide materials. It was total war.

Perhaps the most striking difference of total war from the old wars was that formerly armed men fought only against armed men. There were certain chivalries and sportsmanships. There was a real desire to keep women, children, and noncombatant men apart from its shocks.

In total war the basis has shifted in large measure from war between armed men to war by armed men upon civilians.

In the last war for the first time systematic and organied terrorization and killing of civilians became a part of this strategy. Cities, villages, and homes were ruthlessly burned. Unarmed seamen and innocent passengers were drowned without a chance. Fire and explosives were rained on women and children from the skies.

Three times a day among 300,000,000 people wherever a family gathered to eat they had less because of the enemy. Nowhere in Europe were people free of fear for their lives on land or sea.

EMOTIONS OF THE CIVILIANS

In the course of that total war there developed in the civil population on both sides three fierce and total emotions. These were hate, intolerance, and a spirit of exalting crusade.

From the sufferings of civilians blazed first indignation and finally a fanatic hate. It enveloped the minds of every man, woman, and child.

And this hate was not directed solely to leaders of nations; it was poured upon every individual of the enemy nation. Soldiers fighting on the front held far less hate than civilians at home.

The second of these emotions from that total war was total intolerance. National unity was essential in the face of total national danger. But impatience at discussion rose rapidly to rabid intolerance.

In the democracies part of that intolerance ran quickly to the suppression of free speech and free press. The democratic governments had no need to impose restraints on free expression.

The crowd howled down the most objective statement, the most constructive criticism. They denounced it as the paid voice of the enemy. And intolerance went further. It persecuted inoffensive citizens.

The third great emotion of that war was a crusade of ideologies, of philosophies, of government, and of life.

The ideology of Germany was much the same pattern as the one now in use. It was not so well perfected in phrases and method as this one. But they used most of the slogans we now hear.

On our side we went to war to defeat "might makes right" and "the enslavement of the individual to the state." We said we would make the "world safe for democracy." It was to be "a war to end war."

We said the end of war was that enemy nations must change their way of life to freedom and democracy and peace. The most sublime passions of our people were summoned in action and sacrifice for this purpose.

OPERATION OF PROPAGANDA

All these emotions were stirred on both sides of the conflict by the total power of government. That total war gave birth to governmentally organized propaganda. The hates of the people, their courage, and their aspirations could not be allowed to lag in the face of reverses and suffering.

The atrocities and total wickedness of the enemy had to be constantly illustrated. All governments, including our own, engaged in it.

The heads of those bureaus in most governments have written their confessions with pride in the lies they invented. Every government justified to itself that total emotion is essential to win total war.

To show how deeply these total emotions dominate total war, I may recall that after this had gone on for over 2 years in the last war President Wilson endeavored to bring about a negotiated peace.

His representatives sought my views on its practicality. I felt that hope of negotiated peace was futile. The civilians on both sides cried out in hate and suffering for vengeance and crushing victory.

I advised that no statesman or leader dared propose the necessary compromises which must be the basis of negotiated peace. And this proved to be the case.

And, incidentally, I may observe another effect of these impelling emotions in total war between nations of large resources. Such war can apparently end only by exhaustion or revolution on one side or the other. And the victor in this race of exhaustion is only one lap behind the vanquished.

Once total war is joined it apparently can have no intermediate stops.

IMPOSING OF CONTROLS

There are economic necessities in total war that create vast social aftermaths. The World War of 25 years ago was the first time the freedoms of business, labor, and agriculture were suspended. Industry had to be expanded to meet war production. It had to be constricted in its service to civilian living.

To direct these activities dictatorial authority had to be lodged in the government. In the democracies we used soft phrases to cover these coercions. We talked of cooperation, voluntary action, but underneath we had to show "or else." The Government increased production both by going into business itself and by government dictation to private owners as to what they must do.

Whatever the fine phrases were in which we wrapped these actions, the cold fact was that government in business was socialism, and government dictation to private owners was fascism.

The word fascism had not then been invented. The freedom of labor and the freedom of the farmer were driven a long way down that blind alley. Where people attempted to stand on their so-called rights, propaganda, intolerances, and penalties of law were directed to drive them to cover. Taxes which expropriated savings, pressure loans and inflation were necessary. All that is the method of fascism.

Is it to be the tragic jeopardy of democracy that if it would go to war it must adopt the very systems which we abhor?

DEFEAT OF PEACE HOPES

One of the emotional and intellectual currents of the last total war was the hope for peace that would make total war impossible again. The people of the democracies wanted armies and navies reduced if not abolished. They were resolute that some method must be found for justice between nations.

A thousand ideas came forth. But there was no adequate discussion of how these ideals could be attained. The common expression was victory first. We had a daily reiteration of our high aims. Indeed, within them was the hope of a better world.

With all these ideas and these emotions we went to the peace table. The American people at large were totally unprepared for the problems of peace-making. And hate sat at that table. Statesmen were not free agents. The victorious peoples demanded revenge and reparations for their wrongs and sufferings.

The men who represented England and France at that conference had just been elected on the slogans of "Hang the Kaiser," "Pay every farthing," "Revenge," "Reduce them to impotence forever."

The Allied leaders were consciously or unconsciously dominated by the bitterness of their people. They had to get their treaties approved at home.

Reason could not be restored in the face of total emotion and total suffering. And although our American sufferings were far less than the others, yet we were slow to demobilize our war hates.

HATE OUTLASTING VICTORY

I recollect having had the temerity a few days after the surrender of the Germans at the armistice to say we must at once take down the food blockade on their women and children.

You would perhaps be surprised if you read the universal condemnation I received, not only in the Allied countries, but in America. They demanded more starvation after the war was over. Starvation is the mother of generations of hate.

Also remember Sherman's march to the sea. It has bred hate in our own Southern States for 80 years.

From all this the lesson is that hate, once aroused by the suffering of civil populations, outlasts even victory.

After the last total war the consequence was a treaty which in part sowed the dragon's teeth of the present war. President Wilson and his men sought valiantly to moderate it. The world hoped for a while that through the high-minded formula of

the League of Nations the failures of the peace could be remedied when hates died. But the hates and fears lived on.

COLLAPSE OF THE VANQUISHED

Then came the aftermaths of that total war.

Experience proved that liberty, freedom, and democracy could not be imposed on nations by battle. All over Europe nations did come to the mourners' bench and appeared to be converted, but soon were backsliders.

Indeed, it was proved that intellectual ideas rooted in a thousand years of racial history cannot be uprooted with a machine gun.

Every nation was impoverished. There were millions of maimed and orphaned. Millions of homes and tons of ships were destroyed.

War production had to cease, industry was dislocated, millions of men had to be demobilized. Unemployment and its thousands of miseries were inevitable.

The victorious governments which had some financial strength left carried through these burdens.

The vanquished governments could not do so. Their unemployment, starvation, and a thousand miseries bred revolution. They staved off the day of economic retribution for a few years by financial legerdemain.

But finally the former enemy countries collapsed and dragged even the victors into bitter depression. In the defeated nations the people in renewed misery demanded the existing system be turned out, whatever it was.

In those countries the man on the soap box had the solution of all ills. His phrases contained only one idea in many formulas—to take away from those who still had something. And in the chaos of agony came the man on horseback. The treadmill of the world started all over again.

"GOVERNMENT IN BUSINESS"

And at home it was a difficult task for the democracies to demobilize their wartime regimes. We had given no thought, had no plans for the moral and economic demobilization or the unemployment and financial aftermaths. We had no plan, no solution. It is easier to regiment a people than to unregiment them. Great vested interests and vested habits were created which pressed for perpetuity.

Millions held Government jobs. The thousands of people in authority were reluctant to give up power. Factories had thrived on Government orders. Farmers liked the Government prices. It was only the resolution of President Wilson and the men immediately around him who forced what we now call fascism to retreat.

Nevertheless our Government remained in many kinds of business. And of more vital importance, the ideas of war fascism remained.

When in later years confronted with difficulties, the people demanded that the Government resume these war methods. We saw many of them reappear in soft phrases to make them look like democracy.

All this is but a bare skeleton of the last total war. It takes no account of the millions who died.

In the present war pressure of starvation and air attack are far more diabolic than last time. Compassion is far weaker than even last time.

FACING THE NEXT PEACE TABLE

Today, whether America joins in all-out war or not, we are faced with the same gigantic problems.

The great sacrifices which America will make are motivated by the hope of real and permanent peace.

And I urge upon youth that you study again these experiences for the light which they give upon our course for the future.

We will sit again at that peace table whenever it comes about. Hate will again also sit at the peace table.

The ghastly failures in peacemaking and in economic life after the last total war may be excused on the ground that those who led the world were groping in the dark without the lamp of experience. We have had that experience. And these failures rise now with great questions that must be answered.

And in the study of these questions, let me suggest you examine the causes of failure of the Treaty of Versailles. You will find that a large part of them were failure to allay hate, failure of economic peace, failure to give opportunity of proper elbow room, and of growth to the aspirations of peoples. It failed to secure disarmament and to prevent world inflation and bankruptcy.

Peace must come from the prosperity and the hearts of men. It cannot be held for long by machine guns.

TESTS OF A WORLD ROLE

The immediate questions which arise are these:

Are we giving aid simply to assure the independence of Britain and the others who are fighting against aggression? Or are we extending our view to remaking the world?

How are we going to hold down destructive hate that makes constructive peace so difficult?

How are we to keep aligh. compassion for the injured and starving?

How are we going to settle the relations of the 20 races in Europe?

How are we going to secure that liberty and freedom and democracy be accepted by those races whose whole racial instincts rebel against it? Are we going to police the world?

How are we going to save a world ravaged by famine and pestilence?

How are we going to restore economic prosperity to an impoverished world?

How are we going to assure the proper elbow room for growing people?

How are we going to find refuge for the oppressed?

FUTURE OF THE UNITED STATES

And here in America—

How are we going to hold down intolerance during this period which makes free speech and free press impotent to correct wrong and to develop constructive debate?

With far more difficulties than last time, how are we going to demobilize our war socialism and fascism in America and restore freedom again to men?

With far more exhausted resources than last time, how are we going to provide for our own employment and economic recovery after this war?

In fact, how are we going to make a peace that will be a permanent peace?

These questions must be answered. Some of them need answers today. The others cannot be dismissed on the ground they must await the outcome of the war. There will be no time then.

The answers are vital to the moral, spiritual, and economic welfare of our youth. They will determine your whole lives. And to that end American youth should begin to think now, for it is you who are involved.

WHAT AMERICA MIGHT DO

We cannot expect the British people in their desperation to devote much thought to these ends.

America, however, today stands a certain distance apart from that scene. We do not have the distraction, suffering, and the engrossment closer to the battlefields.

I am one who prays with all my being that America's sons should not be sent to this war. If God grants that we become no more deeply involved than we are today we may be able to bring a more constructive and warning voice to the peace table.

If our moral reservoirs are not drained by the full passions of war we may bring sanity and compassion. If our economic resources are still partly intact, we may be able to contribute something to restore another and better world.

If our faith in democracy is held high amid the storms of war economy we may yet keep the lamp of liberty alight.

Whether the fates determine that we step fully into this war or not, these same questions must be answered. I bid you to think and think fast. For our common purpose must be that our country moves in the moral, the spiritual, and the social paths that will keep it unimpaired in its freedoms, its Christion ideals, powerful and impregnable.

Likelihood of United States Entering European War

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, March 31, 1941

ARTICLE BY GEN. HUGH S. JOHNSON

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very timely article by Gen. Hugh S. Johnson, appearing in his column entitled "One Man's Opinion," published daily in the columns of the Daily News of Washington, D. C.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News]

ONE MAN'S OPINION

(By Hugh S. Johnson)

Despite all that has happened to push this country closer to war, the most recent polls of public opinion, for whatever they are worth, show little if any increase in the willingness of our people to go to war. The percentage is still 83 to 85 percent opposed, which is about what it has been for a year.

Yet a similar poll among Washington correspondents, policy-making Federal officials, and certainly among Army and Navy officials would, in the opinion of most observers, show a majority opinion in at least that percentage that we will be in the shooting front of this war before the summer is out and perhaps much sooner.

This is a very remarkable situation, probably without precedent. It has been almost an axiom in the past that you can't take a democracy into a war against the will of large segments of its people or that, if it could be done, it ought not to be done because of the weakness of disunity. This principle seems to have little bearing today. The saying is: "Oh, they'll come along. They did in 1917 when the country had just voted for Wilson because he kept us out of war and when, at the beginning certainly half of the people didn't want war."

That is also a good guess, although it is nothing more than a guess. But Mr. Roosevelt has shown more ability to direct popular opinion than any leader we ever had, and the past and probable future sequence of events has all led or points in the direction of war.

There is good ground for believing that the present Presidential vacation is to take decisions and place action in quiet surroundings for the crisis in world affairs that certainly lies not more than 60 days ahead—the tightening blockade of Britain and the possible assault across the Channel, Hitler's decision about the Balkans, Japan's decision in the Pacific, and Russia as to Turkey and the Dardanelles.

In the question of ocean convoys by our Navy of American-financed aid to Britain lies the surest, swiftest path toward war for us. The logic of the convoy proposal is hard to beat. This vast armament in our hands is valuable for our own defense. In British hands it aids in our defense. At the bottom of the Atlantic it aids nobody but the Nazis. Are we spending billions for Hitler to sink?

It is true that it remains to be seen how much he can sink without our intervention. But if he is even reasonably successful, what do we do? Some advocates of convoys say: "Oh, we don't need to go to war over the sinking of a few escort vessels any more than we went to war when the Japs destroyed the U. S. S. *Panay*." There isn't much in that. The Japs claimed that was an accident and indemnified the loss. If the Germans fire on our flag, sink any part of our Navy and kill our sailors, it won't be an accident and can't be disavowed. That overwhelming majority against war will begin to fade out.

Even if it doesn't, there is another unavoidable angle. If we attempt to crash the blockade by sinking German naval ships or aircraft, Germany can't ignore that any more than we could. She would almost certainly have to declare war on us—and then the 85 percent would vanish. We would be fighting a defensive war and opposition would be treason.

No, we were in every aspect of the war except the shooting part when the lend-lease bill was enacted in the form in which it passed. The next and last step into bloody war is inevitable. It is only a question of timing and arranging the developing drama to get the maximum of popular support.

Letters About Strikes

EXTENSION OF REMARKS

OF

HON. ED GOSSETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

Mr. GOSSETT. Mr. Speaker, last Saturday I received the following letter from one of the good citizens of my district:

DEAR MR. GOSSETT: My son, age 26, was drafted from a $200 per month job into the Army at $21 per month. Not one word did he say, nor did his father and mother do one thing other than encourage him on into the selective draft.

We at home get mighty sick of these strikes and hope you back the proper authorities 100 percent in either seeing that these fellows get back to work or put them on the selective draft just as you did the boys for the Army.

Gratefully yours,

J. FRED RAYZOR.

This letter is typical of many others I am receiving from some of the best citizens in the United States. In some instances they may improperly condemn labor, but they know somebody is at fault. On last Saturday also I got another letter that meant much to me. It was from a kid brother of mine. Being the son of a small southern farmer, Private Ralph Gossett had to work his way through college. Finishing this, he had just worked himself up to a fairly good job when his country called. He is now serving his Uncle Sam at $21 per month. These boys will soon number a million. Mentally, physically, and spiritually they are the cream of American youth. They have a right to demand a square deal from labor, industry, Government, and all of the individuals and groups of individuals in this country. This matter of peace, security, and democracy is a serious business with them, and they expect it to be so with all others.

Power of the President To Employ the Navy To Convoy Vessels in Time of Peace

EXTENSION OF REMARKS

OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Monday, March 31, 1941

MEMORANDUM PREPARED FOR HON. ROBERT A. TAFT, OF OHIO

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a memorandum which I have had prepared concerning the power of the President of the United States, when the United States is at peace, to employ the Navy to convoy vessels bound to a belligerent.

Mr. VANDENBERG. Mr. President, will the Senator yield?

Mr. TAFT. I yield.

Mr. VANDENBERG. The able Senator from Ohio has just presented for printing in the RECORD what he described as a memorandum, or a legal opinion, covering the President's peacetime right to employ the Navy to convoy vessels bound to a belligerent. I should like to inquire from the Senator from Ohio what the general conclusion of his legal memorandum is on that subject.

Mr. TAFT. The general conclusion is that in time of peace the President has no power to convoy merchant ships if the practically necessary result of such convoying is war. Such action then becomes an infringement on the power of Congress to declare or not declare war; and when pressed to that extent there is no legal right. Substantially the same argument was made on the floor of the Senate with regard to sending troops to Europe. The President may be able to order the Army or Navy anywhere in the world; but he certainly has no authority to order them to land in Germany and attack Germans, because that would be war, and in violation of the rights of Congress. The conclusion reached as to convoying, when it amounts to an act of war, is the same in this memorandum.

Mr. BARKLEY. Mr. President, will the Senator yield?

Mr. TAFT. I yield.

Mr. BARKLEY. Who is the author of the memorandum which the Senator is submitting?

Mr. TAFT. Legal assistants of mine. I had the opinion prepared. I did not prepare it myself. I had assistance.

The ACTING PRESIDENT pro tempore. Is there objection to the request of the Senator from Ohio?

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

MEMORANDUM CONCERNING THE POWER OF THE PRESIDENT OF THE UNITED STATES, WHEN THE UNITED STATES IS AT PEACE, TO EMPLOY THE NAVY TO CONVOY VESSELS BOUND TO A BELLIGERENT

It is contemplated that under the Lease Lend Act the President may use the naval forces of the United States to convoy vessels carrying so-called defense articles to Great Britain.

There is a type of neutral convoy recognized in international law. The purpose of such convoy is to avoid the exercise of the belligerent right to visit and search neutral vessels to ascertain whether their cargo consists of contraband destined for the opposing belligerent's port. In such a convoy the belligerent vessel accepts the word of the commander of the convoy that the vessels do not carry contraband bound for the enemy's ports. (See 2 Hyde, International Law [1922], sec. 734; United States Naval Instructions Governing Maritime Warfare of June 30, 1917, Nos. 51–53; see also Treaty of Commerce and Navigation Between the United States and Italy of 1871, art. XIX; 1 Malloy's Treaties 975.)

It might well be within the power of the President to use the Navy of the United States in such a convoy service. It would promote legitimate trade, and assuming that the belligerent powers recognized the right of neutral convoy, there would be little risk of becoming involved in a situation where there would be danger of active hostilities.

However, this type of convoy would not be usable for the delivery to a belligerent of war materials. The purpose of the contemplated convoy would be to prevent the interception or destruction of the war materials by the armed forces of the Axis Powers. Such conduct would, of course, be unneutral and "illegal" from the viewpoint of international law (2 Hyde, Int. Law, sec. 848). Any objection to such convoy, however, cannot be based upon the ground that it is unneutral or illegal in such a sense. If the lease-lend bill be passed, it is the established policy of the United States declared through Congress to be unneutral. The sale of munitions to a belligerent by a neutral government is equally objectionable from the standpoint of international law (Hyde, supra). The vice is that embarking upon the suggested course would inevitably involve actual hostilities. It would be the purpose of the convoying vessels to prevent the capture or destruction of the vessels carrying munitions to Great Britain. To achieve such purpose the convoying vessels would necessarily have to stand ready to oppose the Axis Powers by use of their armaments. (It is possible that the Navy of the United States would be instructed to ac-

company vessels bearing munitions to Great Britain, merely to stand by as long as the Axis Powers acted in accordance with international law in their exercise of belligerent rights. Since the views of international law taken by the United States would, without any doubt, vary considerably from those of the Axis Powers, armed conflict would again be the necessary result.) The action itself constitutes a state of war, perhaps limited in scope but nevertheless real. In all probability it would lead to more extensive combat.

In *Bas* v. *Tingy* (4 Dall. 37) the Supreme Court of the United States considered at length the relations between France and the United States in the period between 1798 and 1801. The trouble was caused by interference by French armed vessels with our commerce on the high seas. By numerous acts passed in 1798, 1799, and 1800 Congress had stopped all commercial intercourse with France, had abrogated the treaties with France, had authorized merchant vessels to resist French search, had raised a navy and commissioned privateers, and had instructed such ships to attack the armed ships of France on the high seas, to capture them, if possible, and to recapture vessels found in their possession. Of this state of affairs Mr. Justice Washington said (p. 40–41):

"It may, I believe, be safely laid down, that every contention by force between two nations, in external matters, under the authority of their respective governments, is not only war, but public war. If it be declared in form, it is called solemn, and is of the perfect kind; because one whole nation is at war with another whole nation; and all the members of the nation declaring war are authorized to commit hostilities against all the members of the other, in every place, and under every circumstance. In such a war all the members act under a general authority, and all the rights and consequences of war attach to their condition.

"But hostilities may subsist between two nations, more confined in its nature and extent; being limited as to places, persons, and things; and this is more properly termed imperfect war; because not solemn, and because those who are authorized to commit hostilities act under special authority, and can go no further than to the extent of their commission. Still, however, it is a public war, because it is an external contention by force between some of the members of the two nations authorized by the legitimate powers. It is a war between the two nations, though all the members are not authorized to commit hostilities such as in a solemn war, where the government restrains the general power."

Mr. Justice Chase, concurring, said (p. 43–44):

"What, then, is the nature of the contest subsisting between America and France? In my judgment, it is a limited, partial war. Congress has not declared war in general terms, but Congress has authorized hostilities on the high seas by certain persons in certain cases. There is no authority given to commit hostilities on land; to capture unarmed French vessels, nor even to capture French armed vessels, lying in a French port; and the authority is not given indiscriminately to every citizen of America against every citizen of France, but only to citizens appointed by commissions or exposed to immediate outrage and violence. So far it is unquestionably a partial war; but nevertheless it is a public war on account of the public authority from which it emanates.

"There are four acts authorized by our Government that are demonstrative of a state of war. A belligerent power has a right, by the law of nations, to search a neutral vessel; and upon suspicion of a violation of her neutral obligations, to seize and carry her into port for further examination. But by the acts of Congress an American vessel is authorized: First, to resist the search of a French public vessel; second, to capture any vessel that should attempt by force to compel submission to a search; third, to recapture any American vessel seized by a French vessel; and, fourth, to capture any French armed vessel wherever found on the high seas."

The action involved in convoying vessels to Great Britain in the present situation may not be distinguished from that considered in the foregoing case.

Since the action in itself is war, it would seem that embarkation upon that course should be taken only by that authority in the Government of the United States which has the power to initiate or to declare war. That power is deposited in Congress, not in the President.

The constitutional provisions with regard to the armed forces of the United States and the declaration and making of war are the following:

It is provided in article I, section 8, that—

"The Congress shall have power to lay and collect taxes, duties, imposts, and excises, to * * * provide for the common defense * * * of the United States' (clause 1).

"To declare war, grant letters of marque and reprisal, and make rules concerning captures on land and water" (clause 11).

"To raise and support armies, but no appropriation of money to that use shall be for a longer term than 2 years" (clause 12).

"To provide and maintain a navy" (clause 13).

"To make rules for the Government and regulation of the land and naval forces" (clause 14).

"To provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions" (clause 15).

"To provide for organizing, arming, and disciplining, the militia, and for governing such part of them as may be employed in the service of the United States, reserving to the States respectively, the appointment of the officers, and the authority of training the militia according to the discipline prescribed by Congress" (clause 16).

Article II of the Constitution provides that:

"The executive power shall be vested in a President of the United States of America" (sec. 1, clause 1).

"The President shall be Commander in Chief of the Army and Navy of the United States, and of the militia of the several States, when called into the actual service of the United States" (sec. 2, clause 1).

The question will be largely determined by the meaning of the phrase "to declare war." A dryly literal interpretation might be afforded that phrase, which would allow to Congress only the power to make a formal declaration and leave to the Executive the power to determine whether or not in fact the United States should engage in war. It is sufficient to say that this interpretation has never received recognition. The power to "declare" war was given Congress with the intention to confer one of the most solemn attributes of sovereignty.

The verb "declare" was not chosen carelessly. The report of the Committee of Detail of the Constitutional Convention of 1787, dated August 6, 1787, gave the power to "make war" to the legislature. When this report came before the Convention on August 17, 1787, Mr. Pinckney thought that the power should be vested in the Senate only. Mr. Butler, however, "was for vesting the power in the President, who will have the requisite qualities, and will not make war but when the Nation will support it." Mr. Madison and Mr. Gerry "moved to insert 'declare' striking out 'make' war; leaving to the Executive the power to repel sudden attacks." Mr. Sherman thought that the Executive should be able to repel and not to commence war but that "make" was a better word than "declare" since the latter narrowed the power too much. The motion to insert "declare" in the place of "make" carried by a vote of seven ayes, two noes, with one abstention. (Taken from H. Doc. 398, 69th Cong., 1st sess., p. 980, as reported in Tansill, War Powers of the president, 45 Pol. Sci. Quar. 1, at 35–36).

Hamilton in the Federalist (No. LXIX), in comparing the President to the King of Great Britain, said that the President's power "would amount to nothing more than the supreme command and direction of the military and naval forces, as first general and admiral of the Confederacy; while that of the British King extends to the declaring of war * * * which, by the Constitution under consideration, would appertain to the legislature."

Mr. William Whiting in his book War Powers (43d ed., at pp. 38–40), states:

"A state of war may exist, arising in any of the modes above mentioned, without a declaration of war by either of the hostile parties. Congress has the sole power, under the Constitution, to make that declaration, and to sanction or authorize the commencement of offensive war. The United States would ordinarily begin hostilities against a foreign nation by a public proclamation, which would be equivalent to a declaration of war.

* * * * *

"The Constitution, made as it was by men of sense, never leaves the Nation powerless for self-defense. That instrument, which gives the legislature authority to declare war, whenever war is initiated by the United States, also makes it the duty of the President, as Commander in Chief, to engage promptly and effectually in war; or, in other words, to make the United States a belligerent nation, without declaration of war, or any other act of Congress, whenever he is legally called upon to suppress rebellion, repel invasion, or to execute the laws against armed and forcible resistance thereto."

JUDICIAL DISCUSSION OF THE POWERS OF CONGRESS AND THE PRESIDENT

In *Talbot* v. *Seeman*, 1 Cranch 1 (1801), the Supreme Court was called upon to decide whether the United States and France were at war in connection with a controversy concerning salvage for recapture of a vessel by the United States ship of war, the *Constitution*, from a French warship. Mr. Chief Justice Marshall said (p. 28):

"The whole powers of war being, by the Constitution of the United States, vested in Congress, the acts of that body can alone be resorted to as our guides in this inquiry. It is not denied, nor in the course of the argument has it been denied, that Congress may authorize general hostilities, in which case the general laws of war apply to our situation; or partial hostilities, in which case the laws of war, so far as they actually apply to our situation, must be noticed."

In *Fleming* v. *Page* (9 How. 603) a question arose whether goods imported from a port which had been captured by the forces of the United States during the War with Mexico were subject to duties imposed upon goods imported from a foreign country. The Court held that the port was still foreign. In the course of his opinion, Chief Justice Taney said (p. 614–615):

"A war, therefore, declared by Congress, can never be presumed to be waged for the purpose of conquest or the acquisition of territory; nor does the law declaring the war imply

an authority to the President to enlarge the limits of the United States by subjugating the enemy's country. The United States, it is true, may extend its boundaries by conquest or treaty, and may demand the cession of territory as the condition of peace, in order to indemnify its citizens for the injuries they have suffered or to reimburse the Government for the expenses of the war. But this can be done only by the treaty-making power or the legislative authority, and is not a part of the power conferred upon the President by the declaration of war. His duty and his power are purely military. As Commander in Chief, he is authorized to direct the movements of the naval and military forces placed by law at his command, and to employ them in the manner he may deem most effectual to harass and conquer and subdue the enemy. He may invade the hostile country and subject it to the sovereignty and authority of the United States. But his conquests do not enlarge the boundaries of this Union nor extend the operation of our institutions and laws beyond the limits before assigned to them by the legislative power."

The most extensive discussion of the scope of the congressional and Presidential powers is contained in the *Prize Cases*, 2 Black 635. After the breaking out of hostilities President Lincoln, by proclamations issued in April 1861, instituted a blockade of the ports of the Southern States. An extraordinary session of the legislature was subsequently called and in July of 1861 passed an act ratifying the acts, proclamations, and orders of the President. The Court held that a state of war existed because the parties in rebellion occupied and held a portion of the territory of the United States in a hostile manner, declared their independence, organized arms and commenced hostilities; that the President was bound to meet the situation as it presented itself; that his duty as Commander in Chief included resistance of the rebels; and, that as the Commander in Chief in time of war the President had the right to institute a blockade. Some support was found in the subsequent act of Congress ratifying the proclamations of the President, but the chief basis of the decision was the power granted to the President as Commander in Chief of the armed forces. In the course of the opinion, Mr. Justice Grier said (p. 668):

"By the Constitution, Congress alone has the power to declare a national or foreign war. It cannot declare war against a State, or any number of States, by virtue of any clause in the Constitution. The Constitution confers on the President the whole Executive power. He is bound to take care that the laws be faithfully executed. He is Commander in Chief of the Army and Navy of the United States, and of the militia of the several States when called into the actual service of the United States. He has no power to initiate or declare a war either against a foreign nation or a domestic State. But by the acts of Congress of February 28, 1795, and 3d of March 1807 he is authorized to call out the militia and use the military and naval forces of the United States in case of invasion by foreign nations, and to suppress insurrection against the government of a State or of the United States.

"If a war be made by invasion of a foreign nation, the President is not only authorized but bound to resist force by force. He does not initiate the war, but is bound to accept the challenge without waiting for any special legislative authority. And whether the hostile party be a foreign invader, or States organized in rebellion, it is nonetheless a war, although the declaration of it be 'unilateral.' Lord Stowell (1 Dodson, 247) observes 'It is not the less a war on that account, for war may exist without a declaration on either side It is so laid down by the best writers on the law of nations. A declaration of war by one country only, is not a mere challenge to be accepted or refused at pleasure by the other.'

"The battles of Palo Alto and Resaca de la Palma had been fought before the passage of the act of Congress of May 13, 1846, which recognized 'a state of war as existing by the act of the Republic of Mexico.' This act not only provided for the future prosecution of the war, but was itself a vindication and ratification of the act of the President in accepting the challenge without a previous formal declaration of war by Congress."

Little v. *Barrreme* (2 Cranch 170) was another case arising out of the hostilities with the French. Congress had prohibited the sailing of American vessels to French ports and authorized the President to instruct his commanders to examine vessels suspected of engaging in the prohibited commerce, and to bring in for condemnation all vessels so engaged. The instructions of the President were to capture not only vessels bound to France but also vessels sailing from French ports. The captain of a naval vessel brought in a Danish vessel which was, of course, released. The question was whether he was liable in damages and the decision turned upon whether he was protected by the instructions of the President to apprehend vessels sailing from France. Judgment against the captain was sustained, Mr. Chief Justice Marshall saying (p. 178–179):

"These orders given by the Executive under the construction of the act of Congress made by the department to which its execution was assigned, enjoin the seizure of American vessels sailing from a French port. Is the officer who obeys them liable for damages sustained by this misconstruction of the act, or will his orders excuse him? If his instructions afford him no protection, then the law must take its course, and he must pay such damages as are legally awarded against him.

* * * * *

"The instructions cannot change the nature of the transaction, or legalize an act which, without those instructions, would have been a plain trespass."

The decision is significant to illustrate that the initiation of war is solely a congressional function, and that the power of the President as Commander in Chief must be exercised within the area prescribed by Congress.

LEGISLATION AUTHORIZING THE USE BY THE PRESIDENT OF THE NAVAL FORCES OF THE UNITED STATES

Numerous statutes authorize the President to use the land and naval forces of the United States. Thus, in cases of insurrection or violence, the President is authorized to use the land and naval forces of the United States and the militia, for suppression thereof (50 U. S. C. A., secs. 201, 202, 203); and to assist in the collection of customs (50 U. S. C. A., sec. 220). The President may use the land and naval forces to aid judicial process in the enforcement of civil rights laws (8 U. S. C. A., sec. 55). Likewise, the land and naval forces may be used to carry out the purposes of various criminal laws concerning offenses against the neutrality of the United States (18 U. S. C. A., sec. 38), or to prevent the unlawful export of munitions (22 U. S. C. A., sec. 245). The President is authorized to retaliate for discrimination against the citizens of the United States by belligerents in a war in which the United States is not engaged, and to enforce this law may use the land and naval forces (15 U. S. C. A., sec. 77). Formerly the President could detail naval officers to assist South American governments, and officers and men of the Navy or Marine Corps to assist the governments of Haiti or the Dominican Republic (34 U. S. C. A., secs. 441, 443, 446), and may now detail officers of the Army, Navy, and Marine Corps to assist all Latin-American governments, as well as the Philippine Islands (34 U. S. C. A., sec. 441a; 10 U. S. C. A., sec. 540). The President is also authorized to employ the land and naval forces to protect merchant vessels from piracy (33 U. S. C. A., sec. 381). The statute was originally enacted March 3, 1819 (3 Stat. 510).

None of these statutes authorize the employment of the naval forces in the protection of commerce in a manner which would involve the United States in a war.

The constitutional power of Congress to make rules for the government and regulation of naval forces has been exercised by the following statute:

"The orders, regulations, and instructions issued by the Secretary of the Navy prior to July 14, 1862, with such alterations as he may since have adopted, with the approval of the President, shall be recognized as the regulations of the Navy, subject to alterations adopted in the same manner" (34 U. S. C. A., sec. 591).

Pursuant to this authority the United States Navy regulations have been promulgated from time to time. These regulations have the force of law (*Smith* v. *Whitney*, 116 U. S. 167, 181; *Denby* v. *Berry*, 263 U. S. 29, 37), at least as to all persons except the Secretary of the Navy (*Denby* v. *Berry*, *supra*, at p. 38). However, it is necessarily implied in the statutes that the regulations must be consistent with the statutes that have been enacted by Congress in reference to the Navy. (*United States* v. *Symonds*, 120 U. S. 46, 49).

Chapter 18 of the Regulations, in section 2 pertaining to duties in time of war, provides:

"714. The Commander in Chief shall afford protection and convoy, so far as it is within his power, to merchant vessels of the United States and to those of allies."

"715. During a war between civilized nations with which the United States is at peace, the Commander in Chief and all under his command shall observe the laws of neutrality and respect a lawful blockade, but at the same time make every possible effort that is consistent with the rules of international law to preserve and protect the lives and property of citizens of the United States wherever situated."

In section 3, concerning intercourse with foreigners, the following is found:

"721. (1) The commander in chief shall exercise great care that all under his command scrupulously respect the territorial authority of foreign civilized nations in amity with the United States.

"722. On occasions where injury to the United States or to citizens thereof is committed or threatened, in violation of the principles of international law or treaty rights, the commander in chief shall consult with the diplomatic representative or consul of the United States and take such steps as the gravity of the case demands, reporting immediately to the Secretary of the Navy all the facts. The responsibility for any action taken by a naval force, however, rests wholly upon the commanding officer thereof.

"723. The use of force against a foreign and friendly state, or against anyone within the territories thereof, is illegal.

"The right of self-preservation, however, is a right which belongs to States as well as to individuals, and in the case of States it includes the protection of the State, its honor, and its possessions, and the lives and property of its citizens against arbitrary violence, actual or impending, whereby the State or its citizens may suffer irreparable injury. The

conditions calling for the application of the right of self-preservation cannot be defined beforehand, but must be left to the sound judgment of responsible officers, who are to perform their duties in this respect with all possible care and forbearance. In no case shall force be exercised in time of peace otherwise than as an application of the right of self-preservation as above defined. It must be used only as a last resort, and then only to the extent which is absolutely necessary to accomplish the end required. It can never be exercised with a view to inflicting punishment for acts already committed."

"724. (1) Whenever, in the application of the above-mentioned principles, it shall become necessary to land an armed force in foreign territory on occasions of political disturbance where the local authorities are unable to give adequate protection to life and property, the assent of such authorities, or of some one of them, shall first be obtained, if it can be done without prejudice to the interests involved."

"726. So far as lies within their power, commanders in chief, division commanders, and commanding officers of ships shall protect all merchant vessels of the United States in lawful occupations, and advance the commercial interests of this country, always acting in accordance with international law and treaty obligations."

The foregoing regulations might be relied upon as legislative authorization to employ the naval forces of the United States in the convoying of vessels laden with munitions to Great Britain. Reasoning to achieve this conclusion might be: That Congress has knowledge of the regulations as they exist from time to time, and particularly as they exist at the date of the passage of the lease-lend bill; by force of the statute these regulations have the force of statutory law, unless Congress has passed an act inconsistent with the regulation in question; the provision in the lease-lend bill that "nothing in this act shall be construed to authorize or to permit the authorization of convoying vessels by naval vessels of the United States" is not inconsistent with the regulations; such language merely indicated that Congress was content to allow the matter to rest in its present condition under the regulations of the Secretary of the Navy and the power of the President as Commander in Chief.

The fallacy in the argument as above outlined is that it ignores the facts, which are: that if the United States attempts to convoy vessels to Great Britain by so doing the United States joins in the current war upon her own initiative. Under the Constitution the power to so initiate a war rests in Congress alone. Quite obviously, the statute providing for the promulgation of regulations for the Navy by the Secretary of the Navy did not intend to delegate to the Secretary of the Navy, acting, of course, with the approval of the President, the power to declare war.

The present neutrality legislation provides:

"Whenever the President shall have issued a proclamation under the authority of section 245j (a), and he shall thereafter find that the protection of citizens of the United States so requires, he shall, by proclamation, define combat areas, and thereafter it shall be unlawful, except under such rules and regulations as may be prescribed, for any citizen of the United States or any American vessel to proceed into or through any such combat area. The combat areas so defined may be made to apply to surface vessels or aircraft, or both." (22 U. S. C. A., sec. 245j–2 (a).)

The regulations of the Secretary of State thereunder provide that vessels, officers, and men of the United States Navy or Coast Guard may proceed into or through combat areas when under orders so to do, or in the course of their duty (Regulations 156.3 (f) 1; 156.4 (b), set out in annotation to the above-quoted statute). Since the Executive may prescribe exceptions, this statute would not prohibit the convoying of vessels to Great Britain by the naval forces. It is even possible that by specious argument similar to that outlined above, the conclusion that the power to make it lawful to enter combat areas under rules and regulations as may be prescribed, would authorize the prescription of the use of a convoy as a condition of the exception. The same fallacy, of course, would be present.

INSTANCES OF THE EMPLOYMENT OF ARMED FORCE BY THE UNITED STATES

Not including the more pretentious struggles in which the United States has from time to time been involved, there have been numerous instances where the armed forces were employed against other nations for various purposes. A study of such instances is found in Offutt, The Protection of Citizens Abroad by the Armed Forces of the United States (1928). The author states that the armed forces of the United States landed on foreign soil more than 100 times during the past 115 years. The volume referred to contains a study of these instances grouped in 76 sections, each pertaining to a separate incident or series of incidents. My rough grouping of these incidents indicates that precisely 50 percent, or 38, of these incidents were for the purpose of protecting American lives or property during actual or threatened rebellion or other disturbances. Upon 11 other occasions the ostensible reason was the same, but the result was that the United States intervened in the political affairs of the foreign country. Whether this intervention in the internal political affairs of the foreign country was by design or accident is not always clear.

There were 11 instances where the armed forces bombarded or burned towns of semicivilized people as retribution for piratical acts of one kind or another. There were 9 instances where landings were made to pursue pirates, in some of which pirate towns were burned. On 2 occasions we find the United States negotiating a treaty of amity and commerce or amicable settlement of claims with decks cleared for action and a substantial escort of armed men. Three times action has been taken to protect American citizens and their property from irresponsible local governmental authorities. Twice the occasion was to avenge insult or to force apology. In one instance it was the act of a naval officer only, which did not receive approval from his superiors and resulted in his suspension from the Navy. In the other of these instances, the congressional approval was obtained. Certain things stand out. As common to all of these acts, the real or ostensible motive for the action was to protect American citizens or their property either by preventing damage or by instilling a healthy respect. With but one exception this use of force has taken place against incomparably weaker nations. The exception referred to is the stamping out of piracy in the Caribbean by chasing the pirates ashore on Spanish islands, and burning their ships and towns. This situation was considered at length by Congress which, because of the international situation never authorized the President to take such action. While Congress was deliberating, the action was taken by naval officers acting on their own responsibility. (See Offutt, supra, pp. 151–158.)

Specific congressional approval was requested and obtained only in the Vera Cruz incident of April 1914. In that case, pursuant to a message from the President, delivered on April 20, Congress adopted a joint resolution stating that the President was justified in the use of armed forces in Mexico, but disclaiming any hostility to the people of Mexico or the purpose of making war on Mexico. This resolution was approved April 22, 1914. It appears that the armed forces landed the day before.

In only two of the instances was the use of convoy involved. One of these occasions was a Brazilian naval rebellion in 1894. The admiral commanding the United States forces refused to allow the insurgents belligerent rights and declared he would convoy American ships whose commanders wished to dock in Rio de Janeiro. Nothing came of the incident. During the struggle for Greek independence in the 1820's, the economic condition of the Greeks was such as to drive many of them to piracy, and a system of convoy was instituted. It appeared that some of the pirate craft flew the Greek flag and held irregularly obtained commissions from the Greek Government. During the course of time several of the pirate craft were captured or burned. The commanders of the convoying vessels were ordered to scrupulously maintain the neutrality of the United States, and apparently they succeeded, for no objections are noted. (See Offutt, supra, pp. 17–20.)

The authorities seem to agree that in international law it is appropriate to use armed force to protect the lives and property of citizens abroad (Borchard, Diplomatic Protection of Citizens Abroad (1919), p. 448, et seq.; Offutt, pages 1–4). At least this seems to be approved in those instances where no attempt is made to interfere in the internal political situation.

Both Professors Borchard, supra, at page 452, and Offutt, supra, at page 4, indicate that the President as Commander in Chief of the armed forces has sufficient authority to employ those forces in the protection of citizens and property abroad. The basis for the conclusion as set forth by Professor Borchard is that—

"The landing of forces in foreign countries for the purpose of protecting American citizens is not normally an act of war, or a declaration of war, although it might possibly lead to war."

This is probably true in those instances where the state employing the armed force is much more powerful than the state subjected to the indignity. The statement would simply not be true if a powerful state were the intended victim.

It is submitted that each situation must stand alone. If the action to be taken will not result in war, the President's authority as Commander in Chief may be sufficient. In view of the established practice denial of the existence of some power would be unprofitable. On the other hand, if war would be the probable result of the employment of armed forces, Congress must take action. Otherwise, the power conferred upon Congress to declare war is a lifeless and futile thing.

This seems to have been the practical test which has been applied. In the many instances where danger of war was minimal, the Executive has acted alone. But when Mexico, a stronger nation, was involved, congressional authorization was obtained. This authorization need not be a formal declaration—it may be authorization only to act in a manner that will probably involve the Nation in a war. This type of authorization was obtained in the Mexican War of 1846. Mexico had warned that annexation of Texas meant war. Texas was annexed and while the negotiations were pending the President had sent an army to protect the Texan boundary. The Mexicans attacked this force and thereafter Congress declared the war. The Spanish-American War was initiated in

the same manner. On April 20, 1898, Congress adopted a resolution that Spain should withdraw from Cuba, and authorized use by the President of the armed forces. On April 25, 1898, a formal declaration of war was enacted stating that war had existed since April 21. A somewhat different authority was found for the hostilities with the Barbary Pirates. In that case the President, by act of March 27, 1794, was authorized to acquire a navy because it was needed to protect commerce from the Algerine Corsairs. The President dispatched a fleet to protect commerce and the first battle was fought with no further authorization. Thereafter, there were congressional declarations that certain of the pirate nations had commenced predatory warfare and the President was authorized to use the armed forces.

The foregoing justifies the conclusion that it was not the intent of the makers of the Constitution to confer upon the President any power to commence a war, and that it was the intention to confer this power solely upon Congress; that the courts, in such instances as have been considered, have uniformly so declared; that Congress has by no existing law delegated to the President its function of deciding when the United States of its own volition should embark upon a war; that the constitutional practice has been to respect these distinctions; and, finally, that the convoying by the Navy of the United States of merchant vessels carrying munitions to Great Britain, being either war itself or inevitably leading to war, is an act which is beyond the power of the President.

Dated March 15, 1941.

War Veterans in Congress

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

Mr. VAN ZANDT. Mr. Speaker, it is interesting to note that there are 153 Members of the House of Representatives and 25 Members of the Senate who are war veterans. Out of this total of 178 Members of Congress, 5 served in the Spanish-American War and 173 in the World War. Two members of the House of Representatives served in both the Spanish-American and World War.

A further analysis reveals that a total of 141 Members served in the Army, 62 being commissioned and 79 enlisted men. A total of 31 saw service with the Navy, 9 being commissioned and 22 enlisted men. The Marine Corps is credited with 3 enlisted men.

As a result of soliciting information from each Member, the following list has been compiled and is inserted as a matter of information. It is to be noted that the term "W" denotes World War and "S" Spanish-American War service:

Private Flying Operations and Accidents; Air Carrier Operations and Safety Record, 1936–40

EXTENSION OF REMARKS
OF
HON. JOSIAH W. BAILEY
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Monday, March 31, 1941

LETTER AND DATA FROM THE ASSISTANT SECRETARY OF COMMERCE

Mr. BAILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very important statement of private flying operations and accidents, and air carrier operations and safety record for the period 1936–40. In view of general misapprehensions, I invite Senators to give particular attention to the statement. The data come from Mr. Robert H. Hinckley, Assistant Secretary of Commerce.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE ASSISTANT SECRETARY OF COMMERCE,
Washington, March 25, 1941.

Hon. JOSIAH W. BAILEY,
United States Senate, Washington, D. C.

DEAR SENATOR BAILEY: I am inclosing to you herewith three copies each of:

Private Flying Operations and Accidents.

Air Carrier Operations and Safety Record, 1936–40.

I hope you will look these over when you have an opportunity.

Sincerely,

ROBERT H. HINCKLEY.

Private flying operations and accidents

[1940 figures are preliminary]

	January–June 1940	July–December 1940	1940	1939	1938	1937	1936	1935
Airplanes in operation	13, 859	16, 500	16, 500	12, 274	10, 718	10, 446	8, 849	8, 613
Miles flown	84, 400, 000	144, 600, 000	229, 000, 000	177, 868, 157	129, 359, 095	103, 196, 355	93, 320, 375	84, 755, 630
Number of fatal accidents	87	144	231	194	172	185	159	164
Miles flown per fatal accident	970, 115	1, 004, 167	991, 342	916, 846	752, 088	557, 818	586, 920	516, 803
Pilot fatalities	74	122	196	161	141	152	130	134
Dual or student fatalities	5	8	13	7	15	16	15	19
Passenger fatalities	52	86	138	139	115	112	119	100
Aircraft crew fatalities (other than pilot, dual pilot, or student)				4	1	2	6	4
Ground crew and third-party fatalities	4	5	9	3	3	1	2	5
Total fatalities	135	221	356	314	275	283	272	262
Miles flown per pilot fatality	1, 140, 540	1, 185, 246	1, 168, 367	1, 104, 771	917, 440	678, 923	717, 849	632, 505
Miles flown per passenger fatality	1, 623, 077	1, 681, 395	1, 659, 420	1, 279, 627	1, 124, 862	921, 396	784, 205	847, 556

Air carrier[1] operations and safety record, 1936–1940

[Index, 1936=100]

	Miles flown	Fatal accidents	Miles flown per fatal accident
1936	71, 211, 726	10	7, 121, 173
1937	74, 700, 237	6	12, 450, 040
1938	78, 197, 239	8	9, 774, 655
1939	90, 976, 063	3	30, 325, 354

Union With Britain?

EXTENSION OF REMARKS
OF
HON. ROBERT R. REYNOLDS
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Monday, March 31, 1941

EDITORIAL FROM THE NEW YORK DAILY NEWS

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial by the pen of Capt. Joe Patterson, editor and publisher of the New York Daily News, of New York City, entitled "Union With Britain?" This editorial was also carried in the Times-Herald, of Washington, D. C.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Daily News]

UNION WITH BRITAIN?

We have long had great admiration for Lord Beaverbrook. He began as an energetic and increasingly successful operator of various business enterprises in Canada, then went to England to become proprietor of the London Daily Express. The Express has the largest newspaper circulation in the United Kingdom.

Nowadays, Lord Beaverbrook is England's driving, cursing, bottle-neck-smashing and optimistic Minister of Aircraft Production. We admire the results he is evidently getting in this work as much as we admire anything else he ever has done. His radio speech of Sunday added up to a report that Great Britain has turned its most dangerous corner as regards aircraft production, and now has enough planes in reserve to cope with any invasion attempt the German Luftwaffe may launch this spring.

Beaverbrook's outstanding characteristic always has been his patriotism. He always has placed the British Empire's interests ahead of anything else in his scale of values, and always has battled for those interests. Some years before the war, for example, he was for Empire preference—meaning as much trade within the Empire as possible, and as much freezing out of other nations, including the United States, as possible.

We admire such men, no matter what flag they sail under, and we think no nation can have too many of them for its own good. The United States might profitably do with a few more of such men.

PROPOSED REUNION

Well, Lord Beaverbrook wound up his Sunday speech with an expression of fervent hope that "perhaps we will be joined together again" after the war—meaning Great Britain and the United States. Like many another Englishman and numerous Americans, Lord Beaverbrook wants to see this onetime colony of Great Britain return to the mother country after this war.

Lord Beaverbrook being the lifelong British patriot that he is, we think he expects Great Britain to gain fully as much by such a merger as it would give up—if not more. And looking over comparative conditions in this country and the Empire at this time, we think he is right. The Empire would gain a lot from a reunion with the United States. But what would the United States gain?

The United States would take on several liabilities which we would hate to see it take on.

WOULD IT HELP US?

We have already, at the President's urging and by consent of Congress, decided to go all out to save Britain from defeat in this war. The old phrase, "short of war," incidentally, is doing a fade-out. The interventionist feeling now is that if we have to go to war to save Britain, that will be O. K.

Our feeling is that we will have to go to war if the ultimate aim is to defeat Germany decisively on the European Continent. Beaverbrook's swarms of planes can't do that.

Only a huge expeditionary force can, as things now are.

If we join the British Empire after the war, we shall take on an obligation to help Britain every time it gets into a European war. It got into this one by what we have impolitely, but we think correctly, called stumblebum diplomacy. Must we bail it out every time from now on?

By rejoining Britain, we would be going back to a mother country which still has monarchs and nobles—two things our ancestors hoped to get permanently rid of when they revolted in 1776–83. And we would be underwriting the idea that in order to do plenty of business with another nation it is desirable to own that nation—as Britain owns other nations, as Germany hopes to do, as Japan hopes to do. Such ownership is unnecessary, as shown by the fact that Japan is one of our best customers, though we don't own Japan and have little use for it politically or ethically.

We would also be taking on a lot of racial problems in South Africa, India, the Malay States, etc.—and we have never been notable for successful handling of even our own racial problems.

Anyway, all talk of British-American union should be postponed till after the war. As things look now, there is likely to be little love left at that time between England and America.

Strikes in Defense Industries

EXTENSION OF REMARKS

OF

HON. CARL VINSON

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

Mr. VINSON of Georgia. Mr. Speaker, on March 21, 1941, I wrote Mr. Sidney Hillman of the Office of Production Management the following letter:

MARCH 21, 1941.

Mr. SIDNEY HILLMAN,
Office of Production Management,
Social Security Building,
Washington, D. C.

MY DEAR MR. HILLMAN: Will you kindly send to me by Wednesday, March 26, the following information for the use of the Committee on Naval Affairs, House of Representatives:

1. A list of all companies which have experienced any strikes during the period September 8, 1939, to date, which affected construction or procurement for the Army or Navy or which otherwise affected the national-defense program.

2. The number of days each such strike lasted; the number of men affected in the strike; and the number of man-hours lost as a result of the strike.

3. Any information which you have or which you can secure from other agencies of the Government bearing on the cause of each such strike.

Thanking you for your kindness, I am

Yours very truly,

CARL VINSON, *Chairman.*

In answer to that letter, Mr. Eric Nicol, executive assistant to Mr. Hillman, sent me a statement entitled "Strikes in Defense Industries." The statement included a list of the companies, the number of employees involved in each strike, and where the data was available, the number of man-days lost as a result of each strike. The statement also included the date of the beginning and end of each such strike, the defense materials affected, and the labor organization or organizations involved. The following is a summary of information contained in this statement:

Number of strikes	73
Number of strikes solely involving unions affiliated with the C. I. O.	46
Number of strikes solely involving unions affiliated with A. F. of L.	21
Number of strikes involving both unions affiliated with C. I. O. and unions affiliated with A. F. of L.	6
Number of employees involved	146,291
Number of man-days of labor lost	1,209,577

The above figure on man-days of labor lost does not include all of the strikes listed, but only those where data on man-days lost was available. Strikes not included are—

Aluminum Co. of America, Edgewater, N. J.: March 12–22, 1941, 3,000 employees.

American Zinc Co., East St. Louis, Ill.: January 12 to March 6, 1941, 65 employees.

Bethlehem Steel Fabricating plant, Los Angeles, Calif.: March 10–20, 1941, 100 employees.

Condenser Corporation of America, South Plainfield, N. J.: March 10, 1941, to (pending), 2,400 employees.

Cowles Tool Co., Cleveland Ohio: February 27, 1941, to (pending), 110 employees.

Curtiss-Wright Corporation, Neville Island, Pa.: March 4–5, 1941, 900 employees.

Eaton Manufacturing Co., Saginaw, Mich.: November 14–16, 1940, 315 employees.

Fairmount Aluminum Co., Fairmount, W. Va.: March 10–18, 1941, 200 employees.

Harvill Die Casting Corporation, Los Angeles, Calif.: March 13–22, 1941, 350 employees.

Indiana Steel Products Co., Valparaiso, Ind.: March 17–24, 1941, 205 employees.

Ingalls Shipbuilding Corporation, Pascagoula, Miss.; March 10–14, 1941, 135 employees.

International Harvester Co., Rock Falls, Ill.: January 21, 1941, to (pending), 250 employees.

International Harvester Co., Chicago, Ill. (tractor plant): January 30, 1941, to (pending), 6,000 employees.

International Harvester Co., Chicago, Ill. (McCormick works): February 28, 1941, to (pending), 5,500 employees.

International Harvester Co., Richmond, Ind.: February 17, 1941, to (pending), 1,500 employees.

Phelps-Dodge Corporation, Bayway, N. J.: January 29 to February 1, 1941, 1,600 employees.

Ray Day Piston Corporation, Detroit, Mich.: March 10, 1941, to (pending), 110 employees.

Rifle range and training ground, Holly Ridge, N. C.: March 3–5, 1941, 5,000 employees.

Standard Tool Co., Cleveland, Ohio: January 27, 1941, to (pending), 600 employees.

Todd Drydocks, Galveston, Tex.: March 19–24, 1941, 2,000 employees.

Universal Cyclops Steel Corporation, Bridgeville, Pa.: February 1–5, 1941, 1,100 employees; February 4 to (pending), 1,100 employees.

Wright Field, Dayton, Ohio: January 28–31, 1941, 500 employees; March 4–21, 1941, 500 employees.

Bethlehem Steel Co., Bethlehem, Pa.: March 24, 1941, to (pending), 14,000 employees.

American Steel & Wire Co., Donora, Pa.: February 19–20, 1941, 950 employees.

Combustion Engineering, Chattanooga, Tenn.: February 21–March 6, 1941, 550 employees.

Consolidated Steel Co., Orange, Tex.: March 3–7, 1941, 350 employees.

Federal Motor Truck Co., Detroit, Mich.: March 7, 1941, to (pending), 550 employees.

Middleton Steel Co., Detroit, Mich.: March 10, 1941, to (pending), 1,700 employees.

Snoqualmie Falls Timber Co., Snoqualmie, Wash.: December 16, 1940, to (pending), 894 employees.

Watertown Arsenal, Watertown, Mass.: March 3–20, 1941, 100 employees.

Mr. Speaker, the following is the statement transmitted to me by Mr. Eric Nicol, executive assistant to Mr. Hillman, entitled "Strikes in Defense Industries":

STRIKES IN DEFENSE INDUSTRIES

Alabama Drydock & Shipbuilding Corporation, Mobile, Ala.: International Union of Marine and Shipbuilding Workers of America, C. I. O.; building destroyers for the Navy; 3,400 employees; 27,200 man-days idle. Began January 23; ended February 2. Issue: Wages.

Allis-Chalmers Manufacturing Co., Milwaukee, Wis.: United Automobile Workers, C. I. O.; company produces turbines for powder plants, wide variety of machine-tool items, and special items for the Navy; 7,500 employees; 337,500 man-days idle. Began January 22; end pending. Issue: Union relations.

Aluminum Co. of America, Edgewater, N. J.: Aluminum Workers of America, C. I. O.; company produces aluminum for aircraft; 3,000 employees.[1] Began March 12; ended March 22.[1] Issues: Sunday work, wages, and union relations.

Aluminum Co. of America, New Kensington, Pa.: Aluminum Workers of America, C. I. O.; company produces aluminum for aircraft; 7,000 employees; 28,160 man-days idle. Began November 22; ended November 28. Issue: Union relations.

American Car & Foundry Co., Berwick, Pa.: Steel Workers Organizing Committee, C. I. O.; tanks; 1,250 employees; 1,250 man-days idle (8 hours only). Began December 30; ended December 31. Issue: Grievances.

American Zinc Co., East St. Louis, Ill.: Mine, Mill, and Smelter Workers, C. I. O.; bricklayers and other building trades, A. F. of L.; construction of new smelter; 65 employees.[1] Began January 12; ended March 6.[1] Issue: Jurisdictional.

Babcock & Wilcox, Bayonne, N. J.: United Electrical Radio and Machine Workers of America, C. I. O.; boilers for the Navy; 477 employees; 8,109 man-days idle. Began January 3; ended January 27. Issues: Wages and other terms of new agreement.

Bethlehem Shipbuilding Co., Sparrows Point, Md.: Steel Workers Organizing Committee, C. I. O.; boats for United States Maritime Commission; 3,000 employees; 20,100 man-days idle. Began September 20, ended October 7. Issue: Wages.

Bethlehem Steel Co., Lackawanna, N. Y.: Steel Workers Organizing Committee, C. I. O.; steel for defense contracts; 12,000 employees; 18,000 man-days idle. Began February 27, ended February 28. Issues: Union recognition and grievances.

Bethlehem Steel Co., Johnstown, Pa.: Steel Workers Organizing Committee, C. I. O.; steel for defense contracts; 800 employees. Began January 3, ended January 8; 3,200 man-days idle. Issue: Grievances. 1,064 employees. Began January 25, ended January 30; 8,512 man-days idle. Issue: Grievances.

Bethlehem Steel Fabricating Plant, Los Angeles, Calif.: Steel Workers Organizing Committee, C. I. O.; fabricating steel for aviation plants on west coast; 100 employees.[1] Began March 10, ended March 20.[1] Issues: Wages and union recognition.

Condenser Corporation of America (Cornell-Dubilier Corporation), South Plainfield, N. J.: International Brotherhood of Electrical Workers, A. F. L.; condensers for Signal Corps contractors; 2,400 employees.[1] Began March 10, end pending.[1] Issue: Union recognition.

Cowles Tool Co., Cleveland, Ohio: United Automobile Workers, C. I. O.: tools for defense contractors; 110 employees.[1] Began February 27, end pending.[1] Issue: Wages and other terms of new agreement.

Crucible Steel Corporation: Steel Workers Organizing Committee, C. I. O.; steel for defense contracts; Syracuse, N. Y., 2,021 employees. Began November 19, ended November 22; 6,063 man-days idle. Issue: Grievances. Midland, Pa., 3,000 employees. Began November 13, ended November 17; 11,200 man-days idle. Issue: Grievances. Harrison, N. J., 925 employees. Began October 3, ended October 8; 4,625 man-days idle. Issue: Grievances. Pittsburgh, Pa., 1,000 employees. Began March 12, ended March 17. Issue: Grievances.

Curtiss-Wright Corporation, Neville Island, Pa. (Pittsburgh): Steel Workers Organizing Committee, C. I. O.; propellors for aircraft;

[1] Figures and dates are from records of Office of Production Management. These could not be checked by Bureau of Labor Statistics because of lack of adequate data.

800 employees.[1] Began March 4, ended March 5.[1] Issue: Union relations.

Fort Dix, Fort Dix, N. J.: Laborers Union and Carpenters, A. F. L.; cantonment construction; 600 employees; 1,200 man-days idle. Began November 8, ended November 11. Issue: Jurisdictional.

Eastern Malleable Iron Co., Wilmington, Del.: United Automobile Workers, C. I. O.; subcontracts for trench mortars; 580 employees; 24,940 man-days idle. Began January 24, ended March 20. Issues: Union relations and wages.

Eaton Manufacturing Co., Saginaw, Mich.: United Automobile Workers, C. I. O.; parts for aircraft manufacture; 315 employees.[1] Short stoppages on November 14 and 16. Issue: Jurisdictional.

Eaton Manufacturing Co., Saginaw, Mich.; Battle Creek, Mich.; Marshall, Mich.; Cleveland, Ohio: United Automobile Workers, C. I. O.; 3,113 employees; 9,339 man-days idle. Began January 13, ended January 15. Issue: Union relations.

Foster-Wheeler Corporation, Carteret, N. J.: United Electrical Radio and Machine Workers of America, C. I. O.; Navy boilers for ships; 800 employees; 5,600 man-days idle. Began February 12, ended February 20. Issues: Wages and holidays.

Fairmount Aluminum Co., Fairmount, W. Va.: Aluminum Workers of America, C. I. O.; aluminum; 200 employees.[1] Began March 10, ended March 18.[1] Issues: Vacations and grievances.

Harvill Diecasting Corporation, Los Angeles, Calif.: National Association of Diecasting Workers, C. I. O.; castings for west coast aircraft plants; 350 employees.[1] Began March 13, ended March 22.[1] Issue: Wages.

Indiana Steel Products Co., Valparaiso, Ind.: Blacksmiths, A. F. L., Steel Workers Organizing Committee, C. I. O.; machinists, A. F. L.; magnets used in Army contracts, for telephones, switchboards, and head sets; 205 employees.[1] Began March 17, ended March 24.[1] Issue: Jurisdictional.

Ingalls Shipbuilding Co., Pascagoula, Miss.: Boilermakers and machinists, A. F. L.; ships for the Navy; 84 employees; 672 man-days idle. Began January 15, ended January 24. Issue: Wages.

Ingalls Shipbuilding Corporation, Pascagoula, Miss.: Metal trades, A. F. L. (boilermakers versus iron workers); ships for the Navy; 135 employees.[1] Began March 10, ended March 14.[1] Issue: Jurisdictional.

International Harvester Co.: Farm Equipment Workers Organizing Committee, C. I. O.; Rock Falls, Ill., 250 employees. Began January 21, end pending. Issue: Union recognition. Chicago, Ill.; tractor plant; 6,000 employees.[1] Began January 30, end pending. Issue: Union recognition. Chicago, Ill.; McCormick Works; 5,500 employees.[1] Began February 28, end pending. Issue: Union recognition. Richmond, Ind.; ammunition components and tractors; 1,500 employees.[1] Began February 17, end pending. Issue: Union recognition.

Jones & Laughlin, Aliquippa, Pa.: Steel Workers Organizing Committee, C. I. O.; steel for defense contractors; 565 employees; 4,741 man-days idle. Began October 15, ended October 30. Issue: Union recognition.

Kellogg Switchboard & Supply Co., Chicago, Ill.: International Association of Machinists, A. F. L.; International Brotherhood of Electrical Workers, A. F. L.; switchboards and other electrical equipment for Army and Navy; 400 employees; 18,800 man-days idle. Began June 26, ended August 31. Issue: Union recognition and unfair labor practices.

King Powder Co., Kings Mills, Ohio, and Kico, Ky.: United Mine Workers, C. I. O.; powder plants; 124 employees; 2,232 man-days idle. Began September 18, ended October 10. Issues: Wages and union recognition.

Motor Wheel Corporation, Lansing, Mich.: United Automobile Workers, A. F. L.; manufacture of shells; wheels for airplanes; 2,500 employees; 22,500 man-days idle. Began February 13, ended February 25. Issues: Union relations and wages.

Phelps-Dodge Corporation, Bayway, N. J.: United Electrical, Radio, and Machine Workers of America, C. I. O.; small, direct defense contracts; copper for defense contracts; 1,600 employees.[1] Began January 28, ended February 1.[1] Issue: Union recognition.

Ray Day Piston Corporation, Detroit, Mich.: United Automobile Workers, C. I. O.; aluminum castings and pistons for aircraft; 110 employees.[1] Began March 10, end pending.[1] Issue: Union recognition.

Rifle range and training ground, Holly Ridge, N. C.: Building Trades, A. F. L.; Army training grounds; 5,000 employees.[1] Began March 3, ended March 5.[1] Issue: Union relations.

Shipowners Association of the Pacific, San Francisco, Calif.: C. I. O. and A. F. L. maritime unions; shipment of defense materials; 1,330 employees; 61,510 man-days idle. Began October 5, ended December 4. Issue: Wages and working conditions.

Standard Tool Co., Cleveland, Ohio: United Automobile Workers, C. I. O.; machine tools for firms holding defense contracts; 600 employees.[1] Began January 27, end pending.[1] Issues: Wages and other terms of new agreement.

Todd Drydocks, Galveston, Tex.: Carpenters, A. F. L.; shipbuilding and repairing facilities; 2,000 employees.[1] Began March 19, ended March 24.[1] Issue: Grievances

Universal Cyclops Steel Corporation, Bridgeville, Pa.: Steel Workers Organizing Committee, C. I. O.; special steel for fuses and airplane propellers; 1,100[1] employees. Began February 1, ended February 5. Issues: Grievances and wages. 1,100[1] employees. Began February 24, end pending. Issues: Grievances and wages.

Vanadium Corporation of America, Niagara Falls, N. Y.: United Mine Workers, C. I. O.; alloy for special steel used in defense products; 386 employees; 3,860 man-days idle. Began February 10, ended February 21. Issues: Wages and union relations.

Vanadium Corporation of America, Bridgeville, Pa.: Local industrial union, C. I. O.; alloy for special steel used in defense products; 274 employees; 4,650 man-days idle. Began February 10, end pending. Issue: Grievances (union agreement).

Vultee Aircraft, Inc., Downey, Calif.: United Automobile Workers, C. I. O.; aircraft for Army Air Corps; 5,000 employees; 35,000 man-days idle. Began November 15, ended November 25. Issue: Wages.

Wright Field, Dayton, Ohio: Building Trades, A. F. L., electricians, C. I. O.; construction of a wind tunnel; 500 employees.[1] Began January 28, ended January 31.[1] Issue: Jurisdictional; 500 employees.[1] Began March 4, ended March 21.[1] Issue: Jurisdictional.

Youngstown Sheet & Tube Co., Youngstown, Ohio: Steel Workers Organizing Committee, C. I. O.; basic steel for defense materials; 900 employees; 3,600 man-days idle. Began February 11, ended February 15. Issue: Grievances.

Bethlehem Steel Co., Bethlehem, Pa.: Steel Workers Organizing Committee, C. I. O.; basic steel for defense contractors; 14,000 employees.[1] Began March 24, end pending.[1] Issue: Union relations under N. L. R. B. order.

LESS IMPORTANT STRIKES IN DEFENSE INDUSTRIES

Aluminum Ore Co., East St. Louis, Ill.: Federal Labor Union, A. F. L.; bauxite for aluminum; 1,468 employees; 38,168 man-days idle. Began October 24, ended November 30. Issue: Wages.

American Steel & Wire Co., Donora, Pa.: Steel Workers Organizing Committee, C. I. O.; manufacturers of gun shells; 950 employees.[1] Began February 19, ended February 20.[1] Issue: Wage adjustments.

B. & H. Aircraft, Long Island City, N. Y.: United Automobile Workers, C. I. O.; parts for aircraft manufacturers; 120 employees; 840 man-days idle. Began February 19, ended February 27. Issue: Union recognition.

Boomen & Rafter, Olympia, Wash.: International Woodworkers of America, C. I. O.; lumber for defense contractors; 2,500 employees; 29,760 man-days idle. Began September 30, ended October 24. Issue: Wages.

Century Electric Co., St. Louis, Mo.: United Electrical Radio and Machine Workers of America, C. I. O.; manufacturers of generators; 1,269 employees; 97,188 man-days idle. Began June 19, ended October 25. Issues: Wages and other terms of new agreement.

Clark Equipment Co., Jackson, Mich.: United Automobile Workers, C. I. O.; axle housings for Army trucks; 848 employees; 4,240 man-days idle. Began January 18, ended January 24. Issues: Wages and other terms of new agreement.

Combustion Engineering, Chattanooga, Tenn.: Steel Workers Organizing Committee, C. I. O.; essential chemicals for explosives; 550 employees.[1] Began February 21, ended March 6.[1] Issues: Union recognition, wages and other terms of new agreement.

Consolidated Steel Co., Orange, Tex.: Laborers union, A. F. L., steel for Navy boats; 350 employees. Began March 3, ended March 7.[1] Issues: Wages, union status.

Continental Steel Co., Kokomo, Ind.: Steel Workers Organizing Committee, C. I. O.; basic steel for Army and Navy; 500 employees; 5,000 man-days idle. Began January 24, ended February 6. Issue: Wages.

Dahlstrom Metallic Door Co., Jamestown, N. Y.: United Electrical Radio and Machine Workers of America, C. I. O.; parts for airplane contractors; 369 employees; 8,856 man-days idle Began July 15, ended August 15. Issues: Wages and other terms of new agreement.

Farnsworth Television & Radio Corporation, Marion, Ind.: International Brotherhood of Electrical Workers, A. F. L.; Signal Corps contracts; 610 employees; 3,050 man-days idle. Began February 17, ended February 22. Issues: Union status, wages.

Federal Motor Truck Co., Detroit, Mich.: United Automobile Workers, C. I. O.; tractor trucks for Army; 550 employees.[1] Began March 7, pending.[1] Issue: Union status.

Hertner Electric Co., Cleveland, Ohio: United Electrical Radio and Machine Workers of America, C. I. O.; generators for the Navy; 81 employees; 1,944 man-days idle. Began February 10, ended March 13. Issue: Wages and other terms of union agreement.

International Harvester Co., Fort Wayne, Ind.: United Automobile Workers, C. I. O.; some trucks and experimental work; 2,800 employees; 25,600 man-days idle. Began December 31, ended January. Issues: Wages and other terms of union agreement.

Kawneer Manufacturing Co., Niles, Mich.; United Automobile Workers, A. F. L.; parts for aircraft companies; 530 employees; 29,720 man-days idle. Began July 15, ended September 28. Issues: Wages, union recognition, and other terms of new agreement.

[1] Figures and dates are from records of Office of Production Management. These could not be checked by Bureau of Labor Statistics because of lack of adequate data.

Lacy Manufacturing Corporation, Los Angeles, Calif.; Boilermakers, A. F. L.; Steel Workers Organizing Committee, C. I. O.; structural work on runways for shipbuilding company; 77 employees; 2,002 man-days idle. Began November 18, ended December 24. Issues: Union recognition, jurisdictional.

Lumber companies, Oregon and Washington, various places; Lumber and Sawmill Workers, A. F. L.; some lumber for cantonments; 12,000 employees; 161,659 man-days idle. Began October 1, ended December 16 (various dates). Issue: Wages.

Mesta Machine Co., Pittsburgh, Pa.; Building Trades, A. F. L.; plant addition to house gun-forging machinery; 20 employees; 260 man-days idle. Began January 23, ended February 10. Issue: Union recognition.

Midland Steel Co., Detroit, Mich.; United Automobile Workers, C. I. O.; parts for Army trucks; 1,700 employees.[1] Began March 10, pending.[1] Issue: Wages.

Mountain State Steel Foundry, Parkersburg, W. Va.; Steel Workers Organizing Committee, C. I. O.; contracts with Rock Island Arsenal; 210 employees; 1,050 man-days idle. Began January 28, ended February 3. Issue: Union recognition.

National Supply Co., Philadelphia, Pa.; International Association of Machinists, A. F. L.; engines for small Navy boats; 222 employees; 2,220 man-days idle. Began February 18, ended March 3. Issues: Union recognition, wages.

Powell Valve Co., Cincinnati, Ohio; Steel Workers Organizing Committee, C. I. O.; Navy defense materials; 964 employees; 5,784 man-days idle. Began February 11, ended February 20. Issues: Wages, union status, and other terms of new agreement.

Snoqualmie Falls Timber Co., Snoqualmie, Wash.; Lumber and Sawmill Workers, A. F. L.; lumber for defense contracts; 894 employees.[1] Began December 16, pending. Issues: Union status, wages.

Truck drivers, New York City; Teamsters, A. F. L.; contracts for handling defense materials; 7,000 employees; 22,000 man-days idle. Began October 8, ended October 14. Issue: Vacations.

Truck drivers, Newark, N. J.; Teamsters, A. F. L.; contracts for handling defense materials; 1,500 employees; 22,900 man-days idle. Began October 1, ended October 20. Issue: Wages.

Tugboat operators, Grays Harbor, Wash.; Masters, Mates, and Pilots, A. F. L.; Inland Boatmen's Union, C. I. O.; shipments of lumber, 40 employees; 680 man-days idle. Began October 17, ended November 8. Issues: Wages and other terms of new agreement.

Walker Turner Co., Plainfield, N. J.; United Electrical Radio and Machine Workers of America, C. I. O.; tools for aircraft, British orders; 175 employees; 4,200 man-days idle. Began October 23, ended November 26. Issue: Wages.

Watertown Arsenal, Watertown, Mass.; A. F. L. Building Trades; construction work; 100 employees.[1] Began March 3, ended March 10.[1] Issue: Jurisdictional.

S. S. White Dental Co., Staten Island, N. Y.; Federal Labor Union, A. F. L.; equipment for the Army; 565 employees; 6,420 man-days idle. Began March 3, ended March 18. Issue: Wages.

Wire and cable companies, New York, N. Y.; International Brotherhood of Electrical Workers, A. F. L.; Signal Corps contracts; 860 employees; 61,765 man-days idle. Began August 8, ended September 21 (3 companies); August 8, ended February 3 (1 company); August 8, pending (1 company). Issues: Wages, union status.

Minnesota Legislature Endorses St. Lawrence Seaway Project

EXTENSION OF REMARKS
OF
HON. WILLIAM A. PITTENGER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

RESOLUTION OF THE MINNESOTA LEGISLATURE

Mr. PITTENGER. Mr. Speaker, the people of the State of Minnesota are wholeheartedly in favor of action by the present Congress on the St. Lawrence seaway project. They realize the great benefit which will come to the Midwest when ocean-going vessels will be permitted to travel in the Great Lakes area. For that reason they are supporting the legislation which will be before Congress and which will provide for ratification of the agreement between Canada and the United States authorizing the commencement of this project. The Legislature of the State of Minnesota passed a concurrent resolution which was approved by the Governor on March 28, 1941, and is as follows:

Concurrent resolution memorializing the Congress of the United States to take prompt action to ratify the agreement between the Government of the United States and the Dominion of Canada for the development of the St. Lawrence waterway

Whereas the duly accredited representatives of the Governments of the United States and the Dominion of Canada have now consummated and signed an agreement for the development of the St. Lawrence River, and the improvement of the water route of the Great Lakes, so as to permit the free passage of oceangoing ships from the Atlantic Ocean to the head of the Great Lakes and the heart of the Northwest and of the American Continent; and

Whereas the Presidents of the United States for more than 20 years have committed themselves to the promotion of this great development, and President Franklin D. Roosevelt has characterized the St. Lawrence project as of economic value comparable to the Panama Canal and as a vital necessity as a defense measure, and will now ask the Congress of the United States to ratify the agreement as made and provide funds for the completion of the work; and

Whereas the State of Minnesota, through its legislature, for more than 20 years has affirmed its continued support of this project, and through the Great Lakes-St. Lawrence Tidewater Commission of Minnesota has consistently endeavored to bring about the realization of the hopes of the people of this State for this development; and

Whereas we believe that the St. Lawrence project is a vital necessity for the development and stimulation of the resources of this State and of the entire Northwest, and has already been too long delayed, and that great economic advantages will result not only to Minnesota, but to the Nation from the improvement of this natural avenue of commerce: Now, therefore, be it

Resolved, That the house of representatives (the senate concurring) commend and support the President of the United States in his steadfast, consistent, and energetic support of this project, and urge the Congress of the United States, without delay, to approve and ratify the agreement already concluded with the Dominion of Canada; to provide the necessary funds for the work, and thus promote the speedy completion of this great project as a vital, economic, and defense necessity.

That the secretary of state be instructed to send copies of this resolution to the President, the Vice President, the Speaker of the House of Representatives of the United States, and to each of the Senators and Representatives in Congress of the State of Minnesota.

A Chance To Reciprocate

EXTENSION OF REMARKS
OF
HON. JAMES F. O'CONNOR
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

EDITORIAL FROM THE DAILY MISSOULIAN, OF MISSOULA, MONT.

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Daily Missoulian, Missoula, Mont., for February 19, 1941:

[From the Daily Missoulian, Missoula, Mont., of February 19, 1941]

A CHANCE TO RECIPROCATE

For a good many years the collector of internal revenue for the district of Montana and his staff have given excellent service to the people of the State. For thousands they have made easier the preparation of income-tax returns and have assisted competently in solving problems puzzling not only individuals but business organizations. Their cooperation has been warmly appreciated.

And now, with a new tax set-up to struggle with, an opportunity to reciprocate arises. This year the taxpayers are able to assist the internal-revenue men. This they can do by starting earlier than ever on the preparation of their income-tax returns, so that these may be filed well before the March 15 deadline. This would prevent the possible last-minute swamping of the members of the collector's staff, with the probability that many taxpayers might not be able to get this important business attended to before the time limit had expired.

As you probably have read in the news columns, the collector will have deputies in the local zone office in the Federal building from February 27 to March 15. The duty of these men will be to assist taxpayers in preparing and filing their returns. We can make their work easier, can make it possible for all local taxpayers to finish this job well on time by taking our reports and our problems to them as early as we possibly can.

As you have noted, the Missoulian has printed considerable information of value to income-tax payers. Probably you have read these articles and will read those yet to be published. Yet we think it would be well to reproduce here a statement to the Missoulian from Collector Lewis Penwell, who, in a few

words, summarizes the entire situation, including reference to the taxpayers' opportunity to help the men of his staff:

"This is the income-tax-filing period. The Congress has changed the law so that the liability for filing a return is now based on gross income, and not on net income, as in former years. The base, also, has been changed, so that single persons whose gross income is $800 a year and married persons whose combined gross income is $2,000 a year must file a return. Last year this base was $1,000 for single persons and $2,500 for married persons.

"The exemptions have also been lowered to $800 for a single person and $2,000 for married persons. The credit of $400 for each dependent has not been changed.

"Last year in Montana there were filed some 42,000 income-tax returns. This year, partly because of these changes, we expect about a 50-percent increase. Most of this added number of taxpayers will consist of those who have never filed Federal returns before. They will need more help, and it will take more of the deputies' time.

"To meet this great increase the Bureau has augmented its force of field deputies. However, if the taxpayers wait, as many of them do, until the last minute to file their returns, congestion will result and many persons may not get their returns into the collector's offices by midnight March 15.

"Most taxpayers are able to prepare their returns without assistance, but in the event help is required, the collector's office in this district has a competent staff of deputies trained for this service. They are ready to help any taxpayer make out his return. This service is free. If you would urge the people to use it and to file their returns early, I am sure we can clear most of the income-tax returns promptly and easily and avoid an overwhelming last-minute rush.

"With the income tax the Government this year is also collecting the defense tax, which is an added reason for promptness in filing the return. This tax and the income tax may be paid in one lump sum or in four equal quarterly installments."

The Social Security Act

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

RESOLUTION OF CALIFORNIA STATE ASSEMBLY

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of California Assembly on Social Security Act:

Assembly Joint Resolution 2

Memorializing Congress to amend the Social Security Act with reference to the exempt income rights accorded persons receiving old-age assistance

Whereas it appears by section 2 (a) of the Social Security Act that this State on July 1, 1941, will be required in determining the need of applicants for old-age assistance, to take into consideration any other income and resources of such applicants; and

Whereas this requirement will force this State to amend section 2020 of the Welfare and Institutions Code to remove the right to certain exempt income now accorded to persons receiving old-age assistance; and

Whereas this action will force a reduction in the income of those persons receiving old age assistance who are still able to supplement assistance from the State by gardening or other light labor suited to their age; Now, therefore, be it

Resolved by the Assembly and the Senate of the State of California (jointly), That the Congress of the United States be memorialized to amend the Social Security Act to remove this requirement therefrom in order that this State may be eligible to receive further Federal funds for the financing of the Old Age Security Law of this State without the necessity of amending section 2020 thereof; and be it further

Resolved, That a copy of this resolution be sent to the Senators and Congressmen from California in the Congress of the United States by the secretary of State.

Military Highways

EXTENSION OF REMARKS

OF

HON. JOSEPH CLARK BALDWIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

RESOLUTION BY NEW YORK STATE LEGISLATURE

Mr. BALDWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the Legislature of the State of New York:

Whereas the President of the United States in a recent broadcast to the Nation has warned that conditions abroad and lack of military preparedness at home constitute a menace to the safety and security of the people of the United States; and

Whereas the Government of the United States is now intensively engaged in preparation for hemispheric, North American, and national defense, and Congress has appropriated large sums of money for this purpose; and

Whereas an adequate system of military highways over which troops, artillery, mechanized equipment, and other materials of war and supplies may be moved without interruption and with the utmost dispatch is one of the essentials of modern warfare and a necessity in the defense of this country; and

Whereas the State of New York, one of the most important of industrial, commercial, and financial areas of the United States and a section in which arms and munitions are being manufactured and concentrated in enormous quantities, and in which Army posts and military training camps are established, is located, in part, upon the eastern seaboard, while its northern frontiers bordering the Dominion of Canada, a country now at war, are entirely unfortified; and

Whereas, in the event that a hostile power or hostile powers should overcome Great Britain, its naval vessels and transports might steam through the Gulf of St. Lawrence, capture Quebec and Montreal, and, in the latter city, be in a position to strike at the rich industrial and commercial centers of the northeastern United States and hurl its armies upon Albany and New York; and

Whereas, should such events threaten, it would be of vital importance to the United States to be in a position to move troops and military equipment and supplies to our northern frontier in great numbers and in enormous quantities for use in repelling the invader; and

Whereas, if such a situation should develop, the safety and security of our entire country might depend upon the ability of our Government to move defense forces and equipment to our northern frontier, to the Atlantic seaboard, and between strategic points in the State with the utmost speed; and

Whereas our present highways are unsuited to the purpose because many of them are narrow and run through congested metropolitan districts and some are not sufficiently substantial to carry the fleets of heavy transport vehicles, motorized artillery, and other vehicles which would make use of them in the event of war; and

Whereas the joint legislative highway survey committee has recently made a report to this body in which its members assert that, with the present contemplated allocation of Federal funds, at least 4 years will be required to improve the 3,200 miles of New York State highways considered vital for defense purposes; and

Whereas it is the considered opinion of this body that New York State, because of its geographical location and because its entire northern frontier is unfortified, would be among the first to be invaded if Great Britain and Canada should be defeated and there should be an attempt by an aggressor nation or nations to conquer the United States: Now, therefore, be it

Resolved (if the senate concur), That the Legislature of the State of New York hereby petitions the Federal Government of the United States to make available from funds appropriated, or to be appropriated, for defense purposes a sum adequate to carry out a program of military highway construction to the extent considered imperative for the safety and security of the State and Nation; and be it further

Resolved (if the senate concur), That a copy of this resolution be immediately transmitted to the President of the United States, the Secretary of the United States Senate, the Clerk of the House of Representatives, and to each Member of the Congress elected from the State of New York.

By order of the assembly.

ANSLEY B. BORKOWSKI,
Clerk.

In senate, March 18, 1941.
Concurred in without amendment.
By order of the senate.

WILLIAM S. KING,
Clerk.

Declaration of Independence and Monroe Doctrine Discarded

EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

EDITORIAL FROM THE SATURDAY EVENING POST

Mr. TINKHAM. Mr. Speaker, under leave to extend my remarks in the RECORD,

I include the following editorial from the Saturday Evening Post of March 29, 1941:

[From The Saturday Evening Post of March 29, 1941]

TOWARD THE UNKNOWN

Looking back to say farewell. Misgivings are forbidden, but let us not on that account be mistaken about what has happened. It is not a new chapter of American history that now opens. It is a new book with a new theme. The story that began with the Declaration of Independence is finished.

We have broken with our past. We have thrown away our New World, our splendid isolation, our geographical advantage of three to one against all aggressors, our separate political religion. There is no longer a New World, or an Old World, but now one world in which the American people have been cast for a part they will have to learn as they go along.

There is no longer a Monroe Doctrine. In place of it there is an American internationalism. We do not yet know what that means.

From now on there is for us no foreign war. Any war anywhere in the world is our war, provided only there is an aggressor to be destroyed, a democracy to be saved, or an area of freedom to be defended.

Our ideas of aggressor, democracy, and freedom are emotionally clear. Unfortunately, as we go forward in this crusade we shall encounter many moral and logical contradictions. These we must learn to resolve. Every Hitler we must crush. That has been made definite. But every Stalin too? For practical and strategic reasons we have just now relieved Stalin of our moral disapproval. That does not necessarily mean that we have forgotten Finland, it does not mean that we shall not in time restore to her that which was her own. It does show how liable we are to be misunderstood and how easy it will be for the world to say that our moral indignation is selective.

It is too soon to be either critical or analytical. Hardly the first page of the new book has been written. What will follow we do not know. How could we? There was never in all human history a story like it. We began it unconsciously. That is to say, we did not know we were doing it. Indeed, we kept saying we were not. This fact, no doubt, will give the historian some trouble. It may restore him to his faith in a mysterious agency that moves people unawares; it may even wreck the wretched theory of pure economic determinism in human affairs.

In August last year the British Prime Minister, speaking of the 50 destroyers he had got from the United States Navy, said to the House of Commons, "Undoubtedly this process means that these two great organizations of the English-speaking democracies, the British Empire and the United States, will have to be somewhat mixed up together in some of their affairs for mutual and general advantage. * * * No one can stop it. Like the Mississippi, it just keeps rolling along."

The American people took this to be rhetoric. They did not know the British Government was announcing American foreign policy.

In October, at Philadelphia, the President of the United States said, "I give to you and to the people of this country this most solemn assurance: There is no secret treaty, no secret obligation, no secret commitment, no secret understanding in any shape or form, direct or indirect, with any other government, or any other nation in any part of the world—no such secrecy that might or could in any shape involve this Nation in any war or for any other purpose. Is that clear?"

He said, "The United States today is at peace and is going to remain at peace."

He said, one rainy day at New Haven, of the draft, "It is just for the same reason that you have got umbrellas up today, so as not to get wet."

And on October 24 he said, "I repeat again that I stand on the platform of our party: 'We will not participate in foreign wars'."

On that platform he was elected to a third term. On election day the American people were writing the last line in the old book and did not know it.

Three months later the President announced, "We are committed to the proposition that principles of morality and considerations for our own security will never permit us to acquiesce in a peace dictated by aggressors and sponsored by appeasers."

"We" were the people, suddenly staring at the fact that we had assumed ultimate and unlimited liability—moral, physical, and financial—for the outcome of war on three continents, for the survival of the British Empire, and for the utter destruction of Hitler. Anything less or else would be the first American defeat.

How had we arrived there?

Not by any act of conscious will on the part of the American people, but by will of government. If you say, therefore, the people have lost control of government and such is the end of the American system, that may or may not be true, but you are reading from the old book. Destiny is not legal.

How the people would have voted if the question of taking over war on three continents had been put to them will never be known. The question was not put to them.

We know what the people did vote for. They voted for a President who stood upon his platform saying, "We will not participate in foreign wars." But there, again, make sure to remember which book you are in. Words in the old book were simply understood. In the new book that cannot be so. Why it cannot be so belongs to another essay. Anyhow, what is a foreign war? In that instant when you say, or even think, "This is our war too," it is no longer a foreign war, no matter what you said it was yesterday.

We have said it. Standing in the middle of the world we are saying, "Here is the arsenal of all democracy," meaning by a democracy any nation that will employ our weapons against Hitler. That makes the battle of Britain our battle, too, and the battle of Greece our battle, and the battle of the Mediterranean our battle; and everywhere in the world it is the London-Washington Axis against the Berlin-Rome-Tokyo Axis. Where, then, is a foreign war, strictly speaking?

What if our axis should break? What if Great Britain should fail in spite of us? That could happen. We should then have Hitler on one side and his Japanese partner on the other side, neither of whom has attacked us, both of whom we have challenged, one of them to mortal combat.

For perilous isolation on those terms we are not prepared. Yet we have accepted that risk. It was not a realistic thing to do. You would expect schoolboys fighting on the sandlot to know better statesmanship. But a crusade is above statesmanship. So is any great transaction of the human spirit. Essentially it is heedless of danger and romantic, creating its own political realities. Everything about it is improbable.

But if we speak of the improbable, what could have been more improbable than the story in the first book? Was there ever a more reckless political deed than the Declaration of Independence? Or an outcome more unpredictable than that a few ragged, undisciplined farmers with muskets, and some solitary mountaineers with rifles, should expel the trained armies of Europe from this land in order to create what was not yet imagined and had not even a name—the United States of America? Well, no more can we imagine the end of what now is beginning, nor has it any name. We cannot see the shape of the world to come, not dimly. It is not permitted. We know for sure only that neither the world that was our own nor that world which is round will ever be the same again.

At the beginning of the blitzkrieg, with its revelation of the frightfulness of modern technology turned in full use to the business of killing and conquest, the Post said it was this country against Hitler—simply that, because no other country possessed the strength, the skill, and the resources to create in defense of peace a weapon power equal to this new power of aggression in the hands of a war-loving people. We have never modified that conviction. We say it still.

Our quarrel with the interventionists has been upon other grounds.

Firstly, upon grounds of military and political sagacity, that by taking the war to Hitler we forgo our natural geographical advantage, that the status of a nonfighting belligerent exists only in puerile delusion, that as we strip the American arsenal to put weapons in the hands of others we weaken our own defense, and that by all of this we involve our fate with cards of war that might at any moment be played out of our hands.

Secondly, we have quarreled with them on the ground that they stultify the American motive. They say the battle of Britain is our battle, too; they say that to save ourselves we must save Great Britain, and then they say that by making America the arsenal we may ourselves avoid the battlefield, using the bodies of the British as a bulwark to save the body of every American mother's son. If we had ever believed that, or felt it, we should have been ashamed to say it. We never knew, on the other hand, a true isolationist who was not willing to fight and die for it.

And thirdly, we quarrel with the interventionists still, on the ground that they conceal, or have not themselves the courage to face, what it means for this country not merely to take over the war, but in doing that to assume a role in which it must either go on and on until it has gained moral hegemony of the whole world—or fail.

There is the truth; and there is a sense of grandeur in it. The battle of Britain becomes but a terrible episode. The London-Washington axis is a pontoon. This is our walk with destiny, toward an end we cannot see, and if we arrive we shall have walked most of the way alone, as England did before us.

Opposing Strikes in National-Defense Industries

EXTENSION OF REMARKS

OF

HON. LUTHER A. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

EDITORIAL FROM DALLAS MORNING NEWS

Mr. LUTHER A. JOHNSON. Mr. Speaker, the American people are greatly concerned at the delay in our national-

defense program on account of strikes in many plants now engaged in the manufacture of munitions and other products vitally necessary for our national defense.

I am hoping that some steps may shortly be taken to eliminate these delays, either through legislation or through Executive orders, or by the voluntary concent and cooperation of the leaders of the two major labor organizations.

Time is of the essence in our defense program, and there is no subject of greater importance at this time.

The jurisdictional strikes during this crisis seem to me indefensible, and there appeared in the Dallas Morning News of March 24 an editorial which, in a calm and dispassionate manner, discusses this issue, and under leave granted, I submit herewith this editorial:

[From the Dallas Morning News of March 24, 1941]

FEATHER FOR FEDERATION

Nothing in the whole disputed field of labor relationship calls for less sympathy from the general public than the jurisdictional strike during a war crisis. It amounts to placing a private quarrel before the safety of the Nation. So while the cause of the Wright Field stoppage had no merit, the public will heartily approve the sportsmanship of the American Federation of Labor unionists who called off the strike without winning a point for which under normal conditions they would have fought to the bitter end.

The 4 C. I. O. electricians, against whose presence the 400 Federation members struck, may have served the country themselves, however, by winning the generous concession from their bitter rivals. For what leg will C. I. O. majorities have upon which to stand themselves in similar jurisdictional disputes?

Not here, not in many places in America is there any disposition to question the right to strike against intolerable working conditions or for a fair return for labor. Congress, which has already moved to force industry to produce for necessary defense, fails the country if it does not insist that labor shall not interpose petty grievances in the way of the swift industrialization of that defense.

Reclamation of Strategic Defense Materials From Waste Products

EXTENSION OF REMARKS

OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1941

LETTER OF MISS HELEN E. DOWNS TO GOVERNOR BRICKER, OF OHIO

Mr. BROWN of Ohio. Mr. Speaker, now that a shortage of a number of strategic defense materials is impending, the attention of many students of the situation is being turned to the reclamation of such materials from waste products.

In my district one of our fine ladies long ago perceived that which was coming and under date of October 24, 1940, wrote our Ohio Governor, Hon. John W. Bricker, making a suggestion as to how the women of America could assist the national-defense program. The letter to Governor Bricker was written by Miss Helen E. Downs of 231 East Maple Street, North Lewisburg, Ohio.

I have the honor and the pleasure of herewith, including the letter in this address, that the Government and the people of our country may have the benefit of the suggestions contained therein.

NORTH LEWISBURG, OHIO, *October 24, 1940.*

Hon. JOHN W. BRICKER,

Governor of Ohio, Columbus, Ohio.

HONORABLE SIR: It has been asked through the American press that tin (such as empty tins) be saved, yet I notice that this request is being disregarded in my community.

Under the blockade England was cut off from supplies of tin, aluminum, and hospital necessities. When the emergency arose the amount available was inadequate.

Would it not be possible for the people of this country to carry out a plan of conservation of the above-named items with as much enthusiasm and organization as it expressed in the work of the Red Cross, the tuberculosis (Christmas seal) work, and other relief programs?

I believe that if this work was begun now, and executed calmly and with determination, as a public service, very little expense would be involved such as would undoubtedly occur during the excitement of an emergency.

Here is a brief outline of my purpose:

1. To divide each State into districts. Each district being composed of one county. Subdivisions of each district being its natural townships with unit leaders at head of each township.

2. To see that these tins and aluminum pieces are sorted, separated (labels removed), and placed in local sheltered base (unused building) which is rent-free.

3. To see that each truckload of tin and aluminum be weighed so that a record of the amount of flattened metal may be ascertained.

4. To see that flatteners operated at minimum expense be placed, one in each township, at local base.

5. To ask that each district and its subdivisions collect also, hospital supplies—such as slightly worn bed linens—from homes, hotels, rooming houses, etc., to be sterilized, torn into bandages, rolled, sealed, and conserved for war-emergency needs.

6. To ask the Government to set a "rag picker's" price on all aluminum that could be collected by vendors and unemployed from city dump heaps, etc. The price, depending upon the percent of pure metal derived from the redemption of old utensils.

7. To ask if the work of this plan could not be carried on by the American Legion and the Auxiliary of its order.

The fifth section of this plan, i. e., the hospital supplies, is based upon the fact that in a recent survey of wars hospital supplies never were adequate. During the World War bandages were removed from the dead and sterilized for new wounds. The same thing is happening in Europe today.

Most hospitals utilize their worn bed linens to a financial advantage. If this same idea were carried out by State over the scope of a nation, think what a saving of Government money would be had when or if an emergency such as war would occur.

The quickest and most efficient way to start the above-suggested program would be to circulate through the school system direct to the individual family mimeographed circulars telling what is desired, where to bring it, designating local sheltered base. At the same time circulars could be passed to all institutions other than schools.

I do not wish to incite war propaganda. I do wish to help in a defense program. The town where I live knows nothing of the fact that I have worked since August on this plan. But I have made a covert invoice of the sentiment of the people of this county. I find that everyone wants to help toward defense. The trustees of my immediate township have promised the use of their trucks to haul flattened metals to county seat or wherever the Government demands within county to nearest foundry. The local hospitals have given me their promise that if this work is started they will do all the sterilization work free of charge, doing it at their leisure. The Red Cross (county) has promised their cooperation and whole-hearted support. Some of the towns have even suggested their own particular way of flattening, etc. to save a bit more because very little expense can enter into a salvaging business. The most of the expense would be gasoline for haulage and flattening. One small city said they had thought of using their big city roller, which would minimize expense to a degree.

In my immediate county we have one of the largest paper factories in the Middle West. I know I can get all the paper for circulars I need (defective sheets), free of charge. Each sheet will make two circulars. I will enclose my suggestion of what each circular might be like. With a following of an enthusiastic, patriotic Nation, I believe this work, under responsible American Legion unit and district leaders, could be successfully conducted without the outlay of much Federal money. Hitler did this 5 years before he started this war. We are a wasteful nation. Let us not wait for a last-minute scramble. The American Legion are our civilian guard. They are quick, alert, and still soldiers . Their wives are the busiest organization for the common good of their respective communities. Furthermore, they are now the parents of soldiers as well. And I, myself, lost my own brother as a result of the World War. I wish to enlist my services.

May I kindly have your reaction to the above plan when the election is over and you are not quite so busy?

Most respectfully,

Miss HELEN E. DOWNS.

DEFEND AMERICA BY SAVING—YOUR HELP IS NEEDED

Tin

It is requested by the United States Government that all new empty tin cans or good tin of any kind be saved in a sheltered place until ready to discard. Then take to your local township base (Doeville). All labels or paper must be removed from cans or tin before sending.

Aluminum

Save all old and unused aluminum utensils. The Government is offering ------ cents per hundred pounds to vendors or unemployed who can gather old aluminum from city dump heaps, etc. Aluminum must be delivered at local township base separately from tin.

Worn Sheets, Pillow Slips

Emergency hospital supplies, such as worn sheets and pillow slips or other white cotton materials suitable for bandages are needed. Take your contribution to local township base.

The Forgotten Man

EXTENSION OF REMARKS
OF

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

POEM BY A. C. TAPLEY

Mr. HEALEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem by Mr. A. C. Tapley, member of the Middlesex Post, No. 2, Medford Mass., World War Veterans of the United States merchant marine:

THE FORGOTTEN MAN

(By A. C. Tapley)

To-night as my thoughts turn backward, comparing the old with the new,
There is many a somber reflection as the World War comes into view,
Soon after the war's declaration, regardless of creed or craft,
All males between certain ages must register then for the draft.

I didn't claim any exemption as I looked ahead to the day.
And when listing had been completed my name was in class 1A,
So I waited a time with patience hoping to get a call,
'Til spring had turned to summer and summer had turned to fall.

All the bands were turned to music with a patriotic air,
There were strains of Tipperary, Parlez-vous, and Over There,
The boys were dressing in khaki, some were dressed in blue,
I tried to enlist in the Army, I tried the Navy too,
I couldn't make any progress as all that they would say
You'll have to wait 'til your number is called, you're in class 1A.

If my memory serves me correctly there appeared ('bout that time on the scene)
Many posters and much in the papers extolling the merchant marine.
President Wilson had said in his message, to keep this the land of the free,
No greater service could any man give than answer the call of the sea.

He said in words of eloquence in accents loud and clear,
Enlist, young man, that the world may be safe for many a year.
Our Navy is rated the finest, our Army is one of the best,
But we must have ships and seamen to land them safely at Brest.

Select from the best in the Nation fifty thousand men,
Cream of the population and each a citizen,
Young men if you enter this service you will be doing your bit,
We want only men who are able and they must be physically fit,
To those who enlist in this service 'tis absolutely assured
We will grant a release, if accepted, a release from your local board.

So I jacked my job for the life of a gob and bid my friends adieu,
I had to sign on the dotted line till my fingers were askew.
I was directed to get some clothing at the quartermaster's store
And was given a list with orders to get that and nothing more,
Regarding the style of the outfit I'd best have little to say
For I have a faint recollection the neckerchief fitted O. K.

I then crossed Boston Harbor to join the U. S. *Meade*,
There I would get my training, there I would get my feed,
I trotted up the gangplank and landed on the deck,
Then I was given a number and signed again, by heck.

There were boys from Alabama to the point Monomoy,
There were others from Kentucky where the blue grass waves with joy,

One man came down from Sitka town, they came from Kalamazoo,
They also came from Brooklin, Maine, and many from St. Lou,
They came from the shade of Bunker Hill to Frisco's Golden Gate.
From city, town, and hamlet, they came from every State.

They had heard the President's message, and answered the call of the sea,
Now the world would be safer, safe for democracy.
There were plenty of regulations to which we must abide,
We were taught to peel potatoes and we learned about the tide,
We were taught to do our duty, regardless of the station,
We must get supplies to Europe, we were in for the duration.

When we had finished our training those who could pass the test
Were then shipped out with orders to do their best.
To an unknown destination they shipped us down the bay,
Perhaps we would go to London or it might be Mandalay.
We had no choice in the matter, 'twas the will of Uncle Sam.
He could order one to Alaska, another to Amsterdam.

The ships were painted in colors of every design and hue,
Which offered little resistance when mines came tearing thru.
Often we were at the mercy of a hard and ruthless foe,
Ever waiting neath the surface was the dreaded torpedo,
For of all the horrors lurking in the murky depths unseen,
I believe the vilest monster is the German submarine.
Many a ship is missing that sailed across the blue,
They were followed by others, the lucky ones got thru.

After the war was over, after our work was done,
We were discharged with honor and sent home one by one.
After the war was over many heart has yearned,
For at rest on the bed of the ocean is the ship that never returned.
After the war was over at the final call of the roll,
There was many a shipmate missing (his body but not his soul)
Many a mate was missing and the brine has bleached his bones
In a grave that's known to God alone in the locker of Davy Jones.

After the war was over and readjustment came,
Veterans of other branches were readily helped to fame,
The merchant marines were excluded (much to the Nation's shame),
They said tho your face looks familiar, I don't recall the name.
We all remember your service in helping to conquer the Hun,
But you must get recognition from the men in Washington.

Now that the war is over for more than a score of years,
And many a gob has a shiny knob, or gray above the ears,
Any many a tar has crossed the bar (they may be lucky chaps),
But there was no sign of Old Glory, neither a sound of taps.
Should you scale the loftiest mountain, as far as the eye could span,
There would not be a better example of the real forgotten man.

Communist Leadership in C. I. O. Unions

EXTENSION OF REMARKS
OF
HON. MARTIN DIES
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

Mr. DIES. Mr. Speaker, I am convinced that Communists have obtained such a stranglehold on many of the unions in the C. I. O. that it is now beyond the power of Mr. Philip Murray or anyone else in the organization's leadership to do anything about the matter. Of one other thing we may be certain, and that has to do with the attitude of the public toward this issue: The American people will not long tolerate the interference of foreign agents, whether they operate in labor unions or elsewhere, with the program of national defense which has the support of the overwhelming majority of our people.

Our committee's records show that a very large proportion of the leadership in many of th C. I. O. unions is a leadership which owes its allegiance to Moscow. The leadership in the C. I. O. to which I refer is one which obediently follows the Moscow "line" in the great issues before the American people. Despite the predicament in which this situation may place Mr. Murray and others in the C. I. O., the American people are no more in favor of appeasing one dictator than they are in favor of appeasing another. The continued toleration of Communists in positions of C. I. O. leadership is a policy of appeasement which has, I am convinced, the emphatic condemnation of the American people.

Today, I submit a list of leaders in C. I. O. unions who have records of following the Communist Party "line" on important questions of national defense. We, as a committee investigating un-American activities, are not concerned with the legitimate problems of labor unions. We are concerned with following the trails of Communists

wherever those trails lead us. It is not our committee's fault that Communists have penetrated the C. I. O. unions, nor is it our committee's fault that non-Communists in the C. I. O. have tolerated this Communist penetration. No abusive retort that we are anti-labor is going to deter us from following the Communist trail into any place where it may lead.

The following list of C. I. O. leaders is made up of persons who are either card-holding members of the Communist Party or fellow travelers whose records show that they follow the party "line" in supporting the party's front organizations:

Meyer Adelman, Steel Workers Organizing Committee.

Sonia Baltrun, Textile Workers Organizing Committee.

Jesse Barnes, State, County, and Municipal Workers of America.

Leonard Berg, Eau Claire (Wis.) Industrial Union Council.

Lewis Alan Berne, Federation of Architects, Engineers, Chemists, and Technicians.

Leon W. Berney, United Office and Professional Workers of America.

Meyer Bernstein, Kiska Valley (Pa.) Industrial Union Council.

Carl Bersing, Philadelphia Industrial Union Council.

William Black, Aluminum Workers of America.

Harry Block, United Electrical, Radio, and Machine Workers of America.

Daniel J. Boyle, International Fur and Leather Workers Union.

Harry R. Bridges, International Longshoremen's and Warehousemen's Association.

Walter J. Burke, Wisconsin State Industrial Union Council.

Samuel Burt, International Fur and Leather Workers Union.

Charles Cain, Maine State Industrial Union Council.

Joseph Cannon, Lower Bucks County (Pa.) Industrial Union Council.

W. J. Carney, New Jersey State Industrial Union Council.

Joseph Chandler, Allegheny Valley (Pa.) Industrial Union Council.

Harold Christoffel, Milwaukee County (Wis.) Industrial Union Council.

Philip M. Connelly, Los Angeles Industrial Union Coucil.

Emil Costello, Wisconsin State Industrial Union Council.

Robert L. Cruden, member of committee on press and publicity in the 1940 C. I. O. convention.

Joseph Curran, National Maritime Union.

Harry Deck, Zeigler (Ill.) Industrial Union Council.

Eugene V. Dennett, Washington State Industrial Union Council.

Ralph Dawson, Los Angeles Industrial Union Council.

Forest M. Dickenson, Akron (Ohio) Industrial Union Council.

Jonathan Eddy, American Newspaper Guild.

Kenneth Eggert, National Die Casters Association.

Julius Emspak, United Electrical, Radio, and Machine Workers.

Frank Farrell, United Shoe Workers of America.

Abe Feinglass, International Fur and Leather Workers Union.

Elmer Felhaber, Franklin County, Ohio, Industrial Union Council.

L. H. Fenton, International Woodworkers of America.

Abram Flaxer, State, County, and Municipal Workers of America.

Nicholas Fontecchio, Fox Valley, Ill., Industrial Union Council.

James A. Gaynor, Federation of Architects, Engineers, Chemists, and Technicians.

Luther German, Vermilion County, Ill., Industrial Union Council.

Dewitt Gilpin, Farm Equipment Workers Organizing Committee.

Angela Gizzi, United Office and Professional Workers of America.

Ben Gold, International Fur and Leather Workers Union.

Louis Goldblatt, California State Industrial Union Council.

Leonard H. Goldsmith, Newark, N. J., Industrial Union Council.

Ben Gudes, United Retail and Wholesale Employees of America.

Powers Hapgood, United Shoe Workers of America.

Don Harris, United Packinghouse Workers of America.

Arthur Hartman, Cincinnati Industrial Union Council.

John Harvey, International Union of Mine, Mill, and Smelter Workers.

Allan Haywood, New York State Industrial Union Council.

Donald Henderson, United Cannery, Agricultural, Packing and Allied Workers of America.

Ralph Hetzel, United Office and Professional Workers of America.

Austin Hogan, Transport Workers Union.

Michael Howard, United Cannery, Agricultural, Packing and Allied Workers of America.

Clarence Irwin, Shenango (Pa.) Industrial Union Council.

Henry Johnson, United Packinghouse Workers of America.

Joseph Jurich, International Union of Fishermen's and Allied Workers of America.

Milton Kaufman, American Newspaper Guild.

Joseph Kehoe, American Communications Association.

George Kleinman, member of Committee on Press and Publicity in 1940 C. I. O. convention.

George Lane, Bellingham (Wash.) Industrial Union Council.

Richard Shelton Law, Aberdeen (Wash.) Industrial Union Council.

John C. Lawson, Quarry Workers International Union of North America.

Alice Liveright, United Office and Professional Workers of America.

Douglas MacMahon, Transport Workers Union.

James J. Matles, United Electrical, Radio, and Machine Workers of America.

Timothy J. McCormick, United Truck Operators.

Mary Lucile McGorkey, State, County, and Municipal Workers of America.

Frank R. McGrath, United Shoe Workers of America.

Patrick R. McGraw, Duluth Industrial Union Council.

Howard McKenzie, National Maritime Union.

Lewis Merrill, United Office and Professional Workers of America.

Louis H. Michener, United Automobile Workers of America.

Saul Mills, Greater New York Industrial Union Council.

Samuel Mindel, International Fur and Leather Workers Union.

William Mitch, Alabama State Industrial Union Council.

PITTSBURGH, PA., *March 27, 1941.*

Congressman MARTIN DIES,
House of Representatives,
Washington, D. C.:

Since I have shown your charges against the steel workers' organizing committee to be distorted and without foundation, you are now attempting to distort the facts as regards the C. I. O. in similar fashion. Your activities are truly subversive, since you are trying to create confusion and hatred in the Nation through your labor baiting. You are obviously attempting to undermine the morale of the people. It seems strangely significant that your groundless charges against the C. I. O. always come at a time when they can do the most harm. Obviously you are aware of the negotiations now being conducted with the United States Steel Corporation and with the coal operators. I also recall your moving into Chicago last year at exactly the same time that a C. I. O. union was engaged in a Labor Board election at the Armour & Co. plants. Inasmuch as the newspapers say you did not extend me the courtesy of reading my previous telegram to the House, but merely inserted it in the RECORD, I am led to two conclusions—that further communication with you is useless and that your activities at the present time in attacking C. I. O. is just a further effort to grab the headlines and thereby advertise your availability for another series of lectures throughout the Nation, which, I understand, have been very lucrative. I presume it is useless for me to request that you read this telegram to the House.

PHILIP MURRAY,
President,
Congress of Industrial Organizations.

COPY OF CHAIRMAN MARTIN DIES' LETTER TO PHILIP MURRAY, PRESIDENT OF THE CONGRESS OF INDUSTRIAL ORGANIZATION

MARCH 28, 1941.

PHILIP MURRAY,
President, Congress of Industrial
Organization, Pittsburgh, Pa.:

In my telegram to you I asked you a plain and direct question whether or not the C. I. O. is ready and willing to expel from its ranks and from positions of leadership members of the Communist Party. I named some of your leaders and members of your executive board whose Communist affiliatior has been clearly established. You did not give me a plain and unequivocal answer because you dare no. do so. You are unwilling or unable to rid your organization of Communist influences which are doing irreparable damage to the majority of your members who are not Communists and to the Nation as a whole. Not being able to meet the issue squarely and openly you resort to the tactics of abuse and misrepresentation and counter charge. This deceives no one. For 3 years I have tried to

get your organization to expel the Communists who are the greatest enemies of labor in any country. For 3 years you have sidestepped the issue. If your organization is not controlled by Communist influences you will immediately announce a policy of expelling all Communists from your ranks and from positions of leadership and you will follow up this policy of announcement with a wholesale house cleaning.

The laboring people, organized and unorganized, have more at stake in the defeat of Hitler and Stalin than any other group in our Nation. Communists and Nazis are now working in active cooperation throughout the world and in the United States to destroy the rights of labor. In America they are seeking to sabotage our national defense to insure a Hitler victory. Under these circumstances how can your organization in the name of labor continue your unnatural and stupid alliance with the "communazi" enemies of labor and democracy. The issue is squarely before you. The future of the laboring people in your organization depends upon the way in which you meet the issue.

I have already called your attention to the fact that prominent Communist Party members occupy leading positions in your organization and its constituent unions. These persons are publicly-avowed members of the Party. I refer to such men as the following: Donald Henderson, head of the United Cannery, Agricultural, Packing and Allied Workers of America, who was a member of the Committee on Appeals in the 1938 Convention of the C. I. O.; Ben Gold, head of the International Fur and Leather Workers Union, who was a member of the committee on rules and order of business in the 1938 convention of the C. I. O.; Marcel Scherer, national organizer for the Federation of Architects, Engineers, Chemists, and Technicians, who was a delegate to the 1938 convention of the C. I. O.; Kenneth Eggert, strike leader of the National Association of Die Casters, and formerly section organizer for the Communist Party in Toledo, Ohio; and Ralph Dawson, head of the Los Angeles C. I. O. Industrial Council, and communist of public record.

I call your attention to still other communists of public record who hold positions of leadership in the C. I. O. Their records are as follows:

James J. Matles, delegate to the 1938 C. I. O. convention representing the United Electrical, Radio and Machine Workers of America and member of the committee on appeals in that convention. In 1933 Matles publicly endorsed the program of the Communist Party. (See Daily Worker, November 6, 1933, p 2.)

Samuel Burt, delegate to the 1939 and 1940 conventions of the C. I. O. Burt was a speaker at the tenth convention of the Communist Party in 1938 (see Daily Worker, May 24, 1938, p. 4), and in 1933 he endorsed the program of the Communist Party. (See Daily Worker, November 6, 1933, p 2.)

Joseph Chandler, delegate to the 1939 C. I. O. convention representing the Allegheny Valley Industrial Council. Chandler reported to the tenth convention of the Communist Party in the same year. (See Daily Worker, May 30, 1938, p. 8.)

Robert L. Cruden, member of the committee on press and publicity at the 1938 and 1940 conventions of the C. I. O. Cruden is a writer for the Communist Party, his contributions having appeared in the Communist, the Daily Worker, and the New Masses.

John Harvey, delegate to the 1939 convention of the C. I. O., representing the International Union of Mine, Mill, and Smelter Workers. Harvey has been a contributor for the Communist Party Press, and in 1930 he made a tour for the Young Communist League. (See Daily Worker, March 3, 1930, p. 2.)

Albert Lawrence Smith, business agent for the C. I. O. United Electrical, Radio, and Machine Workers of America. Smith's activities on behalf of the C. I. O. have been so extensive that the complete record would fill several pages. His secretary is the wife of George Powers, recently convicted Communist Party secretary in Pittsburgh and former organizer for the S W. O. C.

George Kleinman, member of the committee on press and publicity at the C. I. O. convention in 1940. Kleinman is an instructor in the Communist Party's Workers School in New York.

John C. Lawson, delegate to the 1938 and 1939 conventions of the C. I. O. and member of committee on appeals in the 1938 C. I. O. Convention. Lawson was a delegate from the Quarry Workers International Union of North America. Lawson was speaker at the Lenin memorial meeting of the Communist Party in 1930. (See Daily Worker, January 18, 1930, p. 7.)

Patrick R. McGraw, delegate to the 1940 C. I. O. Convention, representing the Duluth Industrial Union Council. McGraw was a delegate to the tenth convention of the Communist Party in 1938, representing the State of Minnesota. (See Daily Worker, May 31, 1938, p. 4.)

Samuel Nesin, delegate to the 1938 C. I. O. Convention, representing the International Woodworkers of America. Twice, at least, Nesin has been a candidate for public office on the Communist Party ticket. (See Daily Worker, November 3, 1936, p. 4.)

Charles Palmer, delegate to the 1940 C. I. O. Convention, representing the Marine and Shipbuilding Workers of America. Palmer ran for city council in Philadelphia in 1939 on the Communist Party ticket.

Max Perlow, delegate to the 1939 C. I. O. Convention, representing the United Furniture Workers of America. Perlow was a campaigner for Israel Amter, Communist Party candidate for Congress. (See New Masses, November 8, 1938, p. 25.)

Morris Pizer, delegate to the 1940 C. I. O. convention, representing the United Furniture Workers of America In 1933, Pizer endorsed the program of the Communist Party when he was secretary of the T. U. U. L.'s Furniture Workers Industrial Union. (See Daily Worker, November 6, 1933, p. 2.)

Irving Potash, delegate to the 1938 and 1939 C. I. O. conventions, representing the International Fur and Leather Workers Union. Potash endorsed the program of the Communist Party in 1933 (see Daily Worker, November 6, 1933, p. 2), and has been a leading member of the Communist Party in New York.

Robert Robinson, delegate to the 1939 C. I. O. convention, representing the State, County, and Municipal Workers of America. Robinson was also a speaker at the tenth convention of the Communist Party in 1938. (See Daily Worker, May 24, 1938, p. 4.)

William Sentner, delegate to the 1940 C. I. O. convention, representing the United Electrical, Radio, and Machine Workers of America. Sentner was a delegate to the Missouri-Arkansas convention of the Communist Party in 1938. (See Daily Worker, May 25, 1938, p. 5.)

Regardless of your evasion and abuse, I intend to continue to bring to your attention and to the attention of the House of Representatives and the whole country the situation which the foregoing facts reveal. The welfare of organized labor, to say nothing of our national security, depends upon your meeting the issue of communism in the C. I. O. squarely. The names which I have called to your attention in this communication and in previous communications are only the beginning. I reiterate my question: What are you going to do about communism in the C. I. O.? The Congress and the country are becoming impatient for your unequivocal reply.

MARTIN DIES.

Parity Prices for Agriculture

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

PETITION FROM FARMERS OF THOMAS COUNTY, KANS.

Mr. CARLSON. Mr. Speaker, I have received the following petition from a number of farmers in Thomas County, Kans., urging parity prices for agriculture. The national-defense expenditures are further increasing the disparity between agriculture, labor, and industry and therefore immediate consideration should be given to this petition.

The petition is as follows:

We, the undersigned wheat producers and livestock raisers of Summers Township, Thomas County, Kans., demand that immediate legislation and rulings be made whereby the producer can secure parity prices on his product and be placed on par with labor and industry and that United States markets be preserved for United States producers. We order that copies of this petition be made and forwarded to the President of the United States, the Vice President, Secretary of Agriculture, and to our Congressman for consideration.

August Riedel, H. Riedel, H. P. Marcott, Glenn W. Schiffner, Colby, Kans.; Eldo Franz, Oakley, Kans.; Philip A. Ulirich, J. C. Willems, Colby, Kans.; John Rhea, Oakley, Kans.; Frank Dahl, John Holm, Colby, Kans.; Peter F. Gosser, Oakley, Kans.; John Aschenbrenner, Colby, Kans.; Ralph Rhea, Oakley, Kans.; S. E. Beaver, Monument, Kans.; C. M. Weed, D. S. Dahl, Lewis C. Lewallen, Chas. Carney, Clifford Lewallen, Geo. Herbel, Roy A. Kistler, Heinrich D. Goossen, Colby, Kans.; Gilbert Edde, Albert Nelson, Page City, Kans.; W. E. McMurtrey, Oakley, Kans.; Herman F. Riedel, Colby, Kans.; D. W. Belknap, Monument, Kans.; Abr. B. Goossen, O. H. Goellert, Edward D. Goossen, Colby, Kans.; W. G. Gaeddert, Oakley, Kans.; Fred Walberg, Clifford Ramsey, Guy E. Olson, Lawrence Towns, S. A. Kistler, Geo. L. Theimer, L. C. Keck, Colby, Kans.; Paul Cork, Winona, Kans.; Clarence Wagy, Colby, Kans.; Ernest Weinland, B. M. Reed, Monument, Kans.; C. Rassmussen, Lloyd Bever, R. R. Seymour, Abe Dahl, Colby, Kans.

This is to certify that this is a true copy of an original petition filed in my office at Colby, Kans.

[SEAL] LETA V. SECREST,
Notary Public.

My commission expires April 15, 1943.

Migration of Skilled Workers

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

ARTICLE FROM THE SIOUX FALLS DAILY ARGUS-LEADER

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Sioux Falls Daily Argus-Leader:

MAYBE YOU'VE HEARD—DEFENSE TAKES MEN AWAY—SHIPYARDS DEMAND MANY—EVEN PAY TO GET NAMES

(By W. A. S.)

A little group of five men left Sioux Falls yesterday for jobs in the Manitowoc Shipbuilding Co.'s yards at Manitowoc, Wis. The men were all apprentice welders: Elmer Erickson and Herbert Krull of Brandon, Alfred Anderson of Worthing, Buster Scheffelbein of Hartford, and Gust Ustrud of Baltic.

It was a small incident on a spring day, the departure of those five young men, but it gets to be a sore subject when the same thing happens day after day, draining this territory of its best machinists, welders, and able workmen in other lines.

The Northern Pump Co. of Minneapolis holds millions of dollars' worth of defense contracts. I do not know whether it is true or not, but workmen who have left here to work for Northern Pump have written back that the company pays its workers $20 for the name of every competent man back home that they turn in.

That's how serious the shortage of skilled men is in defense industry.

There may still be a few small lathes available for sale by South Dakota dealers, but after these are gone private workshops will have to get along till the defense emergency is over. No lathes of any kind will be available because of priority rulings. Most dealers tell you they cannot supply them now.

And—getting back to the worker situation again—local machine shops are so hard up for good men that they are stealing them from each other. Lynn Hill, of the Sioux Falls Machine Works, a fellow who knows as much about the situation as anybody else, says "it's got so we hardly get acquainted with our men any more before they leave."

This shop, biggest in the wide Sioux Falls territory, has a normal working force of 20 to 25 men. Yet it has lost between 15 and 20 workmen in the last 6 months. It has had to fill in the best it could. Other Sioux Falls shops are the Watson Machine Works and Ulberg's. They have had similar difficulties.

Lynn Hill can rattle off names of these departed brethren till it makes you dizzy.

Glen Lyons and Merle Hill have left to work with Northern Pump, Minneapolis; Darsey Likehim has gone to the Brooklyn Navy Yard; Bill Herrit to the Boston Navy Yard; his brother, Steve, to Bethlehem Steel, Bethlehem, Pa.; Joe Van Westerhuyzen to the American Chain & Hoist Co., St. Paul; John Tierney to the Pioneer Engineering Co., Minneapolis; E. A. Renley to Lockheed Aircraft, Los Angeles; George Hill to Rock Island Arsenal, Rock Island, Ill.; Ray Moline to the Bremerton, Wash., shipyards; Herman Busch to shipyards in Los Angeles.

Many others just blew town, disclosing their destinations only to close friends.

It takes years to train a good machinist, but a reasonably smart lad can pick up the rudiments of welding in a few weeks. Revolving this thought in their minds, "Dad" Hill and his boys started a welding school early in January. Graduates of the 9-weeks' course are already holding down jobs elsewhere.

The big demand for welders is due to this fact: A ship is 15 percent lighter when electric welded than if it is put together with rivets.

The welding school does not pretend to turn out masters of the art, but its graduates have enough stuff to pass American Bureau of Shipping tests, which is all that is required to get jobs in shipyards. They can pick up the fine points later.

Right now the school has an order to fill: 200 men to go to work in a New Orleans shipyard July 1. It hopes to furnish 30 or 40 of this number.

Meanwhile wages of apprentice welders have jumped from the normal 35–40 cents an hour to 60 cents here.

Graduates of the school already at work include Arthur Cook, Sioux Falls, and Ralph Chase, Belle Fourche at the American Shipbuilding Co., Cleveland; Warren Wicks, Dell Rapids; Stephen Papp, Sheldon, Iowa; Ralph Perkins, Sioux Falls; and Ray Reese, Pipestone, Minn., all busy at American Chain and Hoist, St. Paul.

My inquiry into this subject indicates that most married men who have left to get jobs elsewhere have taken their families along. "This defense thing looks like it's good for a few years, anyway," one man wrote back from the East.

That seems to be true especially of shipbuilding. War or no war, Uncle Sam is building himself a two-ocean navy. Fellows who left here 6 months ago have been writing back that they see 7 years of steady work ahead.

Sioux Falls, of course, might get some defense subcontracts. The Sioux Falls Machine Works, for instance, could put on two extra 8-hour shifts. But it wonders where the workmen would come from, with men leaving town every day.

America and Palestine

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

ARTICLE BY HON. JOHN W. McCORMACK, OF MASSACHUSETTS

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by me, which was published in the New Palestine under date of January 31, 1941:

[From the New Palestine of January 31, 1941]

AMERICA AND PALESTINE

(By Congressman JOHN W. McCORMACK, majority leader, House of Representatives)

The year that has just passed will go down in history as the year of the great enslavement. During this period the totalitarian aggressors succeeded in subjugating almost the whole of the European Continent. First Poland and Finland, then Norway and Denmark, and finally the Netherlands, Belgium, and France have succumbed before the brute force of the mighty military juggernaut. These have been hard blows to the cause of civilization, democracy, and human freedom.

Upon the outcome of this struggle, as pointed out by the President of the United States, depends the future of our civilization. The events have demonstrated that democracy "can take it"—take everything the Axis has to give, and still fight back. Indeed, the fight by the democracies is carried on with added determination inspired by a great ideal.

A people inspired by an ideal can never be defeated.

In Greece and in Africa the tide of the battle is already turning.

Planes and arms are going to Great Britain and her Allies from the United States in an ever-increasing stream. Our entire industrial life is being mobilized with a view to giving the maximum aid possible to Great Britain by making America truly an "arsenal of the democracies."

Aid to England is a part of our own national defense.

While the year 1940 must be recorded as the year of the tragedy, there is every hope that the year 1941 will yet go down in history as the year of the great liberation.

In the present conflict the United States has remained a military neutral. Moral neutrality, however, under the circumstances would have been utterly incompatible with the principles for which the United States has stood since its inception.

AMERICAN SYMPATHY

From the very beginning of the war our Government has indicated in no uncertain terms that its sympathies are with the sister democracies.

America is doing and, I believe, will continue to do everything possible for the purpose of assuring the complete defeat of the totalitarian aggressors.

In doing that, our country is looking to its own defenses, in a practical and realistic way.

It is in no way strange, in fact, it is most natural, that I should be with you here tonight. As a Christian and as an American I have been horrified by the indescribable atrocities that have been perpetrated upon the Jewish people.

But over and above this I have always sympathized deeply with the aspirations of the Zionist movement. In this sentiment, too, I am happy to say I have not been alone among the public men of our country. The legislature of my own State of Massachusetts has on repeated occasions endorsed officially the establishment of a Jewish national home in Palestine.

STATE RESOLUTION

It is with great pride and satisfaction that I recall the fact that, as a member of the Massachusetts Legislature, together with my lifelong friend, Elihu D. Stone, more than 20 years ago I supported the Palestine resolutions adopted by our State legislature.

My faith then in the future of the Jewish national home has been more than justified.

It was eminently proper and fitting that the State, in which the founding fathers first set foot on Plymouth Rock, should to this day remember that our forebears fled from persecution in Europe, and should eagerly extend the full measure of its sympathy to all those who are being persecuted.

Thus, it was no accident that through the inspiration of Massachusetts, the United States officially endorsed the establishment of the Jewish national home in Palestine by

a resolution adopted unanimously by the United States Congress in 1922.

Subsequently, the mandate over Palestine, of which the Balfour declaration is an integral part, was again ratified by the American Government in a separate treaty with Great Britain in 1924.

Apart from these official manifestations of approval, Jewish aspirations, Jewish sacrifices, and Jewish achievement in the National Home have won the unstinted admiration of every President of the United States from Woodrow Wilson to Franklin Delano Roosevelt.

I quote from one of President Roosevelt's statements: "The American people, ever zealous in the cause of human freedom, have watched with sympathetic interest the effort of the Jews to renew in Palestine the ties of their ancient homeland and to reestablish Jewish culture in the place where it flourished and whence it was carried to the far corners of the world. Two decades have witnessed a remarkable exemplification of the vitality and vision of the Jewish pioneers in Palestine. It should be a source of pride to Jewish citizens of the United States that they, too, have had a share in this great work of revival and restoration."

For the millions of European Jews who are today clinging so obstinately to life, the existence of a Jewish Home in Palestine is the chief source of strength. As long as this homeland exists, and as long as there remains the possibility of escaping from Nazi Europe, they can continue to hope that next year, with God's help, they will be in Jerusalem. And this is far from being an idle aspiration. Palestine has been indeed the chief sanctuary for the European Jewish refugees, having absorbed almost as many as the rest of the world put together.

I understand that from 1933 to 1940 inclusive, 280,000 Jews entered Palestine. Despite the war and the difficulties of migration, the figures for this past year stood at 24,000. This is an accomplishment of no mean proportions.

CHIEF SANCTUARY

To the millions of suffering Jews on the other side of the water, the existence of the Jewish National Home is a source of hope and strength. They find comfort and inspiration in the knowledge that in Palestine there exists a free, thriving, and growing Jewish community.

Because of all these things, I believe that it is more necessary than ever before to sustain and support the Jewish National Home in Palestine.

There is, however, still another reason why the Zionist efforts in Palestine should have the encouragement of Jew and Christian alike. It is a reason of immediate urgency.

BULWARK OF DEMOCRACY

The Jewish people in the Holy Land, with its deeply rooted democratic traditions and its hatred of everything that nazi-ism stands for, constitutes one of the chief bulwarks of democratic defense in the Near East. Thousands of Palestine Jews are already serving in the armed forces of the allied democracies. Many more thousands of Jews in Palestine have volunteered and are waiting to be called.

I am glad to reiterate that the accomplishments of the Jewish people in Palestine have been of truly epic proportions. The Jewish population of the country has risen from 55,000 in 1918 to more than 500,000 today. The total population during the same period has grown from less than 700,000 to a figure of 1,550,000.

In Palestine the Jews have given incontrovertible proof of their ability as excellent farmers.

More than a fourth of the Jewish population, for the most part living in 257 settlements, earns its living from the soil.

Agricultural experts like Dr. Lowdermilk, who was employed as an adviser by the Honorable HENRY A. WALLACE, have been lavish in their praise of the work that is being done in Palestine. According to them the Jewish Palestinian settlement is by far the most successful experiment in mass colonization on record.

With the aid of Jewish capital and Jewish enterprise, Palestine has developed an industrial plant that holds foremost rank among the near eastern countries. Food preserves and clothing, chemicals, and pharmaceuticals, gasoline, fine steel, and reinforced concrete—these are but a partial list of the products manufactured in Palestine today. During the past year alone 63 new plants were established; and, despite the dislocation caused by the war the process of expansion is continuing apace.

Jewish accomplishments have also benefited the native population. The living standards of the Arab masses of Palestine are far and above what they were before the Balfour declaration, and as much above the standards prevalent in the neighboring countries. From a land of Arab emigration before the war, Palestine has today become a land of Arab immigration. Within the country itself the tendency is for the Arabs to congregate around Jewish settlements, or Jewish cities, because here they can find greater prosperity. The various Jewish agencies have made their hospitals and their social services available to Arabs as well as Jews.

THE JEWISH BIRTHRIGHT

In the light of Jewish sacrifices and achievements in Palestine, and because of Jewish tragic homelessness today, it is imperative that opportunities be granted to the tens of thousands of Jewish victims of oppression and persecution to enter Palestine "as a matter of right."

The very designation of "home" implies the complete freedom of entering it without obstruction.

It is the birthright of every Jew, if he so desires, to return to the land of his fathers.

This is the essence of the Palestine mandate.

It is my hope that we of this generation will have the privilege of witnessing the rebirth of the Jewish nation, and of beholding, in the words of Mr. Winston Churchill, "by the banks of the Jordan a Jewish state" which will be a source of inspiration to all mankind.

It is in this spirit that I am happy to be with you tonight and express my profound confidence in the ultimate achievement of the goal of the United Palestine Appeal.

I know that your cause will succeed, because it is worthy of success. And when the day of success comes, as it is bound to in the near future, it will be another day in the history of mankind when justice will triumph.

Judge J. Warren Madden

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday March 31, 1941

EXTRACTS OF ADDRESSES MADE AT DINNER IN HONOR OF JUDGE J. WARREN MADDEN

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I am inserting in the RECORD the extracts of several addresses made at a dinner in honor of Judge J. Warren Madden. The statements are by Mr. Justice Stanley Reed, Senator George W. Norris, and Mr. Edward Lamb.

The extracts follow:

[Extracts of speeches made by some of the distinguished guests who attended the National Lawyers Guild dinner in honor of Judge J. Warren Madden at Hotel Shoreham, Washington, D. C., on February 22, 1941]

EXTRACT OF SPEECH MADE BY SUPREME COURT JUSTICE STANLEY REED

"I am happy to be here as a guest of the National Lawyers Guild to honor J. Warren Madden, distinguished member of the bar and now an eminent jurist * * *. Those of us who are interested in the progressive development of the law and the viewpoint of liberal members of the bar have looked with satisfaction upon the creation of this organization and its subsequent growth as an important influence upon contemporary legal thought * * *. When Judge Madden first took his seat as Chairman of the National Labor Relations Board he had the confidence of most and later earned the confidence of all * * *. The Nation was fortunate in having a man with J. Warren Madden's honesty and fearlessness in administrating the Wagner Act in the first years of its operation."

EXTRACT OF SPEECH MADE BY UNITED STATES SENATOR GEORGE W. NORRIS

"Wherever he goes, on whatever board or bench he sits he will uphold those American principles of liberty, freedom, and equality to all, without regard to wealth or poverty."

EXTRACT OF OPENING REMARKS MADE BY EDWARD LAMB, EXECUTIVE VICE PRESIDENT OF THE NATIONAL LAWYERS GUILD, WHO PRESIDED AT THE DINNER

"The National Lawyers Guild which represents those members of the bar who believe in civil liberties, the rights of labor and the maintenance and extension of social legislation, is proud to tender this dinner in honor of Judge Madden, a great liberal American."

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

RESOLUTIONS OF THE DETROIT BOARD OF COMMERCE AND THE RETAIL MERCHANTS ASSOCIATION

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions:

RESOLUTION TO THE CONGRESS OF THE UNITED STATES OF AMERICA FROM THE DETROIT BOARD OF COMMERCE

Whereas the State of Michigan is the largest producer of export merchandise in the Unites States; and

Whereas the Great Lakes-St. Lawrence seaway and power project as advocated by President Roosevelt is not only a defense measure but a method to enable the great midwestern industrial and agricultural empire to compete in the post-war program of world trade; and

Whereas we believe it to be in the best interest of the Nation to complete the Great Lakes-St. Lawrence seaway and power project now: Therefore be it

Resolved by the foreign trade committee of the Detroit Board of Commerce, That we do formally and respectfully request the Congress of the United States of America to enact legislation which will bring about the completion of the Great Lakes-St. Lawrence seaway; and be it further

Resolved, That a formally attested copy of this resolution be sent to the President of the United States of America and to the Senators and Representatives in our National Congress.

Respectfully submitted.

DETROIT BOARD OF COMMERCE,
R. W. GIFFORD,
Chairman, Foreign Trade Committee.

Approved by the board of directors:

HARVEY CAMPBELL,
Executive Vice President.

Adopted March 14, 1941.

RESOLUTION TO THE CONGRESS OF THE UNITED STATES OF AMERICA FROM THE RETAIL MERCHANTS ASSOCIATION OF DETROIT

Whereas a bottle neck of approximately 48 miles in the St. Lawrence River deprives the people of the United States of vital production and transportation facilities in the Great Lakes area; and

Whereas the President of the United States of America has indicated to your honorable body and the people of the Nation the importance of developing the St. Lawrence seaway and power project; and

Whereas all Government surveys indicate that completion of the project will be beneficial to the entire Nation; and

Whereas we believe that the completion of the Great Lakes-St. Lawrence seaway and power project will be beneficial to present business and will create new business: Therefore be it

Resolved by the board of directors of the Retail Merchants Association of Detroit, Mich., That we do formally and respectfully request the Congress of the United States of America to enact legislation now pending before it which will enable the completion of the Great Lakes-St. Lawrence seaway and power project; and be it further

Resolved, That a formally attested copy of this resolution be sent to the Honorable Franklin D. Roosevelt, President of the United States of America, and to the Senators and Representatives in our National Congress.

Respectfully submitted.

RETAIL MERCHANTS ASSOCIATION,
CHARLES E. BOYD, *Secretary.*

Approved by the board of directors of the Retail Merchants Association.

JOSEPH L. HICKEY, *President.*

Adopted March 13, 1941.

The People's Army

EXTENSION OF REMARKS
OF
HON. W. O. BURGIN
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

EDITORIAL FROM THE LEXINGTON (N. C.) DISPATCH

Mr. BURGIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Dispatch, Lexington, N. C., of March 27, 1941:

[From the Lexington (N. C.) Dispatch of March 27, 1941]

THE PEOPLE'S ARMY

When a detachment of United States soldiers from Fort Bragg was sent to serve as guard of honor and firing squad at the funeral and burial of William Henry Barnes, last surviving Confederate veteran of Robeson County, last Monday, a fine token of national unity was provided. But it was more than that too, for the promptness with which Major General Devers, Fort Bragg commander, acted in the matter gave striking evidence that this new Army of ours is indeed a people's army, gathered to protect and defend a democracy, not to lord over it. It took no administrative red tape unwinding when General Devers was informed that Mr. Barnes had wanted to be buried by soldiers, and the sons of his neighbors belonging to the National Guard had been sent afar for a period of active service.

The American soldiers who fired the final salute of honor over the grave of a gallant and useful American citizen came from a number of States. Some were the grandsons of men who wore the gray in the sixties, others the grandsons or great grandsons of men who wore the blue. Particular sentiment attaching to this act arises out of the fact it is said to be the first occasion known where men out of the National Army were sent to perform such a service of honor to the memory of a Confederate soldier.

The Confederate veterans, now almost vanished, fondly cherished the recollections of the deeds of valor they performed on many battlefields and a grateful southern people have perpetuated their heroism in war and peace alike on hundreds of public squares. But it was quite fitting also that the soldiers of a united America pay honor to one of these for no group of men in the history of the Nation or the Colonies out of which it developed contributed more substantially to its development in substance and growth in spirit than did these. And from nowhere in this broad land today does there come a more united and determined spirit to defend and preserve a united America than from the area over which once waved the Bonnie Blue Flag that William Henry Barnes followed into battle with the immortal Lee.

St. Lawrence Seaway Project

EXTENSION OF REMARKS
OF
HON. ALFRED F. BEITER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

ANALYSIS OF ST. LAWRENCE SEAWAY TREATIES AND AGREEMENT

Mr. BEITER. Mr. Speaker, on March 25, 1941, through special permission, I inserted in the RECORD an analysis of the proposed St. Lawrence seaway treaty of 1938 and the agreement which is presently before Congress for ratification. Since that time I have been literally besieged with requests for copies of that analysis, and also with inquiries regarding the comparison between these and the original treaty which was before the Senate in 1934. Therefore I have made a further analysis of the three articles—the treaty of 1933, the proposed treaty of 1938, and the agreement of 1941 for the construction of the St. Lawrence seaway, setting each corresponding article side by side in order to make the comparison easier for the eye and mind. The analysis follows:

PROPOSED TREATY OF 1938	ST. LAWRENCE SEAWAY PROJECT AGREEMENT OF 1941	GREAT LAKES-ST. LAWRENCE DEEP WATERWAY TREATY, 1933
Article I	*Article I*	*Corresponding article and paragraphs*
The Commission: Same as in agreement 1941.	The Commission: Article I of the agreement calls for the establishment of a Great Lakes-St. Lawrence Basin Commission consisting of not more than 10 members of whom an equal number shall be appointed by each Government. By an exchange of notes the Governments may change the number of members on the Commission; provided, however, that an equal representation of each Government be maintained (subpar. 1, 4). The Governments, by an exchange of notes, shall prescribe rules and regulations for conduct of the Commission, and may extend or abridge its powers and duties, and upon completion of its duties may terminate its existence (subpar. 4).	The Commission: The Governments agree to establish and maintain a temporary St. Lawrence International Rapids Section Commission of 10 members, 5 appointed by each Government (art. III, par. 1). The Governments may reduce the numbers of members of the Commission, providing equal representation is maintained. The Commission will be terminated by agreement between the Governments (schedule A, par. J).

PROPOSED TREATY OF 1938—continued	AGREEMENT OF 1941—continued	GREAT LAKES-ST. LAWRENCE DEEP WATERWAY TREATY, 1933—continued
Division of work: Same as in agreement 1941.	Divisions of work: The Commission is to allocate construction to the two Governments in such a way that each Government shall construct the works within its own territory or an equivalent proportion in the International Rapids section (subpar. 1–b).	Divisions of work: Same provision (art. III, par. b).
Other duties of Commission: The Commission could prepare plans and specifications in the International Rapids section in accordance with any one of the projects described in the report of the joint board of engineers with appendixes, dated July 13, 1927. It provided, however, that any modifications, which might be agreed upon, of any Joint Board of Engineers' plan, could not increase the proposed total cost of the project as estimated in the aforementioned Joint Board of Engineers' report. This discretionary power differs from the single project (238–242) called for in the current agreement. This article also stipulated the Commission was to serve as an advisory body to the two Governments for the purpose of coordinating all plans for the comprehensive development of the Great Lakes-St. Lawrence Basin. This is not included in the present agreement. The remaining duties were the same as present agreement.	Other duties of Commission: To prepare plans and specifications for construction work in the International Rapids section, in accordance with controlled single-stage project (238–242) for works in the International Rapids section; to approve all contracts in behalf of the Governments for works in the International Rapids section; supervise construction, and submit annual reports to the Governments, on the progress of the works; to certify to the Governments upon completion of the works, and perform other duties assigned to it, by the agreement.	Other duties of the Commission: To prepare plans and specifications for construction of work in the International Rapids section, in accordance with the final report of the joint board of engineers (two-stage development) and to construct such works excepting powerhouse superstructures, machinery, and equipment required for the development of power, side canals, and rehabilitation works (art. III, par. 1).
The countries further agree: The provisions are the same, with the exception that no mention was made as to the manner of remuneration for general expenses of the general Commission, etc.	The countries further agree: The Commission shall have authority to employ such persons and make such expenditures as may be necessary; may avail itself of governmental agencies, officers, etc., as may be available; that remuneration and general expenses, etc., of its members shall be paid by the respective Governments and that other expenses of the Commission except as provided for in Article III shall be borne by the Governments in equal moieties (subpar. 2).	The countries further agree: The Commission shall have power to establish rules and regulations and to employ persons as may be necessary; that remuneration, general expenses, etc., of the Commission shall be regulated and paid by their respective Governments and all other expenses shall be defrayed out of funds provided under terms of article III (United States funds to carry on work in International Rapids section of St. Lawrence) (schedule A; par. c; e–4; 3–h).
The same provisions were made to cover exemption of immigration laws from customs, excise, and other imposts, whether Federal, State or Provincial.	Both Governments agree to permit entry into their countries within the work areas involved in the agreement—International Section, Niagara River Section—of personnel necessary to carry on the work and to exempt such personnel from the operation of their immigration laws and regulations within those areas. The same thing applies in the case of materials, should the Commission allocate certain construction works for one Government to perform in the territory of the other Government (subpar. 3).	Both countries agreed to practically the same provisions as to exemption of immigration laws, etc. (schedule A; pars. 1–1 and 1–2).
Article II	*Article II*	
Financial obligations of Canada: The provisions were just the same.	Financial obligations of Canada: According to this article, Canada agrees to construct works in the International Rapids section allocated to Canada by the Commission, and to operate and maintain or arrange therefor, works situated within Canada (subpar. a).	Financial obligations of Canada: In this treaty Canada agreed to construct, operate, and maintain works in the Thousand Island section below Oak Point; to construct, maintain, and operate side canals and locks on the Canadian side, and to construct rehabilitation works required on their side of the border (art. I, pars. a to c, incl.). The two countries agreed that the Commission should construct all works of the International Rapids section located within Canada by using Canadian engineers and workmen and materials—or that an equivalent proportion of the total work should be constructed by Canadian forces and with Canadian materials (art. III, par. b). Canada agreed to operate all works located within Canada (art. III, par. 2).
The date of completion was set at not later than December 31, 1949. The proviso for deferment of Canadian work was not included.	Canada further agrees to complete at a date not later than December 31, 1948, the Canadian links in the seaway, including the Welland Canal deepening, providing, however, that war conditions or defense requirements justify a modification of this period of time when Canadian work shall be completed, the Governments may, by exchange of notes, defer or expedite their completion (subpar. b).	Canada declared to complete the wholly Canadian links in the waterway—including the deepening of Welland Canal—at a date not later than that of completion of the International Rapids section works (preamble).
Article III	*Article III*	
Financial obligations of the United States: The provisions were just the same.	Financial obligations of the United States: According to this article, the United States agrees to construct works in the International Rapids section allocated to the United States by the Commission and to operate and maintain or arrange therefor works situated within the United States (subpar. a).	Financial obligations of the United States: The Commission was directed to construct all works of the International Rapids section located within the United States by using United States workers and materials; or failing this, to construct an equivalent proportion of the total works with United States

PROPOSED TREATY OF 1938—continued

In this proposed treaty the United States did not have to pay for the powerhouse superstructures nor the side canals and locks located on the Canadian side as in accordance with the present agreement.

Provisions just the same.

Article IV

Development of power in the international section: The provisions were just the same with the exception that the article stated the Governments might construct powerhouses as well as install machinery at such time as their requirements for power might dictate.

The Governments agree that the Commission shall arrange for engineering services with any agency in either country authorized to develop powe. in the International Rapids section.

Permitted diversions: This article provided that the equal diversion of water for power purposes in the International Rapids section was to be controlled daily.

Control of flow in International Rapids section: The provisions were just the same with the exception that no mention was made concerning the control of flows through the St. Lawrence River International Rapids section so as to not adversely affect power developments in the Canadian section of the St. Lawrence River.

Test period required: No such provision appeared.

Board to control diversions, regulate flows, etc.: No provision for this board or authority.

Provisions for 14-foot canal: Not directly mentioned in proposed treaty but included in the plans of the International Joint Board of Engineers, one of which by terms of the treaty had to be substantially followed.

AGREEMENT OF 1941—continued

The United States further agrees to supply funds for the construction, design, and supervision of all works in the International Rapids section, with the exception of machinery and equipment for the development of power and for rehabilitation works on the Canadian side (subpar. b).

The United States also agrees to complete work in the International Rapids section and in the Great Lakes system above Lake Erie at a date not later than the date of completion of the Canadian links of the seaway (subpar. c).

Article IV

Development of power in the International section: The Governments agree they may install or arrange for installation of such machinery as may be required for the development of power at such time as may be most suitable in respect to their power requirements (subpar. a).

The Governments agree, in view of the need for coordination of plans for the development of power in the International Rapids section, that the Commission may arraige for engineering services in either country with any agency authorized to develop power in that section of the St. Lawrence (subpar. b).

Permitted diversions: Except as modified by article VIII, the Governments agree each country shall be entitled to the use of one-half of the water available for power in the International Rapids section (subar. c).

Control of flow in International Rapids section: The Governments agree that the flow of water through the International Rapids section and out of Lake Ontario shall be so controlled and regulated as to maintain present depths of water for navigation and shipping purposes in the harbor of Montreal and the navigable channel of the St. Lawrence River below that city, and so that power developments in the Canadian section of the St. Lawrence River shall not be adversely affected (subpar. d).

Test period required: Upon completion of the works they shall be operated with the maximum water level held at 238.0, sea level datum, for a test period of 10 years, or shorter period as may be approved by a board or authority established under provisions of paragraph (f) of article IV. Should the board decide the maximum water could practicably exceed 238.0, the Governments may, by exchange of notes, subject to the terms in the notes, authorize an operating elevation exceeding 238.0 (subpar. e).

Board to control diversions, regulate flows, etc.: The Governments may, by exchanging notes, provide for a board or authority to control or supervise the diversion of water in the International Rapids section, to regulate the flow out of Lake Ontario and through the International Rapids section of the St. Lawrence River, and to report on the feasibility of increasing the head under which the power plants at the International Rapids section may operate (subpar. f).

Provisions for 14-foot canal: During construction of works in the International Rapids section adequate facilities for maintaining existing 14-foot navigation in that section shall be provided (subpar. g).

GREAT LAKES-ST. LAWRENCE DEEP WATERWAY TREATY, 1933—continued

workmen or materials (art. III, par. b). The United States agreed to operate all works located within that country (art. III, par. 2).

The United States undertook to furnish all funds for construction work in the International Rapids section excepting in this case Canadian powerhouse superstructures as well as machinery and equipment for development of power (art. III).

The United States also agreed to construct, operate, and maintain works in the Thousand Islands section above Oak Point, and a side canal with locks opposite Barnhardt Island; to construct all rehabilitation works on the United States side (art. II, pars. a to c, inclusive) and by declaration to complete all works not later than date of completion of International Rapids section required in the Great Lakes system above Lake Erie. (Preamble.) (The same as 1941 agreement excepting United States did not have to pay for Canadian side canals or powerhouse superstructures.)

Development of power in the International Rapids section: The Governments agreed either could arrange for construction of powerhouse superstructures, machinery, etc., for development of power within their respective territories (art. III, par. c).

The Government agreed the Commission could make contracts for engineering with any agency authorized to develop power; could defer such parts of power works as need be constructed with powerhouses and; and could make contracts with aforementioned agencies for constructing any deferred power works (schedule A, par. g-1).

Permitted diversions: Same provisions excepting diversions were to be controlled daily (art. IV, par. a).

Control of flow in International Rapids section: The provisions were just the same with the exception that no mention was made concerning the conrtol of flows through the St. Lawrence River International Rapids section so as to not adversely affect power developments in the Canadian section of the St. Lawrence River.

Test period required: No such provision appeared.

Board to control diversions, regulate flows, etc.: No provision for this board or authority.

Provisions for 14-foot canal: Not directly mentioned, but included in the plans of the International Joint Board of Engineers, which had to be followed.

PROPOSED TREATY OF 1938—continued	AGREEMENT OF 1941—continued	GREAT LAKES-ST. LAWRENCE DEEP WATERWAY TREATY, 1933—continued
Article V	*Article V*	
Ownership of works constructed: Provision is just the same.	Ownership of works constructed: Nothing in the agreement confers upon either Government proprietary, legislative, or administrative, or other jurisdiction in the territory of the other, and they agree that all works constructed under the agreement's provisions shall constitute a part of the territory in which they are situated.	Ownership of works constructed: Provisions were the same (art V).
Article VI	*Article VI*	
Other canals permitted: The same provision was included excepting that approval of the Commission was required.	Other canals permitted: Either Government may construct alternate canals and channels for navigation in the International Section, or in waters connecting the Great Lakes, within its own territory, at any time. Water may be utilized for such purposes.	Other canals permitted: The same provision was included (art. VI).
Article VII	*Article VII*	
Rights of navigation in St. Lawrence River and Great Lakes system: In this article the following quotation appeared: "Nothing in this article or in any other article of this treaty shall be construed as infringing or impairing in any way the sovereignty of the United States of America over Lake Michigan." The remaining provisions as to navigation were included.	Rights of navigation in St. Lawrence River and Great Lakes system: Both Governments agree that the Great Lakes and St. Lawrence River system, notwithstanding the provisions for termination contained in any treaties, shall be open for navigation to the citizens or subjects, ships, vessels, and boats of each Government.	Rights of navigation in St. Lawrence River and Great Lakes system: Provision was the same (art. VII).
Article VIII	*Article VIII*	
Diversions: Same provision.	Diversions: Each Government within its own territory must measure the quantity of water diverted from or added to the Great Lakes system. It shall file such records with the other Government semiannually (subpar. a).	Diversions: Same provision (art. VIII, par. c).
Other diversions allowed: Provisions were substantially the same.	Other diversions allowed: Each country has the exclusive right to use boundary waters in quantities equivalent to any waters diverted into the Great Lakes system from watersheds lying wholly within their particular country at all points below the point of entry of such waters added to the Great Lakes system from other watersheds (subpar. b).	Other diversions allowed: Same provision (art. VIII, par. d).
Instead of this section applying to diversions in excess of those permitted on January 1, 1940, it stipulated that water should not be diverted through the Chicago Drainage Canal in excess of the amount established by the Supreme Court by decree rendered April 21, 1930, and that diversion through that canal would have to be reduced to that amount by December 31, 1938. Any diversion made in excess would be considered "emergencies," and in the event the Canadian Government took exception, the matter was to be submitted for final decision to an arbitral tribunal, similar to the provisions proposed in the new agreement. The proposed treaty also stipulated that no diversion of water other than that referred to in connection with the Chicago Drainage Canal would be permitted to another watershed unless approved by the International Joint Commission.	If either Government authorizes diversions—except as permitted in the preceding paragraphs—they agree to give immediate consideration to any objecting representations made by the other Government. It is agreed that should it be impossible to otherwise reach a satisfactory settlement, that the matter will be submitted to an arbitral tribunal which shall be empowered to direct such compensatory and remedial measures as it may deem just and equitable. The arbitral tribunal shall consist of three members—one appointed by each Government and a third, the chairman, selected by both Governments. This applies to any diversion made in excess of that permitted in either country on January 1, 1940 (subpar. c).	Instead of this section applying to diversions in excess of those permitted on January 1, 1940, it stipulated that water should not be diverted through the Chicago Drainage Canal in excess of the amount established by the Supreme Court by decree rendered April 21, 1930, and that diversion through that canal would have to be reduced to that amount by December 31, 1938. Any diversion proposed in excess would be considered emergencies, and in the event the Canadian Government took exception, the matter was to be submitted for final decision to an arbitral tribunal, similar to the provisions proposed in the new agreement. The proposed treaty also stipulated that no diversion of water other than that referred to in connection with the Chicago Drainage Canal would be permitted without approval of the International Joint Commission (art. VIII, pars. a and b).
Compensatory and regulatory works: Provision just the same.	Compensatory and regulatory works: The Commission is required to report upon the desirability of regulatory and compensatory works in the Great Lakes system and should the Governments approve these, prepare plans and specifications for the works and recommend allocation of their costs. The Governments are to make arrangements for their construction through exchange of notes (subpar. d).	Compensatory works: Works in the Niagara and St. Clair Rivers were to be constructed "at the cost of the United States as regards compensation for diversion through the Chicago Drainage Canal, and at the cost of Canada as regards the diversion for power purposes, other than power used in operation of the Welland Canals" (art. VIII, par. e).
Article IX	*Article IX*	
The Niagara Falls project: Provisions were substantially the same.	The Niagara Falls project: The Commission shall prepare plans and specifications for works in the Niagara River, taking into account the recommendations of the Special International Niagara Board. These works are to distribute and control waters of the Niagara River so as to prevent erosion and enhance the scenic beauty of Niagara Falls.	The Niagara Falls project: No provisions for this undertaking were included.
The provisions were the same with the exception that the Governments were required to make arrangements for the construction works. The remaining provisions were substantially the same.	The Governments may make arrangements by exchange of notes for the construction of such Niagara River works, including temporary diversions to facilitate construction. The cost shall be borne in equal moieties.	

PROPOSED TREATY OF 1938—continued	AGREEMENT OF 1941—continued	GREAT LAKES-ST. LAWRENCE DEEP WATERWAY TREATY, 1933—continued
Provisions the same.	Notwithstanding amounts specified in article V of the Boundary Waters Treaty of 1909, the United States may authorize an additional diversion within the State of New York, above the Falls, at a rate not exceeding 5,000 cubic feet of water per second, and Canada may, within the Province of Ontario, divert a like amount, upon completion of the Niagara River works.	
The provisions were the same excepting that the Commission was required to report on the equal and equitable diversion for power purposes, rather than just the efficient and equitable as in the present agreement.	The Commission is required to test Niagara River construction works under a wide range of conditions and to certify to the Governments the effect of such works and make recommendations respecting water diversions. In doing so, the Commission shall take special cognizance of scenic beauty of the Falls and rapids, the requirements of navigation on the Great Lakes system, and efficient utilization and proportionment of waters for power purposes. The Governments may, by exchanging notes and concurrent legislation, determine the methods by which these purposes may be attained.	
Article X	*Article X*	
Claims: No provisions made for these claims.	Claims: Each Government agrees that provisions for the disposition of claims and satisfaction of valid ones occurring in the territory of the other in connection with construction by such Government of works authorized by the agreement, shall be made (subpar. a).	Claims: No provisions made for these claims.
Provisions were substantially the same.	Each Government is released from responsibility for damage or injury to persons or property in the territory of the other caused by any action authorized by the agreement other than damage or injury covered in the preceding paragraph (subpar. b).	Provisions were substantially the same (art. IX, par. a).
Same provisions.	The Governments agree that each will assume responsibility and expense in acquisition of lands required to carry out the agreement.	Same provisions (art. IX., par. b).
Article XI	*Article XI*	
Ratification: The treaty shall be ratified in accordance with the constitutions of the two Governments.	Ratification: The agreement is subject to the approval of the Congress of the United States and the Parliament of Canada. Following such approval it shall be proclaimed by the President and ratified by the King of Great Britain. It shall become effective on the day of exchange of the instrument of ratification and a copy of the proclamation which shall take place at once.	Ratification: The treaty shall be ratified in accordance with the constitutions of the two Governments (art. XI).

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

EDITORIAL BY WALTER PARKER

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to introduce an editorial entitled "A Better Way to Spend a Billion Than on the St. Lawrence Seaway," by W. lter Parker, nationally known economist, in the Official Court Record of New Orleans:

A BETTER WAY TO SPEND A BILLION THAN ON THE ST. LAWRENCE PROJECT

(By Walter Parker)

A sea-level ship canal between the Atlantic and the Pacific, across the Isthmus of Tehuantepec, would be of far greater economic value to the United States, to Mexico, and to all Latin America, than would be the St. Lawrence power and seaway project which the President is advocating.

A Tehuantepec ship canal could be easily defended, and it would shorten the shiplane distance between all the North American ports on the Atlantic and the Pacific. It would greatly enlarge the economic opportunities of all Central America as well as of Mexico. It would facilitate commerce between the New World and Asia, and it would go very far in removing the economic handicaps now resting on the entire midcontinent region of the United States.

Were they to consult the economic well-being of the Mississippi Valley—that great region lying between the Appalachians and the Rockies and which is bountifully supplied with natural resources—every Senator and Congressman from the Valleys of the Ohio, the Missouri, the Arkansas, the Red, and the Mississippi Rivers would vote to build the Tehuantepec Canal rather than vote money for the St. Lawrence project.

California, Oregon, and Washington would be greatly benefited were the Tehuantepec Canal opened. They will not be helped by the proposed St. Lawrence project.

A connection between the Atlantic and the Pacific across Tehuantepec would bring the producing sections of the United States many hundred miles nearer western markets than the Panama Canal does.

Ice would never form in a Tehuantepec canal.

Since a sea-level canal at Tehuantepec would materially lower distribution costs, its effect would be to create a new and valuable economic impetus, and in the post-war period the refinement of economy will be required if economic rehabilitation is to come along satisfactory lines.

The only real advantage ever claimed for the St. Lawrence seaway was that it would help wheat exports. But since such claims were seriously made, the United States has lost most of its wheat export markets—not because of the war but because the change by the surplus-producing United States from world debtor to world creditor was not accompanied by any adequate change in the tariff policy which would permit imports on a scale sufficient to offset exports.

Under its tariff policy, the surplus producing United States must change from a producer of surplus raw materials to a producer of the finished articles of world commerce. That is, for its exports it must rely more and more on manufactured articles than on cotton and wheat.

Some day, after Japan shall have grown tired of attempting to subjugate 450,000,000 Chinamen, China will emerge as a vigorous, developing country. It will need machinery and manufactures in great quantities—products which the midcontinent region can turn out in great quantities.

The Panama Canal is almost as near to Europe as it is to the ports of the United States. Not so Tehuantepec. The latter is

just across the Gulf of Mexico from the ports of the United States, and many sea miles would be saved in the process of distribution.

Insofar as the development of hydroelectric power to result from the St. Lawrence project is concerned, power experts are of the opinion that more power, at less cost and at a much earlier date could be developed through the use of steam.

If more power be needed in the St. Lawrence River section—and many people doubt that it is—the use of steam engines would create a larger use for coal, oil, and other fuels, thus enlarging employment in fields of greatest need. The coal miners most certainly need greater opportunities.

Even now, with all the water power available in the Tennessee Valley project, the T. V. A. is reported to be planning the erection of steam-power generating plants to supplement the water-power facilities as a matter of precaution.

Obviously the United States cannot afford to finance all the great projects the brains of men can conceive at one and the same time and prepare for war, too.

Would it not be wise for Congress to weigh the value of great projects and select those which will do the most good to the economic life of the Nation?

Between 5 and 7 years will be required to make the St. Lawrence project available, and to do that between $400,000,000 and $1,000,000,000 of the taxpayers' money will be required to do the job.

No more money and no more time would be required to open a sea level ship canal across the Isthmus of Tehuantepec. The Tehuantepec project would prove an everlastingly valuable impetus to trade and commerce in a large way.

The St. Lawrence seaway project is not needed; steam power can be had at less cost than hydroelectric power, and the national defense phase is out because long before the project could be completed the war will probably end because of exhaustion.

Mississippi Valley Senators and Congressmen might well consider these matters before approving any appropriation for the St. Lawrence project.

They might well reach the conclusion that the money could be spent on Tehuantepec to far greater advantage.

Business and Government

EXTENSION OF REMARKS

OF

HON. ALBERT L. VREELAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

RADIO DISCUSSION BETWEEN HAROLD JOHN ADONIS AND GEORGE E. STRINGFELLOW

Mr. VREELAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following interview between Harold John Adonis, director, New Jersey State Government Bureau of Research, and George E. Stringfellow, president of the Chamber of Commerce and Civics of the Oranges and Maplewood, in one of the forum broadcasts over station WINS on March 29, 1941:

BUSINESS AND GOVERNMENT

Mr. ADONIS. Good afternoon, ladies and gentlemen. At the moment, our country has a big job to do—the job of building up our own defenses and extending what aid we can to the countries which are struggling to hold in check the forces that threaten us—it is a job that calls for close cooperation between business and government. It is highly important, therefore, that all of us, as citizens, know how the machinery of government operates and how the relations of government and industry, or government and business, are maintained. Accordingly, we have asked Mr. George E. Stringfellow, president of the Chamber of Commerce and Civics of the Oranges and Maplewood (the "Five Town" chamber), and director of the New Jersey State Chamber, to tell us how this can best be done.

Mr. STRINGFELLOW. That's a pretty large order, Mr. Adonis, but I'll be glad to tell you, as a businessman, how I would go about it.

Mr. ADONIS. That's just what we want to have you tell us, Mr. Stringfellow.

Mr. STRINGFELLOW. The Federal Government is reaching out more and more to control and regulate the conditions under which we live and work. Therefore, if we are to preserve our democratic system of government, it is necessary that the individual citizen be on the alert to anticipate injurious effects of legislation and regulation, and to call them to the attention of his Representative in Congress. If we are to act intelligently, we must know whether Washington is going to do things to us or for us. Every citizen has the responsibility of going to the polls and voting for his public or political representatives. That can be called his constitutional responsibility. But he has another obligation—the obligation of bringing to the attention of his poltical representative pertinent information concerning current legislative problems, in order that they may act judiciously and wisely. That can be called extraconstitutional responsibility. The need of dependable information of this sort has long been recognized by our Government. That is why legislative committees hold hearings on virtually all of the more important legislative subjects coming before Congress. For example, the Chamber of Commerce of the United States was not organized at the suggestion of businessmen. It was organized at the suggestion of the first Secretary of Commerce and Labor, with the approval, of course, of President Taft. It was set up as a vehicle to provide Congress with accurate, mature, and truly representative business opinion regarding proposed legislative measures.

Mr. ADONIS. You mean government asked for it first?

Mr. STRINGFELLOW. Precisely. And that suggests this important question: How can the individual citizen keep himself informed as to what Government is doing in order that he may determine for himself whether contemplated legislation is good or bad? The answer is obvious: He can't—not by himself. He wouldn't have time for anything else if he followed closely the activities of Congress, and Congress is only a part of our Government. There are dozens of bureaus, commissions, administrations, and what-not issuing regulations which have the force and effect of law—regulations which bear directly upon our ways of working and making a living.

Mr. ADONIS. It looks, then, as if the individual citizen were stymied.

Mr. STRINGFELLOW. Not at all. Since we live in an organized age, the way out is organization. It is the orderly method by which the individual can keep informed concerning public questions which involve his particular interests and express his opinion about them.

Mr. ADONIS. How would you set up such an organization?

Mr. STRINGFELLOW. Many already exist, such as (1) farm, (2) labor, and (3) educational organizations. I am speaking now, however, only of business organizations, with which I have had some experience. There are something like 10,000 so-called trade associations, representing various types of trade and industry. There are about 3,000 chambers of commerce and boards of trade in the larger towns and cities of our country, not to mention those in smaller communities; and there are chambers which function on a State-wide basis.

Mr. ADONIS. Just how old is the chamber of commerce idea?

Mr. STRINGFELLOW. The oldest chamber in the United States is the Chamber of Commerce of the State of New York. It was established in 1768. Its original charter was granted by King George III. There are much older commercial organizations, the oldest dating back to the fifteenth century. Most European chambers are semi-official institutions. They are appendages of government—organized from the top down. American chambers of commerce, on the contrary, are modeled on the old New England town meeting idea—from the bottom up. They are purely voluntary institutions.

Mr. ADONIS. Just how does a chamber function, Mr. Stringfellow?

Mr. STRINGFELLOW. The efficient chamber of commerce is a vehicle for dealing with community interests. By community interests I mean the things that concern the individual citizens but which the idividual, acting alone, can't do anything about—for example, such things as fire protection or transportation facilities. In many instances, chambers of commerce point the way for action by the authorities. You will find, as a rule, that what we call a "live" town has an active and efficient chamber of commerce.

Mr. ADONIS. Getting closer to home, what are some of the functions of the Chamber of Commerce and Civics of the Oranges and Maplewood?

Mr. STRINGFELLOW. The broad purpose of our five-town chamber of commerce and civics is to safeguard and advance the acknowledged high standard of the Oranges and Maplewood as an outstanding residential community, and to promote the welfare of business and industry located within its area. It is an energetic and progressive organization with a notable record of accomplishments, all of which have contributed to the satisfaction and comfort of living in our community. For instance, an entire new shopping distict has been developed; streets have been widened; trolley lines have been replaced with fast and efficient bus service. Furthermore, new apartment-house developments have set the country an example in twentieth century living without sacrificing the graciousness of one of the most famous residential suburban areas in the country.

Mr. ADONIS. Mr. Stringfellow, I am sure our listeners would like to hear more about the constructive work your five-town chamber of commerce and civics is doing to foster the trade and welfare of the Oranges and Maplewood.

Mr. STRINGFELLOW. To cover the whole range of activities would, of course, be impossible in the time allotted to me. Our major program, however, deals with such questions as community promotion, taxation, transportation, public safety, retail distribution, public health, State and national legislation, community planning, industrial problems, and national defense.

Mr. ADONIS. I can well see how your chamber of commerce, as you have described it, might be very like the old town forum or town meeting.

Mr. STRINGFELLOW. More than that, Mr. Adonis. One must remember that changes which affect us as individuals also affect the communities in which we live. Our interests are wrapped up with the interests of hundreds of other communities throughout the country. We are directly affected by what goes on within our States and within the United States. That is especially true of the last.

Mr. ADONIS. That sounds all right in theory, Mr. Stringfellow, but Washington, to many people, is very far away. How is the individual citizen going to find out what national legislation is contemplated, and how it will affect his interests?

Mr. STRINGFELLOW. That isn't so difficult as it sounds. Let me give you an illustration. In Washington there is the Chamber of Commerce of the United States. It is a federation of some 1,600 business organizations, chambers of commerce, and trade associations. If a bill is introduced in Congress which affects business—and most of them do nowadays—that bill is called to the attention of more than 1,100 so-called legislative committees maintained by local chambers of commerce and trade associations. All of these eleven-hundred-odd legislative committees consider this bill. They may approve or disapprove, or they may take no action at all. If they so choose, as is often the case, they can communicate with their Representatives in Congress, and intelligently indicate their opinion of the proposed legislation.

Mr. ADONIS. How does the Member of Congress take this advice?

Mr. STRINGFELLOW. I have yet to learn of a Member of Congress who did not welcome an honest expression of opinion from his constituents. I say honest opinion. I do not mean artificially manufactured propaganda originating with a few persons who assume, without warrant, to speak for many others.

Mr. ADONIS. What would you suggest in the way of improving relations between business and Government?

Mr. STRINGFELLOW. I would suggest that first the business men interest themselves in their community affairs by joining their local chamber of commerce. That is the starting point. If the businessman does not take an interest in community affairs, it is a safe bet that he isn't going to bother about State or National affairs. The next step is, through his local chamber, to interest himself in the affairs of his own State. There are a number of State chambers of commerce set up for this purpose. For instance, the New Jersey State Chamber of Commerce, with headquarters in Newark, is one of the most effective chambers in the country. Finally, business men and civic leaders should give more attention to national business affairs by using the facilities of the great over-all organization, the Chamber of Commerce of the United States. The main thought to keep in mind is that the effectiveness of business organizations depends upon the initiative of individual business men. Organizations can help them, but they cannot take there place. Business men and civil leaders must supply the motive power. The national chamber is not the parent of the local chambers. It is the offspring.

Mr. ADONIS. How does this affect government?

Mr. STRINGFELLOW. In this way: The best kind of government—the kind we mean when we speak of a democracy—is that which reflects the opinions of a majority of the people. It is not the kind that is imposed upon the people by an arbitrary authority. In a democracy, laws are not really made, they grow—grow out of the consciousness of the people themselves. When the people reach a conclusion that a certain course of action should be followed, this conclusion is expressed in terms of a law and, as we say, Congress enacts it; that is, it puts the conclusion into effect. But the impetus begins out in the grass roots with the individual men and women with whom our national destiny rests. The best insurance we have against dictatorships is the earnest effort on the part of these men and women to inform themselves concerning proposed legislation, to determine in the light of their own convictions whether it is good or bad, and to tell their political representatives what they think about it. Let me say, too, that in all fairness, we ought to be as unsparing of our commendation as we are of our criticism, which unfortunately we are not. We have, as Mr. Adonis said, a big job to do—a job that will demand the closest understanding between Government and business. We have the organization machinery for maintaining and promoting this understanding. It could be more extensively used to the benefit of the Nation as a whole.

Mr. ADONIS. Thank you, Mr. Stringfellow. Ladies and gentlemen, you have just heard an interview with Mr. George E. Stringfellow on the subject of business and government—a subject very much in the minds of most of us at this time. This was brought to you as a public service of station WINS.

Old-Age Pensions

EXTENSION OF REMARKS

OF

HON. JAMES F. O'CONNOR

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

RESOLUTION BY THE BOARD OF COMMISSIONERS OF HILL COUNTY, MONT.

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the Board of County Commissioners of Hill County, Mont.:

HILL COUNTY COURT HOUSE,
March 15, 1941.

We, the undersigned members of the Board of County Commissioners, county of Hill, State of Montana, believe something must be done to provide adequate pensions for our deserving senior citizens, and, at our regular meeting have adopted this resolution:

"Whereas the members here assembled believe that a national uniform system of old-age pensions should be adopted throughout the United States of America; and

"Whereas the proposals embraced in the Townsend bill (H. R. 1036) will greatly relieve, if not entirely abolish, unemployment, and will provide to the people the American standard of living; and

"Whereas the various States of the Union are finding it difficult to raise a sufficient revenue to finance the payment of adequate pensions to the aged; and

"Whereas that a universal tax be levied and moneys so raised shall be divided pro rata and paid to all citizens of the United States who have attained the age of 60 years and over: Now, therefore, be it

"*Resolved*, That we most respectfully urge upon the Congress of the United States of America to consider the basic principles of the Townsend bill (H. R. 1036) now in committee; and be it further

"*Resolved*, That one copy of this resolution be forwarded to each of the following: The Honorable ROBERT L. DOUGHTON, chairman of the House Ways and Means Committee; the Honorable BURTON K. WHEELER, Senator; the Honorable JAMES E. MURRAY, Senator; the Honorable JEANNETTE RANKIN, Congresswoman; the Honorable JAMES F. O'CONNOR, Congressman."

RAY L. SAND,
Chairman, Board of County Commissioners.
J. C. LUDWIG,
A. J. TIMMONS,
Commissioners.

Our President Has Spoken

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

EDITORIAL BY LUDWIK LESNICKI

Mr. SABATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include an editorial of Ludwik Lesnicki, editor and political commentator, from a recent issue of the Alliance Daily, Chicago, and repeated in Courier, Milwaukee, and other dailies, on the speech of President Roosevelt.

The editorial very briefly and accurately expresses the views to which many political writers and commentators fully subscribe.

The editorial follows:

[From the Alliance Daily, Chicago, Ill.]

OUR PRESIDENT HAS SPOKEN

(By Ludwik Lesnicki)

President Roosevelt's speech is a great historic document. It will rank as such in the future.

In no utterance of an American President have the facts been faced more fearlessly.

In no utterance has the logic of those facts been more clearly stated.

President Roosevelt does not disguise the purpose of his message.

That part of his speech is strong meat for strong men and women.

It means the practicable cooperation with the nations that are fighting savages and murderers.

It means the organization and coordination of our material resources.

His statement, "Our democracy has gone into action," is not merely a magnificent gesture.

Every patriotic American will certainly re-echo the President's declaration that—

"There is no longer the slightest question or doubt that the American people recognize the extreme seriousness of the present situation. That is why they demanded and got a policy of unqualified, immediate all-out aid for Britain, Greece, China, and for all the governments in exile whose homelands are temporarily occupied by the aggressors."

If this declaration, indeed, be not the voice of a nation, we are not fit to be a nation.

The President asks that we range ourselves on the side of the democracies of the world and against unscrupulous autocracies, whose continued success and power spells an eternal menace.

Thus the President has spoken.

We are prepared to spend and be spent for those high ideals that neither numbers nor wealth have blotted from the souls of true Americans.

Government Aid for Farm Tenants

EXTENSION OF REMARKS

OF

HON. PAUL CUNNINGHAM

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

RESOLUTION OF THE GENERAL ASSEMBLY OF IOWA

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the General Assembly of the State of Iowa:

Senate Concurrent Resolution 12

Whereas Iowa was developed primarily as an agricultural State and is at the present time one of the greatest agricultural areas in the Union; and

Whereas farming in Iowa is primarily a way of living which in the past has provided a place for ambitious and thrifty families to live in peace and security and provide for themselves the necessary and desirable things in life; and

Whereas the advent of power machinery and equipment, together with the application of the triple-A program, has made it possible for certain individuals, companies, and corporations to farm ever-increasing areas of good farm land at a profit; and

Whereas this practice is depriving thousands of Iowa farm families from their only way of living and is forcing many of them onto relief rolls; and

Whereas an additional 5,000 families will be deprived of their way of livelihood again this year and will be forced to leave their present homes; and

Whereas through the drifting of these landless farmers from State to State in search of land and homes the solution of this great evil has passed beyond the control of the various States and the problem has become national in character and extent; and

Whereas through governmental agencies aid has been extended to home builders in urban districts by governmental guaranty of loans on such homes; and

Whereas farm homes for these dispossessed farmers are at least equally as important to the tranquillity and security of our Nation as are the homes for urban residents and at the present time no provision has been made to early or adequately relieve this ever-growing cancer in our body politic; and

Whereas it has long been the established policy of our Federal Government to provide homes and homesteads for our farm-minded people to which policy much of our national progress may be ascribed: Now, therefore, be it

Resolved by the Senate of the State of Iowa (the House of Representatives concurring), That we memorialize the Congress of the United Staes that they by amendment of the Federal Housing Act or by the enactment of new and appropriate legislation make available to farmers, and especially to farm tenants who are without farms, governmental aid equal to that afforded to urban residents in order that they may be able to obtain sufficient land and decent homes in which to live and maintain their families; and be it further

Resolved That copies of this resolution be transmitted to the President of the United States and to the Vice President, and to the Secretary of Agriculture of the United States, and to each Member of the Congress.

The Tax Problem

EXTENSION OF REMARKS

OF

HON. JARED Y. SANDERS, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

LETTER FROM A CONSTITUENT

Mr. SANDERS. Mr. Speaker, under leave to extend my remarks, I desire to have placed in the CONGRESSIONAL RECORD a letter from a constituent, Mr. A. L. Prescott, of Baton Rouge, La., expressing his views on the matter of taxation.

I have long been of the opinion that the people of this country are ahead of the Congress, both in the seriousness of their views of the present situation and in their determination to take whatever steps may be necessary to see this country safely through the present emergency. That we can finance the tremendous program of national defense and the policy of aid to Britain voted by this Congress and approved by the people, without greatly increasing our taxes, is a delusion. Anyone who attempts to tell us that it will not be necessary to increase our taxes is merely trying to fool the people. That the people themselves who must foot the bill realize this is evident.

This letter is merely typical of other letters received, and illustrates the point of view of these splendid, patriotic American citizens who are animated by no thought except the love of our country and of our American ideals.

The letter I refer to is as follows:

MARCH 18, 1941.

Hon. J. Y. SANDERS:

Now that we have the lend-lease bill passed, we want to make it work. I am in favor of a defense tax on all weekly wages from $20 a week up of from 1 percent to 5 percent, with exemption for those under $35 a week that have a dependent family.

I think that everyone wants to help and this is a fine way to pay our way as we go. Besides, if Hitler wins, our money would not be much good, anyway. We want no half-way measures and if we have the cash we will get action.

I make $40 a week. Help get good wages and the people won't mind the tax.

A. L. PRESCOTT,
Baton Rouge, La.

Financing National Defense

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

RADIO ADDRESS BY HON. WRIGHT PATMAN, OF TEXAS

Mr. PATMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered over the radio on March 30, 1941:

Ladies and gentlemen of the radio audience, during the third week of this month, March 1941, the House of Representatives passed appropriation bills aggregating $11,000,000,000. These bills will soon become a law. Eleven billion dollars is an incomprehensible sum. Divided up among the 130,000,000 people in this country, it means an $85 debt for every man, woman, and child in America. Before the end of this year our Nation will owe $65,000,000,000. This is the equivalent of a $500 per capita debt owed to the Federal Government alone. It does not include debts owed to cities, counties, and States.

$130,000,000,000 (BILLION) DEBT BY END OF YEAR

If we continue what is commonly referred to as the orthodox money system of issuing interest-bearing bonds to obtain the Government's money for the use of the Government, by the time this debt is paid it will have cost the people twice as much as the amount of the bonds, or $130,000,000,000 instead of $65,000,000,000. It is a change in this so-called orthodox money system that I desire to talk to you about this evening which is in support of H. R. 116, now pending in Congress.

GOVERNMENT PAYING BONDHOLDER AS MUCH AS PAID SOLDIERS AND SUPPLIERS

The question of paying interest on our national debt is more serious than many people believe. It means that the taxpayers are required to pay $2 for every $1 that the Government borrows. It means that every time a soldier is paid a dollar, the bondholders are promised a dollar in interest, which is paid later. Every time one who furnishes materials or supplies to the Government is paid a dollar, the bondholders are promised a dollar in interest, which will be paid later. In other words, $2 paid by the Government for every $1 borrowed.

PAYMENTS BY ALL INDIVIDUAL INCOME TAXPAYERS NOT SUFFICIENT TO PAY GOVERNMENT ANNUAL INTEREST CHARGE

In order that you may fully realize the significance of this tremendous burden on the people, if all of the money paid by the millions of individual income taxpayers this year is used to pay interest on our national debt, it will not be sufficient. It was not sufficient last year nor the year before. Therefore, if we can eliminate a wasteful expenditure, which amounts to more than all of the money paid by the individual income taxpayers each year, our efforts will not be in vain.

GOVERNMENT-BOND RACKET STARTED TO APPEASE THE RICH

When our Government was founded over 150 years ago, it was the theory of Alexander Hamilton that if the Government needed money, it should issue interest-bearing bonds and sell them to obtain the money. Mr. Hamilton realized it was not necessary for the Government to sell a bond in order to acquire money that the Government itself created, but those supporting the views of Mr. Hamilton insisted that it would be a good thing for the country for the following reasons:

First. By selling bonds issued by the Government to individuals, and especially to rich people, it would cause these rich influential people to have an interest in the new Government, a selfish interest; and in the event of trouble, these people would support the Government because if the Government should fall, they would lose their investments.

Second. It was insisted that if the Government issued interest-bearing bonds, Congress would be retarded from becoming too extravagant; that is if Congress appropriated too much money, and thereby caused

the issuance of an excessive bond issue, the price of the outstanding bonds would go down in value and all the bondholders in the country would be protesting to Congress against the further increase in appropriations so as to protect the value of their bonds. Further, it was said that if Congress became too extravagant, the Government would be unable to sell its bonds and thereby prohibit the Congress from appropriating money, or spending money.

When Mr. Hamilton suggested that the rich people would better support the Government if they owned an interest in the country, a financial interest, there was a very much different situation existing then, compared to the situation now. Then, our Government was in its infancy, had just been established and had not proven itself.

The answer to the contention that the issuance of bonds will retard an extravagant Congress, it can be said now that such an argument is not applicable because banks can now obtain new money on their Government bonds 100 cents on the dollar. Therefore there is no danger of bonds losing their value or becoming unsalable.

OLDEST LOBBY IN AMERICA

It can be truthfully said that Mr. Alexander Hamilton inspired the first militant minority to influence Congress when he caused Government bonds providing for interest payments to be sold to rich people over the country for the purpose of having them exert pressure on Congress at the proper time to keep down governmental expenditures. So the oldest lobby in America is the United States Government bondholders' lobby.

INTEREST BURDEN WILL SOON REACH $2,000,000,000 A YEAR

Our country drifted along for the first 125 years without paying very much interest on Government bonds. A comparatively small amount was paid each year in interest on Government bonds, but not a sufficient amount to cause any concern. During the past 25 years, however, the interest burden has become quite a problem for the Government. In recent years the Federal annual interest charge has increased to over $1,000,000,000, and within the next few months, when our national debt is increased to the debt limit, our Federal annual interest charge will probably exceed $2,000,000,000. This will certainly be true if interest rates are increased as contemplated by those who have so much to do with the control of our monetary system at this time.

UNNECESSARY, EXTRAVAGANT, AND WASTEFUL

It is my contention that it is unnecessary for the sovereign Government of the United States to issue interest-bearing bonds and thereby cause the Government to pay interest for the use of its own credit. I contend it is not only unnecessary but it is also extravagant and wasteful.

FEDERAL GOVERNMENT HAS SOLE POWER TO CREATE MONEY

If an individual State or a private corporation needs money, it is proper and right for bonds to be issued and sold for the purpose of obtaining the money. In such a case neither the State nor private corporation has the power to create money. That is not true as to our Federal Government, since it has the money-creating power and certainly should not sell bonds, upon which interest must be paid, in order to obtain money that the Federal Government only can create.

GOVERNMENT SELLS BONDS TO OBTAIN MONEY OF ITS OWN CREATION

I propose that the Government issue its own credit on its own security without paying tribute to any group for the privilege of using its own credit. The Government issues both bonds, which draw interest, and money, which are non-interest-bearing obligations of the Government. Both are obligations of the Government based upon the same security and are printed at the same printing plant here in Washington. It is certainly difficult for many people to understand why the Government that issues both bonds and money must sell bonds and pay interest every year in order to acquire money that the Government itself creates.

BANKS GET MONEY FOR 30 CENTS PER $1,000

Your attention is invited to the fact that our Government is permitting the Federal Reserve Banking System that is owned by private commercial banks to issue money upon the credit of the Nation by paying the cost of printing the money, which is about 30 cents per thousand dollars. These banks take this money, which costs them 30 cents per thousand dollars, and buys United States Government bonds, upon which the Government pays to them an interest charge each year. Private commercial banks also create money and buy United States Government interest-bearing bonds. This does not make common sense.

NO PRINTING-PRESS MONEY SCHEME

It must be understood that I am not advocating what is commonly referred to as a printing-press money scheme; neither am I advocating the issuance of "rubber money" or "baloney dollars." The proposal that many of us are working on in Congress will stabilize the value of money and will safeguard our Nation against dangerous inflation as well as save the taxpayers $2,000,000,000 a year in interest charges that they will be compelled to pay on our huge national debt if the system is not changed.

FEDERAL RESERVE BANKS NOT OWNED BY GOVERNMENT

The Federal Reserve Banking System is not a governmental institution. Every dollar of outstanding stock issued by this system is owned by the private commercial banks of the country. Although the Federal Reserve Board is appointed by the President and confirmed by the United States Senate, the system is privately owned, and the private banks of the country otherwise control the Federal Reserve Banking System. For all practical purposes, our Federal Reserve Banking System, which has the money-issuing power, is owned and controlled by the private commercial banks that are selfishly interested in controlling money and its value.

It would be just as reasonable for the United States Treasury to be operated by private selfish interests as it is for the institutions that create money upon the Government's credit to be owned by private institutions.

BOOMS AND DEPRESSIONS

Throughout our Government's existence we have had booms and depressions one after another. We have abundant proof that can be presented during each decade of our country's 150 years existence to show that a banker-controlled, money-issuing privilege or debt money system is not only wrong but injurious and destructive to the rights of the people.

EVERYTHING MUST BE PAID FOR

It is not proposed that Congress cause money to be issued that will never be paid back. Someone must pay for everything, and in the exercise of the privilege that it has of issuing non-interest-bearing Government obligations, or credit instead of interest bearing, they will have to be paid back; but the payments made each year of an amount equal to what is normally paid as interest will entirely pay off and liquidate the bonds in 25 or 30 years.

Do not overlook this fact, that if we pay 4 percent each year on our public debt, we will have it entirely paid in 25 years, if we are not compelled to pay as much in interest as we pay on the principal of the debt.

RESOLUTIONS SHOULD BE SENT TO CONGRESS

During this critical period, when we are trying to save every dollar that we can for national defense, and to provide for our huge social program, every debating society and open forum should fully and thoroughly discuss this proposal that will save the taxpayers $2,000,000,000 a year. Resolutions should be adopted by different groups and sent to Congress.

DEFINITE PROPOSAL

My proposal is for the Government to acquire the entire ownership and control of the Federal Reserve banking system by paying the member private commercial banks the $138,000,000 they have invested; for a new board to be set up to control the system, obligated to stabilize the value of money and not permit a man-made depression every few years, which causes the rich to become richer and the poor to become poorer; and eliminate private banking control or influence over the issuance of the Nation's credit.

Then when the Government needs money, the Treasury can obtain it without an interest burden in either of two ways:

First. The Treasury can deliver to the 12 Federal Reserve banks non-interest-bearing obligations and have the banks, which will be Government owned, to give the Treasury credit for the amount of the bonds. Checks can then be drawn upon the account and any debt owed by the Government can be paid as at present. No more money will be printed than under our present system.

Second. Or the Treasury can deliver to the Federal Reserve banks interest-bearing bonds and receive credit for them and pay the money out in payment of Government debts; interest will be paid on these bonds to the Federal Reserve banks, but the banks being owned by the Government, the profits from the interest on the bonds will flow right back into the Treasury. The only difference in this plan and the present system is that the Government will not be required to pay interest and no more money will be printed than under our present system. Provisions could be made for the interest-bearing bonds held by the Federal Reserve banks to be sold to the public in the event of danger of inflation.

IDIOTIC SYSTEM SHOULD BE CHANGED

In conclusion, I repeat that Congress should immediately take steps to change this idiotic system, which requires the people to pay $2 for every $1 that is borrowed by the Government. The change suggested will save our taxpayers $2,000,000,000 a year and will enable the Federal Government to entirely pay off and liquidate our enormous public debt in 25 years.

Last, but not least, our proposal embodied in H. R. 116, will prevent dangerous inflation and will repeal the laws, which have farmed out the use and abuse of the Government's credit to private commercial banks and institutions owned by them.

Conservation at the Head Gate

EXTENSION OF REMARKS

OF

HON. JOHN J. McINTYRE

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

ADDRESS BY R. R. GARDNER, OF GLENROCK, WYO.

Mr. McINTYRE. Mr. Speaker, last Friday morning Mr. R. R. Gardner, of

Glenrock, Wyo., a delegate to the national convention of the Izaak Walton League of America, delivered a very able address in which he discussed the problem of conserving fish in streams by screening irrigation ditches. Under leave to extend my remarks in the RECORD, I include his address.

The subject Conservation at the Headgate is unusually difficult and extremely important and deals with the loss of fish through irrigation ditches, reclamation projects, and all man-made outlets from streams and reservoirs.

We, the fishermen, conservationists, and lovers of wildlife, are clamoring for action to stop this fish loss, while the water user is maintaining a determined resistance against the enforcement of the fish-screen laws of the various States, especially in States wherein the user is required to stand part or all the cost of screening.

Taking the Wyoming case as an example, we find that prior to this year Wyoming had a law which provided that the user of water was obligated to construct and maintain fish screens at his own expense. This law was entirely disregarded and never enforced for the reason that it was not workable. However, it presented the problem of public rights in water, and through the efforts of the Izaak Walton League of Wyoming a new law was passed at the last session of our legislature which at least partially remedied the difficulty, and for the purposes of the record I will read it:

"*Be it enacted by the Legislature of the State of Wyoming:*

"SECTION 1. That section 122-1204, Revised Statutes of Wyoming, 1931, be amended and reenacted to read as follows:

" 'SEC. 122-1204. The Game and Fish Department of the State of Wyoming may construct and maintain, at or near the point of diversion where the water of any stream or reservoir is diverted by any means of conveyance from its natural channel, some fit and proper device whereby all fish will be prevented from entering said means of conveyance; provided, such device does not obstruct or diminish the flow of water through said means of conveyance; and provided further, that the determination as to obstruction shall be within the discretion of the water commissioner of the district within which such structure is placed subject to appeal to the division superintendent, and from the decision of the division superintendent to the State engineer.' "

I read this only to show the change made in the law and that it may be studied in conjunction with other State laws and with the thought that a more uniform code may be adopted by all the States wherein the same problem exists.

Only through a national organization, such as the Izaak Walton League of America, can the matter be properly studied, and ultimately carried to a successful conclusion.

I would like to suggest a workable plan and make a hero of myself, but I may not be as successful as Paul Revere, who was one of our greatest heroes. He told his wife he was out all night with a horse and she believed it.

I have corresponded with fish and game organizations, with game commissions of the various States, and with the Bureau of Fisheries of the Federal Government; and have compiled a world of data in connection with the subject matter, and after reading all of this information and analyzing it, I still find the subject quite confused and find it difficult to make a definite suggestion.

The subject might be divided, however, into the following subheads:

1. Number of fish lost through irrigation ditches and canals.
2. Conditions of outlets and headgates through which fish migrate.
3. Attitude of water user toward screening headgates.
4. Responsibility of water user to screen headgates.
5. Obligation or duty of our fish and game commissions and Federal agencies to assist in screening headgates, and
6. Proper screens to use in preventing loss.

In studying the various phases of this subject I have reached certain conclusions in connection with each separate phase, and will endeavor to give you the result of these conclusions.

First, I find, upon consulting various water users, that there is a diversity of opinion as to the number of fish that are actually lost annually through headgates and through diversion of water into irrigation ditches and canals. Some are of the opinion that many fish find their way back into the streams when the water runs low, while others are of the opinion that fish will gradually work downstream in a canal, as well as in a flowing stream, in order to find deeper water. No doubt this phase of the question has been studied by game and fish departments and definite information may be obtained on it. However, I have made a personal investigation, and judging from conversations with water users and data obtained in my study of this subject, I am fully convinced that thousands of fish, in fact, millions of fish, are lost annually through irrigation canals and water diversion, and it is incumbent upon our game and fish commissions to make a thorough study of this loss and a study of the ditches and canals through which the greatest number of fish are lost, in order that intelligent action may be taken to curb it.

Certain States have made definite surveys of losses, and I could quote figures to show that the loss is tremendous. For instance, the Federal Bureau of Fisheries made a survey to determine the loss of fish in irrigation ditches supplied by the Yakima River in Washington, and the investigator reported finding 4,000 fish, of which 90 percent were migrating salmon, in a 200-acre tract. For the 250,000 acres then under irrigation this would indicate a loss of approximately 5,000,000 fish at one watering, 4,500,000 being salmon in the first and second years, and for an entire season this figure would have to be multiplied many times. Our own game and fish commission in Wyoming has stated that it has no way of estimating the number of fish that survive after planting, but believe that loss through irrigation laterals is the greatest single waste we sustain. I have personally investigated irrigation ditches and have found many fish stranded. In one instance a rancher found 12 fish in his garden one morning, 4 of which were large trout, approximately 1 foot long. He also informed me that he had seen many large as well as small fish in his ditches and laterals.

Investigations made by various game and fish commissions of the Western States and by the Bureau of Fisheries disclosed that there is a greater loss of small fish through irrigation ditches than of large fish, due to the fact that the young fish is inclined to drift with the current and has no natural instinct to avoid drifting with the current into irrigation headgates and openings. It follows that it is very difficult to check the exact loss of these small fish in laterals and meadows. The fact remains, however, that millions of fish are lost annually through our irrigation ditches, and it presents one of the most difficult problems for our consideration.

It seems useless to spend thousands of dollars each year to hatch, rear, and plant fish only to have them lost in irrigation ditches. It would seem a good business policy to use some of the money expended by our game and fish commissions in the propagation and planting of fish, to properly screen headgates, and thus save a larger portion of the fish planted.

It is estimated by one fish hatchery that it costs 30 to 40 cents per pound to raise and plant fish. Certainly something should be done immediately to prevent the loss of these fish so expensively raised and planted, as well as those naturally propagated. Fish lost through headgates make an excellent but costly fertilizer.

The condition of outlets, that is their various construction, is a matter of common knowledge, and it would be useless to dwell at length on this phase of the subject. I might say however that many of our western ranchers throw a temporary dam across a mountain stream, thus diverting the entire flow and incidentally many of these dams are manure dams which also pollute the water.

With the entire flow of the stream diverted it is easy to understand that many, many fish would be lost through such diversion.

As to our fish-screen laws, it is my conclusion that it is difficult to enforce the present screen laws of the various States. Because of the cost of installation and maintenance of proper screens, I am sure that irrigationists cannot be forced to install screens or to maintain them. It seems to be the general attitude of irrigationists that they are entitled to use the water which actually belongs to the State, but they do not wish to go to any expense in keeping the fish out of the ditches.

The State of Oregon has attempted to enforce a screen law, and I have a statement from the Oregon State Game and Fish Commission to the effect that in one or two instances ditch owners have actually been sued for not complying with the law. The cases were lost. Therefore, I must conclude that our problem is not so much one of law but in securing the cooperation of the irrigationist in working out a plan whereby streams may be properly screened and the expense thereof shared by the State game and fish commissions, or by direct State or Federal appropriations. I might say in this connection, however, that in the State of California action was brought to enforce a screen law and was successfully carried through the State supreme court. This probably is the only instance where a screen law was completely tested and held valid and enforcible.

As a result of this action, however, California amended its law in 1933, by which amendment one-half of the cost of fish-screen installation, operation, and maintenance was assessed to the commission. But this law also failed to meet the needs, and a bill is now pending before the legislature in California, or has been passed, whereby the commission will be permitted to construct, at its own cost, fish screens on ditches where the water is used primarily, and, in the larger portion thereof, for agricultural purposes. All other water users will install screens upon order of the commission at their own expense, and all screens, regardless of how originally installed, will be operated and maintained by the ditch owner. This bill has the endorsement of the American Legion of that State, the conversation or sportsmen's organizations, and the commission itself.

In order that uniform codes may be adopted, a Nation-wide, comprehensive plan must be evolved by which the State game and fish commissions and the various sportsman's organizations of the States will work in harmony and in conjunction with stock growers and farmers associations and with individual irrigationists. A long-range plan should be adopted with the ultimate aim of procuring the passage of laws that are practical, feasible, and acceptable to all parties in

interest, and under which we may eventually screen adequately all the principal irrigation ditches and canals of the States wherein this problem is present.

I have procured about all the data available pertaining to the type of screens used by various States and those which apparently have been most successful, and, I find that a rotary or drum-type screen is probably the best type available. There seems, however, to be some drawback in connection with most of these. The principal of which are:

1. Excessive cost of installation.
2 Troublesome maintenance.
3. Inefficiency of operation.

I have found that the cost of installing one of the better rotary screens is almost prohibitive from the standpoint of the water user, and it appears to me that the only way these screens may be installed is through the cooperation of the water user, the game and fish commission, and Federal agencies. Our game and fish commission in Wyoming has made a study of the types of screens available, cost of installation, etc., and is at the present time looking toward the installation of certain rotary type screens.

After studying this problem from every angle, I feel justified in making the following recommendations:

1. That through proper publicity, the Game and Fish Commissions and the various sportsmen's organizations of the States affected, attempt to build up sentiment among irrigationists in favor of conservation by proper construction and screening of headgates.

2 That special committees be appointed by Game and Fish Commissions to work in conjunction with committees from sportsmen's organizations to ascertain and report on the most economical, feasible, and practical fish screens for use in headgates and other sources of diversion, and to make recommendations as to proper methods of installation and maintenance.

3. That Game and Fish Commissions make surveys of all irrigation ditches and canals of the States affected that take water from the principal fishing streams, and outline a systematic plan for the screening of these ditches.

4. That Game and Fish Commissions make a special study of the streams and of the irrigation outlets and screen those outlets first through which we sustain our greatest fish loss.

5. That each stream selected to be screened be completed in its entirety before work is started on another stream.

6. That the Izaak Walton League cooperate with the Bureau of Fisheries and attempt to procure assistance through Federal appropriations and W. P. A. projects in the installation of screens.

7. That a committee from the Izaak Walton League work in conjunction with committees from the Game and Fish Commissions of the various States to propose a revision of the present State laws relative to screening ditches to provide that all or a portion of the cost and expense of installation and maintenance of screens shall be borne by the game and fish commissions and that power and reclamation projects be compelled to install and maintain their own screens.

In conclusion I would like to leave this thought: That the objects and purposes of the Izaak Walton League of America are not dissimilar to the objects and purposes of game and fish commissions of the various States and that by working in close harmony and conjunction with State commissions we can accomplish much good.

Surely, if we are to maintain good fishing in the Western States, we must work earnestly and diligently to eliminate the fish losses and provide additional means of conservation.

Subversive Activities of Certain Labor Leaders

EXTENSION OF REMARKS
OF
HON. LELAND M. FORD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

LETTER FROM JOSEPH CURRAN, PRESIDENT, NATIONAL MARITIME UNION, AND REPLY THERETO BY HON. LELAND M. FORD, OF CALIFORNIA

Mr. LELAND M. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

NATIONAL MARITIME UNION
of AMERICA,
New York, N. Y., March 26, 1941.

HONORABLE SIR: The National Maritime Union has been the target of continued slanderous attacks by Congressman Dies, his committee and other anti-labor Congressmen. On Tuesday, March 25, he launched a tirade against the National Maritime Union on the floor of the House of Representatives, calling the union "Communist-controlled" and stating that he had inside information that the union was contemplating a general strike in the event Harry Bridges was deported.

The following is the reply of the National Maritime Union to these attacks.

The fantastic and slanderous charges which Congressman Dies has again repeated on the floor of the House on Tuesday that the National Maritime Union is "Communist-controlled" on the basis of evidence obtained in biased, one-sided hearings, from witnesses who, for the most part, consist of petty thieves, gangsters, expelled members of the union with axes to grind, all willing to lie for personal gain, proves more clearly than ever our contention that this committee is biased and working solely to destroy legitimate labor unions, instead of ferreting out real un-American activities. Congressman Dies is playing on public hysteria which is at a high pitch at this time, to carry out his nefarious work.

His charge that the National Maritime Union is contemplating a general strike in the event that Harry Bridges is deported is so ridiculous that it needs no reply. The constitution of the National Maritime Union calls for secret referendum vote of all members before a strike can be called. The National Maritime Union reiterates, however, its full support of the National CIO program in defense of Harry Bridges.

Very truly yours,
JOSEPH CURRAN,
President.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., March 27, 1941

MR. JOSEPH CURRAN,
President, National Maritime Union of America,
126 Eleventh Avenue,
New York City, N. Y.

MY DEAR MR. CURRAN: This will acknowledge receipt of your letter of March 26 wherein you take exception to certain things that Congressman DIES has said about you and your union and their support of Harry Bridges, particularly where he calls your union "Communist controlled."

It is my opinion that if ever an outfit deserved the criticism that you, Harry Bridges, and other leaders in your union receive, you certainly have earned and deserved it. It is my further opinion that this country is no longer going to judge you and your cohorts by your honeyed, misleading words, but are going to hold you responsible for what you do and your real actions.

Of course, you would not like DIES and his committee any more than a lot of other people whose activities DIES and his committee have thrown the searchlight of publicity upon. This subversive work is best carried on in the recesses of darkness and ignorance and by keeping the ordinary man within your ranks misinformed and misled.

I have always stated that a man can attain a certain high standing by reason of the quality of his enemies. I can therefore say that to me, and to the great majority of the people in the United States, Congressman MARTIN DIES and the members of his committee have attained a tremendously high standing by reason of such enemies as you.

It is my opinion that there is a certain group of leaders in this country who have made a racket out of unionism. These same leaders have, at no time, considered the welfare and well-being of the man in their ranks who is actually doing the work. All that these leaders sought to do was to create strife, dissension, and riots in order that they could have something by which to justify the collection of their tremendous racketeering fees. In addition to these American-born racketeers, it is my opinion that the ranks of the C. I. O. leaders have become filled with subversive foreign-born leaders who would destroy the American form of government and all American labor with it.

I note that you apparently resent the statement that this committee has called your union "Communist controlled"; but as against this, I also note that your union has never expelled the Communist element and has consistently refused to do so.

It is not the legitimate, constructive labor movement that Dies and the great majority of the people in this country object to, but it is the destructive, Europeanized, socialized, Sovietized, Communized, un-American racketeering union leader, who is promoting un-American ideas, that Dies and many of the rest of us object to.

With reference to your statement about the quality of witnesses. Very frankly, I have never known you to throw out of your union, to use your own words, "the petty thieves, gangsters," etc., "with axes to grind" for their own personal gain. It is my opinion that most of these remained within your union and that this is the type of leadership that is hurting the constructive unions, as well as the destructive unions like your own. Of course, occasionally, when those termed by yourself as "petty thieves and gangsters" fight over the spoils that have been taken away from legitimate workmen, somebody will be thrown out when greed manifests itself.

As usual, you do not answer "yes" or "no" about the strike with reference to Harry Bridges. You sidestep the issue and leave it open so that you may strike if you want to, but you have not been straightforward.

I note that your group speaks of persecution, individual rights, individual liberty, freedom of speech, and freedom of action when you want to use these things yourselves, but, by God, how you do scream when anybody else insists upon having his freedom of speech, action, individual liberty, or constitutional rights. When your union uses force to

coerce men to join your union in such instances as this, where stink bombs have been thrown into the homes of men, men's arms have been broken, men's jaws have been broken, property such as automobiles wrecked, industrial plant property wrecked and destroyed, slow-down strikes engaged in, goon squads acting as pickets to beat up men who want to go to work, has it ever occurred to you that any of these men whom you have beaten up, the owners of the property that you have destroyed, the owners of industries, the public at large, have any rights under the Constitution of the United States? Your outfit has violated every one of the principles of decency, has disturbed the peace, become trespassers and destroyers of property, resisted the officers of the land, tried to take the law into your own hands, and now you come running and screaming for these rights that you would deny others.

Your own chickens are coming home to roost and you now have destroyed public confidence in yourself and your unions, and eventually the public will give you what you so richly deserve.

These remarks go only to the racketeering, un-American, subversive leadership, and do not apply to the poor devil who is really doing the work down in the ranks, who has been beaten up into submission and coerced into joining your outfit, and who has been willing to do these things in the days of unemployment in order to give his wife and family something to eat after he has gotten through paying you through the nose both in cash and with his self-respect.

I again honor MARTIN DIES and the Dies committee for the enmity which you bear toward them.

Very truly yours,

L. M. FORD.

Jackson Day Address

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, April 1 (legislative day of Monday, March 31), 1941

ADDRESS BY THE PRESIDENT

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the Jackson Day address delivered by the President of the United States from Fort Lauderdale, Fla., on last Saturday evening, March 29, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am sitting in the little cabin of the little ship *Potomac*, in the harbor of Fort Lauderdale, Fla., after a day of sunshine out in the Gulf Stream. That I cannot in person attend one of the many Jackson Day dinners I regret, but it is good that you are again celebrating the memory of a great American leader who believed, fanatically almost, in the principles of a democracy based on the freedom of the ballot box.

I try to get away a couple of times a year on these short trips on salt water. In Washington, as you know, the working day of the Presidency in these days averages about 15 hours. Even when I go to Hyde Park or to Warm Springs, the White House office, the callers and the telephone all follow me. But at sea the radio messages and the occasional pouch of mail reduce official work to not more than 2 or 3 hours a day.

So there is a chance for a bit of sunshine or a wetted line, or a biography or a detective story, or a nap after lunch. Above all, there is the opportunity for thinking things through—for differentiating between principles and methods, between the really big things of life and those other things of the moment which may seem all-important today and are forgotten by the world in a month. That means that if today the fellow next to you catches a bigger fish than you do, or vice versa, you don't lie awake at night thinking about it.

SAYS TIME CALLS FOR COURAGE

Yes; you recapture your philosophy, but in so doing you do not sit down mentally and become a fatalist. You still seek peace of mind and of spirit—but you come to realize that today you have to work overtime, and work harder than ever before in your life to make that peace possible later on. If we sit down now we may get run over later. And if our kind of civilization gets run over, the kind of peace we seek will become an unattainable hope.

That is why, in the comparative quiet of this week, I have become more than ever clear that the time calls for courage and more courage—action and more action.

That is why it is appropriate today to honor the name of Andrew Jackson—because he was first and foremost a great American, who placed his devotion to country above adherence to party, and provided an ever-living symbol of the rugged, courageous spirit of our people.

Responsibility lay heavily upon the shoulders of Andrew Jackson.

In his day the threat to the Federal Union came from within. It was a sectional threat. More than that, it was a threat which came from Jackson's own people—indeed, from some members of his own party. It was inspired by refusal to recognize the sovereign authority of the United States. And by his actions Jackson placed himself far above section and party.

CITES THREAT TO NATION

In our own day the threat to our Union and to our democracy is not a sectional one. It comes from a great part of the world which surrounds us, and which draws more tightly around us, day by day.

Again, to do this job, we Americans—nearly all of us—have risen above any considerations of party politics.

Long before Jackson became President the two-party system of government had become firmly entrenched as a basic principle of American political life. It had shown its value as a method of obtaining free and open discussion of public issues, formulating new policies to meet new conditions, and fixing responsibilities in affairs of government as an indispensable part of our conception of free elections.

The dictators cannot seem to realize that here in America our people can maintain two parties and at the same time maintain an inviolate and indivisible nation. The totalitarian mentality is too narrow to comprehend the greatness of a people who can be divided in party allegiance at election time but remain united in devotion to their country and to the ideals of democracy at all times.

In dictatorships there can be no party divisions. For all men must think as they are told, speak as they are told, write as they are told, live—and die—as they are told. In those countries the nation is not above the party as with us. The party is above the nation, the party is the nation.

Every common man and woman is forced to walk the straight and narrow path of the party line, as drawn by the dictator himself.

POINTS TO FREE ELECTIONS

In our country, disagreements among us are expressed in the polling place. In the dictatorships, disagreements are suppressed in the concentration camp.

Last year we held an American election, in which the people—Democrats, Republicans, Independents, and others—by secret ballot, and without prodding by the bayonets of storm troopers, voted for their public officers—local, State, and national.

And we are determined so to act that America will go on year after year, holding free elections.

All of the great freedoms which form the basis of our American democracy are part and parcel of that concept of free election, with free expression of political choice between candidates of political parties. For such elections guarantee that there can be no possibility of stifling freedom of speech, freedom of press and the air, freedom of worship.

These are the eternal principles which are now being threatened by the alliance of dictator nations.

Ours is the responsibility of defending those principles which have come to us as our national heritage, ours is the responsibility of passing them on—not only intact, but stronger than ever, to all the generations yet to come.

RECALLS CONQUERED NATIONS

We Americans realize how tenuous would be the existence of our party system, our freedom of election, our freedom of living, if the doctrines of dictatorship were to prevail. For if they were to prevail it would not be in Europe alone.

The history of nations betrayed during the past year, the history of nations conquered during the past year, should show us and the rest of the world what it means to live in a world organized and ruled by the Gestapo.

Let us ask ourselves, frankly and seriously: How long could we maintain our ancient liberties under these terrible conditions? How soon would we have to accept the doctrine that one must fight fire with fire?

How long would it be possible to maintain a semblance of our two-party system, with free elections, in a Nazi-dominated world?

How soon would we decide to imitate nazism and abandon our two-party system and regiment our people into one party—which would certainly be neither Democratic nor Republican?

NONPARTISAN DECISION NOTED

Should that evil time come, we would no longer hold these friendly gatherings, either on Jackson Day or on Lincoln Day.

We Americans have already weighed these questions carefully and thoughtfully. We Americans have announced our determination that, with all our resources and all our power, we shall help those who block the dictators in their march toward domination of the world.

The decision we have reached is not a partisan decision. The leader of the Republican Party himself, Mr. Wendell Willkie, in word and in action, is showing what patriotic Americans mean by rising above partisanship and rallying to the common cause; and now that the plain people of America have spoken their determination, Republicans and Democrats, in the Congress and out of the Congress, are patriotically cooperating to make that determination take positive form.

The enemies of democracy are now trying, by every means, to destroy our unity. The chief weapon they now use against us is propaganda.

GOSPEL OF FEAR ASSAILED

The propaganda comes in ever-increasing quantities, with ever-increasing violence,

from across the seas. And it is disseminated within our own borders by agents or innocent dupes of foreign powers.

It is directed against all Americans—Republicans and Democrats, farmers and bankers, employers and employees.

Propagandists, defeatists, and dupes, protected as they are by our fundamental civil liberties, have been preaching and are still preaching the ungodly gospel of fear. They use insinuation and falsehood. They have tried to shatter the confidence of Americans in their Government and in one another.

We have seen what has happened to the great industrialists of Germany who supported the Nazi movement, and then received their reward in Nazi concentration camps or in death.

We have seen how the workers of France were betrayed by their so-called champions, the Communists. For no matter what Communist lips have to say, their actions have proved that in their hearts they care nothing for the real rights of free labor.

SCORES AGENTS OF NAZI-ISM

The agents of nazi-ism and those who unwittingly help them are still trying to play both ends against the middle. They have attempted to exploit the natural love of our people for peace. They have represented themselves as pacifists when actually they are serving the most brutal warmongers of all time. They have preached "peace—peace!" in the same way the devil can quote scripture.

Of course, the purpose of all this has been to spread terror among us. The effect of it has been only to fortify our determination.

When Abraham Lincoln became President he had to face the awful reality of War between the States. On July 4, 1861, in his first message to the Congress, he presented this vital question:

"Must a government, of necessity, be too strong for the liberties of its own people or too weak to maintain its own existence?"

Lincoln answered that question as Jackson had answered it—not by words, but by deeds. And America still marches on.

We of today have been presented with that same question. We, too, are answering it by deeds. Our well-considered philosophy for the attainment of peace comes not from weakness but everlastingly from the courage of America.

Is This Our War?

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 1 (legislative day of Monday, March 31), 1941

ADDRESS BY DAVID A. REED

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the RECORD a speech by former United States Senator David A. Reed, delivered before the Hungry Club, Pittsburgh, Pa., on March 23. The subject of the speech is, Is This Our War?

There being no objection, the address was ordered to be printed in the RECORD, as follows:

To commence with, my complete sympathy at the present time is with Britain, Greece, and China, as well as Finland, Holland, Belgium, and the other small democracies that have been overwhelmed. I hope to see the Axis Powers decisively beaten.

When we are told that "Britain is fighting our war," let us stop to test that statement by common sense and not by hysteria and emotion. Take first the causes that led up to the revival of German military might and the critical incidents that plunged Europe into the present war. How far was the United States consulted in what took place in the last decade and how far are we to blame for the resurgence of Germany and the outbreak of war?

Germany began to prepare for war at a considerable time before Hitler came into power. I remember that in 1932, in conversation with Prime Minister Herriot of France, I found him excited about the secret preparations that were being made by the German Army and Navy. He told of German orders for submarine periscopes then being manufactured in Holland, of secret stores of arms in East Prussia and of many other details of preparation which had been unearthed by the French military intelligence service. In 1935 the British amazed the world by the announcement of a naval treaty with Germany which allowed the Germans, in violation of the Versailles Treaty, to begin to build up their submarine fleet and allowed a surface strength of 35 percent of the British strength. It has never been pretended that we were consulted about such a treaty. In 1936 the Rhineland was reoccupied by Germany in defiance of the Versailles Treaty. If this had been stopped by France or Great Britain, the 1940 blitzkrieg would have been impossible. Nothing was done because of domestic uncertainties in France and Great Britain. Again the United States was not consulted. When Austria was occupied, the Allies took no action whatever, although the occupation was in violation of Germany's treaty obligations. Again America was not consulted. When the Sudetenland was snatched from Czechoslovakia and surrendered to Germany at Munich, the sole responsibility rested on Chamberlain and Daladier. When the rest of Czechoslovakia was overrun 6 months later, again America had nothing to do with the proceedings. When the integrity of Poland was guaranteed, the United States was not consulted, and when the invasion of Poland began and war was declared, the United States was no party to the treaty, nor was it to blame for the decision to declare war.

Up to that time, certainly no one in the United States considered that the present war was our own, or that in declaring war in defense of Poland, France and England were fighting our war for us. And then came the apparent stalemate during the winter of 1939–40. It was humorously called the sitzkreig, and the late Senator Borah dubbed it a "phony war." Certainly no one in America at that time considered that the war was ours.

In the spring of last year inaction gave way to startling rapidity of movement. The German treaty of nonaggression with Holland disappeared like a puff of smoke and in quick succession Holland, Belgium, and France were invaded and conquered. All the world came to recognize the seriousness of the war.

Overnight in America boredom was replaced by hysteria. Whereas a year ago George Washington's advice against any European alliance seemed still to be sound, now in our emotional excitement we hear a considerable number of Americans calling for union now with Great Britain. They are so excited that they are ready to repeal the Declaration of Independence and the Revolutionary War forthwith. We hear it said in many quarters that Great Britain is fighting our war.

What fertile ground for progaganda is made by this hysteria. Our British friends naturally are taking good advantage of this opportunity. Mr. Churchill is probably the busiest man in the world today, yet he took time off to escort Mr. Hopkins and Mr. Willkie on their sightseeing excursions. Every patriotic Britisher is following his example. I do not blame them in the least. They see a chance to draw us in as an ally and they are only doing their patriotic duty toward that end.

But we owe a similar patriotic duty to our country. It is our duty to examine the situation with clear eyes and clear heads to see whether it is to the interest of our country that we become a belligerent. We must not forget that no act of war has been committed against us by the German-Italian axis. They have not sunk any of our ships. They have not invaded our territory. They have not mistreated our citizens. In short, they have committed no hostile act against us. In Asia it is true that our gunboat *Panay* was sunk, but the Japanese Government made instant apology and paid without a quibble the bill which we rendered for damages to the ship and its crew, making it very evident that the attack was not a matter that had official sanction. Aside from this, the Japanese have been scrupulously careful to give us no cause for a declaration of war.

If no hostile acts against us have occurred, there still remains the question whether we are not in danger of attack on either coast or both coasts if Britain should be defeated. To this question the answer conclusively is, "No." Unless we give away our Navy and utterly neglect our land defenses, no invasion by the Axis nations is possible, whether Britain wins or Britain loses. Every seasoned military man will tell you that. No responsible official of our Army or our Navy would admit for a moment that such an invasion is possible either at the present time or within the reasonably near future.

To me, that answers the question whether this is our war. We have not been attacked and need fear no attack. If we enter the war, it will be a war of aggression on our part, commenced because of our disapproval of the barbarous behavior of the Axis nations. Does America want to start a war of aggression and thus undertake to police the world into behaving according to our pattern of civilized behavior? I do not think that we are big enough to police the world. If that be our duty, we should have declared war when Japan invaded China, when Russia invaded Finland, when Italy invaded Ethiopia, when Germany gobbled up Czechoslovakia.

Jackson Day Dinner Address

EXTENSION OF REMARKS

OF

HON. JAMES H. HUGHES

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Tuesday, April 1 (legislative day of Monday, March 31), 1941

ADDRESS BY HON. MATTHEW F. McGUIRE

Mr. HUGHES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a Jackson Day address delivered by Hon. Matthew F. McGuire, Assistant to the Attorney General, at Wilmington, Del., on Saturday, March 29, 1941, on the subject Americans All.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Directly across from the White House, in Washington, on historic Pennsylvania Avenue in a small gardened area known as Lafayette Park, which adds much to the beauty of the capital city, there stands an equestrian statue of Andrew Jackson, on the pedestal of which there is the legend: "Our Federal Union; it must be preserved." Thus, in deathless stone and in deathless phrase for future generations of Americans to read and ponder is the Americanism of Andrew Jackson. To him, as to Jefferson, we Democrats owe the philosophy and the principles of our political faith.

It is said of Jackson that he was the first American in public life to implement the doctrine of party organization and party responsibility in the government of the country. We are proud, here tonight as Democrats and as members of the political party of Jackson, that for the last 8 years the responsibility of government in this country has been confided to that party; that when economic disaster seemed to shake for a moment the faith of the masses of our people in our democratic form of government, when the whole democratic process seemed to have been tried and found wanting, that it was our party that produced the leadership and the leader that lead us out of the abyss of despond back upon the broad highway of hope and faith in our American political philosophy.

I know that you and millions of other Americans this night thank God that the American people have found another Jackson in Franklin D. Roosevelt, and I venture to say that future generations of Americans and free peoples everywhere, long after you and I, and our time and our generation, have disappeared into the shadows of the past, will rise up and bless the name of the present President of the United States

We meet here tonight, not for the purpose of partisan triumph—the hour is too grave for that—but as Democrats and Americans to pledge anew our faith and our loyalty to the principles of Jackson, because they are the principles upon which the wonder that is America has been builded. We meet to pledge anew our faith and confidence in the leadership of the man who is the President today, not of the Democratic Party, but of all Americans, irrespective of party, who is not only the President of the United States but the hope and the voice of free peoples everywhere. As partisans, of course, we rejoice that this great leader has sprung out of our party in an hour of great need and that now in the hour of a still greater need our people have again chosen him to lead them.

No man can say what Andrew Jackson would do today if he were face to face with the crisis that confronts us. We do know, however, that he would never cringe for a moment before the iron fist of force, the veiled threat, or the outspoken challenge. He knew that the way to confound the enemies of freedom was to oppose them with every weapon in its arsenal. While this country, under Franklin D. Roosevelt, has fought and won the fight for a full recognition of the fundamental rights of the individual—for the recognition of the fact that the individual man is a man with a man's dignity and a man's destiny before him, for the right to work and the right to security, the right to think and to speak and to worship according to the dictates of the individual conscience—it now finds that those very rights are challenged and the constitutional government that guarantees and preserves them threatened by the loosening of forces abroad in the world, far more devastating and far more sinister in their objectives since any time in human history, since the barbarians of the north swept down upon the Lombard plains and, with their short fiat swords, conquered the Rome of the Caesars. Yet, when this possibility was first pointed out by the President, he was regarded as a warmonger by some, and was accused of indulging in rhetoric for the purpose of distracting the attention of the people of this country from a frank and realistic examination of their own domestic problems.

But, looking back 5 years to the occasion of that utterance on that June day in 1936 when he accepted his second nomination, we know today it was something more than mere rhetoric. To most of us the possibility of the present world catastrophe was nowhere on the horizon, yet the President, with almost prophetic vision, saw it coming and tried to awaken the people of this country to a sense and a realization of the disaster that was even then approaching with hurricane force. Later, when the conflict seemed inevitable, he did not cease his efforts, but made personal appeals in order to head it off.

Even after its outbreak, and it was called a phony war and one that carried no menace for us, he alone warned us of our danger. It was only after the shambles of Dunkirk, the fall of Belgium, Denmark, and Norway in quick succession, the utter collapse of France and the horror of the opening phases of the Battle of Britain that we were aroused from our lethargy and at last stood face to face, once and for all, with the terrible and awful facts that confronted us. Our people, at last awake, acted quickly, and, shattering precedent, chose for their third time leader the man who saw it all coming. He had led them to triumph over internal dangers—he was the man to lead them against those from without.

The election over, prominent men in the party of the opposition threw partisanship overboard, while the Nation closed ranks and now presents a united front to those who would either challenge its institutions or threaten their destruction. This is the American way.

No thinking person doubts now but that President Roosevelt stated the strong conviction of the American people when he gave voice in protest against the accumulating tyrannies of this new power which but for the valiant opposition of the free peoples of Britain and Greece has all but subjugated the Old World and theatens the New.

The startling change in the political complexion of the European Continent, occurring almost in the twinkling of an eye, has made us realize as never before the menace that confronts us.

A peaceful people, dedicated to the arts of peace rather than those of war, we suddenly find ourslves compelled to take unprecedented measures for national defense, to create and maintain a large standing army drawn from the ranks of our citizenry, and to train that army with all the power and ability that we possess, not only in the rudiments but in the very last lessons of war; to double the size of our fleet, and to turn another great army of men not to the pursuits of peace, but to the task of preparing mighty modern engines of destruction and all the horrible instrumentalities of war in order that we might succor those who hold the battle lines of freedom and protect ourselves.

This sudden transformation of a peaceful people into one who sees the menace that would destroy them at its very doors did not take place overnight. The issues were debated in the democratic and American way, and the American people finally came to the realization that the time for debate had ceased and that the time for action had come. Then it was that the democratic process was vindicated and the world saw, and is now seeing, what a democracy can do if it is put to the test.

America has not taken these steps without estimating the cost. It means sacrifice; it means longer hours of work; it means heavier taxes; it means also that we Americans have come to realize that our Americanism is verily "the pearl beyond price," and that Democrats though we may be tonight, and Republicans though we may have been yesterday, as Americans we face the morrow.

True, we can rejoice, as I have said and rightly so, that in the dark days of 1932 it was our party that produced the leader who has led the country back to the strength and to the courage that is its today, and thank God that in this tremendous hour we can still turn to the same leader, placing in him our country's hopes, its aspirations and its confidence. He did not fail us then, he will not fail us now. No man knows the folly and the futility of war more than Franklin D. Roosevelt No man hates war more than Franklin D. Roosevelt.

This program of defense is not projected merely because it is the politic thing to do. It is forced upon us by forces which menace our very being.

It may seem strange, perhaps, on such an occasion to devote an address almost entirely to a discussion of external affairs. I say to you that these affairs which are external today may be of prime concern tomorrow. These affairs have impinged so much upon our very existence that our domestic concerns seem trivial when compared to them. We live in peace and happiness, while within plane range men and women are dying to maintain the things we take for granted. We cannot view such matters with equanimity any more than we can sit down in the bosom of our family and in the shelter of our homes while a conflagration rages at our very doors which is destroying the homes of others and may well envelop and destroy our own.

A little over a hundred years ago the Battle of New Orleans was fought by Andrew Jackson over 2 weeks after the treaty of peace had been signed in Belgium. We could afford to close our eyes in those days to events of the Old World which seemed so very, very far away. But today—what a different story. News of an event is flashed the world around almost immediately as it happens, and by the flick of a dial you know instantly what has occurred half a world away. There is no such thing as isolationism any more—any more than the people who lived in the town of Gettysburg on those fateful July days of 1863 could be oblivious of the fact that a mighty battle upon which the fate of a nation depended was being waged almost in their own back yards.

I leave with you no note of pessimism. I minimize not the gravity of the moment, but I say to you that as we have met and mastered in the past 8 years, under the leadership of a great President and with the support of a great people, internal problems that had not only dislocated our economy and challenged the workability of the democratic process and of our very system of democratic government, with that same leadership and the same support of a strong and united people, we shall meet and master the graver threat we find challenging us now.

Jackson was a great Democrat; but better, Jackson was a great American. Lincoln was a great Republican; but better, Lincoln was a great American; and today we have another great Democrat who has demonstrated his ability to lead, and that great Democrat, Franklin D. Roosevelt, is a great American. As for you and me, not only for tonight but in all the days and nights that lie ahead, let us remember and let us be motivated by the one all soul-consuming fact—we are Americans.

Post-Emergency Problems

REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1941

Mr. DONDERO. Mr. Speaker, the congressional districts of those Members in which the national-defense program is in operation or will be in operation undoubtedly will enjoy a certain degree of prosperity which they have never known before, but with it will come problems which also they have never known before. Some of the problems will bear on the question of relief and taking care of people who have moved into the districts or who have gained a residence in a State from some other State, but are unable to move away or go back to the States from whence they came. It will be the problem of the Federal Government to aid in some manner and provide care for those people.

A very distinguished committee has come from Oakland County, Mich., and has prepared a statement. They are here now in conference with certain committees of this House in an attempt to solve in advance some of the problems which will be created by our national-defense program and which will call for the most careful and serious consideration on the part of every Member of the Congress of the United States.

Mr. Speaker, I ask unanimous consent to include that statement as a part of my remarks.

The SPEAKER. Is there objection?

There was no objection.

The statement referred to follows:

Oakland County, Mich., having more than 254,000 population, according to the last Federal census, is the second largest county in the State, being second only to Wayne County in which lies the city of Detroit.

Oakland County is bordered by Wayne County on the south, Macomb County on the east, and Genesee on the north. The great automotive industry, centered in three of these counties, has been or is being called on to perform its part in the defense program. As citizens and governmental officials of Oakland County, we are proud of the opportunity to have a part in the war effort, even if only in a civil capacity. However, we are keenly cognizant of the fact that new problems face us and every other industrial center as a result of the war effort, and it is concerning these problems that we request your attention at this time.

Expansion of our present industrial facilities and new defense plants such as the Chrysler tank plant are causing a shortage of housing and educational facilities and overtaxing public facilities such as sewage disposal, police and fire protection, and bringing an increase in demands for hospitalization.

We are informed that steps are already being taken by the Congress to combat this situation. We are, therefore, primarily concerned with the situation in which we will find ourselves when the war effort is over and the slow-down, the return to normalcy, begins.

Thousands of workers and their families are migrating from elsewhere to Michigan to work in defense or allied industries, and they are presently needed. If the war effort continues for 3 years, practically 100 percent of these workers will have lost their settlement in the States from which they came, will, under the Michigan law, have acquired settlement in Michigan, and become dependent on the relief agencies in the counties in which they live when the war effort ceases. Welfare relief in Michigan is shared by the State and county in variable proportion, depending on the ability of the county to pay. While Oakland County has its own industries, Pontiac plant and Yellow Truck and Coach companies, it is, in addition, a sort of bedroom for thousands employed in Detroit. You can readily see that a serious problem will confront this county when the war effort is over.

Without in any way desiring to shirk or evade our own governmental responsibilities we believe we are typical of many communities in the United States which will be faced with similar problems and believe something should be done now by way of preparation rather than succumb to the problem when it arrives.

We are cognizant of the fact that our legislature could amend our present law requiring 1 year of self-sustaining residence to acquire settlement, to 10 years, thereby spanning the prospective period of war effort and prevent the acquisition of legal settlement in Michigan but we do not believe this is a correct solution. Other States would retaliate with similar laws and our present arbitrary and widely diversant settlement laws would become more chaotic. Uniformity of such laws is to be sought, not discouraged.

We believe that Federal legislation, pointed at uniformity is desirable and could be justified constitutionally. We further believe that provisions should be made for either Federal settlement and reimbursement to local relief agencies for aid extended to persons with a Federal settlement or provide for Federal aid to States who have abnormal increases in settlement due to activities of the Federal Government such as are occurring in the present war effort.

We are not familiar with the tax limitations of other States which would be affected similarly by the war effort but Michigan taxing units are limited by its constitution to 15 mills on the assessed valuation for all governmental purposes, debt service existing previous to December 8, 1932, excluded.

We earnestly solicit your cooperation to the end that this problem may be successfully solved.

ROBERT Y. MOORE.
GEORGE H. BURT.
HARRY M. MERRITT.

Jackson Day Dinner Address

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, April 1 (legislative day of Monday, March 31), 1941

ADDRESS OF HON. HARRY S. TRUMAN, OF MISSOURI

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the junior Senator from Missouri [Mr. TRUMAN] at a Jackson Day banquet held on Saturday night, March 29, 1941, in the city of Louisville, Ky.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Toastmaster, Governor Johnson, and Mr. Mayor of Louisville, it is a very great honor for a grandson of Kentucky to be introduced by that great State's distinguished Governor. I appreciate that honor very much.

I am glad to be in the home district of EMMETT O'NEAL, your able Congressman. He is very highly thought of in the House of Representatives at Washington.

Kentucky has two very able Senators at the National Capital. Hon. A. B. CHANDLER is building a reputation for himself as a hard worker and an able Senator.

It is my very great privilege to be one of the followers of the most able majority leader in the Senate, Hon. ALBEN BARKLEY. Senator BARKLEY is an able leader; and I, for one, am glad to follow him. Every Member of the Senate loves and respects him. As long as he is in the Senate, Kentucky and the Nation will be ably represented.

We are here tonight to celebrate a victory of the Democratic Party. We cannot rightly do that without paying tribute to the man who formed and constructed the party visualized by Thomas Jefferson.

Andrew Jackson gave us Democratic government, cemented the Republic, and firmly established the principles on which the Democratic Party is founded. The actual control and management of the Government by the people became a reality under the old firebrand from Tennessee.

Until Jackson, Presidents had the advantages of birth, education, and social standing. Jackson carved his career out of the wilderness of the West. He brought home to the Atlantic seaboard that a very important part of the Nation also lay west of the Alleghenies. The migration into Tennessee, Kentucky, Ohio, and the Northwest Territories had opened up new lands and created new problems, even as the age-old ones were still perplexing the Adams administration. Bank failures, unemployment, and the farm problem were just as lively and perplexing in the days 100 years ago as they are today.

There was a general feeling west of the Appalachian Mountains that the Washington government was a long way off, and not particularly interested in the general welfare of the country as a whole. Presidential candidates were picked at caucuses of the Representatives in Congress. The people were not considered. The era of good feeling under Monroe and John Quincy Adams was rather like the era of prosperity under Harding, Coolidge, and Hoover. The Western States were so far removed from the ideals and political philosophy of the East and New England, that had Burr's attempt for a separate nation in the West been made a few years later it might have succeeded. But Tennessee produced a patriot and a strong man whose influence held the country together for another 30 years, and whose life and actions have continually contributed toward making this great Nation greater, ever greater with each generation. It was the Jackson influence that kept Missouri, Kentucky, and Maryland from seceding in the War between the States.

Jackson was in a class by himself in the history of Presidents. Fatherless in infancy, a prisoner of war at 13 in the Revolution, mourning the loss of his mother, who died nursing American prisoners of war in that war, without rich kin or powerful friends, he carved his own career. He is almost a

tradition in our history. He is credited with more birthplaces than Homer. There are claims extant that he was born in Ireland, in England, on the high seas, in Pennsylvania, in Augusta County, Va., in Berkeley County, Va. (now West Virginia), in North Carolina, and in South Carolina. South Carolina has the best claim.

He grew up in the Waxhaws of South Carolina, is said to have been a good judge of horseflesh and whisky. He studied law, went to Tennessee, became district attorney, judge of the Federal Court, a planter of note, and a leader of the Tennessee Militia. With a body never strong and handicapped by wounds, he wore out the strongest men in the battle of life. Without ever having seen a real army, he moved a mob of undisciplined, ill-equipped, half-starved farmers and hunters over more than a thousand miles of wilderness, and, in a pitched battle, successfully defended a mighty empire and completely crushed the ably led, well-armed veterans of the Napoleonic wars. By winning the Battle of New Orleans he guaranteed the creation of the present United States of America. True, this battle was fought after peace had been made in Europe, but all of us today know that great powers do not give up conquered strategic territory because of the terms written on mere "scraps of paper." If Andrew Jackson had not won that battle 126 years ago, Britain would have controlled the Mississippi, the Louisiana Purchase would have been lost, and the United States of America, if it had survived at all, would have been confined to the North Atlantic seaboard. But great as was his military triumph, it was but a preliminary to his real contribution to our national life. The country general who could defeat world-renowned military experts; the rough backwoodsman, who often refused to be bound by the traditions and codes of a polite society; the savior of New Orleans and the conqueror of Florida entered the complex life of our national politics and indelibly stamped the seal of human rights upon the Government of the United States.

Unfortunately, it is a part of life that those who seem best fitted to help their fellow men too often use every method, fair or foul, to perpetuate their own advantage. So when Andrew Jackson advanced to lead the common people against intrenched privilege, he found the wealth, the respectability, and the learning of the country against him. Big business and big political leaders hated him. The press as a whole joined the barrage of hate. He was called "illiterate," "imbecile," "wastrel," "liar," "atheist," and "dictator." If the terms had been created, he would have been a "Bolshevik," a "Communist," and a "Hitler." The viciousness of intrenched greed can best be illustrated by the filthy attacks upon his wife and family. Then, as now, those who cannot win by fair means do not hesitate to slander, to libel, and to destroy the happiness and even the good names of those whose only offense is to be loved members of the immediate families of our political leaders. Their brutal attacks drove Andrew Jackson's beloved wife to her grave even as he was about to assume his duties as President of the United States. The greatness of Jackson can best be appreciated when we remember that even a broken heart could not swerve him from service to his people.

He crushed the absolute grip of private monopoly upon the throat of our banking system. He brought the capital back from the Biddle Bank in Philadelphia to Washington. He shattered the office-holding clique who regarded a Government job as a private right. Although the "holier-than-thou's" shuddered, he drove into the national consciousness the cardinal truth that "the people rule."

Jackson has been assailed as the father of the spoils system, but what has been overlooked is that every Government position when he became President was filled with a henchman of the old order; most of whom were bound by every tie to those who had used any and all weapons to destroy him and to defeat his policies. The President took the position that he could not effectively serve the people unless he had the support and cooperation of those who must carry out his instructions. Why should he be held up to scorn as an enemy of good government because he sought to make the people's control of government effective?

Andrew Jackson maintained the highest concept of the obligations of the public service. Permit me to quote from a letter to his friend, President Monroe:

"The Chief Magistrate of a great and powerful nation should never indulge in party feelings. His conduct should be liberal and disinterested, always bearing in mind that he acts for the whole and not a part of the community. By this course you will exalt the national character, and acquire for yourself a name as imperishable as monumental marble. Consult no party in your choice; pursue the dictates of that unerring judgment which has so long and so often benefited our country and rendered conspicuous its rulers. These are the sentiments of a friend. They are the feelings—if I know my own heart—of an undissembled patriot."

In spite of his temper of fire his dynamic energy was guided by a heart which throbbed with sympathy for humanity. He hated with an intensity seldom equaled but he acted with a mind single to the common good. He drove men relentlessly to gain an end but he personally led every attack. He gave no quarter to any enemy but he sacrificed himself for any friend. Uncompromising loyalty, unyielding courage, and ceaseless energy were not mere characteristics—they truly were the very life of Andrew Jackson.

The Democratic Party owes its existence to this "Great Commoner." True though it is that Thomas Jefferson shaped its political philosophy, the party had become a formless, loose-knit, almost aimless collection of discordant elements. It had almost lost the capacity to solve problems and to serve human needs. Jackson caught up the smoldering torch and blew it into a consuming flame that has never yet been quenched. Since his day our party has enjoyed the longest continual existence of any party in our national history. It has survived a great Civil War and economic revolutions. It has continued from a frontier civilization on through to the complex industrial and commercial life of today. Perhaps it has not always kept its eye single to the service of humanity, but the memory and influence of Andrew Jackson has been so tremendous that in every time of national crisis it has rallied to a Jackson-inspired leader.

Tilden, Cleveland, Bryan, and Wilson wrote living chapters in each passing age by calling the party back to courageous, vigorous, and unqualified service to humanity. When our party has dared, when it has followed ideals, and when it has led the attack upon organized greed, we have been successful. Whether or not we gain political victories at every election is immaterial; the important result is that in each case we were the agents after Jackson, and his successors, in keeping America upon the high road toward the full realization of human liberty.

In our own time we have passed through another Jacksonian era. We have seen the forward sweep of unholy, uncontrolled, private greed and unscrupulous and indifferent politicians bring us to the very brink of disaster. Once again we have seen another Jackson—not from the frontier, not self-educated, not born to endure poverty—but truly inspired by the same single courage, absolute loyalty, and dynamic power as that which was the very life of Jackson. The Dutch son of New York, college-trained and economically protected in youth, who has produced a new revival of faith in humanity, is the spiritual descendant of Andrew Jackson. We have had a rebirth of human rights and a rededication of government to man under the twentieth-century streamlined Jackson—Franklin Delano Roosevelt.

Great as he was, Jackson did not create democracy, but he did raise the people to a reassertion of democratic rights. He did not set up a government of, by, and for the people, but he did force a government to respond to the voice of the people. He did not solve all of the problems of his age, but he did and does inspire us to believe that problems can and must be solved.

We are born into a great political ancestry. Jefferson, Jackson, Tilden, Cleveland, Wilson, and Roosevelt have set the standards. We have a right to pride and glory in our history, but we also have a deep responsibility. If the Democratic Party claims the right to bask in the glory of these leaders, we owe it to their memories to rededicate ourselves to the perpetuation of their ideals. If our party remains true to its leadership, we will join in the toast to that southern-born, western-raised, greatest Democrat our country ever produced, Andrew Jackson, and his great successor, the President of the United States.

Jackson Day Dinner Address

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, April 1 (legislative day of Monday, March 31), 1941

ADDRESS BY HON. ELBERT D. THOMAS, OF UTAH

Mr. BARKLEY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an address delivered by the senior Senator from Utah [Mr. THOMAS] on last Saturday at Milwaukee, Wis., on the occasion of a Jackson Day dinner.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is significant tonight that we in honoring the name and memory of Andrew Jackson, the great commoner of the White House, also pay tribute to the courage and leadership of our own President, Franklin D. Roosevelt, who has steadfastly maintained those Jacksonian principles of democracy which have kept us free.

In approaching my subject this evening and in entering a discussion of world affairs of today I find myself in about the position of the fine old preacher who announced to his congregation that he was going to expound at length upon a subject about which the Lord had been able to say only a few words. We know that the situation in the world before us is complex. Some magazines like to refer to our being confronted with a second World War. It is not that. There is no choosing of sides in the present war. In the present conflict there is so much chaos, so much confusion, so much revolution that we cannot glibly describe the situation in that way. In fact, there is no easy way of defining it. I do not wish to try to define it. As someone said in ancient times, you can-

not define an elephant, but everyone can recognize one when he sees it. The important thing is that we know that there is disorder and revolution and we stand in a position to be challenged with regard to it.

With the consideration of the lend-lease bill we were faced with the determination of our own American policy with reference to this international conflagration. Congress was called upon to weigh all of the evidence, to evaluate the aid to the democracies program in the light of our national history. This congressional debate was a real threat to the American nervous system; everyone was tense. When time was so important, it was feared that we would just talk and not act while the world was burning, and yet we knew that it was only from talk that planning could come, and action in times like these should only come after planning. During this debate there were many feigned issues and trumped up charges presented. Many said that the all-out aid program was entirely inconsistent with our Monroe Doctrine and our established foreign policy. Others said that we had no foreign policy and that we have, as a result, acted from the standpoint of expediency from day to day. Both of these charges I deny. I believe that the lend-lease bill itself represents a unit in its relation to the history of the United States as it has devolved throughout the 150 years of the past in relation to the position which the United States has taken as a result of its firm, fixed, and settled policy. Those terms are terms which are used in international relations; and if we understand a nation's firm, fixed, and settled policy, then we can understand when we are in harmony with its foreign and internal policy and when we are out of harmony with it.

I have mentioned our Monroe Doctrine, for instance. Administration spokesmen have stated that "there are two things which the American people desire to preserve. One is the peace of this Nation and of this hemisphere. The other is the freedom and independence of this Nation and of this hemisphere. They want to preserve them both at the same time, if this is possible." This, in my estimation, clearly states our position relating to the lend-lease program and our foreign policy. We are all aware that the Monroe Doctrine has been the cornerstone for our international diplomacy and foreign policy for more than 100 years. We usually think of this as a singular pronouncement, but its background and its singularity show us that it is truly an American principle. I know historians talk about the origin of the Monroe Doctrine and refer to the influence of England in the pronouncement of that doctrine. They give John Quincy Adams, the Secretary of State, credit for it, and some say that it had its origin in a foreign country, and so they write on and on. But 12 years before the pronouncement of this doctrine the Congress of the United States passed a resolution which became a law of this country and they then and there by law declared the Monroe Doctrine. The act given forth by the Congress of the United States should have a place in all the textbooks in regard to this great doctrine.

Congress, in 1811, resolved as follows:

"Therefore * * * *Resolved, etc.*, That the United States, under the peculiar circumstances of the existing crisis, cannot, without serious inquietude, see any part of the said territory pass into the hands of any foreign power; and that a due regard to their own safety compels them to provide, under certain contingencies, for the temporary occupation of the said territory. They at the same time declare that the said territory shall in their hands remain subject to future negotiations."

This resolution passed in 1811 became the American policy in law 12 years before Monroe made his pronouncement. In 1812 Madison sent troops in keeping with the rights given him by this resolution to foreign-owned territory in the Americas to defend that foreign territory from attack by another European power. The resolution of 1811 with the action by Madison gives America a 130-year-old precedent for what we are doing today. Congress again has passed such a resolution in 1941. The world has been told that foreign-controlled territory cannot be transferred by force, and America has acted to be prepared so that today we will not have to send troops as Madison did. We have made our declaration. Our people, with our neighbors in all the Americas, stand united in will and in power to see that that declaration is respected.

While we are thinking of the past but with our eyes pinned on the future, let us lay down and make part of our hopes four simple rules for union, rules given us by our own immortal Washington when his thoughts during times of troubles were even on a better world. These simple rules, so effective in the past, may well be the fundamentals to guide the world in the future if union and peace are its aims.

First. There must be an indissoluble union of all the states under a single federal government.

Second. The debts incurred must be paid to the uttermost farthing.

Third. The militia system must be organized on uniform principles.

Fourth. The people must be willing to sacrifice local interests to the common weal.

The first of Washington's principles is now on the lips of many and in the hearts of many more.

The second is sound because it is the only way a certain credit and honest economic system can be assured.

The third has been a long-time dream of many, and in 1910 the Congress of the United States adopted resolutions urging the President of the United States to negotiate for a common world police force.

The fourth is the key to any united effort which proved so successful in our own Federal system, in the British Commonwealth, and in other successful unions such as the old German Empire. In essence it is Jefferson's idea which antedated our Federal organization, a government that would provide that local things be administered locally and that things of common interest be administered by the Government, which represents all those interests.

As I have stated, the Monroe Doctrine represents our cornerstone of American diplomacy—the foundation, or the Magna Carta of our foreign policy, as it were. It is this great doctrine that today is our fixed, firm, and settled policy. Since, we have seen that the origin for our foreign policy emanated from almost the time of the Declaration of Independence, we can in truth say we have been acting with consistency. It matters not whether we formerly thought of it as a unilateral regional policy, today it is a multilateral understanding representing a united Western Hemisphere facing a combined European-Asiatic threat to Democracy. The Monroe Doctrine has evolved into a mutual pact between our Government and the other States of the Americas. That is a tremendous advance. The aspect of turning the Latin American attitude away from that of considering us an aggressive Government of the north imposing upon governments of the south is a constructive change. If the time will come when the British Commonwealth of nations will go further and do their part in our Western Hemisphere by Canada's taking her place in this union of the Americas we shall have accomplished what we have sought for many years. It is the dream of Bolivar come true. I am sure that the citizens of the State of Wisconsin would be overjoyed with the realization of this achievement. I might mention parenthetically that the ratification of the St. Lawrence waterway treaty will be a step in that direction, and again we should pay tribute to our great President for his indefatigable efforts both as the President of the United States and as the Governor of New York in furthering this great project.

With the lend-lease bill now on the statute books of our land, and the establishment of this all-out-aid program as a part of our national policy we can pause a moment in retrospect and look back at the debates of Congress without suffering from nervousness, and we can marvel that such a momentous problem was handled in truly a Democratic manner, and though the debates became heated it is notable that in the exercise of freedom of debate, because there were no clotures invoked debate was carried on in a dignified, and distinguished manner. There was an absence of personal invective and acrimony. Here, at perhaps one of the most important moments in our Nation's history the fact that we can preserve the guaranties of democracy is indeed a real compliment to our scheme of Government. Undoubtedly "Old Hickory" himself said hallelujah when he peered through the portals of heaven to see this sight!

Now that we are once again on a well defined course we realize that our individual jobs have been cut out for us. Our national course has just been chartered and it is for us as individual seamen to see that we have smooth sailing. We all know that our success depends upon what we make of ourselves—and we know that if we resort to selfishness and greed we cannot be free. This is no time for any of us to get fat or to achieve personal or political fortunes—we know that we have a common responsibility to maintain the freedom and independence of this Nation, and we must move toward that responsibility together.

We have heard some say that we must have a dictatorship to cope with a dictatorship. To this I do not subscribe. Nor do I think that the present program calls for dictatorial actions on the part of our President. We are indeed fortunate to have the inspiration and guidance of our great Constitution before us. We know that the first words of article II setting forth the powers of the Executive say, "The executive power shall be vested in a President." This can mean only one thing, that he is authorized to carry forth and administer the laws of our land. Not only is he head of the executive branch of the Government, but he is also Commander in Chief of the Army and Navy of the United States. There is no other appropriate person than the President who can carry out the will of Congress. What a pitiful spectacle it would be to see the Congress with 531 Members administer a program under a national emergency. Our constitutional forefathers knew of these complications and took the necessary safeguards in writing our Constitution; they had had experience with a parliamentary executive under the Confederation and they knew its weakness. When America speaks to foreign nations she must speak with one voice. Our Constitution provides for that. Debate with ourselves. Yes; for we understand the rules and conflicting opinion is a process of deliberation but when we speak as one nation to another there can be but one voice if we are to be effective. In 1917 our President Woodrow Wilson asked Congress for power that would prove our unity. For power that would show that America speaks with but one voice but it was denied him. Our President then was defeated in his wishes and when he spoke to a wrongdoer among the nations the wrongdoer paid no attention because he thought President Wilson's people did not support him. Had we shown the same unity in peace

as we later showed in war it is doubtful if we would have ever entered the war. If we will remain united in peace today we can avoid war. America united in war is a power that few nations would wish to challenge. America united in peace standing for liberty, freedom, and right is a power that only the mad would rouse to action.

Our country has indeed been fortunate in having great Presidents in time of our emergencies. At such times we should never regret the fact that our Executive is strong and powerful. Being strong and powerful does not mean that he has dictatorial power. It does not mean direction by a single will. It does not mean interference with courts, or elective officers, or the Federal system. Thomas Jefferson in his writings set forth prophetic words on this general subject. He said:

"The last hope of human liberty in this world rests on us. We ought, for so dear a stake, to sacrifice every attachment and every enmity. Leave the President free to choose his own coadjutors, to pursue his own measures, and support him and them, even if we think we are wiser than they, honester than they are, or possessing more enlarged information of the state of things."

Strange as it may seem, the charges of dictatorship leveled at President Roosevelt gave me a feeling of satisfaction. I knew that they were not true, but I also knew from my reading of history that this was an old charge and in most cases was a good omen, because it meant that we had a good, strong President. These are the men who have been charged with wanting to make themselves dictators and kings: Washington, Jefferson, Andrew Jackson, Lincoln, Theodore Roosevelt, and Woodrow Wilson.

At times it looks rather selfish for democracy to give to a few men so many great honors, but democratic governments survive only by being administered by the experienced. It is also significant that our great Presidents have realized it was necessary to magnify their calling during times of stress. Our great Presidents realized that the Government of the United State was never intended to be weak, but was always expected to be strong when it was necessary for it to be strong. Strong and just, it faces the world today. It stands today as it has always stood—strong against the aggressor and ready to aid the victim of aggression.

We all are grateful to "Old Hickory," the American who, as we were reminded by our President last year, "did the big job of saving the economic democracy of the Union for its westward expansion, strengthened in the ideals and practice of popular government." It is significant the President further reminded us "that the people unanimously reelected him in spite of the fact that Biddle and the bank had sought to create an economic depression in order to ruin him."

It is interesting to note that sometimes our Presidents have acted under their own initiative in times of national emergencies without power specifically conferred by Congress. Thomas Jefferson purchased Louisiana without such authority. He was meticulous in his regard for the Constitution; and since he had no congressional authority to act, he took such action under the treaty-making power. The country has not only vindicated him for this act but has praised him for his foresight and genius.

In the spring of 1861 Fort Sumter was fired upon, though Congress did not assemble until the following June or July. It was President Lincoln who, in the midst of an emergency, had exercised a power which no other President has ever exercised. He did this because he thought it necessary to save the Government. Also, before Congress had assembled, he called for 75,000 volunteers on his own responsibility. We, of course, are all grateful for his acts.

We could not let pass in this discussion a reference to the stand taken by Andrew Jackson against the South Carolina nullification. The following passage is perhaps the most important passage in President Jackson's pronouncement: "I consider the power to annul a law of the United States, assumed by one State, incompatible with the existence of the Union, contradicted expressly by the letter of the Constitution, unauthorized by its spirit, inconsistent with every principle on which it was founded, and destructive of the great object for which it was formed." This proclamation voiced the opinion and feeling of the whole country, except the nullifiers in South Carolina and a few of their comrades in other Southern States. The dignified tone of the paper was especially satisfactory. It was the right tone to take to men who had allowed their passionate temper to commit them to unworthy proceedings, and who had sought a remedy for civil grievances in acts which made liberty and security impossible. Jackson found himself a national civil hero. He had already been acclaimed a military hero. He lives in popular memory and tradition chiefly as the man who put down a threat of treason, so it is this act of true leadership, and his ability to assert himself in time of an emergency, though an internal emergency, it is true, that as much as anything gives him a commanding and important position in our United States history books. By his actions he united his people and when he asked Congress to grant him the authority to use force if need be to maintain his stand it was granted to him. Our country remained safe. Our Nation then through unity prevented war. Our Nation today by unity can stay out of war. My plea is for national unity, for come what may we are then better off. One hundred and thirty million people speaking as one—130,000,000 people standing for right—130,000,000 knowing the worth of freedom, the joy of liberty, the right to worship as we wish, think as we choose, speak and write as we will, come and go, buy and sell, own and dispose as we see fit, can unite as one voice, and when that voice is the voice of righteousness who is there to say it nay.

Cardinal O'Connell Says Secret Maneuvers Are Bringing Us Nearer and Nearer to War—Democracy Is Being Betrayed

EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1941

STATEMENT BY CARDINAL O'CONNELL, OF MASSACHUSETTS

Mr. TINKHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Cardinal O'Connell, of Massachusetts:

BOSTON, MASS., March 29.—William Cardinal O'Connell, Catholic archbishop of Boston, was quoted today by the Boston Traveler as saying "secret maneuvers behind the scenes of government are drawing us nearer and nearer to war."

The cardinal said, in an interview with the Traveler on his return from a winter vacation in Miami, Fla., that "the trust of the people in their Government is a dangerous thing to toy with."

"There is a distinct feeling," he added, "that things are going on behind the scenes unknown to the people. This is the sort of distrust that brought about revolutions in Europe—the distrust of the people in their government.

"I hope," he asserted, "that this country stays out of war. I know the people want to stay out, but the Government seems to ignore their wishes while still talking of democracy.

"Some sort of secret maneuvers are bringing us nearer and nearer to war all the time. This does not tally with democracy. Everybody is wondering just where we are in this thing. It is not a fair thing for a government calling itself democratic.

"All this mystery that is going on is puzzling to the people and is not fair."

The cardinal, greeting newsmen in his stateroom on the steamer *Boston*, appeared to be in excellent health.

"I'm speaking neither pro nor con the Government," he added. "I'm merely echoing the sentiments of the people from all parts of the United States. Their question is: 'Where are we in this situation?'"

American Manpower in the Balkans and in Africa

ARTICLE BY WILLIAM H. STONEMAN

Mr. TINKHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news dispatch from the Chicago Daily News:

[From the Washington Evening Star of March 26, 1941]

SPEEDY STAFF TALKS BETWEEN UNITED STATES AND BRITAIN URGED IN LONDON—COORDINATION OF VIEWS HITHERTO UNDERTAKEN ONLY HAPHAZARDLY

(By William H. Stoneman, Chicago Daily News Foreign Correspondent)

LONDON, March 26.—Speedy initiation of comprehensive staff talks between the leaders of the American and British armed forces are being urgently, though strictly unofficially, suggested by observers in London.

As far as is known, coordination of American and British views has been undertaken, to date, only in the most haphazard fashion. Droves of military, naval, and air experts have come to London during the last few months and a good many British experts crossed the Atlantic in the other direction. All of them have had specific jobs of investigation to do and the great majority of them have accomplished their missions in a thoroughgoing and satisfactory way.

Most of them, however, have not had any authority to discuss strategy or to engage in the drafting of even the most tentative plans for cooperation.

POLITICAL SITUATION BLAMED

The result is that if the United States went to war any time soon, American and British forces would not be in position to cooperate to the best advantage.

Naval and air forces from the United States could certainly be thrown into action speedily, but even then it would take some time to decide where and when to use them most effectively.

Blame for this unbusinesslike and highly unmilitary situation is laid to the American political situation. The American people, and particularly the isolationist elements, it is said, would be aroused by such an unneutral step as the initiation of staff talks or the creation of a supreme war council. Proponents of the idea answer that the American people have welcomed the dispatch of technical experts to London and that they would presumably have no objections if similar experts discussed other matters.

Even though no promises were made in advance of an American declaration of war, they insist, it would be both possible and extremely helpful for high officials to look over the situation and to decide tentatively what could be done by the combined forces in case the United States took an active part.

TOPICS TO BE DECIDED

Some of the things which might be decided by the panel of experts from both sides would include: (1) The theaters of war in which the United States might operate most effectively; (2) what types of forces would be required for such operations; and (3) the measure of responsibility which each one of the two powers would have for operations in any one sphere.

If, for instance, a great American army would be required for operations in Africa or southeastern Europe, it would be far better to decide so now and prepare for the speedy enrollment and training of such a force before the bell rings. Likewise, if America's chief contribution would be to send large forces of bombers and fighters to Europe, then it would be advisable to concentrate on the production of such units and not waste time, energy, and money on the production of units which will not be needed.

It can be taken for granted that these matters have been discussed unofficially by American and British politicians and special envoys, some of whom have military training. It is still safe to say that no adequate plans have been made and that no real attempts have been made to formulate such plans.

First Conference of the Inter-American Bar Association

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, April 1 (legislative day of Monday, March 31), 1941

ADDRESS BY ATTORNEY GENERAL JACKSON

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. Robert H. Jackson, Attorney General of the United States, at the first conference of the Inter-American Bar Association in Habana, Cuba, on March 27, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, Mr. Minister, and members of the Inter-American Bar Association, the founding of this association, at a time when so much of the world either has lost or has forsaken government under law, bears witness to our faith in a civilization ordered by reason rather than by force. We are debtors to this captivating country and city, not only for a generous hospitality, but more importantly for an inspiring leadership. We lawyers from the United States value this opportunity to compare our own legal philosophy and institutions with those of other American commonwealths. You have no doubt been impressed with our modest habit of expounding our own law by a recital of some case we won.

Every delegate comes to this council with pride in his own national institution and tradition. No one comes to capitulate to any other. Each of our pioneering peoples of this hemisphere has looked to one or another of the old world civilizations to fertilize its intellectual life. Since communion with Europe has been interrupted we have turned to each other for cultural enrichment. We are rediscovering the Americas. Of course this has its perils. I am told that in Washington the old and the young of both sexes are making a furious study of the Spanish and Portuguese languages. We trust that you good neighbors will bear with your characteristic good humor the punishment that is in prospect for your native tongues.

The easy and fraternal terms on which our profession meets serve to emphasize the discord of the world and above vexing national problems rise grave questions of law relating to our international well-being.

We are haunted by the greatest unfinished task of civilization which is to create a just and peaceful international order. If such a relationship between states is to be realized, we know its foundations will be laid in law, because legal process is the only practical alternative to force.

The state of international law and of progressive juridical thought on the problems of States not actually participating in hostilities is of more than academic interest in a world at war. The United States feels obliged to make far-reaching decisions of policy. I want the legal profession of this hemisphere to know that they are being made in the conviction that the structure of international law, however apparently shaken, is one of the most valuable assets of our civilization. There may be differences of opinion as to some of its particular rules, but we have made conscientious effort to square our national policy with enlightened concepts of the law of nations viewed in its entirety.

It is the declared policy of the Government of the United States to extend to England all aid "short of war." At the same time it is the declared determination of the Government to avoid entry into the war as a belligerent.

The question has been raised whether the two aspects of this dual policy are reconcilable with law, or whether such comprehensive aid, extended to one belligerent party to the express exclusion of the other, is incompatible with the obligations which international law imposes upon a state, not a belligerent in the war.

President Roosevelt in his message to the Congress of January 6, 1941, said that "Such aid is not an act of war."

Secretary Hull and Secretary Stimson have voiced similar conclusions and the committees of both Houses of Congress are committed to the same view.

But weighty names and even heavier texts are found to contend that our only legal alternatives are to enter the war ourselves or to treat all belligerents with impartiality. It has been asserted that international law forbids the United States to exchange overage destroyers for air and naval bases in this hemisphere, and forbids us to render acts of assistance to a belligerent with whose institutions and cause we feel some kinship, and who has been subjected to aggression.

I do not deny that particular rules of neutrality crystallized in the nineteenth century and were codified to a large extent in the various Hague conventions which support this view. But the applicability of these rules has been superseded. Events since the World War have rejected the fictions and assumptions upon which the older rule rested. To appreciate the proper scope of that doctrine of an impartial neutrality, we must look to its foundations. Its cornerstone is the proposition that each sovereign state is quite outside of any law, subject to no control except its own will, and under no legal duty to any other nation.

From this it is reasoned that, since there is no law binding it to keep the peace, all wars are legal, and all wars must be regarded as just.

This doctrine is stated by a standard authority:

"It would be idle for it (international law) to affect to impart the character of a penalty to war when it is powerless to enforce its decisions. * * * International law has consequently no alternative but to accept war, independently of the justice of its origin, as a relation which the parties to it may set up if they choose, and to busy itself only in regulating the effects of the relation. Hence, both parties to every war are regarded as being in an identical legal position, and consequently as being possessed of equal rights." (Hall's International Law, 5th ed., 1904, p. 61.)

It is easy to see how an international law, which holds all wars to be legal, and all warring nations as possessed of equal rights, arrives at the conclusion that neutrals must not discriminate between belligerents.

To the mind untutored in such sophisticated thought it seems to be characterized by more of learning than of wisdom. It does not appear to be necessary to treat all wars as legal and just simply because we have no court to try the accused. That hypothesis seems to justify President Wilson's statement that "International law has perhaps sometimes been a little too much thought out in the closet." Certainly the workaday world will not accept an unrealistic and cynical assumption that aggression, by a state that had renounced war by treaty, rests on the same basis as defense against an unprovoked attack in violation of treaty.

I think it was Henry Adams who complained that he was educated in one century and was living in another. All of us, even some of our international lawyers, suffer the same dislocation of ideas. The difference is that Henry Adams recognized it. Some of our scholarship has not caught up with this century which, by its League of Nations Covenant with sanctions against aggressors, the Kellogg-Briand Treaty for renunciation of war as an instrument of policy, and the Argentine Antiwar Treaty, swept away the nineteenth century basis for contending that all wars are alike, and all warriors entitled to like treatment. And this adoption in our time of a discriminating attitude toward warring states is really a return to earlier and more healthy precepts.

The doctrine of international law in the seventeenth and eighteenth centuries was based on a distinction between just and unjust wars. From that distinction there was logically derived the legal duty of members of the international society, bound by the ties of solidarity of Christian civilization, to discriminate against a state engaged in an unjust war—in a war undertaken without a

cause recognized by international law. That duty was stressed by the scholastic writers in the formative period of the law of nations. It was voiced by Grotius, the father of modern international law. There was, in his view, no duty of impartial treatment when one of the belligerents had resorted to war in violation of international law. Writing in 1625, he said: "It is the duty of neutrals to do nothing which may strengthen the side which has the worse cause, or which may impede the motions of him who is carrying on a just war."[1]

It may be argued that the nineteenth century and the first two decades of the twentieth witnessed an interlude in international law inconsistent with what went before and also with what was to follow. But if I read history correctly, there has seldom, if ever, been a long period of time during the past three centuries when states, for their own self-defense or from other motives, have been completely impartial in relation to the belligerents. More often than not, at the end of wars, there have been recriminations of such activities, which have thereafter been largely overlooked. The testimony of historians as to the practice of states in the seventeenth, eighteenth, and nineteenth centuries should not be overlooked by the international lawyer insofar as the real limits of the principles of neutrality are concerned.[2] It is safe to assert that the absolute category of neutrality on the one hand, and belligerency on the other hand, will not square with the test of actual state practice, and that, as judged by that practice, there is a third category in which certain acts of partiality are legal even under the law of neutrality.

Even during the vogue among publicists and text writers of the theory that all wars were just and all neutrality therefore undiscriminating, modern practice—especially American practice—shows instances of discriminating, qualified neutrality. During the World War, after the United States had declared war on Germany, a number of Central and South American Republics formally announced a departure, in favor of the United States, from the obligations of impartiality. Some of them, like Guatemala, El Salvador, and Costa Rica, offered their territorial waters and ports for the use of the naval forces of the United States. Others, like Brazil and Uruguay, expressly modified their neutrality regulations in that direction. Uruguay issued a decree announcing that she would not treat as a belligerent any American nation engaged, in defense of its rights, in a war with states in other continents and Germany did not consider this decree as resulting in a state of war.

Thus, American states tendered to the United States, when in the throes of war, moral and economic support based on a conviction of the justice of our cause and the identification of their ultimate well-being with our success—a generous manifestation of good will for which my countrymen and my government will never cease to be grateful and to reciprocate. In fact the joint resolution of Congress enacting our Neutrality Act of 1939 provided: "This joint resolution (except sec. 12) shall not apply to any American republic engaged in war against a non-American state or states."

The experience of the World War was too much for any doctrine that all war was to be accepted as just.

This doctrine was revised by the Covenant of the League of Nations. That instrument substantially limited the right of war and imposed upon its members certain duties designed to enforce that limitation.

The Covenant of the League of Nations did not abolish neutrality. It did not impose upon the members of the League the duty to go to war with the Covenant-breaking state. But it did lay upon them the obligation to adopt against the responsible state what was therefore regarded as unneutral conduct contrary to international law. To that extent it revived nonparticipation combined with active discrimination against the aggressor and active assistance to the victim of aggression. The attitude of Great Britain during the Italo-Abyssinian war in 1935 and 1936 illustrated clearly the position created by the Covenant. Great Britain did not declare war on Italy. At the same time she insisted that Italy was not entitled as a matter of law to expect from Great Britain the fulfillment of any obligations either of the Hague Conventions or of the customary rules of neutrality. Great Britain thus applied the concepts of international law which logically resulted from substantial curtailment of the right of war. Great Britain and other members of the League of Nations adopted an identical attitude in the course of the hostilities between Finland and Soviet Russia. The British Government supplied Finland with arms and ammunition; it authorized the setting up in Great Britain of recruiting bureaus for the Finnish Army; and it adopted other measures clearly prohibited by The Hague Conventions.

There would be obvious inconsistency in the United States invoking the benefits of a covenant to which it refused adherence, but I cite the covenant because it both evidences and dates the changed position of both war and neutrality in the world's thought. And it was followed by another commitment to which we were a party.

The Kellogg-Briand Pact of 1928, in which Germany, Italy, and Japan covenanted with us, as well as with other nations, to renounce war as an instrument of policy, made definite the outlawry of war and of necessity altered the dependent concept of neutral obligations.

The Argentine Antiwar Treaty, signed at Rio de Janeiro in 1933, is one of the most important American contributions to the growth of the law in the last decade. It is in a real sense a precursor of the system of consultation which was started at Buenos Aires in 1936. The implications of consultation are well recognized today.

In 1918, in a letter to Colonel House who was then preparing a first draft of a plan of a league of nations, Elihu Root expounded the fundamental bases for a new international order. He wrote in part as follows:

"The first requisite for any durable concert of peaceable nations to prevent war is a fundamental change in the principle to be applied to international breaches of the peace.

"The view now assumed and generally applied is that the use of force by one nation toward another is a matter in which only the two nations concerned are primarily interested, and if any other nation claims a right to be heard on the subject it must show some specific interest of its own in the controversy. * * * The requisite change is an abandonment of this view, and a universal formal and irrevocable acceptance and declaration of the view that an international breach of the peace is a matter which concerns every member of the community of nations—a matter in which every nation has a direct interest, and to which every nation has a right to object."[3]

The principle stated by Mr. Root has been accepted by practically all states in the Treaty for the Renunciation of War, in the Argentine Antiwar Treaty, and in the replies to Secretary Hull's famous statement of July 16, 1937. That principle lies at the very foundation of our present policy.

Present aggressive wars are civil wars against the international community. Accordingly, as responsible members of that community, we can treat victims of aggression in the same way we treat legitimate governments when there is civil strife and a state of insurgency—that is to say, we are permitted to give to defending governments all the aid we choose.

In the light of the flagrancy of current aggressions, which are apparent on their face and which all right-thinking people recognize for what they are, the United States and other States are entitled to assert a right of discriminatory action by reason of the fact that, since 1928 so far as it is concerned, the place of war and with it the place of neutrality in the international legal system have no longer been the same as they were prior to that date.

That right to resort to war as an instrument of national policy was renounced by Germany, Italy, and Japan in common with practically all the nations of the world, in a solemn treaty which the United States helped to call into being, to which it has become a party, which it has been its proclaimed intention to make the cornerstone of its foreign policy, and whose provisions it has invoked on repeated occasions as expressing a fully binding international obligation. The present hostilities are the result of, and have been accompanied by, repeated violations of that treaty by Germany, Italy, and Japan. It may be noted in this connection that Italy was the first state to adhere to the Argentine Antiwar Treaty after the original signatories.

The Treaty for the Renunciation of War and the Argentine Antiwar Treaty deprived their signatories of the right of war as an instrument of national policy or aggression and rendered unlawful wars undertaken in violation of their provisions. In consequence, these treaties destroyed the historical and juridical foundations of the doctrine of neutrality conceived as an attitude of absolute impartiality in relation to aggressive wars. It did not impose upon the signatories the duty of discriminating against an aggressor, but it conferred upon them the right to act in that manner. This right they are indisputably entitled to exercise as guardians both of their own interests and of the wider international community. It follows that the state

[1] 3 De Jure Belli et Pacis, 293 (Whewell ed., 1853).

[2] In the seventeenth and eighteenth centuries it was not uncommon to grant the right of passage to one belligerent only. In particular such one-sided aid was freely extended in pursuance of preexisting treaties promising help in case of war. It comprised not only the right of passage, but also deliveries of supplies and contingents of troops. This admissibility of qualified neutrality, in conformity with previous treaty obligations, was approved by writers of authority, including leading publicists like Vattel and Bynkershoek, who otherwise stressed the duties of impartial conduct. Wheaton, the leading American writer, asserted, as late as 1836, that a neutral may be bound, as the result of a treaty concluded before the war, to furnish one of the belligerents with money, ships, troops, and munitions of war. Kent, another authoritative publicist, expressed a similar view. Distinguished European writers, like Bluntschli, shared the same opinion. Even as late as the nineteenth century, governments occasionally acted on the view that qualified neutrality was admissible. In 1848, in the course of the war between Denmark and Germany, Great Britain, acting in execution of her treaty with Denmark, prohibited the export of munitions to Germany. During the South African War, Portugal complied with the obligations of her treaty with Great Britain and permitted the landing of British troops on Portuguese territory.

[3] Root's letter to House appears in The Intimate Papers of Colonel House, arranged by Charles Seymour, IV, 43. See also Jessup, Elihu Root, II, 376.

which has gone to war in violation of its obligations acquires no right to equality of treatment from other states unless treaty obligations require different handling of affairs. It derives no rights from its illegality.

It is not to be overlooked in this connection that two groups of highly reputable international lawyers have agreed in general with this position. I refer to the International Law Association (especially to the Budapest Articles of Interpretation) and to the research in international law conducted under the auspices of the faculty of Harvard Law School, which, after considering this matter, came to substantially the same view, with the qualification that they might be more exacting with reference to the determination of the aggressor by a method to which the alleged law-breaking states had theretofore agreed.[4] Of course, neither of these bodies spoke in relation specifically to conditions existing today.

Most international lawyers will agree that where there is a specific legal obligation not to resort to armed force, where there has been a resort thereto, and where it has been appropriately determined that one party is the aggressor by a method which the aggressor has agreed to accept, the traditional rules of neutrality need not be applied. The difficulty with this proposition lies in the lack of means for determination of the fact of aggression.

There are compelling reasons why we must not await a judicial or other formal determination of aggression today. In the evolution of law we advance more rapidly with our concepts of substantive rights than with our machinery for their determination. Rough justice is done by communities long before they are able to set up formal governments. And where there is a legal obligation not to resort to armed force it can be effectuated as legal obligations have always been effectuated on the frontiers of civilization before courts and machinery of enforcement became established. In flagrant cases of aggression where the facts speak so unambiguously that world opinion takes what may be the equivalent of judicial notice, we may not stymie international law and allow these great treaties to become dead letters. Intelligent public opinion of the world which is not afraid to be vocal and the action of the American States has made a determination that the Axis Powers are the aggressors in the wars today which is an appropriate basis in the present state of international organization for our policy.

By resorting to war in violation of the provisions of the Kellogg-Briand Pact, or the Argentine Antiwar Treaty, the Governments of Germany, Italy, and Japan violated a right and affected the interests of the United States. It was not a mere formal or theoretical right that was thus affected. The very basis of these treaties was the assumption that, in this age of interdependence all its signatories had a direct interest in the maintenance of peace and that war had ceased to be a matter of exclusive interest for the belligerents directly affected. If that is so—and it is so—then international law provides an ample and practically unlimited basis for discriminatory action against states responsible for the violation of the treaty or treaties.

The Treaty for the Renunciation of War and the Argentine Antiwar Treaty, by altering fundamentally the place of war in international law, have effected a parallel change in the law and status of neutrality, and we claim the wider rights which that change imparts. But, independently of that view, there is another sound basis for our action today.

The legitimate application of the doctrine of self-defense and the implications of antiwar treaties go hand in hand. It is in these fields where, perhaps, the most important developments of international law will take place in the immediate future, and these are the developments which the international community has sorely needed—developments in international sanctions.

We all knew that since 1928 the principle of self-defense has been used as an excuse for internationally illegal action, but we also know that there is a legitimate principle of self-defense in international law, which is one of its most fundamental principles. The standard of action under this principle, as under other principles of law, is that it is to be applied in relation to what the reasonable man (or state) would do under the same or similar threatening circumstances. There can be no doubt that the political, territorial, economic, and cultural integrity of the Western Hemisphere is menaced by totalitarian activities now going on outside this hemisphere. In this situation the principle of self-defense may most properly be invoked, and we in the Americas are invoking it in relation to the facts as we know

---

[4] Almost contemporaneously with going into force of the Kellogg-Briand Pact, and at a time when it was not self-serving, United States Secretary of State Stimson, in 1932, announced his view of the change which that treaty wrought in our legal philosophy: "War between nations was renounced by the signatories of the Briand-Kellogg Treaty. This means that it has become illegal throughout practically the entire world. It is no longer to be the source and subject of rights. It is no longer to be the principle around which the duties, the conduct, and the rights of nations revolve. It is an illegal thing. Hereafter when two nations engage in armed conflict, either one or both of them must be wrongdoers—violators of this general treaty law. We no longer draw a circle about them and treat them with the punctilios of the duelist's code. Instead we denounce them as lawbreakers.

"By that very act we have made obsolete many legal precedents and have given the legal profession the task of reexamining many of its codes and treatises." (The Pact of Paris. Three Years of Development. Address by the Honorable Henry L. Stimson, Secretary of State, before the Council on Foreign Relations, Aug. 8, 1932. U. S. Government Printing Office, Washington, 1932. Supplement to the October 1932 number of Foreign Affairs.)

These codes and treatises have been and are being reexamined as Secretary Stimson suggested they must be, and the legal consequences of the Kellogg-Briand Pact in the matter of neutrality were formulated in the so-called Budapest Articles of Interpretation, adopted in 1934 by the International Law Association. They read as follows:

"Whereas the pact is a multilateral law-making treaty whereby each of the high contracting parties makes binding agreements with each other and all of the other high contracting parties; and

"Whereas by their participation in the pact 63 states have abolished the conception of war as a legitimate means of exercising pressure on another state in the pursuit of national policy and have also renounced any recourse to armed force for the solution of international disputes or conflicts:

"(1) A signatory state cannot, by denunciation or nonobservance of the pact, release itself from its obligations thereunder.

"(2) A signatory state which threatens to resort to armed force for the solution of an international dispute or conflict is guilty of a violation of the pact.

"(3) A signatory state which aids a violating state thereby itself violates the pact.

"(4) In the event of a violation of the pact by a resort to armed force or war by one signatory state against another, the other states may, without thereby committing a breach of the pact or of any rule of international law, do all or any of the following things:

"(a) Refuse to admit the exercise by the state violating the pact of belligerent rights, such as visit and search, blockade, etc.

"(b) Decline to observe toward the state violating the pact the duties prescribed by international law, apart from the pact, for a neutral in relation to a belligerent.

"(c) Supply the state attacked with financial or material assistance, including munitions of war.

"(d) Assist with armed forces the state attacked.

"(5) The signatory states are not entitled to recognize as acquired de jure any territorial or other advantages acquired de facto by means of a violation of the pact.

"(6) A violating state is liable to pay compensation for all damage caused by a violation of the pact to any signatory state or to its nationals.

"(7) The pact does not affect such humanitarian obligations as are contained in general treaties, such as the Hague Conventions of 1899 and 1907, the Geneva Conventions of 1864, 1906, and 1929, and the International Convention Relating to the Treatment of Prisoners of War, 1929." Report of the Thirty-eighth Conference of the International Law Association, Budapest (1934), pp. 66–68; also, 33 A. J. I. L. (Supp.) 825–826, note 1.

These Budapest Articles did not secure unanimous approval on the part of international lawyers, but they gained support from the majority of them. Even those jurists who felt unable to subscribe fully to the Budapest Articles of Interpretation were emphatic that the Kellogg-Briand Pact effected a decisive change in the position of the law of neutrality. Thus, the late Ake Hammarskjöld, a judge of the Permanent Court of International Justice from 1936 until his death in 1937, in discussing, in the course of the Budapest Conference, the implications of the Kellogg-Briand Pact in relation to neutrality, said, "You will have noticed that, except when the texts compelled me to use the word 'neutrality,' I have been careful to use another word, the status of nonbelligerency. * * * I have chosen the other expression merely because I wanted to underline that the status of nonbelligerency under the Kellogg Pact is not necessarily identical with the status of neutrality in pre-war international law." (Report 38th Conf., loc. cit. at 31.)

The Budapest articles of interpretation were not disapproved by the United States. On the contrary, Secretary of State Stimson, speaking before the American Society of International Law on April 26, 1935, said: "Our own Government as a signatory of the Kellogg Pact is a party to a treaty which may give us rights and impose on us obligations in respect to the same contest which is being waged by these other nations. The nation which they consider an aggressor and whose actions they are seeking to limit and terminate may be by virtue of those same actions a violator of obligations to us under the Kellogg Pact. Manifestly this in itself involves to some extent a modification in the assertion of the traditional rights of neutrality.

"Even in the face of this situation some of our America lawyers have insisted that there could be no change in the duty of neutrality imposed by international law. I shall not argue this. To such gentlemen I only commend a study of the recent proceedings last summer of the International Law Association at Budapest. The able group of lawyers from many countries there assembled considered this question and decided that in such a situation the rules of neutrality would no longer apply among the signatories of the Kellogg Pact, and that we, for example, in such a case as I have just supposed, would be under no legal obligation to follow them." (Proceedings of the American Society of International Law (1935), pp. 121, 127.)

them and as we, in our best judgment, can foresee them in the future. We are today putting content into the principle of self-defense by giving it concrete application which will create important precedents. By this action we are again showing the fundamental soundness of this principle of international law, and are developing its implications at the very moment when we are being charged, in certain quarters, with ignoring or violating the less fundamental rules of neutrality which are, both in fact and in law, irrelevant to the existing situations.

The present implementation of the principle of self-defense did not start with the lease-lend bill in the United States. It began at the Panama consultation in 1939 and was developed in relation to the law of neutrality by the Inter-American Neutrality Committee at Rio de Janeiro, as endorsed by the Consultation of Foreign Ministers here at Habana in 1940. That historic meeting accepted the recommendations of the Neutrality Committee and adopted the Act of Habana for the provisional administration of European possessions and colonies in the Americas. It went further and proclaimed the right and the duty of any signatory to take defense measures if the safety of the continent were threatened.

These events have ushered into international law a basis upon which the United States may legally give aid to the Allies in the present situation. No longer can it be argued that the civilized world must behave with rigid impartiality toward both an aggressor in violation of the treaty and the victims of unprovoked attack. We need not now be indifferent as between the worse and the better cause, nor deal with the just and the unjust alike.

To me such an interpretation of international law is not only proper but necessary if it is not to be a boon to the lawless and the aggressive. A system of international law which can impose no penalty on a lawbreaker and also forbids other states to aid the victim would be self-defeating and would not help even a little to realize mankind's hope for enduring peace.

The principle that war as an instrument of national policy is outlawed must be the starting point in any plan of international reconstruction. And one of the promising directions for legal development is to supply whatever we may of sanction to make renunciation of war a living principle of our society.

The only sanction that seems available in our time is the freedom of the right-thinking states of the world, particularly the states of the Western Hemisphere, to give a material implementation to their moral and nationally official judgments as to the justice of a war. The American States have done this officially with respect to the invasion of Belgium, Holland, and Luxemburg.[5] A public opinion which can express itself only in sermons is not likely to restrain the aggressive propensities of any powerful state. If, however, that opinion may command measures short of war that are likely to prevent the success of aggression, it is certain to have some deference even from the ruthless. Short-of-war measures which enlightened opinion may invoke include all forms of moral censure and diplomatic disapproval, discriminatory embargoes or boycotts, as well as financial credits and furnishing of supplies and material, weapons and ships. These speak a language understandable to those deaf to the precepts alike of Christian civilization and of legal obligation and scholarship.

After an experience that ranged from complete impartiality, through "armed neutrality," and then to war itself, President Wilson in 1919, addressing a group of international lawyers, said:

"If we can now give to international law the kind of vitality which it can have only if it is a real expression of our moral judgment, we shall have completed in some sense the work which this war was intended to emphasize."

The quarter century that followed has in my judgment given to international law that vitality—the League Covenant began the modification of the old concept that all wars were just and legal. The Pact of Paris and the Argentine antiwar treaty completed the outlawry of war. The signatory may now in its policy express its discriminating judgment and its moral convictions.

It is upon these considerations that I have advised my Government in the hope that its course may strengthen the sanction against aggression and contribute to the realization of our aspiration for an international order uder law.

[5] On the initiation of Uruguay, the American states released a joint declaration protesting against the military attacks directed against these states. They declared, in part, that: "The American republics in accord with the principles of international law and in application of the resolutions adopted in their inter-American conferences, consider unjustifiable the ruthless violation by Germany of the neutrality and sovereignty of Belgium, Holland, and Luxemburg." (Department of State Bulletin, May 25, 1940, p. 658.)

America and the War

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 1 (legislative day of Monday, March 31), 1941

EDITORIALS FROM BUFFALO EVENING NEWS

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD two editorials from the Buffalo Evening News of March 20, 1941, entitled, respectively, "No Convoys" and "Watch the Drift."

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Buffalo Evening News of March 20, 1941]

NO CONVOYS

The immediate succession of Lord Halifax's report that a German U-boat was on its way to American coastal waters, of Prime Minister Churchill's statement that Nazi submarines and battle cruisers had been operating in the western Atlantic, and of the sudden burgeoning of talk about United States naval convoys for ships carrying supplies to Britain doubtless is no coincidence. As far back as last December, the Daily Mail of London came out editorially in a plea for American warships to convoy merchant vessels to within 100 miles of the English coast, and British officials from Mr. Churchill down have scarcely concealed their hope that this would be America's next move in aid of Britain. The Committee to Defend America by Aiding the Allies, many of whose members favor an open declaration of war on Germany by the United States, has just issued another of its manifestoes calling for convoys to see that Britain gets the goods shipped under the Lease Lend Act.

But convoys mean war—the shooting kind of war. Senator GEORGE, leader of the fight for the lease-lend bill, recognized this when he declared: "I have always stood against convoying vessels by the American Fleet, and will stand against convoying vessels by any unit of the American Fleet until and unless the point shall come when I shall be willing to vote for war, because, in my judgment, convoying would lead us into actual war." Hitler's threat to sink any ships attempting to break the blockade hardly can be an idle one since it is a matter of life and death for Germany to enforce the blockade.

The American people approved the lease-lend bill for one reason only—because they believed it was a measure of defense that offered the only chance of keeping the United States out of the war.

There are, in fact, a number of untried measures short of convoys to help Britain solve her admittedly serious shipping problem. Britain today has approximately 13,333,000 tons of ocean-going shipping, at least as much as that at the start of the war. Because of replacements from invaded countries and the United States, the net decline in tonnage has only just begun. Recent sinkings in intensified submarine and air attacks have been serious, but these could be compensated for months to come if the British were to transfer their ships, now plying on African, Pacific, and other relatively safe routes, to the Atlantic, allowing American ships to take their places. By coordination of American and British shipping in this way it has been estimated that 1,000,000 tons could be added to the vital British Isles trade.

WATCH THE DRIFT

Taking it for granted that the American people are honest when they straw vote 85 percent to stay out of war, it is instructive to chart our drift away from neutrality and toward war in the 18 months of the European conflict. As an airplane pilot follows his course he constantly checks for drift, meaning the deviation caused by cross winds. The student of American foreign policy can best check for drift in the statements of the Nation's navigator, the President.

Outbreak of war, radio address, September 3, 1939: "I trust that in the days to come our neutrality can be made a true neutrality."

Eighteen days later, message to Congress to lift the arms embargo, largely to give employment here, and "removal of the embargo is merely reverting to the sounder international practice and pursuing in time of war as in time of peace our ordinary trade policies."

May 16, 1940, message to Congress, and May 26, radio address, while France was falling. Much on defense of the United States, nothing on aid to the allies.

October 12, 1940, after the United States had sent great material aid to Britain, left alone, address to the Western Hemisphere: "No combination of dictator countries of Europe and Asia will stop the help we are giving to almost the last free people fighting to hold them at bay * * *. The people of the United States, the people of all the Americas, reject the doctrine of appeasement."

Preelection. Peace. Hartford, Conn., October 30: "The United States today is at peace and is going to remain at peace." Rochester, N. Y., November 2: "Your President says this country is not going to war." Cleveland, November 3: "The first purpose of our foreign policy is to keep our country out of war."

Postelection. Wartime footing. Radio address, December 29: "We must be the great arsenal of democracy * * *. We must apply ourselves to our task with the same resolution, the same sense of urgency, the

same spirit of patriotism and sacrifice that we would show were we at war."

1941: Theory of aid-Britain expands to refusal to recognize a Nazi victory. Message to Congress, January 6: "We are committed to the proposition that principles of morality and considerations for our own security will never permit us to acquiesce in a peace dictated by aggressors and sponsored by appeasers."

Same address: Theory of aid-Britain dilates to intention to resist aggression anywhere. President backs establishment of four essential human freedoms "everywhere in the world," pronouncing this phrase four times.

March 15: Theory of aid-Britain enlarges to commitment to complete defeat of Axis. Radio address: "And from now on that aid will be increased, and yet again increased, until total victory has been won. * * * Never, in all our history, have Americans faced a job so well worth while."

As events break like machine-gun fire around us, we have become, as a nation, too closely framed in reviews of the week. It is healthful occasionally to make a mental review of a year or a year and a half. When the pilot checks his drift he compares his latest reading with his very first reading to get total variation. What a variation from "true neutrality" to commitment to "total victory"!

Strikes in Defense Industries

EXTENSION OF REMARKS

OF

HON. CHARLES O. ANDREWS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 1 (legislative day of Monday, March 31), 1941

SURVEY FROM THE GALLUP POLL

Mr. ANDREWS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a Gallup poll on strikes in national-defense industries.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

PUBLIC BLAMES UNION LEADERS FOR STRIKES IN DEFENSE INDUSTRIES, GALLUP SURVEY REVEALS

REPORTED THIS WEEK

Do you think America's production of arms, airplanes, and other war materials is going fast enough?

Yes, 30 percent.
No, 53 percent.
No opinion, 17 percent.

(Those saying no): What do you think is the chief reason why production isn't going ahead faster?

Strikes in defense industries, 52 percent.
Politics and red tape, 11 percent.
Shortage of plants, etc., 6 percent.
All other answers, 19 percent.
No answer, 12 percent.

Do you think labor-union leaders are helping the national-defense production program as much as they should?

Yes, 18 percent.
No, 68 percent.
No opinion, 14 percent.

Do you think industrial (business) leaders are helping the national-defense production program as much as they should?

Yes, 51 percent.
No, 31 percent.
No opinion, 18 percent.

Which do you think is trying harder to help national-defense production, labor-union leaders or industrial leaders?

Industrial leaders, 56 percent.
Labor leaders, 10 percent.
Both the same, 16 percent.
No opinion, 18 percent.

Would you favor a law compelling employers and unions to submit their differences to a Federal labor board before a strike could be called in industries connected with the defense program?

Yes, 85 percent.
No, 7 percent.
No opinion, 8 percent.

Henry Ford has refused to recognize labor unions in his plants. Do you approve or disapprove of his attitude toward labor unions?

Approve, 58 percent.
Disapprove, 29 percent.
No opinion, 13 percent.

Westbrook Pegler, the newspaper writer, claims that many labor-union leaders are racketeers. Do you agree or disagree with him?

Agree, 72 percent.
Disagree, 14 percent.
No opinion, 14 percent.

FROM RECENT SURVEYS

Should the Government forbid strikes in industries manufacturing materials for our national-defense program, or should the workers in these industries continue to have the right to strike? (July 1940.)

Yes, 72 percent.
No, 20 percent.
No opinion, 8 percent.

During the next 4 years do you think there should be more or less regulation of labor unions by the Federal Government than at present? (November 1940.)

More, 60 percent.
Less 21 percent.
Same, 19 percent.

Are you in favor of labor unions? (May 1940.)

Yes, 74 percent.
No, 26 percent.

Return of Frigate "Constellation" to Baltimore

EXTENSION OF REMARKS

OF

HON. MILLARD E. TYDINGS

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, April 1 (legislative day of Monday, March 31), 1941

EDITORIAL AND ARTICLE FROM THE BALTIMORE EVENING SUN

Mr. TYDINGS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Baltimore Sun of March 20, 1941, and an article published in the same newspaper of March 22, 1941, dealing with the subject of the proposed return of the U. S. frigate *Constellation* to Baltimore.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

[From the Baltimore Evening Sun of March 20, 1941]

OUR NOBLE CAUSE

Nations may rise or fall; there may be wars and rumors of wars; civilization may hang in the balance. These minor incidents have no discouraging effect upon the high purpose of Edward S. King, chairman of the *Constellation* committee of the Gavel Club, which is to bring the frigate *Constellation* back home to Baltimore. He just keeps plugging right on.

The *Constellation*, as everybody ought to know by now, was built in Baltimore, launched from Sterrett's shipyard on Harris Creek, September 7, 1797, and manned in this city. She is the oldest surviving frigate of the United States Navy.

The *Constellation*, recently recommissioned by Secretary Frank Knox, is now tied up in the United States naval station at Newport, R. I. "Kidnaped" is the word employed by Mr. King when he speaks of her present situation. It is Mr. King's ambition to see her brought back to her home port and moored off Fort McHenry "as a memorial to Mrs. Reuben Ross Holloway, that noble patriot who brought about making by Congress the Star-Spangled Banner our national anthem."

Governor O'Conor, at the request of Mr. King, has appointed a committee to wait on President Roosevelt and request the return of the frigate, but the committee hasn't yet waited. "Would that there were some upheaval with Baltimoreans and citizens of Maryland," exclaims Mr. King, "and that they would rise in their might and power and press and press for the return of our birthright."

Baltimoreans are famous for their indifference. They do not upheave readily. But if persistence can do the job—and with due consideration for the persistence of Mr. King—then the *Constellation*—and please don't confuse it with that other noble ship, the *Constitution*—is already as good as here.

[From the Baltimore Evening Sun of March 22, 1941]

MOVE AGAIN BEGUN TO RETURN "CONSTELLATION" TO BALTIMORE—GALA DAY IN 1914 WHEN FRIGATE SAILED UP PATAPSCO AFTER HER LAUNCHING HERE RECALLED

It was a gala day in September 1914 when the U. S. frigate *Constellation* sailed up the Patapsco and into the Baltimore Harbor, exactly 117 years to the day from the time she was launched here.

Since that occasion, when Marylanders were celebrating the birthday of the Star-Spangled Banner, the *Constellation* has never come back to Baltimore, and that is what Marylanders for more than a generation have been complaining about.

SEVENTY-SEVEN THOUSAND SIGN PETITION

Last year, under the sponsorship of the Gavel Club and its president, Edward S. King, more than 77,000 persons signed a petition to bring the frigate—the oldest ship in the Navy—back to Baltimore permanently.

Thursday, doing what they had done before at several previous sessions of Congress, Senators TYDINGS and RADCLIFFE introduced a bill authorizing the restoration and preservation of the ancient warship and moving it to Baltimore.

The last time the *Constellation* came here Baltimoreans did their best to brand it as their very own.

MEMORIAL TABLET

To mark the homecoming they tacked a bronze memorial tablet on one of the walls of the gun deck in the stern which reads:

"This tablet commemorates the return of this historic frigate *Constellation* to her birthplace, Baltimore, upon the one hundred

and seventeenth anniversary of her launching, September 7, 1797. She is one of the first three sister ships of the United States Navy, the *United States*, the *Constellation*, and the *Constitution*.

POMP AND CEREMONY

Little Miss Helen Jackson Preston, daughter of the late Mayor Preston and now Mrs. Benjamin S. Rich, pulled the string which tore away the American flag from the memorial tablet.

Her father was there, standing with Admiral Frank F. Fletcher, Capt. William F. Fullam, Superintendent of the Naval Academy, and other distinguished guests, to give her encouragement, but he took no part in the ceremonies.

Noisy celebration was combined with pomp and ceremony for the few days the ancient frigate lay here.

IS GREETED IN HARBOR

As she came in the harbor at the head of a fleet of warships the whistles of boats and the cries of their seamen greeted her. A Cuban cruiser gave her a five-gun salute and the *Constellation*, having no guns that would fire, had to let one of the accompanying warships answer it.

The guns at Fort McHenry saluted next, and soon afterward the *Constellation* was at pier 6, Pratt Street. The next day, besides the unveiling ceremony, Colonial scenes were reenacted on the lawn in Carroll Park. Charles and Baltimore Streets were roped off for carnival.

CONTRAST NOTED

"A queer, beautiful picture the *Constellation* made among the modern craft in the harbor," said the Sun the next day, "in sharp contrast to the grim, gray iron of the torpedo destroyer *Cummings*, which lay just in her rear, and to the modern warships, with their iron battle towers, out in the harbor.

"The historic waters of Baltimore were the shrines of those who were doing homage to the men who made the history of the country."

As far as the *Constellation* goes, many Marylanders strongly feel that Baltimore waters are the only ones that have a right to be its shrine.

IS MOORED AT NEWPORT

To their most recent efforts to bring this about, they obtained the endorsement of all but one Governor, and that was the Governor of Rhode Island, where the *Constellation* now is moored, at a pier at Newport.

Even leaders of the Maryland campaign admitted the Rhode Island chief executive was in a delicate position.

An earlier effort to bring the frigate here was scotched by President Roosevelt, partly because the Navy asserted it would cost $1,000,000 to completely recondition her.

TERMS ESTIMATE "PREPOSTEROUS"

In Baltimore, James E. Hancock, president of the Society of the War of 1812, said this estimate was "preposterous."

The *Constellation* was designed by Joshua Humphreys and was built at the Canton shipyard of Samuel and Joseph Sterrett. Her name typified the field of the American flag, and there was a tradition that Baltimore women contributed their pocket money toward the expense of building and outfitting her.

YANKEE RACE HORSE

The frigate's first fight, on February 9, 1799, ended in what was described as a "glorious victory."

She met the French frigate *L'Insurgente* near St. Kitts, and after an hour and 14 minutes of hot fighting captured her. The fire was so hot that the men crawled out of the ports to dip up water to pour over the cannon.

Subsequent engagements gave the frigate the nickname among the French "Yankee cheval de course" (Yankee race horse).

A Farmer Writes—Build for the Future—No Jobs for These

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 1 (legislative day of Monday, March 31), 1941

EDITORIALS FROM WILLISTON DAILY HERALD

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD three editorials from the Williston (N. Dak.) Daily Herald, as follows: March 12, 1941, entitled "A Farmer Writes"; March 19, 1941, entitled "Build for the Future"; and March 20, 1941, entitled "No Jobs for These."

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Williston (N. Dak.) Daily Herald of March 12, 1941]

A FARMER WRITES

Advice on how best to farm comes most often from those who are not actual farmers, but from students of farming—both professional and amateur—who see what's being done, make comparisons, and offer the results as advice to those actually tilling the soil.

From farmers themselves, however, we feel the best advice on farming should come, but the trouble is that most of them are too busy, and some of them find difficulty in putting their thoughts into words, so as a general thing we get little farming counsel from farmers. There are some, however, whose experiences are fruitful and whose expression of thought is good, and their suggestions are most worthy of consideration. One such is Louis B. Dvorak near Dickinson who recently wrote a letter published in the Bismarck Tribune, from which we take it for quotation here. The letter follows:

"What we need in North Dakota is irrigation. Even though it may be only one-half or one-fourth acre, it will produce enough vegetables for a large family for the winter. The sooner we get this idea in the people's mind, the sooner we will be on the road to self-support in home-grown needs.

"A pump costs money, but when you figure the results it pays for itself in 1 year, and the pump with ordinary care will last a lifetime. This would be one way of having fewer people on relief, because the majority of people, through getting grants the last few years, have lost the desire of self-support. They figure: 'Well, we got by this year; somehow we will make it next year. The Government will feed us somehow.'

"I think John Moses should, in some speech later toward spring, urge people to plant and irrigate a garden wherever possible to ease the burden of the Government, as it has its hands full now for the defense of our country. We will have billions of dollars spent on armaments. And careless people—if the Government has to feed them—will run us way into debt for years to come. Of course, all cannot have irrigated gardens, but there are at least half of the people in North Dakota that can have at least a watered garden, if not more irrigated ground."

Mr. Dvorak's first premise is that farmers won't starve if they have their cellars full of vegetables, and his second is that every farmer should take advantage of whatever natural facilities he has to assure himself of such a supply of food. He admits that probably only half the farmers in North Dakota could irrigate as he suggests, but sees no reason why that half, at least, shouldn't have well watered gardens every year.

We plan and speak and write much about irrigation here in western North Dakota, but most of our effort concerns the big projects such as the Buford-Trenton and Lewis and Clark near Williston. As Farmer Dvorak suggests, perhaps there is even a bigger field of endeavor in helping individual farmers scattered throughout the countryside to put to use whatever facilities they have available so as to irrigate gardens for themselves and for the better feeding of their families.

[From the Williston (N. Dak.) Daily Herald of March 19, 1941]

BUILD FOR THE FUTURE

If the defense program should offer Williston a factory of some kind employing 1,000 persons, but only for a year or two, would we accept it gladly?

That question was asked us recently by one of the city's businessmen and, after some discussion, the conclusion was reached that such a proposal would not be an unmixed blessing, and that the city would probably be better off in the long run if it turned down the factory entirely.

Poor business, you might say, to reject a pay roll of 1,000 men. But looking at the matter with long-range view, how about the years after the proposed plant closed down? What would these 1,000 workers do in our midst after their brief employment ended? And what would the city and county do with the responsibility for caring for these 1,000 workers and their families—a total of probably 4,000 persons? When you're up against questions such as those and can't find the answers, then you wonder if a short-time industrial boom would be a good thing for our city or any other city in the land.

It is with such situations in mind that the men who shape our reclamation program in the West have concluded that they will easily be reconciled to the fact that the Midwestern and Western States get only dribbles from the flow of billions which go out in the defense effort. Reclamationists will try to get additional Federal allocations, but they will seek the money for further reclamation work, not for industrial plants and other endeavors directly concerned with the national-defense program.

The reclamation program is shaping up as a long-term plan to help relieve the country of the post-war dislocations, as well as merely to give Western States more irrigation projects. This trend is prompted by the realization that after the defense-spending spree is over, and after the war in Europe is concluded, the Nation is going to be faced with its greatest crisis of unemployment and economic dislocation. What would have happened to Williston if the 1,000-man factory came to our city for a brief time, actually will be happening throughout our industrial centers on a much larger scale when the defense emergency is over, and then there will be troubled times as great as any seen in our country.

One way of alleviating the difficulties will be by a program of public works to take up the slack in employment. Another way will be to have available farms to which the unemployed can turn, because the first place many of them will want to go when they lose

their jobs will be back to the land from which they went to the factories. The reclamation program can help in both branches of this program.

First, the reclamation endeavor can continue as it has, or even at an accelerated pace, and open up stabilized farming through irrigation on an ever-increasing acreage. This will make available more and more farms on which it will be possible at least to make a living and provide a haven for many unemployed workers when they start searching for the security of the land. Beyond that, however, the reclamation program can speed up its planning and survey work, prepare additional projects to be built with public funds, make ready a fund of jobs on which the Federal Government can draw in a postwar construction program for the hiring of men thrown out of work by the end of the war emergency. And that is one of the present aims of the men who work in our water-resources program.

Thus will the reclamation program of the West help the Nation withstand the shock of economic dislocations which are sure to come in the not-so-far distant future.

[From the Williston (N. Dak.) Daily Herald of March 20, 1941]

NO JOBS FOR THESE

Hundreds of job inquiries, but no jobs to offer.

That's the experience of the Williston office and all other branches of the State employment service these days as the country engages in a tremendous shift of labor population as result of the defense program.

The job seekers in North Dakota are the common labor type of worker, the men on W. P. A. who would like to get back into higher-paying private employment, the odd-jobs men who would like steady work, the men now working who hope to find better jobs under the huge program of national defense.

But there is nothing for these men in the newly expanding industries. Wherever in the industrial East there is construction—and there is plenty of that under the broad program of factory expansion—there is plenty of common labor available. There is, therefore, no need of transporting labor of that kind from North Dakota into the work centers of the East and Middle East, and consequently the job seekers of this State are merely told there is no work for them.

What industry wants is skilled labor—tool and die makers, machinery experts, men who know the ins and outs of modern mass production by machines and assembly lines. The country is being scoured for this type of worker in frantic efforts to build up the production of our factories to meet the needs of the present emergency. There have been a few such workers found in North Dakota—men who were employed during the last industrial boom and came West to find security in farm lands when the bubble broke—and some of them have gone back to the bench and assembly line to contribute their skills to the needs of the day. But there are very few in such a State as ours.

In hearing the report of the employment service that hundreds of North Dakota workers have applied for defense jobs, we find therein cause for praise of our working population. Of these hundreds, a large part undoubtedly is W. P. A. labor—men now employed on public projects but hoping for something better; men who have accepted the help of W. P. A. to tide them over, but who now feel a surge of hope that better jobs are available, and that they can get them. We feel a justifiable pride that these men are eager to better their condition and are applying for these defense jobs, and therefore feel all the more keenly the tragedy of the situation which finds no jobs for them, even though the Nation is now taking an inventory of labor because of a shortage of the kind of workers that are most needed.

Because of the defense program, which is expected to put thousands and millions of men to work, the Government has already begun to cut down on W. P. A. appropriations and cut W. P. A. workers off the pay rolls. That program of curtailment, however, should not be extended to such States as North Dakota, whose workers, even though they apply for these new jobs, can find no place in the defense effort. There is, rather, plenty of argument here for the continuation of a public-works program to keep these men employed on public projects because there is nothing else for them.

As far as we are concerned, the public projects most desirable and useful to this section are those which have to do with irrigation and other water uses—from the huge Missouri diversion project on down to irrigation wells or stock-watering dams on individual farms. Our working population needs them, our farmers want them, and the whole countryside will benefit greatly if they are carried out.

Aid to Greece

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 1 (legislative day of Monday, March 31), 1941

EDITORIAL FROM WASHINGTON EVENING STAR

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Washington Evening Star of March 14, 1941, entitled "Help Greece Now."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of March 14, 1941]

HELP GREECE NOW

The primary aim of the Lease Lend Act is to safeguard Britain against German attack, because the fall of Britain would be a catastrophe transcending all else. Yet the act's broader objective is to aid the opponents of totalitarian aggression everywhere. And surely none is more deserving of quick and generous assistance than is heroic Greece—a fact specifically recognized by the President when he announced Tuesday that Greece would share in the first shipment of matériel to leave this country after passage of the act.

Greek Minister Diamantopoulos declared yesterday that Greece will hold firm against "all aggression." None can doubt Greece's determination to do this. The exploits of the Hellenic soldiers in Albania are as amazing as were those of the Finns in their dogged resistance to the Russian colossus; and, thanks to British aid, Greek resistance has been more enduringly successful. The punishment inflicted upon the Italians has been noteworthy, both in men and materials. The Greek military authorities estimate that at least 130,000 Italian soldiers have been killed or captured on the Albanian front since the Greco-Italian war started last October, and fresh losses pile up rapidly with every passing day. The Albanian venture has become a chronic ulcer, eating away steadily at Italy's waning strength.

But the military aspect is far outweighed by the diplomatic and psychological services which Greece has rendered to the fight against the totalitarian powers. To estimate the value of these imponderables, it is only necessary to cast the mind's eye back to last autumn and consider how different the situation might have been if John Metaxas had yielded to Mussolini's ultimatum.

Up to that time Germany had gone from victory to victory, while Italy had confidently stepped in on what looked like the winning side. A big Italian army had crossed the Egyptian frontier from Libya, while another large army in Italian east Africa threatened to take Britain's Egyptian base and the vital Suez Canal in the rear. Almost two decades of boastful preparation had given Fascist Italy considerable prestige. At least, cautious critics were willing to give it the benefit of the doubt.

The miserable showing made by the Italians in their invasion of Greece pricked the bubble of Fascist prestige. It may have been largely on the basis of that poor showing, as well as on the acquirement of Greek bases in Crete and elsewhere, that General Wavell determined to risk what looked like a gamble in his Libyan campaign.

The diplomatic and strategic repercussions of the Italian fiasco upon German plans were likewise important. If Greece had tamely surrendered and had been occupied by the Axis, the whole Balkan peninsula might well have followed suit, and perhaps Turkey as well. There is good reason to believe that the Axis general staffs were then planning a gigantic pincer operation against Egypt and the Near East. The progressive collapse of Italian military and naval power sent that bold idea into the discard. Even today, for all the Reich's military advances and diplomatic successes in the Balkans, Germany is there strategically on the defensive, seeking to keep the Balkans at peace and prevent the formation of a Balkan war front. Greece's timely resistance alone made this possible.

Perhaps most important of all has been the electrifying effect of Greek heroism in the realm of the spirit. Everywhere, men have been taught the lesson that patriotic devotion in defense of high ideals goes far to outweigh handicaps in numbers and equipment; that this is not simply a war of machines but of dauntless souls as well. That is Hellas' supreme contribution to the cause which most Americans hold dear. It is time that Greece received from us prompt and generous support in her hour of dire need.

President Roosevelt's Program for Total Victory

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 1 (legislative day of Monday, March 31), 1941

ADDRESS BY ROBERT M. HUTCHINS

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered on the 30th of March by President Robert M.

Hutchins, of the University of Chicago, on the subject of President Roosevelt's program for total victory.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

[From the Washington Times-Herald of April 1, 1941]

HUTCHINS TERMS ROOSEVELT POLICY "FALSE PATH TO LIBERTY"—SAYS AMERICANS STILL HAVE CHANCE TO ACT BEFORE PLUNGING INTO WAR

CHICAGO, March 31.—Robert M. Hutchins, president of the University of Chicago, declared yesterday that President Roosevelt's program for "total victory" is a "false path to freedom."

He said the American people want peace. But if the Nation plans for total victory, he said, "it should fight now."

"We are not justified in hoping that the Axis will suffer total defeat without full American participation in the war."

Hutchins spoke at a Sunday morning service at the university's Rockefeller Memorial Chapel. His address was broadcast nationally by the Mutual Broadcasting System.

Hutchins warned that "we still have not lost the power to decide for peace or war."

"We still have a chance to catch our breath, reflect a little, and take a last look around before we plunge into the abyss," he asserted. "The people have never had a chance to express themselves on the issues of war or peace."

PRAISES PRESIDENT

"The President is a democratic leader. One of his greatest qualities is his sense of responsibility to the people. If he is moving toward war, he must be doing it in the conviction that the people want him to. If this is his conviction, he is mistaken."

Recalling that on election eve last November Mr. Roosevelt had said, "We propose and expect to continue our lives in peace," Hutchins discounted the President's remarks of March 15, wherein he said, "Do not let us waste time reviewing the past or fixing or dodging the blame for it."

"I cannot believe that this means that he wants us to forget his promises to pursue a policy of peace," Hutchins said.

Admitting that the people of the United States want to defend the country, "aid Britain, and stay out of war," he reminded his audience that supporters of the lend-lease bill hailed it as a bill to keep the country out of war."

"The passage of this bill gave the President no mandate for war. The people want peace."

He challenged the administration's proposed aid to "embattled democracies," describing China, Greece, and Turkey as dictatorships.

Throughout his speech Hutchins asked: "What are we going to war for?" He accused Britain of failing to set out her war aims or a plan for reconstruction of the European system after the war. And he said President Roosevelt had been vague in stating the purposes of this Government.

RECALLS PLEDGE

"Are we to rush to arms everytime the British Empire is in danger?" he said. "Are we to put down every tyrant that arises in Europe?"

Then, recalling Mr. Roosevelt's four freedoms—freedom of worship, of speech, from want, and from fear—Hutchins said "the President cannot literally mean that we are to fight on till the four freedoms ring everywhere. If we are to be responsible for the four freedoms everywhere, we must have authority everywhere. We must force the freedoms upon people who might prefer to do without them.

"We seek freedom from want, and we impoverish ourselves. We seek freedom from fear, and we terrorize ourselves. We seek freedom of worship and freedom of speech, and we suppress them."

He asserted that capitalism will not survive American participation in the war. But, because "it is the vehicle of the materialism which has brought us to our present pass," he said he was uncertain that it deserved to survive.

ROOSEVELT'S PROMISES

"Things look black," Dr. Hutchins said. "The President now calls for 'total victory' over 'the enemy' and urges upon us the determination needed to win.

"Still there is a chance that these remarks are for foreign consumption and do not mean what they seem to mean. They seem to mean that the British, Chinese, and Greeks are our allies. If this is so, it is immoral to let them die for us while we sit safely at home. We should have been in the war from the start. We should fight now. And if we are actually to press on to total victory, we must fight. We are not justified in hoping that the Axis will suffer total defeat without full American participation in the war.

"Two days after war broke out in Europe the President assured the Nation that he would do everything he could to keep it at peace. He has repeated these assurances again and again. Every speech he made during the campaign contained a pledge to keep the country out of war. The night before the election he said: 'We propose and expect to continue our lives in peace.' Two weeks ago he said: 'Do not let us waste time reviewing the past or fixing or dodging the blame for it.' But I cannot believe that this means that he wants us to forget his promises to pursue a policy of peace.

"Until we are engaged in miltary action we must continue to hope that we can avoid the ultimate catastrophe. We stand on the brink of war. But we have not been attacked. The burden of proof rests on those who claim we are about to be.

"The people have never had a chance to express themselves on the issue of war or peace. The election gave them no chance. Both parties declared for peace. Both candidates declared for peace.

PEOPLE WANT PEACE

"The Gallup poll shows that the people are for peace and that they trust Mr. Roosevelt to keep them at peace. The Gallup question published 10 days ago was, 'If you were asked to vote on the question of the United States entering the war against Germany and Italy, how would you vote—to go into the war or to stay out of the war?' Eighty-three percent of those asked said they would vote to stay out.

"The country wants to defend itself, aid Britain, and stay out of war. We have been told over and over again that we could do just that. During the hearings and debates on the lease-lend bill man after man announced that this was a bill to keep the country out of war. Mr. Willkie said that was why he was for it. Senator GEORGE, who led the fight for the bill, said that was why he was for it. The passage of this bill gave the President no mandate for war. The people want peace.

DOUBT OF DEMOCRACIES

"If we go to war, what are we going to war for? Mr. Roosevelt tells us we are to save the democracies. The democracies are, presumably, England, China, Greece, and possibly Turkey. Turkey is a dictatorship. Greece is a dictatorship. China is a dictatorship. As to England, in 1928 Mr. Anthony Eden, now foreign secretary, speaking in behalf of a bill extending the suffrage, felt it necessary to say to the House of Commons: 'We have not got democratic government in this country today; we never have had it and I venture to suggest to honorable members opposite that we shall never have it. What we have done, in all the progress of reform and evolution of politics, is broaden the basis of our oligarchy.'

RESTORING BOUNDARIES

"If we go to war, what are we going to war for? The British propose to defeat the Axis. What they propose to do then they do not say. They have repeatedly refused to say. Yet the United States is entitled to know. Are we to rush to arms every time the British Empire is in danger? If so, we are entitled to know what the future policy of the British Empire is to be. Are we to put down every tyrant that arises in Europe? If so, we are entitled to know what is to be done to keep each tyrant from being worse than the last.

"If we go to war, what are we going to war for? The only specific statement the President has made on the course we are to pursue after the war is found in two sentences in his last speech. He said, 'We believe that any nationality, no matter how small, has the inherent right to its own nationhood.' To the same effect, he said, 'There never has been, there isn't now, and there never will be any race of people fit to serve as masters over their fellow men.' Do these statements imply restoration of pre-war boundaries in Austria, Czechoslovakia, Danzig, Poland, China, and Rumania? Is this undertaking to be world-wide? If so, how do we induce Russia to restore the pre-war boundaries of Estonia, Latvia, Lithuania, Finland, and Poland?

"We are stirred, but not enlightened, by the great phrase—the four freedoms—which the President has used as the general statement of our aims. Freedom of worship, freedom of speech, freedom from want, and freedom from fear—if we go to war we go to establish these four freedoms everywhere.

ARMED MISSIONARIES

"The President cannot literally mean that we are to fight on till the four freedoms ring everywhere. If we are to be responsible for the four freedoms everywhere we must have authority everywhere. We must force the four freedoms upon people who might prefer to do without them rather than accept them from the armed missionaries of the United States. This new imperialism, this revised conception of the white man's burden, this modern version of America's manifest destiny is a repudiation of the Presidential teaching that there never has been, isn't now, and never will be any race of people fit to serve as masters over their fellow men."

The Oil Monopoly Stays in the News—Great American Oil Companies Play a Prominent Part in International Relations—Wars and Neutrality Laws Annoy Them Little

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1941

Mr. COFFEE of Washington. Mr. Speaker, the activities of the American oil monopoly in selling their products throughout the world, have too often been overlooked by the American public. In this connection, some recent newspapar articles should prove of interest. In

the Washington Post of March 20, 1941, Senator JOSEPH C. O'MAHONEY, of Wyoming was quoted in connection with a speech he delivered at a dinner meeting of the Washington, D. C., branch of the American Association of University Women. Among other things, the Senator discussed certain integral aspects of the oil monopoly and their operations in world trade. I quote:

[From the Washington Post of March 20, 1941]

SENATOR O'MAHONEY ASSAILS AIR LINE IN SPEECH HERE

Charging that the Pan American Air Transport Co., "a creature of the State of Delaware, is doing what the Constitution prohibits the State which created it from doing," Senator JOSEPH C O'MAHONEY, of Wyoming, declared last night that "the modern phenomenon of big government seen simultaneously in Europe and America is a result primarily of big business."

Addressing the dinner meeting of the Washington branch of the American Association of University Women at the clubhouse last night, he said that the Senate Committee on Appropriations is now considering the opposition of the Pan American Air Transport Co. to the appropriation of $1,250,000 for the establishment of a competing air service across the Atlantic Ocean.

"Pan American has entered into a contract with the Government of Portgual," he said, "by which it has bound that Government not to grant landing rights to any other American company. The Constitution of the United States provides that no State shall enter into any contract with any other State or with any foreign power without the consent of Congress.

"Pan American has subsidiary corporations in at least 18 or 20 foreign countries, and no agency of the Federal Government has as yet been consulted about the terms of any one of these contracts.

"The War Department and the State Department are today gravely concerned over the problem of oil going to the Axis Powers," he said. "Socony Vacuum Oil Co. has a subsidiary corporation in Hamburg, Germany. The Dutch Shell Oil Co., which through one of its subsidiaries, the Shell Oil Co., delivers and sells gasoline in Washington, is now under the control of Herr Hitler. It has vast oil resources in the Dutch West Indies.

"The Standard Oil Co. of California, which has been shipping oil to Japan from California, and the Texas Oil Co. both own oil deposits in the Bahrein Islands in the Persian Gulf and in nearby Saudi, Arabia. An embargo by the American Government on the exportation of California oil to Japan would not touch either of these Asiatic sources of oil supply," he pointed out.

Mr. Speaker, in the Washington Times-Herald of March 15, 1941, there is a very arresting story concerning the operations of major oil companies in connection with international trade. While we have been told by prominent Government officials and students of international affairs that we have been embargoing the export of high-grade oil to Japan, the facts disclose that we have actually increased our shipments thereof to Nippon. In a subsequent speech, Mr. Speaker, I shall implement this statement with statistical data, having secured it with some trouble and the expenditure of a great deal of effort in the isolated files of Government bureaus. It is an amazing and disturbing fact that we are permitting oil companies operating in the United States to grow increasingly fat upon the annual profits they derive from the sale of very valuable lubricating oil and high-octane gasoline to the Japanese. Actually boycotting the aggressors and thereby assisting the democracies is not the general practice of this country, though we are told that it is. Of what avail is it to loan vast sums of money to the Republic of China while we permit, directly and indirectly, shipment to Japan of 100 octane fuel? To me it is outrageous and cause for an investigation by Congress. Who and what are the mysterious forces at work which are subverting and preventing effective quarantining of aggressor nations? How is it that these great oil companies are so potent in international relations that they can overcome the established and declared attitude of the United States Government in requiring licensing of exports of matériel of war? The article speaks for itself:

[From the Washington Times-Herald of March 15, 1941]

UNITED STATES FIRMS DEFY CURB ON OIL FOR JAPANESE WAR MACHINE—EMBARGO THREAT BOOSTS FLOW TO ORIENT; HEAVY DIVERSION TO GERMANY REVEALED

(By Pat Frank)

Military circles expressed fears yesterday that even if all categories of oil for Japan were embargoed, big American oil companies with fields outside the United States would continue to supply the Axis partner with huge quantities of fuel.

These fears were expressed, despite administration efforts to curb the flow of strategic petroleum products to Nippon and recent indications by President Roosevelt that the country's wide-open policy in regard to oil might be changed, although he has never said when such a change might occur.

UNITED STATES FIRMS INVOLVED

It was pointed out in military circles that if such an embargo came about, sales from foreign fields would be made outside the jurisdiction of Gen. Russel L. Maxwell's export control division.

"When we shut off new categories of fuel to Japan, watch that trade be shifted to the Bahrein Islands," an oil man told this correspondent.

In these islands and in near-by Saudi Arabia the Texas Co. and the Standard Oil Co. of California, the two companies with tremendous interests in the Far East, have opened up immense oil reserves. Together they own the Bahrein Petroleum Co., Ltd., formed for the express purpose of supplying eastern and southern Asia.

OIL STILL FLOWING

Japan with its war machine poised to strike at the Dutch East Indies, Singapore, and even the United States itself, is still obtaining hundreds of thousands of barrels of American oil.

The export-control division set up by Presidential order and military proclamation has succeeded in shutting off the flow of 100-octane aviation gasoline from the United States to Japan. But other fuels—including the oil that powers Japan's battleships—are being shuttled across in increasing quantities.

And Japan still gets its aviation gasoline. It gets some in American tankers from Venezuela, Mexico, and the far-off Bahrein Islands. It gets some from the frightened Dutch East Indies. And it makes some with an American process now in the hands of Germany.

HUGE EXPORT IN JANUARY

In the month of January—the latest month for which figures are available at the Bureau of Foreign and Domestic Commerce—the United States sent 647,708 barrels of gas and distilled fuel oil to Japan. This was away over the monthly average for 1940, which was 425,515 barrels. To naval officers this is significant, for it's the kind of oil that operates Japan's fleet.

In January we sent 520,534 barrels of crude oil to Japan, also an increase over the monthly average of last year.

In 1939 we sent Japan 562,230 barrels of aviation gasoline.

In 1940 we sent Japan 527,451 barrels of high-grade gasoline, of which approximately 327,000 barrels was aviation gas. The President halted the export of aviation gas, without license, to all countries outside the Western Hemisphere, effective August 1, 1940.

Since then Japan hasn't been able to get our 100-octane gasoline—not directly.

But Japan employed a clever dodge in continuing to import aviation gas. The 100-octane fuel—the only fuel that will push 400-mile-an-hour fighting aircraft—was loaded into containers at west-coast ports. And into the containers was poured enough crude oil to reduce the rating of the fuel to distillate oil.

When the fuel arrived in Japan it was redistilled and, lo, it was 100-octane airplane gas again.

UNITED STATES HALTS PRACTICE

The aid the great combines have given the Axis is best told by lubricating oil, perhaps. You cannot run fighting planes without high-grade lubricating oil, and the United States produces the best lubricating oils in the world.

Germany's one great weakness is "lube." Germany makes plenty of 100-octane gas through synthetic process. But you cannot make ersatz lube.

In 1938 Japan imported from the United States 307,272 barrels of lubricating oils. In 1939 the Japanese imports jumped to 513,545 barrels. And in 1940 Japan imported 811,499 barrels.

OIL DIVERTED TO GERMANY

In January of this year Japan's imports of lubricating oil reached the all-time high, for 1 month, of 247,982 barrels—about 50,000 barrels less than was imported in an entire year 2 years ago.

Do you think that all that "lube" stayed in Japan?

This is Washington's most explosive secret.

Another secret concerns what happened to the "lube" oil that went to Spain.

In the first 8 months of the war, 296,000 barrels of "lube" went to Spain, contrasted with 99,544 barrels during a comparable period in the previous year.

From an official British source the O. N. A. learned that most of the lubricating oil sent to Denmark, before the invasion of that nation, was diverted to Germany. In the first 8 months of war, Denmark imported 311,718 barrels of "lube," compared with 164,700 barrels in the same period the year previous.

Mr. Speaker, in the Nation, weekly magazine, of March 1, 1941, the well-known writer, I. F. Stone, tells the true story of the sale of gasoline to aggressors. It is an astounding and disturbing story which Mr. Stone tells. Are these oil companies bigger than government itself? Can they defy United States Government? Are they going to be permitted to nullify the accepted policy of our Government—that of quarantining the aggressors? Are profits

more sacred than national honor? I quote the article, and suggest its reading to those concerned with international affairs:

[From the Nation of March 1, 1941]

OIL IS STILL NEUTRAL

(By I. F. Stone)

One need possess no inside information to see that war with Japan is a possibility. Gossip in circles on the Hill which are close to the Army and Navy say "within 60 days." Yet the same patriotic oil companies whose dollar-a-year men dominate the Defense Commission continue to send Japan the oil it needs. During the week ended February 15 we sent Japan 147,044 barrels of crude oil and 137,657 barrels of lubricating oils. We sent Britain 60,000 barrels of crude and 168,986 barrels of fuel oil the same week. Oil is still neutral.

When foreign countries, like domestic consumers become annoyed with Standard Oil, the marines are called for. Otherwise business is business and a yen is as good as a dollar. For all the headlines about oil embargoes, American oil companies are enjoying a boom in exports to Japan. Here is the total value of our petroleum exports to Japan during the past 4 years:

1937	$43,733,000
1938	51,191,000
1939	45,285,000
1940	53,133,000

Lest the reader think these exports have been slowing down I give the figures for 1940 by quarters:

First quarter	$8,584,000
Second quarter	7,717,000
Third quarter	14,160,000
Fourth quarter	22,675,000

Oil exports to Japan are running at a rate almost double any year since the "China incident" began.

The figures for gasoline alone show that we sent Japan three times as much gasoline in 1940 as in any of the 3 preceding years. Aviation gas is a story in itself. The Commerce Department, at the request of the State Department, changed the name of aviation gas last September to "high-grade motor fuel in bulk or containers." This was done, I was told, "so the State Department wouldn't be embarrassed by writers and newspapermen." In 1939 Japan took 628,560 barrels of aviation gas. In 1940 it took 556,703 barrels of "high-grade motor fuel in bulk or containers." The Export Control Division says no aviation gas of higher than 87.5 octane content is going to Japan and that this other gas is inferior gas, not suitable for modern planes. Some authorities say flatly that it is good enough to be used in planes combatting an inferior air force like China's.

It is unfortunate that public attention has been centered on aviation gas, for war with Japan would be a naval war, and fuel oil runs battleships. Japan is being kept well supplied with fuel oil by American companies. Japan and Kwantung together (the State Department insists on separating them, although Japan's possession of Kwantung—the old Port Arthur region in south Manchuria—goes back to 1905) obtained almost 7,500,000 barrels of fuel oil from this country last year. Of basic importance, too, are Japan's heavy imports of crude oil, which amounted to more than 12,000,000 barrels in 1940. In December we exported 2,000,000 barrels of crude, of which half went to Canada, a fourth to Japan. Fuel oil and aviation gas are, of course, manufactured from crude oil. Japan has considerable facilities for refining and cracking, despite oil-company apologetics to the contrary. Latest published figures, which are several years behind, show Japan's refining capacity to be 52,600 barrels a day, as compared with greater Germany's 68,770. Her cracking capacity is 16,250 barrels a day, as compared with greater Germany's 7,290 barrels a day.

Exports to Japan are not the only contributions of American oil companies to the Axis. There are two sources through which Germany and Italy might obtain American oil—Soviet Russia and Spain. The attention paid to these two loopholes is in inverse ratio to the amount of oil going to them. The dollar value of all petroleum products shipped from this country to the Union of Soviet Socialist Republics last year was $1,850,000, as compared with the total of $53,135,000 sent to Japan.

Joseph Curran, of the National Maritime Union, testifying before the Senate Foreign Relations committee on February 10 against the lease-lend bill, provided a glimpse of Spanish possibilities. He told of the recent trip of a Standard Oil tanker, the *W. H. Libby*. "Not long ago," he said, "she went to Cartagena, Colombia, and loaded up with oil she took to Freetown, West Africa, for British use. Then she hurried back to Carapito, Venezuela, for another load of oil which she took, this time, to Teneriffe in the Canary Islands, where the cargo was transferred to a German and Italian tanker. * * * The crew of the *W. H. Libby* found Teneriffe a busy port, with a steady stream of Standard Oil tankers pulling in and out." In the harbor when the *W. H. Libby* left, were three German and five Italian tankers, the crew reported.

This part of Curran's testimony was given scant attention in the press, whether it was for or against the lend-lease bill. It would have been easy to refute it from Standard Oil and official records. I am told in the Commerce Department that oil exports from this country to Spain are now running about 300,000 barrels a month. But no one knows how much oil is going to the Spanish islands for transshipment to the Axis from American oil companies and refineries in Venezuela and the Dutch West Indies. Japan is obtaining large quantities from American and British oil companies in the Dutch East Indies.

The press has played up every story of Mexican oil going to Japan or the Axis Powers, but pays little attention to American oil bound for Japan, and makes no attempt to investigate how much oil may be reaching Germany and Italy through Spain, although that would be a great story. Mexico has some excuse for her shipments. Standard, Dutch Shell, and the State Department have been doing their best to enforce an unofficial embargo on Mexican oil, as I disclosed in the Nation last fall. The Navy, on instructions from the State Department, chose to pay Standard Oil 10 cents a barrel more for fuel oil rather than buy it from a small American company which manufactured the oil from Mexican crude. The only exception since made is for fuel oil manufactured by Harry Sinclair from crude given him by the Mexican Government in settlement of his claim under expropriation.

Behind the scenes Mexico is now being blackjacked into an agreement whereby Standard and Shell will get back operating control of their properties. The American taxpayer will be asked to foot the bill in the shape of a loan or an appropriation paying off the exaggerated estimates the American oil companies place on the value of their Mexican properties. The excuse will be that we must keep Mexican oil out of Japanese hands. Why not start by keeping American oil out of Japanese hands?

Dramatization of How a Bill Becomes a Law

EXTENSION OF REMARKS

OF

HON. ALFRED F. BEITER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1941

DRAMATIZATION OF HOW A BILL BECOMES A LAW BY SISTER MARY CONSILIO, O. P.

Mr. BEITER. Mr. Speaker, under leave to extend my remarks, I include herein a dramatization of how a bill becomes a law entitled "How Bill Became John Law, Esquire," by Sister Mary Consilio, O. P. This dramatization was produced recently at Public School No. 47, in the city of Buffalo, N. Y., under the direction of one of the teachers, Mr. Leo Burgoyne. Nine ninth-grade boys played in the cast. The balance of the ninth-grade class and part of the seventh-grade class sat on the stage and made up the "congressional chamber." One of the pupils of the eighth-grade class explained, by use of a slide, the progress of a bill through Congress before the performance.

This drama was published in the Young Catholic Messenger and is of interest to young students who are studying civics and current history. I first included this in an extension of remarks in the CONGRESSIONAL RECORD of March 29, 1938, and am repeating it at this time by special request.

HOW "BILL" BECAME "JOHN LAW, ESQ."

(A dramatization of how a bill becomes a law, by Sister Mary Consilio, O. P.)

(The bill debated in this drama is fictitious.)

Scene: The Capitol, Washington, D. C.

CHARACTERS

Bill, who later becomes John Law.
Representative Blank, who introduces Bill.
Presiding Officer of the House.
Chairman of Committee on Foreign Affairs.
Clerk.
Representative Dash, Chairman of the Committee of the Whole.
Leader of the favorable side.
Leader of the opposing side.
Sergeant at Arms.

(Scene one: The Capitol. Representative Blank enters with "Bill" beside him.)

Representative BLANK. Hurry along, Bill. I want to get you through the House before the session adjourns.

BILL. I'm all nervous about facing that big crowd of men. How many did you say there were?

Representative BLANK. The full roll is 435, but several have died and the State Governors have not yet appointed others to fill their unexpired terms. Don't worry, though, Bill. You'll find lots of friends in the House. I've spoken about you to many of the leaders, and they are quite anxious to have me introduce you.

BILL. Do you think they'll make me change my appearance any? I do like just what I have on.

Representative BLANK. Well, they may put a patch or two on you, but they won't change you very much. The committee will have to see you first in private, and if they think you're fit you will have to come before the House; if the committee doesn't think you'll do, I'm afraid it's the graveyard for yours.

BILL. The graveyard? What graveyard?

Representative BLANK. That's what we say when we mean that a bill has been killed by the House committee. It means that the committee doesn't think it will do, and it fails to recommend it to the House. That "kills" the bill. It never comes before the House in that same form again. But don't worry, old friend. You'll easily get by the committee. I don't expect to see you go to the graveyard.

BILL. It isn't very pleasant there. I don't want them to smother me like that. You don't think they'll do that to me, do you, Representative Blank?

Representative BLANK. I think they won't do that to you, Bill. You see, the last time there was a big war in the world, hundreds of thousands of our soldier boys were sent to Europe, and millions of our dollars were lent to the nations of Europe. Some say it was because many Americans had money invested in foreign nations and they were anxious to have their interests protected. Some rich bankers had lent money to foreign banks to pay for the war, so naturally they didn't want those countries to lose the war. Now if Congress agrees to you, the amount of American investments and loans in foreign countries will be limited and made at the risk of the investors, and the United States will not be mixed up with foreign troubles again because of American investors. But here we are now; I will introduce you.

BILL. What a crowd of lawmakers I see before me. I hope I have a happy fate at their hands.

(Scene 2. Before the House of Representatives. The class may represent the Members of the House.)

Representative BLANK. Mr. Speaker, Representative Blank.

PRESIDING OFFICER. Representative Blank.

Representative BLANK. I wish to introduce my friend Bill to the Members of the House. His full name is A Bill for the Limitation of American Investments and Loans in Foreign Nations. I hope that he will be favorably received by the Members of the House.

PRESIDING OFFICER. Thank you, Representative Blank. I shall refer your friend Bill to the Committee on Foreign Affairs, and I hope that he will live to come up before the body of the House. We shall call your Bill No. 9676543. Now the next business before the House, please.

BILL (aside). Whew! That was short and snappy. Now for the committee room. They tell me the committee work is done in secret and that no records are made of the proceedings. Well, now that I'm on the way, I am anxious to go through with it all.

(Scene 3. Some time later. Outside the committee room. Bill, looking rather wilted, but smiling, follows a member of the committee from the room.)

BILL. Wheeww! That was hot! I feel so wilted that I can't jump around to celebrate my victory. What a lot of mean things those committee men on the left said about me. They said that I would destroy the freedom for which their forefathers died; that I would banish the word prosperity from the American dictionaries.

MEMBER OF COMMITTEE. Hello, there, Representative Blank. Here's your bill we're returning to the House. He was almost smothered in there, but we saved him. The opponents said that if he did pass the two Houses the President would surely veto him, and that if the President failed to do that the Supreme Court would undoubtedly declare him unconstitutional in cases that would be sure to come up concerning this bill.

Representative BLANK. They're not any too comfortable about my bill, are they? How do you feel now, bill? Quite elated?

BILL. Not at all, yet. They tore me apart too much for that. They made some very uncomplimentary remarks about me, but one of the committee stood up and asked: "Mr. Opponent, was your son used as fodder for cannon in the last war? My son lies with thousands of others among the poppies in Flanders' fields." That changed the direction of the wind. They began to listen after that, and here I am now, going back with this gentleman to the House.

Representative BLANK. Well, you're a party bill, so all the loyal members of our party will support the committee's recommendation and vote to pass you to the Senate. I will see you later. Good luck.

(Scene 4: The House of Representatives again some time later.)

CHAIRMAN OF THE COMMITTEE. Mr. Speaker, chairman of the Foreign Affairs Committee.

SPEAKER. Chairman of the Foreign Affairs Committee.

CHAIRMAN. The Committee on Foreign Affairs reports favorably on the bill for limitation of American investments and loans in foreign nations. The committee recommends that said bill be given a place on the calendar to await its turn to come up for discussion before the body of the House. Thank you.

SPEAKER. I recommend the bill to the Committee on Rules, so that the bill may be given a date on which to come up before the House.

BILL (aside). Suspense! Suspense! I wish the Committee on Rules would advance me out of my turn. They do it sometimes to important bills, I hear. I guess that is why the Committee on Rules has been nicknamed "the steering committee." I think I shall rest for a while until my date is called. I've had a strenuous time of late.

(Bill departs.)

(Scene 5: Several weeks later. The House of Representatives again)

SPEAKER. Members of the House of Representatives, we have before us for discussion a bill introduced by Representative Blank and favorably reported by the Committee on Foreign Affairs. We shall now debate this bill in the Committee of the Whole.

BILL (to clerk, beside whom he is seated). What does that mean, please?

CLERK (in whisper). The whole body of Representatives will sit as a committee to discuss you. The Speaker will leave his place and will appoint a Representative to be Chairman of the Committee of the Whole for the time being. There are some sharp debates coming, I think.

BILL. Do you think they'll kill me? Does the House have a graveyard, too?

CLERK. Yes; the House has a graveyard, too. You must be prepared for anything.

BILL. I feel cold and creepy. What's the temperature in here, please?

CLERK. Hush-sh; 84°—in the shade, too!

SPEAKER. I shall appoint Representative Dash to the chair, please, as Chairman of the Committee of the Whole. Representative Dash.

Representative DASH. Thank you, Mr. Speaker. Members of the Committee of the Whole: We have up for discussion today the limitation of American investments and loans in foreign nations. The Committee on Rules has determined 5 hours as the time limit for the bill's discussion. I shall announce the rules for time limit as set by the Committee on Rules for this debate: The committee appoints 2½ hours as the limit beyond which neither side may continue the debate. The leader of each side of the debate may be allowed 1 hour to open the discussion, but, according to the rules of the House, no Member other than the leader will be allowed more than 5 minutes of speaking time. No one, without the consent of all, may speak twice.

BILL (to himself). I wish the opposing side had only 5 minutes altogether in which to speak. This is terrible. Why don't they start?

LEADER OF THE FAVORABLE SIDE. Mr. Chairman, Members of the Committee of the Whole: During recent years much ugly matter has been brought to light bearing on the United States and the World War. I need not review for you the facts in all their ugliness. I need only remind you that the flower of our American youth was lost, that millions of dollars have gone, and that untold suffering has come upon our Nation. Why? The doughboys would have told you then, "To make the world safe for democracy." But what have our recent investigations uncovered? That underlying our principles of democracy, lying concealed as a worm in a core, unknown—unnoticed—by the average American, was the matter of foreign investments and loans. This, the bill up for discussion now, hopes to eliminate by curtailing the amount and kind of investments and of loans, and, if need be, to place a tax upon all such moneys which find their way to foreign nations.

LEADER OF THE OPPONENTS. Mr. Chairman, Members of the Committee of the Whole, it will be our aim to bring before this Committee reasons why this bill should not be passed. Does not our Constitution guarantee "the pursuit of happiness" to each of its citizens? Would not this bill curtail such a guaranty? Does not our Constitution guarantee the rights of property? Would not such a bill destroy them? My respected opponent failed to prove his points in which he declared that moneyed interests, rather than democracy, were the motivating principle of our entrance into the World War. Let the opposing party prove the truth of these statements, and then we shall attempt to prove that such a bill for the limitation of American investments and loans in foreign nations would be a violation of the rights guaranteed by the Constitution to its people.

BILL. They both sound like good arguments to me. I wonder whether I'm all wrong? But, no; didn't the Committee chairman say, "Was your son used as fodder for cannon in the World War?" And didn't he add sadly, "My son lies with thousands of others among the poppies in Flanders' fields." * * *

(Several hours later, during which the debate has continued.)

BILL. Well, the debate seems about over. Perhaps they'll patch me up a bit here. I'm rather worn from my rough handling so far.

CLERK (in a whisper to Bill). The Committee of the Whole has just voted favorably on you. Watch, now. The Chairman of the Committee gives his place back to the Speaker, the Committee "rises," and becomes again the deciding body, or the House of Representatives, and the bill will be placed before them for passage. This part will be interesting. They may start some filibustering.

BILL. Filibustering? That sounds like fighting.

CLERK. Well, it isn't fighting actually, but it shows the opposing side has some fight in it. They may call a motion to adjourn, or call for yeas and nays, etc., which would take a long time, or do anything to delay the passage of the bill. They could keep that up indefinitely if the Speaker recognized such "dilatory motions." But the Speaker won't, I'm sure, and if many such motions are made, he will refuse to give the floor—that is, to recognize—anyone whom he knows to be filibustering.

BILL. Suppose the Speaker approves the filibustering and gives that side the floor repeatedly. Then what'll happen to me?

CLERK. Someone may enter a motion of "previous bill," which means that the bill up for discussion before any of the filibustering started must be decided at once if the House says so. Even motions made to adjourn may be declared out of order. The Members then vote yes or no on the bill. This is called the cloture rule. That means the debate has been closed.

BILL. I hope they're ready to close the debate on me. They ought to see I'm good for their welfare.

CLERK. Well, not everyone sees alike, you know. Some think you're a danger to the Constitution.

SPEAKER. We are now about to call for the vote on the bill entitled "A bill for the limitation of American investments and loans in foreign nations." The clerk will now call for ayes and then for nces.

BILL. Here's where I get mine. I'm afraid to look or listen

CLERK Those in favor of the bill will signify by saying "aye."

(Class gives the vote.)

Those contrary, signify by saying "nay."

(Class again votes.)

The ayes have it. The bill for the limitation of American investments and loans in foreign nations has been passed by the House of Representatives.

SERGEANT AT ARMS. Congratulations, old top. I knew you'd make it. Now for the Senate. I hope they give you a good reception.

BILL. Thanks; you are very encouraging. But what'll they do to me there?

SERGEANT. No more than they did to you in this House, except that they may put a patch or two on you and send you back here for an O. K. before you go to the President. Goodbye; there's a long path ahead of you yet, but I hope you make it.

BILL. Thanks, friend. Off to the Senate for mine. Oh, what a thrill to hear that chorus of ayes. Hooray, whoopee, hurrah.

(Scene 6. Several weeks later. Representative Blank meets his one-time friend, Bill, on Pennsylvania Avenue. Bill wears a policeman's cap and badge and carries a stick.)

Representative BLANK. Well, if it isn't my old friend, Bill.

EX-BILL. How are you, Representative Blank? I'm Bill no longer. The President put his signature on me this morning and now I'm John Law, Esq. See my new outfit? Because of the President's approval, I may now go abroad in the land and, believe you me, people will respect me from now on.

Representative BLANK. Do you remember how nervous you were when I introduced you in the House?

JOHN LAW, Esq. I surely do. But I'm not any longer. I've been through a great deal since then. I got into a few minor difficulties in the Senate, but they were ironed out quite satisfactorily and here I am, thanks to you and your friends, the champion of the American Nation, John Law, Esq., on the limitation of American investments and loans in foreign nations.

(The end.)

Gutzon Borglum

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1941

POEM BY EDNA BUTLER TRICKEY

Mr. MUNDT. Mr. Speaker, it was recently my privilege to sponsor a poetry-writing contest on the theme of democracy by offering a prize to the poem selected by the South Dakota Poetry Society as deserving of first place. This prize-winning poem will be featured in the South Dakota Poetry Magazine, Pasque Petals, published in Aberdeen, S. Dak., but because of its Nation-wide appeal in paying tribute to Gutzon Borglum I am taking the liberty of reprinting it here so that it can be available to all America.

This poem, Gutzon Borglum, pays deserved tribute to the sculptor of Rushmore, in South Dakota's majestic Black Hills, and is written by one of the talented young poets of my State who is rapidly making a name for herself in the literary world:

GUTZON BORGLUM

(By Edna Butler Trickey, Aberdeen, S. Dak.)

Now he is one with them—
Washington and Jefferson,
Roosevelt and Lincoln,
Whose faces he has made to live in stone;
Shrine of democracy, Mount Rushmore's miracle!
He consecrated at that shrine his own best gifts:
Deft hands that labored 40 years with stubborn stone,
A mind that matched those rugged hands,
A ripe philosophy, and a fierce love
For men who carved a nation out of wilderness.
Each curve and hollow he designed to stand
One hundred thousand years of storms and weathering;
And now he leaves to us the task
Of holding fast his dream and theirs
Who look down from the mountainside—
"That this America shall ever be,
Henceforth a hundred thousand years, land of the free!"

W. P. A.

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1941

LETTER FROM A CONSTITUENT

Mr. BOGGS. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to include the following letter on the W. P. A. from a constituent in my district:

GRETNA, LA., *March 21, 1941.*

Hon. T. HALE BOGGS,

Representative, Second Louisiana District.

MY DEAR MR. BOGGS: Thousands of W. P. A. workers throughout the Nation will be released from the rolls within the next 30 days, due to a very unpopular law among the workers. This law to which I am referring provides that all W. P. A. workers, excepting World War veterans and supervisory employees, who are on the W. P. A. rolls for 18 months continuously must be released. Those persons affected are not eligible for recertification until they have been off the W. P. A. rolls for 30 days, then their reassignment on the W. P. A. rolls depends on the demand for workers in their respective classifications; it may be several months before some classes are reemployed, others may never be reassigned. The worker who is affected feels that he is being discriminated against because of the fact that neither the war veterans nor supervisors suffer any interruption of employment due to this law. Usually it will be found upon investigation that the workers affected are among the most needy on the relief rolls.

The Work Projects Administration seems to be in open competition with private industry. The class of work being done in every detail is the same as private industry. The W. P. A. worker is compelled to produce accordingly. The sponsors are today recognizing this fact.

Not a stone has been left unturned by President Franklin D. Roosevelt and his worthy Cabinet to assure the success of our Nation's preparedness program. He has called upon the W. P. A. to be used on defense projects in every corner of the United States, and believe me they are performing their assignments masterfully. A recent tour by Secretary Knox of all Coast Guard and naval defense projects has caused Mr. Knox to praise the W. P. A. for its cooperation.

Bills requesting billions upon billions of dollars to carry on defense programs are daily flooding the Senate. All red-blooded Americans at this "peak hour" have pledged themselves at all cost to do their share toward making the defense program a complete success. Salaries have been increased in private industry, better working conditions also provided, but all seem to forget the man on the relief rolls, especially those over 45 years of age. Why should he be forgotten? Why should he not be given the same opportunity as the veteran or other relief employees? Why should the laws of a nation as great and resourceful as ours be used to discriminate against a willing and capable man's employment, and prevent him from earning a living for his family? The compensation law prevents a man of this caliber from securing employment in private industry because of his age, while the 18-month law deprives him of his employment on the W. P. A. rolls. Many persons over 45 years of age are still capable of serving and benefiting industry.

President Roosevelt in an address before the White House Correspondents Association on March 15, 1941, said he was appealing to the hearts and minds of every man and every woman within our borders who love liberty; he asked them to consider the needs of our Nation at this hour and put aside all personal differences until our victory is won.

The best way to keep down differences, in my opinion, is to remove the cause, if possible.

During these abnormal times, in this land of abundance where billions are spoken of

in terms of pin money, there is no necessity of workers being released from the W. P. A. rolls when they could be placed on defense projects, somewhere, someplace. The 18-month law should be repealed or an amendment passed to care for this emergency.

I have reasons to believe, that, due to the great number of workers affected by this 18-month law, the representative who will interest himself in this worthy cause, will be highly regarded by the people to whom he is responsible.

I am an employee of the W. P. A. over 45 years of age; the father of nine children. I will be affected by this law shortly, however, I am as much interested in the repeal of this law for the benefit of others as I am for myself, therefore, you are privileged to use this letter over my signature to the best advantage. Hoping to hear promptly from you concerning this matter and at the same time assuring you of my fullest cooperation,

I am,

Yours respectfully,

CLARENCE J. HOGAN.

American Journalism Remains the Palladium of Our Liberty

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1941

EDITORIAL FROM DETROIT FREE PRESS

Mr. SHAFER of Michigan. Mr. Speaker, under permission to extend my remarks, I include the following timely editorial from the Detroit Free Press:

[From the Detroit Free Press]

A FREE PRESS

National defense is paralyzed by strikes.

Strike! Strike! Strike! is the cry across the land.

Reactionary managements are taking advantage of a grave national situation to cripple the union-labor movement. Radical union leaders are taking advantage of the same desperate condition to promote their own greedy ends. Moscow and Berlin are helping.

Labor leaders are at each other's throats in the mad scramble for power, stopping production in plant after plant merely to battle for jurisdictional supremacy—who is to rule the men, dominate the factory, and get the dues.

Greed, Hate, Distrust, and Disunity are the Four Horsemen of the American Apocalypse.

Hitler laughs, Stalin jeers, and Matsuoka smiles.

"Democracy the decadent; Democracy the dying! Democracy the stupid and inefficient! It is as we told you, our subjects. The people, the dumb, stupid people are unfit to govern themselves."

Long ago Hitler laid down the Nazi technique on how to conquer a nation without firing a shot or striking a blow. He said to Rauschning: "Mental confusion, contradiction of feeling, indecisiveness, panic; these are our weapons."

It is the technique he used in Austria, in Czechoslovakia, in Poland, in the Scandinavian nations, in the Low Countries, in the Balkans—and, above all, in France.

Already there are those in the United States, alarmed at the prairie fire of strikes sweeping across America, who are seeing in this present situation a parallel with that of France.

France, with the finest army in the world, caved in at the first touch of Nazi pressure, for seeds of greed, hate, distrust, and disunity were long planted there. France collapsed because she was torn with internal dissension.

Shall America go the same way?

Shall we go down the same path along which Britain went unto the eleventh hour?

Such questions are in the minds of men and women everywhere in America today.

The answer is No.

For in the ultimate analysis there is no comparison between the French situation and the American. The similarities are only on the surface.

America will be saved to itself because America has a free and untrammeled press.

France might have been saved, but France never did have a free press.

France never possessed anything but a corrupt, subsidized, and always purchasable press.

Every editor and publisher represented a faction, a group, a party, or some predatory interest. Never did the press of France see its country as a whole with a national interest in its well-being transcending its own venal purposes.

That is not true of America.

Here every newspaper of every shade of political opinion speaks out for a united America and sees this Nation as a whole from the Atlantic to the Pacific.

In France it was a common habit for foreign powers to subsidize certain newspapers to be used to disrupt France.

Apologists for French journalism explain that this had to be because there is very little advertising in France and great institutions of journalism could not be maintained, self-supporting, and profit making, and therefore independent.

That may all be. The point is that the great American press is free and is made free by its diversified advertising and by the immediate reaction of its readers.

And so it is that throughout the United States today all the newspapers of all shades of opinion are rallying to the call for a united people. As a result public opinion is crystallizing so rapidly that both radical union leaders and reactionary business leaders are showing alarm—for well they know the mighty power and the speed with which an aroused American public opinion works.

The laws have been written on the books for mediation.

This lightning-like crystallization of public opinion is neither for the unions nor for management.

It is for production.

And the only way to get production is by mediation instead of violence.

Older unions, such as the Brotherhood of Locomotive Engineers and our own Typographical Union, have no strikes even in peacetime, in depressions, or in prosperity. They have grown older and wiser and know the value of the ways of peace—both men and management.

It is taking nothing from union rights and nothing from management rights to ask—in the name of the Nation's salvation—that they sit in conference and come to a common ground of understanding, as civilized Americans instead of gangsters from the jungles.

That is the task the American press is performing.

It is the task the British press performed before that last fateful hour.

A true democracy cannot exist without a free press and that is why France was never at heart a true democracy. It had the form but not the spirit.

American journalism still remains the palladium of our liberty.

Pogroms Against Labor Unions

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1941

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein an editorial from a recent issue of the Tacoma Labor Advocate, the official organ of the American Federation of Labor unions of Tacoma and Pierce County, Wash. This enterprising publication is edited by John McGivney.

In these days when it is the fashion and practice to search for scapegoats upon whom to vent our spleen at and distaste for any inefficiencies or inequities in our national life, organized labor has been sought out for vitriolic attention at the hands of Tories, conservatives, and sincere and honest, but unprofound, middle-of-the-road citizens.

In pre-Nazi Germany, Hitler built up a large following by centering the wrath of the people upon the Jews. His diatribes against organized labor were developed in a major degree after he became Reich Chancelor. It is always easy to fasten the blame for anything we do not like upon some militant group, organization, or individual, and thus exculpate ourselves from responsibility or liability for certain unpopular happenings. For more than a quarter of a century, labor has steadily been adding to its gains, expanding its benefits, and increasing its efforts. Naturally, in the course of that program, it has trod severely upon the toes of those from whom its efforts have extracted better working conditions, shorter hours, and increased compensation. But, like the elephant, these reluctant cooperators with labor did not forget. They have been biding their time. They have been waiting for the hour to reveal their true attitude toward labor. Now behind the protecting cover or cloak of national defense, they are ordering extra supplies of ammunition, and polishing up their arms. Soon they will make an overt attack upon entrenched labor.

In relatively few and isolated instances, there have been some abuses of the privileges and powers of labor, but to turn down all of labor because of these comparatively scarce instances, is analogous to burning down an office building because it was found that there were cockroaches in one of its numerous rooms. I would like to see, Mr. Speaker, some attention paid to those industrialists who are gouging the public in this present hour. I would like these very vociferous champions of the public good to demand the restoration of the legal requirement for competitive bidding in Government contracts. I would like publicity given to their business with the Federal Government, where compatible with the public interest. I would like to

see the torchlight of publicity illuminate the inner workings of corporate bookkeeping.

Who was it who demanded the eradication of all limitations upon all profits with respect to contractors dealing with the Government? Why do we limit in peacetime the profits which may be enjoyed by the contractors, as had been decreed by the Vinson-Trammell Act, with respect to Navy Department purchases and contracts but repeal such legislation in times of national emergency? Why do we remit back to these contractors three fourths of the taxes they would ordinarily have to pay? Mr. Speaker, if Great Britain taxes 100 percent of the war profits of her defense industries, might it not be a good idea for the United States to emulate in that respect the country whose other ideas we are so prone to espouse? Why are we so solicitous about the imposition of corporate income taxes in defense industries in fixing the maximum thereon at 42 percent, when Great Britain imposes a minimum tax on normal profits received by all industrialists at 42½ percent? Is it not fair to expect that labor, which has been deprived of earning power during 10 years of depression, should demand a modicum of the enormous profits about to be received by industries engaged in national-defense projects?

The veterans' organizations, for 20 years, have proclaimed their insistence that we take the profits out of war. The only place wherein we have carried out this edict is that we are sending young men into the draft sections of the Army at a pay of 67 cents a day.

But let the editorial speak for itself.

[From the Tacoma (Wash.) Labor Advocate]

ANTISTRIKE LEGISLATION

Everything these days, whether the making of soup or putting a half sole on one's brogans, is regarded as "a defense measure." And if you ask for more wages from an employer you are guilty of gross disloyalty. And in this hue and cry against labor, there seems to be a perfect alliance between naval and military brass hats, reactionary politicos, and big business and small.

It is not, as a matter of fact, that any of these things are defense industries, whether they are or not. It is that labor must be kept down as is the antilabor fashion of all Fascist-minded folk everywhere fighting democracy.

In the Congress there are being introduced many sumptuary laws, all of which have for their principle the noble task of chaining labor, and it may be noted that many of those are supported by southern gentlemen who owe their seats to the fact that in those democratic States the poor are successfully disfranchised in right valiant but somewhat antiquated style, by means of a poll tax. So knowing who butters their bread and when, naturally they are zealous to serve their masters while the majority of American eligibles are kept from the ballot box by means of a poll tax.

When seeking for some crushing argument against labor, these solons and big business, of which they are more or less efficient stooges, point to the fact that the boys who go forth to serve their country, and if need be to war, must take their chances for $21 a month. And they say how can the American worker refuse to serve, if necessary, for the same pay as the men who are drafted for the Army.

It might be pointed out that that begins, but it doesn't end, a very extensive argument. In the first place the firms against which the workers strike are not engaged in defending anything else but their profits, just as the Congressmen whose own pay is so excessive, whether in the House or the Senate, are, in protesting against labor's reasonable wage demands, not trying to help the class whence come the votes at election time.

If we want to standardize things, then government should own all the profit-making mechanisms, individual or corporative, as well as direct the wages and the living of draftee and the workman, as those solons suggest.

It may be further pointed out to those who oppose strikes that the workers are left to their own sweet selves in seeking and securing work. If there is room for them, very well; if not, well also, if not so well. They must do the best they can. And the workers' experience during the past score years and those years immediately after the last war when in both instances they were left to drift for themselves, is not to be so easily forgotten.

Every worker should receive pay that should sustain him and his family in comfort at all times. That we believe is one of the first duties as it should be one of the first tenets of democracy. Some of these profiteering patriots seem to think that the worker should be grateful for a job and for what money he is given by an employing corporation, whose expansion and whose contracts are written up by the British or the American Governments, and which have little regard in the prices paid to actual production costs.

We have been scanning a list of so-called war industries, and the way they have been soaring upward would make a stratospheric balloon blush with shame. None of them but are raking in the gains in very comfortable shape, but some of them, we also notice, have had trouble with their employees who in turn have had trouble making ends meet.

We dwell upon these facts because any person can see in the making a determined attack upon the workers, upon reform legislation, and upon their freedom to strike.

We have advanced so far on the road to reaction that now it is almost a crime against one's patriotism to quote Abraham Lincoln to the effect that God was to be thanked that we had a system of labor in this country where striking was possible. And we have so far departed from elemental concepts of human freedom that there are men in the Congress ready and willing and eager and anxious to bind labor in chains, hog-tie them past all industrial freedom, and sling them to the profiteers who are once again with us.

Daily in the papers, lists of strikes, some of them correctly given, many more of them certainly very far wrong, are to be noted, and as if to curry favor for its pernicious and most vicious monopoly, the broadcasting chains in almost every news period catalog the list of strikes, new and old, as if part of the contribution of the workers to slow down national-defense programs.

We all know better than that. Those who make that charge were silent as the grave and still are, about the bottlenecks which industry places in the way of production. Not a word is said. But when the worker, hard put to it now when working as when he was unemployed, to secure his daily bread for him and his, has the courage to unite and demand it and to fight for it, he is listed as a malcontent and subversive one who threatens the well-being of his country.

For a new low in conceptions of human freedom and especially of industrial freedom you need only listen to some of these southern solons who are solons by the grace of the poll tax. Their own subservient souls are so overcome with anger when they think of the workers, the producers, the men who toil and labor and fill this bountiful land with beneficial commodities, that they find trouble in expressing their views in denouncing the union workers in such efforts to secure decent remuneration.

New antistrike laws are proposed, and these are proposals which will tend not to promote efficiency, or to increase production to the limits of capacity, but to destroy it altogether. Knudsen is one with Hillman in opposing such legislation. And indeed anyone with any experience in modern industry would know that this is the certain way to detract from efficiency on the job among Americans with their tradition of freedom and their unquestioned right to strike.

Doubtful Proposal

EXTENSION OF REMARKS

OF

HON. THOMAS ROLPH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1941

EDITORIAL FROM THE SAN FRANCISCO CHRONICLE

Mr. ROLPH. Mr. Speaker, under leave to extend my remarks, I include an editorial appearing in the San Francisco Chronicle under date of March 25, 1941:

[From the San Francisco Chronicle of March 25, 1941]

DOUBTFUL PROPOSAL

Attorney General Jackson is backing a bill in Congress to permit the F. B. I. to tap wires in subversive and kidnaping cases and to restrict the authority solely to the Federal Bureau of Investigation.

The proposal leaves us dubious. There is excellent reason behind the present laws forbidding wire tapping by anyone. The reason is the possibility of abuse. Once give any agency that power to be used legally and the door is opened to abuse. We say this in no reflection on the F. B. I.; we think the observation applies as well to any other agency. The proposal smacks too much of opening the way to a gestapo.

Besides, if this authority were to be given to the F. B. I., why withhold it from the Army and Navy Intelligence Services, which also have use for it if it could be used, under law, only legitimately, which we beg to doubt?

Will it not be better to leave the present laws in force, forbidding wire tapping to anybody? Then, if the F. B. I. or the Army or Navy Intelligences should surreptitiously resort to it in an emergency—we do not mean to say they do—one could be sure that it would be only in a serious case and would not be abused.

Lars Eric Bladine

EXTENSION OF REMARKS

OF

HON. JAMES W. MOTT

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1941

EDITORIAL FROM THE McMINNVILLE (OREG.) TELEPHONE REGISTER

Mr. MOTT. Mr. Speaker, on January 13 of this year a prominent and beloved citizen of my State, and an outstanding figure in its political life, passed quietly

and peacefully to his reward. This citizen was Lars Eric Bladine, publisher of a weekly newspaper, the Telephone Register, at McMinnville, Oreg., in my congressional district.

The people of Oregon are so well acquainted with the biography and with the work and services of Lars Bladine that I shall not undertake to recite them, but as a tribute to a friend and a fellow citizen whose life has made his own community and his State a better place in which to live, I wish to record here what another friend has said about him. And so, under leave to extend my remarks in the RECORD, I append the following editorial which was printed in the Telephone Register, and which expresses much better than I can the love of those who knew him best:

[From the McMinnville (Oreg.) Telephone Register]

There is a strange stillness in the office down the hall.

On the desk there are a few opened letters, a small stack of clippings, several folded newspapers. It is the desk of a newspaperman. And in the silent typewriter is a sheet of clean copy paper. It is awaiting an editorial for these columns which will never be written.

Because Lars Bladine is gone.

Just a few short hours ago he was here. He was busy, as always. Telephones were ringing. "May I speak to Lars Bladine?" Visitors, businessmen, friends were coming into the office. "Is Lars in?"

Then another call. He was just preparing to write. The clean sheet of copy paper was in his typewriter, when he went out for a few minutes. He never returned to his desk. For death, as it must to all men, came Monday evening for Lars E. Bladine, publisher of the Telephone Register, less than 2 hours after he was suddenly stricken by a heart attack.

It's hard to realize he's gone. But out beyond there must be some opening for a man with such experience, and such talents as Lars—for a man with a lifetime—50 years—of newspapering to his credit. At 15 he began it, just a boy at an all-engrossing task from which he never turned. He alone could look back over that half century, full of its joys and sorrows, its friendships and battles, its "scoops" and disappointments, but we'll never know all of it now. Up to the very end he enjoyed it. Seldom does one derive so much fun out of friends and out of sheer living as did Lars.

Ability and love of work drew rewards and recognitions. His newspapers were numerous during the years—the Marathon Republic, Albert City Appeal, Webster City Freeman-Tribune, Cedar Falls Daily Record, Clinton Advertiser, and then the Telephone Register. Right was right with him, and many and colorful were his battles to maintain it.

Busy as he was with his chosen profession, Lars Bladine still found time to serve the cause of his country and good government. Born in Sweden, but raised in America, Lars was a real American of the most admirable type. At a time such as now, when the need for him and men like him is keenly felt, it is doubly hard to bid him goodbye. For 14 years he was a member of Iowa's Republican Central Committee, serving once as the State chairman, and when he later came to Oregon he served the same group in this State as its secretary. Nine years as Marathon's postmaster, and another 12 as Iowa's collector of internal revenue also belong on his record.

Yet through it all, and despite the fact that he was often as newsworthy himself as he wished others would be, Lars Bladine was shy. Gruff, kindly, humorous, lovable, he was still boyishly bashful and reticent about any praise or honors. The story is told of him that in 1932 the Republicans of Iowa turned to him as their candidate for Governor. But he refused. "Hell, no," he told them. "I don't want the job."

And then he packed up and came to Oregon and McMinnville, where in a few brief years he found himself once again completely equipped with another State full of friends, to all of whom he was just Lars. Many throughout the Nation were proud and happy to call him friend. He was, we know, an intimate acquaintance of all the Presidents from the first Roosevelt to Hoover, and Harding, Coolidge, and Hoover personally appointed him to his collectorship of internal revenues for Iowa.

It was much as he had written when he first became publisher of this newspaper back in 1928. "Twenty years ago," he wrote then in these self-same columns, "the writer made a bid for this newspaper after spending a week in looking over McMinnville and Yamhill county. He had disposed of a newspaper property in Iowa and remembering Horace Greeley's injunction, came west."

At the same time he stated his hopes for McMinnville, as well as his journalistic creed: "It will be the purpose of the new owners to publish a newspaper that will creditably reflect the spirit of the community, to print the news without fear or favor and so far as it is possible to promote the prosperity and happiness of all deserving people. We have some very definite ideas as to the responsibilities and duties of a newspaper to its constituency. These ideas have come through the school of experience, and we hope to profit by them." As to whether he fulfilled his promise or not, we cannot be judge so well as you, his readers. But it will be remembered that a little over a year ago, in 1939, his Telephone Register was named the Nation's best weekly newspaper.

Those of the newspaper profession, accustomed daily to viewing life in all its manifestations, are sometimes thought to be a hardened lot. Lars, himself, was a poor exponent of that type, with his gentleness and kindness. But at times like this it is difficult to dispel that choking feeling which insists on rising. Words, with which we are supposed to deal with something resembling ease, fail to convey just how we feel. This isn't good enough, Lars. It's nothing to what tribute you deserve, we know. But without your help, the things we feel don't seem to come out quite plainly, in that lucid manner you so often used. And we know you'd never even tolerate anything about yourself in your own columns if you were here. So this will just have to do.

There are lots of things we could say, of course. It is not hard to find things to say in the life of one who has been so intimately connected with life and the news for over half a century.

It won't be the same around here without you, Lars. We're going to miss you—miss you a lot. But we'll stop here, knowing you'd like it better this way. It came time for you, as it will sometime for all of us, for your final "30."

Strikes

EXTENSION OF REMARKS

OF

HON. CHARLES F. McLAUGHLIN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1941

RADIO ADDRESS OF HON. SAM HOBBS, OF ALABAMA

Mr. McLAUGHLIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech of the gentleman from Alabama, Hon. SAM HOBBS, in the National Radio Forum, arranged by the Washington Star, March 31, 1941, and broadcast over a network of the National Broadcasting Co.:

Wars were once fought by men. Now men merely operate the engines of death. Martial mechanization is just as essential for successful competition in war as is industrial mechanization necessary in these days of mass production. The shoemaker with his awl and needles could not compete with modern shoemaking machinery. He is extinct. Automobiles can be made by hand but such competition with production and assembly lines is an absurdity.

Forty years ago a great orator loved to talk about a million embattled farmers springing to arms, seizing their shotguns and squirrel rifles, and driving any invaders into the Atlantic Ocean. That may have been a real threat then, but it is a joke now. One tank division, with a squadron of our fighter planes and of bombers, could annihilate a million men, so armed, in an afternoon.

When shotguns and squirrel rifles were weapons of war, quick arming was feasible. But few homesteads have an airplane or a tank in the garage. So preparation for modern warfare is a lengthy operation. It takes years. Four years are required, as a minimum, to produce one battleship. It is a race not only against time but also against the same effort of other nations. It took Hitler 4 years to attain mass production of airplanes. France and England could have retained their dominance in the air by competing then. But they did not. They did not appreciate the fact that modern war is won by doing a better job in the factories producing war matériel. So when Chamberlain went to Munich, he had nothing but an umbrella. France was not conquered in 1940, nor on the field of battle in the spectacular sweep of Hitler's air corps and tanks. She was conquered by the failure of her factories to function efficiently during the 7 years preceding. It was not her Maginot Line that failed but her production and assembly lines.

Ambassador Bullitt testifies as an eyewitness. He says that after France was partially overrun, with many of her major airplane factories in German hands, she produced with what she had left, two and a half times as many airplanes in 1 month as she had ever produced in any month of her history when she had all of her facilities supposedly on the job.

No one disputes these facts, and they should encourage us. The Battle of Waterloo may have been won on the cricket fields of Eton. But the battles of Poland, Holland, Belgium, and France were won in the factories of Germany. Hitler's "fifth column" was powerful. But his "sixth column"—his factories—was omnipotent.

Nowadays wars do not come to nations who are prepared to defend themselves. Aggressors simply count the navies, the supply ships and transports, the supplies of oil, ammunition, food, and the number of aircraft and tanks, and if these equal or exceed their own, there is no war.

This should be right down our alley. We have practically everything—surplus food, clothing, transportation, ingenuity, energy, experience, men, skill, money, plants, raw materials and, thanks to some remaining isolation and the British Fleet, enough time. But not a day to spare. Our experts have on paper an adequate defense program. Total defense, which would if realized, guarantee the peace of our hemisphere.

We have drafted $40,000,000,000 and there has been no strike of a single dollar.

We have drafted 17,000,000 men, plus the National Guard. And there has been no strike.

American farmers work 80 hours a week at 15 cents an hour. As a result our national pantry is full and overflowing. And there has been no strike.

The United States is the paradise for both capital and labor. There are more millionaires in America than in the rest of the world. The salaries of management are the highest ever known. Here labor enjoys the highest wages, as short hours, as ideal conditions, and is provided with as good housing, as much leisure, as good recreational facilities and as good health and hospital care as the world has ever known. The cost of living has not risen materially in this emergency. No wages have declined. No right of labor has been denied or withdrawn. Yet, in the face of these facts and the challenge to prodigious effort flung by our able leaders, selfishness stalks abroad in the land—and time—the most priceless resource at our command—is wasted. While the time worked compared to the time lost makes the loss seem small, yet who can say that we can afford to lose even one day? The summarized history of the defense effort of 14 nations has already been written in two words: "Too late."

Yet, in spite of this repeated handwriting on the wall of recent history, strikes in the United States have caused the loss of more than a million man-days of work in January and February of 1941—625,000 man-days lost in 220 strikes in January, 1,000,000 man-days lost in 240 strikes in February. One million six hundred and twenty-five thousand man-days of idleness in January and February 1941. And the record for March will be worse. In February alone—a 28-day month—we lost the equivalent of a thousand men working a thousand days—more than 3 years. In these 2 months' strikes subtracted from our defense effort the worktime necessary to produce two 10,000-ton cruisers, or seven 1,700-ton destroyers, or 10 submarines, or 222 heavy 4-engine Army bombers, or 541 light Navy bombers, or 1,238 fighting airplanes. In 127 plants listed by the Navy Department, the output of which affected the national-defense program, 3,781 days, or 10½ years were lost during 1940 and the first month and a half of 1941. Of the 7,817,360 man-hours lost in these 127 plants, substantially one-half of this total loss was caused by strikes for a "closed shop." Jurisdictional strikes and organizational strikes accounted for a large percentage of the other half.

But in spite of the horror with which the American people view the actual figures just quoted, showing an average of almost a million man-days a month of strike-enforced idleness during the first 3 months of 1941, the work time actually lost in plants closed by strikes does not begin to tell the whole story. The figures I have quoted for January and February are given by the Bureau of Labor Statistics of the Department of Labor. They are accurate as far as they go, but they do not show the time lost in open plants, which should be producing defense matériel which cannot "deliver the goods" because of the lack of ingredients, the flow of which has been stopped from the plants closed by strikes. Mr. Merrill Meigs, of the O. P. M., a witness before the Committee on the Judiciary, testified as to these disastrous consequences in slowing up airplane production. He pointed out that there were some 2,000 parts needed for the construction of aircraft. These basic parts come from many factories, a large percentage of which are small plants, some working only a hundred men, yet the lack of the product of any one of them stops the production of airplanes and bombers just as effectively as though the whole of the huge assembly plant which finally turns out the finished aircraft had been closed. The lack of one kind of casting made of an essential metal stops the assembly line. The failure of the supply of screws of a peculiar and essential kind, when the small plant that makes them is closed by a strike, stops the production of the whole airplane into which they should have gone, though the assembly plant is not closed and is ready to run. Thus a tabulation of the time loss caused directly by strikes cannot give the picture of the full slow-down of our defense effort. Such figures merely give the direct and immediate time loss. The indirect and sometimes remote time loss resulting from the strikes may be even greater.

The strike in a wheel-producing plant closed down not only that plant but had an impeding effect upon the production of tanks, airplanes, bombers, and motor vehicles ordered by the Army from other plants.

The Vanadium Corporation strike is a good illustration. Incidentally, this strike, now tentatively settled after reaching its seventh week, is an outlaw strike, called in defiance of the wishes and orders of the regional director of the C. I. O., who warned the strikers that they had forfeited their rights to C. I. O. protection and were the victims of irresponsible leadership. The Vanadium Corporation is the Nation's largest producer of ferrovanadium, a vital alloy in producing many types of munitions. The direct effect of this strike was merely to close that one plant. But affidavits of American Locomotive Co., Simonds Steel Mills, Union Electric Steel Corporation, Universal-Cyclops Steel Corporation, Vulcan Crucible Steel Co., Worth Steel Co., Bethlehem Steel Co., Carnegie-Illinois Steel Corporation, Henry Disston & Sons, Inc., Dominion Foundries & Steel, Ltd., Hamilton, Ontario, Erie Forge Co., the Midvale Co., Mesta Machine Co., Lukens Steel Co., Lebanon Steel Foundries, Latrobe Electric Steel Co., Jessop Steel Co., Heppenstall Co., and Crucible Steel Co. of America certify that ferrovanadium on order for each of them with the Vanadium Corporation is impeding the manufacture of materials ordered from them, respectively, for national-defense purposes. The percentage of defense orders thus impeded in these collaterally affected companies ranges from 58 to 100 percent.

The strike in the Vultee airplane plant was never authorized by the vote of any union. The Allis-Chalmers strike in Milwaukee, which has kept 7,000 men idle more than 2 months, still continues. Immediately after it was proven by handwriting experts, and thereafter allegedly admitted by the labor leaders who called it, that the strike was based upon a crooked election in which the ballots of some 40 percent of the workers were forged, the Secretary of the Navy and Mr. Knudsen, in charge of the Production Division of the O. P. M., appealed to both management and labor to reopen the plant and to negotiate a settlement of their differences after production had been resumed. This strike, incidentally, is tying up turbines in several instances practically completed, which are badly needed for the generation of electricity so essential to the production of aluminum and therefore airplanes. These turbines are on order for installation in several dams in the far West and at least five of the turbines are designed for the T. V. A. Yet we read in yesterday's papers that the strikers voted nearly a hundred percent not to return to work and passed a resolution "that Knox and Knudsen be condemned for their conspiracy with the company officials to try and force so-called Government-sponsored back-to-work movement"; and Harold Christoffel, head of the local union, publicly threatened any worker who returns to work with the loss of his job.

The strike in the Galveston shipyard is said to have been caused solely by the demand that one foreman be fired. It is said that only 67 men went out on strike, but that these 67 formed a picket line which none of the other workers would cross, hence the whole plant was shut down for a week. The Bethlehem steel strike is said to have been called solely in an attempt to prevent an alleged company union from holding its regular annual election of officers.

But the story that recurs over and over again is that local union leaders, backed by hired "goons," dominate the members through physical violence or threats thereof. Right here in Washington in a meeting of local union No. 1 of the Bricklayers and Plasterers' Union, evidence before our committee showed that an unarmed member of the union was beaten with weapons into insensibility and caused to spend 6 weeks in hospitals because when called upon he corroborated the assertion of an officer of the local that on the Navy Administration Building job in the navy yard the men did not work after the whistle blew His assailants have since been convicted and sentenced in the United States court. Other evidence was to the effect that a group of members of a local in California raised a purse and sent a man all the way to Washington to appeal to Congress to give the members protection against their own officers. Saturday, in Akron, Ohio, a jury convicted Harry D. Jones, vice president of the Ohio Federation of Labor, on a three-count indictment charging malicious destruction of property. The evidence showed that Jones hired two men to dynamite three construction projects employing rival C. I. O. unionists.

Ninety percent of the leaders and members of organized labor are loyal and patriotic. But the 10 percent have sufficient power to filch from organized labor its good name and to put it under a cloud of suspicion and prejudice. By retaining such leadership, organized labor is committing suicide. This small percentage of false leaders are betraying their constituencies. They are termites destroying the house of organized labor. Many of them are Communists, obeying the mandates of Moscow. They apparently glory in impeding our defense effort.

No wonder our great President, and a sincere friend of labor, Saturday night, in his Jackson Day speech, warned his radio audience against subversive influences. He said: "Propagandists, defeatists, and dupes, protected as they are by our fundamental civil liberties, have been preaching, and are still preaching, the ungodly gospel of fear. They use insinuation and falsehood. They have tried to shatter the confidence of Americans in their Government and in one another.

"We have seen what has happened to the great industrialists of Germany who supported the Nazi movement and then received their reward in Nazi concentration camps or in death.

"We have seen how the workers of France were betrayed by their so-called champions, the Communists. For no matter what Communist lips have to say, their actions have proved that in their hearts they care nothing for the real rights of free labor."

Is our Government impotent? Assuredly not. The same power that can draft 17,000,000 men to be put in uniform and at work for a dollar a day can find a way to keep men at work who are getting a dollar an hour, or more. The Constitution of the United States decrees: "The Congress shall have power to * * * provide for the common defense and general welfare of the United States; * * * to raise and support armies; * * * to provide and maintain a navy."

There is the unlimited grant of an amplitude of power. Let no one mistake long-suffering patience for impotence.

But no one wishes to exercise this power, nor any other compulsion. We have implicit confidence in our fellow citizens who compose the rank and file of organized labor. We appeal to them to do their part of this job. The rights of labor, as well as of the rest of us must be preserved. We are all in the same boat. The good men in lead-

ership and the ranks of organized labor must rid themselves of unpatriotic and disloyal leadership. They must insist upon the rights of free-born Americans to work and to produce the munitions of war without which our Ship of State will be sunk. We appeal to our friends and fellow citizens, both in the ranks of management and labor, to forget their selfishness and quarrels, till America be fully prepared to defend herself. Congress has already acted to insure the rights of labor. Capital and management have been told in no uncertain terms that they are expected to do their duty. Neither group would have any rights under a dictator.

It is heartening that the executive council of the building and construction trades department of the American Federation of Labor pledged this afternoon "that there will not be any stoppage of work on any essential defense-construction project because of jurisdictional disputes among its member unions"; and "that contractors recognized as fair to organized labor will be allowed to employ nonunion men temporarily on defense projects when its member unions are not able to furnish a full force of union workmen"; and "that no permit or initiation fees would be collected from these nonunion men under such circumstances, except when the men can qualify for membership and have been accepted as members of the unions"; and "that initiation fees shall be the minimum possible."

Both the resolutions making these pledges and the tone of preamble give hope that these reforms may materialize in general practice.

It is fervently hoped that all loyal labor and all loyal capital and all loyal management may accept the challenge of this crisis, purge their respective ranks of the disloyal, and do their job. They are our first and last line of defense.

We must all assert our best selves, and live patriotically, gloriously, heroically, in this great hour when the life of the Nation, yea, the fate of the world are at stake.

Labor and National Defense

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1941

RADIO ADDRESS OF HON. JOHN E. FOGARTY, OF RHODE ISLAND

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered recently over the radio:

If there is any one thing that is absolutely vital at this critical period in our history, it is a spirit of unity and cooperation among all the people, whether they work as wage earners or are engaged in management.

The task which we are now striving with our every fiber to carry out—the gigantic job of making our own country impregnable and of supplying the nations which are opposing the dictators—is one which can be swiftly and successfully executed only if all sections of our great Nation work together without discord and strife.

At a time like this, when we recognize the imperative need of maintaining the conviction that all Americans, those who wear overalls and those who sit behind polished desks, must be united in order that our great national effort shall succeed, it is deplorable indeed to see a small but highly vocal minority striving with might and main to destroy this spirit of unity which is absolutely vital.

I refer to the speeches and newspaper articles of recent days in which the labor unions of the country are given no credit for the wonderful cooperation which they have been giving to the national-defense program but instead are denounced in the most intemperate language. I refer specifically to the barrage of publicity with respect to initiation fees and to the cry that legislation forbidding labor to strike, regardless of how the workers might be exploited and abused by their employer, shall be placed upon the statute books.

Insofar as the initiation fee question is concerned, the facts are entirely at variance with what has been published in the public press and are equally at variance with the distorted statements on the subject which have been made, with a typical but deplorable disregard of the truth, by professional labor haters both in and out of Congress.

It is my understanding that one of the first tenets of good American journalism is to get the story right and to get it complete. But on the question of initiation fees, which has received such big headlines during the past few days, the public press has taken this fundamental rule of journalism and of simple fair play and thrown it out the window.

And insofar as the proposals to enact antistrike legislation are concerned, the truth is that there is no need whatsoever of any legislation of this vicious and un-American character and that, further, if any such antistrike bill were to become a law, it would probably do more to wreck the national-defense program than anything that the agents of Adolf Hitler could ever concoct.

Now, first, let us set the record straight once and for all on the initiation fee situation upon which so many words, written as well as spoken, have been used by well-paid columnists hostile to labor and by politicians of antilabor stripe.

The charge is made that the building trades unions affiliated with the American Federation of Labor are charging new members who have been put to work on defense construction projects exorbitant initiation fees and union dues. As interpreted by the most viciously antilabor commentators in the press, the labor unions are exacting tribute from workers for the privilege of working on defense projects.

Now, let us hold this charge up to the light and see what then happens to it.

We find, first of all, that the initiation fees are, in truth, being charged the new members coming into the unions, just as new members have paid initiation fees for as long as there has been a labor movement. There is nothing new or of a special nature in the charging of initiation fees.

And we quickly discover that, allegations to the contrary notwithstanding, the initiation fees charged new members now are no higher but in very many instances substantially lower than the initiation fees charged new members during normal times.

Now let us examine the charge that these initiation fees are excessive.

When a worker becomes a member of a long-established, sound, solid labor union, such as the building-trades organizations of the American Federation of Labor, he places himself in a position where a large number of extremely worth-while advantages and benefits accrue to him.

In the first place, he becomes entitled to share in the established union rates of pay for his classification of work and the decent conditions on the job which organized labor has achieved only after long decades of struggle.

And in the second place, the new union member becomes entitled, by the mere fact of having become a member of the union, to the many and valuable benefits of the old-age pension and unemployment insurance and mortuary systems which the older unions have established.

Labor justifiably points with pride to the fact that, during the worst depression years that the country has ever known, the unions met and paid all valid claims, never defaulting. This was done during a period when banks and insurance companies and other huge financial institutions were collapsing left and right.

And, of course, when a craftsman joins the union of his trade he becomes entitled to all the numerous and well-known protections and safeguards—the security against maltreatment by his employer among them—which have impelled millions of patriotic American workers to join together in labor unions for the past 60 years and more.

Considering all the enormous and obvious advantages which a worker receives when he becomes a member of a sound trade-union, I think it is clear that the initiation fees, far from being excessive as alleged, are actually moderate in the extreme.

And, finally, let us expose the shameless falsity of the suggestions made by enemies of labor that the initiation fees represent nothing but tribute exacted by selfish union leaders.

The truth is that these initiation fees are collected in accordance with the provisions of union constitutions, adopted in democratic conventions, and that in accordance with the provisions of the union constitutions the money collected in initiation fees goes into the union treasuries.

And each member of the union, whether he is a brand-new member or a veteran member who has fought and sacrificed in order to help achieve the standards of today, has an equal equity in the funds in his union's treasury. It is his money and the funds are used for his welfare and advancement.

There you have the truth of the matter in regard to initiation fees. The press could have ascertained these facts with no difficulty. But, of course, these facts would have spoiled the stories that have been told in bold headlines, and, unfortunately, the policy of many newspapers seems to be that where labor is involved, the rule that is followed is, "Never let the facts interfere with a good story."

Now, let us consider all the wild and wooly charges that have been flying through the air thick and fast with respect to defense strikes. Let us consider all the ill-considered proposals that all strikes shall be outlawed.

I want to make perfectly clear that I don't approve unwarranted strikes. I condemn arrogant tactics on the part of anyone, whether it be employer or employee.

And it is, of course, not at all desirable from the standpoint of national-defense production that there should be a large number of strikes in defense industries. But actually, despite the great publicity given those strikes which do occur, the number of strikes at any one time in defense work has been extremely small.

Organized labor has demonstrated in the past, and is demonstrating again today, that superiority in efficiency is maintained by voluntary action on the part of labor, not by compulsion.

The question of forced labor was settled by the Civil War. The curtailment of the right to strike is as repugnant to the Constitution as it is abhorrent to the American people. The right to strike is an inseparable part of the bill of rights of American labor.

But apart from the unconstitutionality of forced labor, which is what no-strike legislation would mean, the experiences which Kansas, Colorado, Canada, and New Zealand have had with no-strike laws prove that this

is no remedy whatsoever, but quite the contrary.

I can think of no greater folly than the enactment of the antistrike proposals which are now before Congress. Any such law would immediately cause unrest, strife, and rebellion. It would indicate to the workers of the Nation that they are not considered as partners in the national effort, that the rights of freemen are not for them, that they are to be shackled and driven like slaves, just as workers are shackled and driven by the lash of the Nazis.

Labor has been supporting the national-defense program 100 percent from the very beginning. Labor has been supporting the defense program, first because the patriotism of an American worker is second to that of no one, and secondly because labor realizes more fully than other sections of the community that it has a tremendous stake in the survival of democracy—that free, democratic trade-unions cannot exist under totalitarianism.

Labor's feeling that it has this stake in the victory of the democratic cause is the explanation of why there have been so very few strikes and of why American workers are toiling with such zest and zeal to produce as rapidly as possible the ships and tanks and planes and all the other things that are necessary to the defense of our country.

But if we were to junk labor's democratic right to withhold its labor power—a right which is exercised only as a last resort, generally where an employer refuses to recognize the law of the land and deal in good faith with his employees' organizations—we would, in effect, be telling labor that it no longer had any stake in the national effort.

We would be informing the workers of the Nation that, at this late stage of what is supposed to be a gigantic program of democracy opposing dictatorship, we had decided to heed the muddled and unwise advice of those enemies in our midst who urge that the way to prepare to defend democracy is to abandon democracy and adopt in its stead the hateful methods and policies of the dictators.

It is particularly senseless to advocate no-strike legislation at this time because of the fact that the Nation, through the action of President Roosevelt, has just established a National Defense Mediation Board.

This 11-man board, whose personnel includes outstanding and highly respected leaders representing employees, employers, and the public, has the authority to invoke public opinion against whichever side is at fault in any major labor dispute resulting in a strike or lock-out.

President Roosevelt, in establishing the Defense Mediation Board, has called upon both labor and management to give such sufficient advance notice of any threatened interruption to continuous production as will permit exploration of all possible avenues of settling controversies before they can get to the strike stage.

William Green, president of the American Federation of Labor, has pledged the full cooperation of that patriotic organization.

The creation of the Defense Mediation Board represents an important and constructive step toward the promotion of uninterrupted production in defense industries. In view of the powers possessed by the Board, and in view of the caliber of the men named to the Board, I am satisfied that it can and will help labor and management to settle disputes around the conference table. And therefore there no longer is the slightest reason for consideration to be given to any bill proposing the outlawing of the right to strike.

Labor's fight for fair and equitable treatment is as long as the story of the Nation. Labor has made great progress over the years. The rights and conditions it has gained, labor jealously guards. That it should guard these rights and conditions is right, and, in addition, it is highly desirable from the standpoint of the welfare of the entire Nation.

Our country is laboring in the throes of a mighty effort. The Nation is dedicated to a lofty purpose. It would be the rankest form of hypocrisy to plead for the help of labor in America, organized and unorganized, for the achievement of that purpose and at the same time throttle labor by the enactment of restrictive and punitive legislation.

Why Destroy the Urge To Save?

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1941

ARTICLE BY JAMES TRUSLOW ADAMS

Mr. CRAWFORD. Mr. Speaker, thrift brings many blessings. It is so very fundamental to the social, moral, and economic progress of mankind in his efforts to practice and make effective a high degree of civilization that I, for one, look with concern on many forces now at work in the United States. Mr. James Truslow Adams, recognized as one of our greatest historians, has been so deeply impressed with some of the new forces that are now running in the United States that he has written an article, published in the March 24, 1941, issue of Barron's—The National Financial Weekly—and in which he discusses the subject Thrift and War. His statements are so highly important in this hour, and I believe they should be given wide publicity.

I submit the article for the RECORD:

[From Barron's of March 24, 1941]

THRIFT AND WAR—URGE TO SAVE DESTROYED—TREND TOWARD GOVERNMENT OWNERSHIP

(By James Truslow Adams)

Threat of the greatest war in which the United States has ever been involved has suddenly, like a flash of lightning, illuminated our entire mental landscape. It has disclosed vividly the differences between old practices and new theories.

Nowhere has this been more revealing than in the concept of thrift. The confusion of mind of the New Deal with regard to it stands naked to the sight of all. For example, an economic adviser to the Department of Agriculture, Mordecai Ezekiel, recently proposed as his first three points to cure our economic ills that there should be enough Government spending "to counterbalance the excess savings"; "taxation to diminish the incentive to save"; and "procedure so to increase individual security as to diminish the need of savings by the general mass of workers."

Within a week of this utterance, the Under Secretary of the Treasury, Daniel W. Bell, made a proposal which comes in direct conflict with the Ezekiel theory. In view of the Government's obvious necessity for money for war or defense, the Under Secretary of the Treasury urged the issue of Government bonds on such a basis as to induce the people to save in order that the Government should have funds to call upon and that inflation should be avoided.

IMPORTANCE OF THRIFT

Here is a clear divergence of philosophies, and in view of the resulting crisis it may be well to reconsider the theory of thrift. Our whole future, war and post war, may depend on the view adopted by Government and people.

Thrift, which has been so repugnant to many of the New Dealers, new economic thinkers, and new dictators, has been throughout history one of the leading factors, with others such as religion and physical environment, in influencing the character and rise to civilization of mankind. Whatever the future may hold, history teaches that in the past the ascent of man from the savage state, which the philosopher Hobbes denominated as "poor, nasty, brutish, and short," has been due to man's instinctive desire to acquire private property and to his discovery of the advantages of thrift. It is, or should be, needless to point to the role of accumulated capital, whether in the form of stored food, extra arrowheads and implements, a hut instead of a cave, and so on down to our modern forms, in enabling the vast mass of mankind to improve their condition and to create a high instead of a low standard of living for at least the great majority.

The stream of history flows on but forms of government change. Thrift, however, would seem to have a very special role to play in our modern self-governing democracies. Democracy depends for success on the character of its citizens, and character depends, in part, on hard work and the self-respect which a reasonable security self-earned brings to all, human nature being what it is. There have been times when work could not be had by many and when those lacking it were carried as far as possible by those who had accumulations. This was far from an ideal system, as human life is always far from perfect, but under it the belief in the value of thrift persisted.

There have also been brief periods of speculative mania when the belief in thrift, though not that of accumulating personal resources, was temporarily lost. But after such periods the belief in thrift has returned. The years leading to the crash of 1929–32 formed such a speculative period, but in the latter year Roosevelt was overwhelmingly elected President on promises of governmental and personal thrift which might have been heartily approved by Benjamin Franklin. The people again were ready to try saving instead of gambling.

GOVERNMENT GOES IN FOR BORROWING, TOO

Before that, for some years, the lure of quick and easy profits in the market, high pressure salesmanship, the psychological pressure of advertising, and the easy terms offered by installment buying had upset the steady balance of even the most conservative—rich and poor. Since then, however, Government itself has largely discouraged thrift. Disregarding the fact that widespread ruin was largely due not simply to hard times, but to the enormous debt accumulated by stock margins, too heavy mortgages, and excessive installment sales, Government has tried to teach us that even Government can be bought on the same installment plan. Highly critical of business which had brought American living to the highest standard the world had ever known, the administration took over from business as its only lesson the worst blunder business had made, namely, that debt could be incurred recklessly.

Accepting the theory of the English economist Keynes, which the English were too clear-headed to accept themselves, our Government started on a debauch beyond the wildest dreams of the more reckless business leaders. It decided that the way to cure a nation overburdened with debt was, not to save, but to create more debt. It has oper-

ated by colossal annual deficits ever since it came to power. It tried to create jobs in business by attacking and destroying business, and tried to create plenty by a policy of artificially caused scarcity.

But it did more. It set to work to eliminate from men the fundamental idea of saving and thrift. The attack has come from many quarters, and the confusion is growing. Two incentives to save are reasonable security and a reasonable return. We need not here rehearse the story of the attacks on private enterprise—the failure to do anything for the railroads except to pile higher debts on them and to increase their costs and taxes; the unfair Government competition with the public utilities; and now the threat to divert the most conservative investments of the insurance companies into common-stock portfolios; thus injecting uncertainty into perhaps the three greatest investment fields for the public for the past two decades. Even that last asset to which rich and poor cling, a life-insurance policy, has now become a speculation due to what the Government may or may not do. Marketability is a factor in investment, but owing, in part, to the drastic regulation of markets, that is fast disappearing. I noticed the other day that one of the soundest preferred stocks, which always used to have a spread of an eighth between bid and asked, was quoted with nine points between them. The difficulty of marketing holdings in any quantity is notorious.

But there is more than such things as these. The low interest rates forced by the Government have so reduced return from investment as not only to make insurance and annuities more costly and all forms of saving, such as high-grade bonds, savings bank accounts, and others less remuneratively attractive, but also to encourage squandering by individuals and all governmental bodies. Worse than all, underlying all these measures has been a philosophy, believed and preached, that America had oversaved and overbuilt, that it had reached the point of a static economy in which saving would be a curse and not a means of further advance nationally and of attaining self-respect and sufficiency individually.

ALARMING IMPLICATIONS FOR SOCIETY

According to the apparent New Deal theory, thrift must be destroyed. The incentive should be taken away from the well-to-do by such taxation as will make saving sterile, and from the poor by assuring them that they will get what they want or need without self-denial and foresight on their own part. We all admit that in a modern industrial society the State must provide more means of social security than in a primitive agricultural one in which each person owns the means of procuring a livelihood under almost any economic conditions. But this new theory of abolishing if possible all effort by individuals to gain security and a better life for themselves by their own efforts has most alarming implications for society as a whole. It is a negation by theorists of all we know about the rise of society in the past and of human nature.

Let us consider the impact of the war on this theory. It has been claimed that America was overbuilt, but now that we suddenly need goods the Government is moving heaven and earth to increase our plant. The capital—goods and money—to do so must come from somewhere. The money, it is said, is to be raised from either taxation or borrowing or both. It is obvious that there can be no property tax if people have not saved in the past to buy property—cars, houses, lands, securities, or what not.

Suppose nobody had saved anything for the past 500 years and was living only on the largess of the Government; would the Government tax its own property and would it get any further than by trying to raise itself by its own bootstraps? Take the income tax. If everybody had been living up to his income, where, according to the new theory, would any tax come from, except in part, possibly, by a tremendous fall in the scale of living even for the poorest? Instead of the one-third now poorly housed, clothed, and fed, the full 100 percent of the population would be so under the oversimplified situation shown above.

It is said that the Treasury intends to pay for the war by tapping savings held by insurance companies, other institutions, and individuals to pay for bonds, and get the rest of the cost from taxes. But if savings and living well within an income are uneconomic and perhaps some day illegal, or so discouraged by Government as to become impossible, then what?

The impact of war, or of the preparation for it in our belated defense program, leads to another question. We have been through some 10 years of depression, greatly accentuated, I believe, by the false economic theories of the Government. There have been millions of unemployed. Even the Government does not know how many, though it has poured out billions to help them. Millions of these recently jobless are now to be at work at high wages. In my section, Connecticut, factories are working 24 hours a day 7 days a week, and young men recently with no means of support except the Government (which means taxpayers like myself and not a Santa Claus on his own), are now getting $60 to $75 a week. In some cases, so strong is the best part of human nature and the desire to feel independent, they are saving, but in all too many they are buying cars and riding high, wide, and handsome. The Government does not give the example of trying to save a cent. The capital of the rich and middle class is levied on. Men are drafted into the armed forces, but labor is highly paid, and striking for more.

When the boom is over and the inevitable post-war break comes, the cry will go up again, for those who have not saved, that "we cannot let Americans starve." The Government realizes that, but its only suggestion is to prepare for a bigger and better Works Progress Administration and to take still more from those who have saved or may still be earning fair incomes. Why should young men save, except by native instinct, when the great Government tells them saving is bad national economics and that they will be taken care of anyway when they lose their jobs, get sick or old?

DIPPING INTO A ROYALTY PAYMENT

But for how many generations can we go on living on the accumulated savings of the former ones who believe in and practiced thrift? How long will those of us, who do not think in terms of a 40-hour week to get ahead and save, go on trying to do it if the whole weight of the Government is used to break us of the habit, and where will the surplus come from then? For a personal illustration, I have just had a small royalty payment from England. Britain taxed it 48 percent. Here, the Federal Government takes 38 percent of what's left. If I invest it in a bond, Connecticut takes from 10 percent up or more, and when I die and leave it to my widow heaven knows what the State and Federal Government will take. How long will one continue to work, to make a taxable income, to build up property which can also be taxed, with those facts in mind, and when being taught by the Government that one is doing the Nation an economic disservice by trying to save?

And when we stop creating income and building up estates, however small, what will there be left for the Government to do but to take over the crumbs from the table of private enterprise and turn itself into a socialistic or communistic State, whatever the difference may be between them ultimately? From one side of its mouth the Government calls for thrift so we can lend money to it; with the other it tells us that thrift is an exploded idea, and its tax collectors demonstrate it to us.

After the Middle Ages, much was heard of the "dead hand" of the Church, but the dead hand of a modern government, with its unlimited power of confiscation, taxation, and killing of private initiative and ambition, may well prove as paralyzing and devastating. Is it yet too late for one government to turn back and to build up, as far as it can, a thrifty and self-respecting citizenry, who may receive at times such governmental aid as the conditions of the new industrial world may demand, but who will still be taught that in democracy happiness and independence come, as Thomas Jefferson was taught by his father, from not asking someone else to do for him what he can perfectly well do for himself?

And, even against the great pressure of government and its heterogeneous crew of volunteer spokesmen, might it not be well for that great portion of the people who are hard-working and saving, and on whom the burden of taxation will fall later, to try to instill the meaning and effect of thrift into those who are now getting high wages and know little about direct taxation?

SOCIALISM THE ALTERNATIVE

Lincoln said that this country could not long endure half slave and half free. Neither can it do so half ambitious, energetic, and thrifty, and half willing to be supported by their hard-working and thrifty fellows. If the Government abolishes saving and thrift, then there can ensue in time—a result which may not be wholly unwelcome to some of the New Deal's more noisy camp-followers—only a socialism or communism which will be the total negation of all we have dreamed of America, and leave most of the 130,000,000 of us at the mercy of the inevitable tiny group at the top who may still, like Hitler, Goering, and the rest, maintain regal state at the expense of an exploited people. Poverty, prison, and the concentration camp will replace the insurance policy and the savings bank, the millions of comfortable homes and the Bill of Rights.

Judging not from a theory of the future but from all the lessons of history, I do not think this prophecy is overdrawn. If we have a choice, we have not overlong to make it, and if we still have the energetic initiative of a living democracy, the task is one to be undertaken by all, employers and employees or solitary workers like myself, and not alone by the irresponsible theorists of the left-wing of a Government which rests ultimately only on the lives and toil of the mass of the rich and poor who make up the Nation.

Old-Age Assistance

EXTENSION OF REMARKS

OF

HON. HARRY R. SHEPPARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1941

RESOLUTION BY THE CALIFORNIA STATE LEGISLATURE

Mr. SHEPPARD. Mr. Speaker and Members of the House, due to the recent regulations of the Social Security Board

as those regulations apply to the State of California, and in view of the fact that the California congressional delegation has taken steps requesting the Social Security Board to amend their regulations, I am herewith indicating the interest of the respective legislative bodies of the State of California, manifested by assembly joint resolution No. 2:

Assembly Joint Resolution 2

Memorializing Congress to amend the Social Security Act with reference to the exempt-income rights accorded persons receiving old-age assistance

Whereas it appears by section 2 (a) of the Social Security Act that this State, on July 1, 1941, will be required in determining the need of applicants for old-age assistance, to take into consideration any other income and resources of such applicants; and

Whereas this requirement will force this State to amend section 2020 of the welfare and institutions code to remove the right to certain exempt income now accorded to persons receiving old-age assistance; and

Whereas this action will force a reduction in the income of those persons receiving old-age assistance who are still able to supplement assistance from the State by gardening or other light labor suited to their age: Now, therefore, be it

Resolved by the Assembly and the Senate of the State of California (jointly), That the Congress of the United States be memorialized to amend the Social Security Act to remove this requirement therefrom in order that this State may be eligible to receive further Federal funds for the financing of the old-age security law of this State without the necessity of amending section 2020 thereof; and be it further

Resolved, That a copy of this resolution be sent to the Senators and Congressmen from California in the Congress of the United States by the secretary of state.

Lewis Compton, His Resignation as Assistant Secretary of the Navy a Real Loss to Our First Line of Defense—His Record of Faithful and Effective Service

---

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1941

Mr. VOORHIS of California. Mr. Speaker, one of the brightest spots in the whole national-defense situation at present is the fact that construction work on America's new and vastly expanded Navy is proceeding ahead of schedule. This has not just happened. It has been, of course, the result of the work of men. My remarks here have to do with the work of one of the most devoted of those men.

This man's name is Lewis Compton, who, until a couple of weeks ago, was Assistant Secretary of the Navy, and who was Acting Secretary during probably the most critical period of all—when the expansion program was being started on its way.

In justice to him, and in order that some public record may be made of his work for the Navy, I am presenting here in the CONGRESSIONAL RECORD an account of that work. It happens, however, that Mr. Compton and the late Representative William Byron, of Maryland, who recently met his death in an airplane accident in Georgia, were very close personal friends. Had Mr. Byron lived, it was, I am informed, his intention to do what I am doing now with regard to Mr. Compton's work. Under the circumstances, I am glad to make it a matter of record that these remarks are not only my own expression but also in a very real sense an expression of our honored colleague, Mr. Byron.

Lewis Compton first came to the Navy Department with Mr. Charles Edison in January 1937, and served as Mr. Edison's assistant during his tenure as Assistant Secretary of the Navy. Mr. Compton's previous naval experience consisted of service during the World War as a Reserve officer in the cruiser and transport force, and 10 years' service after the war in the Naval Reserve as the commanding officer of a fleet division.

Due to the illness of the then Secretary of the Navy, the late Honorable Claude A. Swanson, a great deal of the work of the secretariat fell upon the shoulders of the Assistant Secretary of the Navy, and, by like token, Mr. Compton assumed many of the duties and responsibilities that were normally those of the Assistant Secretary. It was during this period that the measures were taken that are now reflecting themselves in very materially reduced building times for new naval vessels under construction. An example of the time saved through standardization of design and other measures is the fact that the building time of destroyers has been reduced from 32 months to 18 months. By setting up a procedure to permit private yards to buy the machinery, auxiliaries, and other items for ships to be built at navy yards, Mr. Compton saved a great deal of time and money and assured standardization of equipment in ships of like types. It is estimated that 2 months were taken off the building time of destroyers by this policy alone.

When Charles Edison became the Secretary of the Navy in January 1940, he recommended to the President the appointment of Mr. Compton as Assistant Secretary of the Navy, and the appointment was made on February 9, 1940.

During the spring of 1940, in the absence of the Secretary on an extended tour of inspection of Naval Establishments and the United States Fleet, and during the period between the resignation of Mr. Edison as Secretary of the Navy and the appointment of Colonel Knox to that post, Mr. Compton served as Acting Secretary of the Navy. For nearly 3 months he handled all the business of the Secretary single-handed, such as attendance at Cabinet meetings, appearance before committees, signing contracts and official mail, and the signing of numerous other legal documents requiring the signature of the Secretary. It was during this period that the negotiations were consummated for the 11-percent increase in the Navy which was still pending in Congress. It was also during this period that negotiations were started in anticipation of the 70-percent increase which was contemplated. Policies set at that time, in connection with the building of ships and public works have, I understand, generally continued in effect. Mr. Compton was primarily responsible for the policy of diverting shipbuilding and shipbuilding facilities to the gulf coast and the west coast, in order to provide shipbuilding facilities in these strategically important areas for the repair of damaged ships in the case of necessity. The policy was also set at this time, of first employing up to the utmost capacity, and providing necessary expansions in all of the private yards that had prior experience in the construction of combatant naval vessels. After full use of these facilities had been provided for, the policy was established of doing business so far as possible with well-established going concerns, rather than with firms especially organized to take advantage of emergency needs which, in many instances, were underfinanced and required a great deal of governmental aid.

Policies were also established at this time for carrying out the vast program of construction of air bases and the expansion of industrial and shipbuilding shore facilities and other necessary works. Features of the public-works policy included in the negotiation of not to exceed one major contract with any one firm in order to spread the work as much as possible and the making of contracts, wherever possible, with local concerns wherever competent organizations could be found.

By insisting upon the awarding of Navy business to two firms to keep them going, Mr. Compton preserved the availability of these important facilities for the use of the expanding national-defense program. He insisted on the award of a design contract to a firm of naval architects who employ over 500 skilled draftsmen, who were about to lose their jobs because of the lack of work. He also made an award to another firm who had constructed an $800,000 plant without any assurances whatsoever as to what rate of amortization they could expect for tax purposes. Without this plant being kept in commission the Navy today would be without that facility for the mass production of motor torpedo boats.

The foresight used in initiating negotiations on an if-and-when basis, conditional upon the enactment of the authorizations and the passage of the appropriations, resulted in the Navy Department being able to send out letters of award on all of the combatant tonnage authorized and appropriated for under the 11-percent and the 70-percent increase bills, within a matter of a few hours after the President signed these measures. The contracts involved in the 11-percent increase amounted to more than $500,000,000, and those involved in the 70-percent bill amounted to slightly over $4,000,000,000.

It was Mr. Compton who, in May 1940, issued the necessary orders to place the navy yards of this country on the basis of a 48-hour week, with time and half overtime for the additional 8 hours over the normal 40 hours a week.

In May of 1940 Mr. Compton learned that vast quantities of machine tools were being exported out of the country to Japan, Russia, and other foreign powers. As there were already indications that machine tools would constitute one of the most serious bottlenecks in any materially expanded defense program, Mr. Compton, through the machine-tool section of his office, undertook negotiations with the State Department looking toward the refusal of an export license on these tools. The result of this action was that these tools were not exported but were placed in bonded storehouses. In some cases, the tools were actually on board ship, ready for transportation overseas; in others, they were on docks, ready for shipment, or in transit from the manufacturing plants.

This action was taken by Mr. Compton when the so-called speed-up bill was still pending in Congress. There were two clauses in this bill which were needed by the Navy Department to get possession of these tools for use in American shipbuilding, aviation, and other allied industries; namely, the power to negotiate and the power to commandeer. It was not until after the power to negotiate and the power to commandeer was granted by the Congress late in the summer of 1940 that many of these tools became available to navy yards and to American industry. But except for Lewis Compton's foresight and courage they would have been already on their way to installation in the factories of foreign powers. The monetary value of these tools was estimated to be in excess of $10,000,000.

In the spring and summer of 1940 Mr. Compton served with Rear Admiral Reeves on a board of two members appointed by the President to prepare legislation for the Staff Corps of the Navy. The result of this study was the drafting of a bill which will straighten out many of the inequities in the administration of the Staff Corps personnel and be of lasting benefit to the Navy in many ways.

During his term of duty as Acting Secretary Mr. Compton consistently and actively advocated legislation to provide decent low-cost housing for married enlisted men of the Navy and also for industrial workers in congested industrial districts. Such legislation has subsequently been enacted.

At the direction of the President Mr. Compton launched the special program for the training of 5,000 Reserve ensigns. As a result of a vigorous campaign of education including two radio broadcasts given by Mr. Compton on Nation-wide hook-ups, 500 young American college boys were physically examined, enrolled, and at sea on battleships of the United States Fleet for training within 18 days after the directive had come from the President. The entire 5,000 young men were enrolled before the end of the summer.

It was also during Mr. Compton's tenure as Acting Secretary that the so-called speed-up bill was introduced and passed in Congress. One clause of this bill removed the statutory limitations on the employment of Class 4–B personnel—clerks and stenographers. Without the removal of these limitations it would have been utterly impossible for the Navy Department to provide for the rapid expansion that was necessary in the departmental and the field services. This bill also contained a clause which gave the Secretary of the Navy power to negotiate contracts.

Without this power to negotiate, it would have been utterly impossible for the Navy Department to make the splendid record which it did in getting the authorized ships and public works under contract without any loss of time. This measure contained other provisions which are largely responsible for the record of speed being made by the Navy Department in the execution of the naval phase of the national-defense effort. A policy of decentralizing authority and responsibility to naval inspectors in the field was initiated by Mr. Compton and has been enlarged since. By making it possible for decisions to be made in the field, Mr. Compton saved a great deal of time which would otherwise have been lost in trying to put this vast program through one knothole in Washington.

As contracting officer, Mr. Compton has signed, in actual contracts and in letters of award, for over $5,000,000,000 worth of public works and ships. His work has been as vital and important as that of any man connected with the Navy Department for many years and I consider it a privilege to make this brief account of that work a matter of public record. Indeed, I believe it is doubtful whether any executive official, except only the President of the United States himself, has been so largely responsible for the excellent record of pushing forward our naval program as has Lewis Compton, a man who, for reasons rather hard to understand, is no longer an official of the Department.

EXTENSION OF REMARKS

OF

HON. CLYDE T. ELLIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 25, 1941

EDITORIAL ENDORSING PROPOSED ARKANSAS VALLEY AUTHORITY

Mr. ELLIS. Mr. Speaker, under permission granted me by the House I insert here three splendid editorials endorsing the proposed Arkansas Valley Authority—one of them answering certain charges made by the Governor of Oklahoma:

[From the Southwest American, Fort Smith, Ark., by Editor C. F. Byrns, March 30, 1941]

Gov. Leon C. Phillips of Oklahoma has definitely declared his opposition to the proposed Arkansas Valley authority which would be created by a bill introduced in Congress by Congressman CLYDE T. ELLIS and Senator JOHN E. MILLER of Arkansas.

Appearing Friday before a meeting of the Washita Valley Improvement Association meeting in Chickasha, Okla., the Governor teamed up with the association in support of a resolution opposing the A. V. A.

The Oklahoma Governor's attitude on A. V. A. is understandable. He has been carrying on a one-man war against the Federal Government on the public power front since he took office. He has done battle continuously with the United States Army engineers on the construction of the Denison Dam on Red River. He tried, without success, to stop construction on Grand River Dam, being built by a State agency with Federal funds, because of a controversy over road relocation and rebuilding in the Grand River lake area. It would be most surprising if he should now reverse his well-known position and approve the A. V. A. idea.

The attitude of the Washita Valley Improvement Association is harder to understand. Presumably, it is concerned with doing for the valley of the Washita River in Oklahoma exactly what the A. V. A. bill proposes to do for the whole drainage area of the Arkansas, the White, the St. Francis, and the Red Rivers. If the program of the A. V. A. is ever carried out, the program of the Washita Valley Improvement Association would be a part of it.

Newspaper stories describing the Chickasha meeting reflect the apparent basis for the opposition.

Governor Phillips is quoted as saying to the meeting: "You heard this morning about the proposed Arkansas Valley Authority. We all feel alike about this attempt to further abrogate our rights to develop and control our natural resources. The Supreme Court has set the stage for this kind of legislation. I hope you will do your duty as citizens of Oklahoma in raising your voices against this growing monster."

The news story contains this statement: "Phillips and others favor a system of flood-control and irrigation projects 'designed to hold water where it falls' as opposed to the big dam projects. He supports a system of farm ponds, lakes, and storage reservoirs progressively distributed along tributaries in the general drainage shed of rivers."

It seems to me the attitude taken by the Oklahoma Governor and the Washita Valley Improvement Association needs a large dose of realism.

Without a question, the people of the States have the "right" to develop their own rivers, impound their waters, utilize their energy, prevent floods, provide irrigation, and otherwise make their resources contribute to the public welfare.

Equally without question, the States have not done so, for excellent reasons.

The States have not the legal authority nor the finance to do the job on a large scale, which treats a drainage system as a single entity and takes full advantage of its possibilities.

Practically all the river improvement work or the utilization of stream flow which has been done by the States has been done only when the States could persuade the Federal Government to put up the money. The Grand River Dam is the present outstanding example. The State is doing that, but it is doing it with Federal money. It would never

have touched the job without the Public Works Administration to act as the angel.

Certainly we have the right to develop our own rivers. We have the right also to provide employment for our own unemployed. But we have not been able to do either without Federal help, and there is no prospect that we shall any time in future.

The fundamental idea of the Arkansas Valley Authority proposal is to do on a complete scale, for the drainage areas of four related rivers, exactly what the Washita Valley Improvement Association is trying to do on a very limited scale in Oklahoma.

No State and no combination of States can do the job effectively. The limited efforts they have made in that direction have been handicapped by lack of jurisdiction outside their own boundaries and by lack of financial resources for the large investments which are necessary.

Such progress as we have made in the use of our waters has been made with Federal money in practically all instances and with direct Federal control over the project in most of them.

The A. V. A. simply proposes to substitute a comprehensive, integrated program of water use for the piecemeal development of unrelated and sometimes antagonistic projects which has been the rule and will be the rule until a Federal agency is created big enough to bring it all together into one rational whole.

We need to be realistic about this thing. We can go on having meetings of local improvement associations forever, and we will never get the real job done until we have set up some kind of agency with power that crosses State lines and credit that will command the necessary millions. When we do that our great natural resources will cease to lie dormant; our great rivers will cease to destroy and begin to build, and we shall see the beginnings of a new and brighter day here in the Southwest.

[From the Atlanta (Ga.) Constitution of February 9, 1941]

THE RIVER AREAS

Full utilization of the Arkansas and Columbia River valleys through authorities modeled after the Tennessee Valley Authority, now being considered in Washington, will further enhance the economic future of these two great areas.

After an initial period of adjustment, not without turmoil, the T. V. A. is beginning to demonstrate the immense potentialities of regional planning—the integration of resources of an entire section under centralized guidance, and the planned development of the economic resources through which the greatest benefits are brought to all citizens of the affected area.

This value particularly has been demonstrated under the defense emergency, in which T. V. A. has been cast in a major role. Planned for peacetime development, little has been required to turn the newly harnessed resources to the task of national mobilization. Under this condition, the reversion to a peace economy will be less difficult than it will be in regions where there has been only piecemeal and decentralized planning.

The Tennessee Valley Authority not only has been concerned with the construction and operation of power facilities but in the rebuilding of farm lands, development of a balanced agricultural and industrial economy, provision of adequate marketing facilities, cooperative purchasing and selling of commodities, the discovery of new methods and products, and the manifold other phases of regional planned economy.

It is this type of authority proposed for the Arkansas and Columbia River sections. The Arkansas area embraces almost all types of land use found in the United States, with fertile sections, drought areas, and flood-threatened lands. It is weak in industrial structure, weak in intelligent use of farm lands, but strong in ambition and ripe for centralized development. The Columbia area comprises almost virgin territory being opened by the construction of the Bonneville Dam.

There will be opposition. It is recommended that this opposition examine the operation of T. V A. and the great advances made possible through it before thoughtlessly opposing a proposal of utmost potential value to the sections involved.

[From the Louisville (Ky.) Courier-Journal of February 13, 1941]

THE ARKANSAS IS A PROVOKING RIVER

The proposed Arkansas Valley Authority, now before Congress, embraces an area three times the size of the Tennessee's watershed. This fact alone would rebuke the Topeka Capital's disparaging reference to "little T. V. A.'s" if the bill creating the Authority had not provoked a sectional controversy commensurate with the magnitude of the undertaking.

The division on the question is at variance with historical positions. A conference of western Governors at Denver condemned A. V. A. as a menace to State rights, while Arkansas, whose political traditions are steeped in the sacredness of State rights, sponsors the legislation. Perhaps the popularity of watershed development bears a direct ratio to the distance from T. V. A. Arkansas is just across the Mississippi River from it.

Be that as it may, the Arkansas River drains no such comparatively simple geographical unit as the Tennessee Valley. The Arkansas system traverses mountains, plains, prairie, and the lower Mississippi Delta. It presents a complicated series of problems from the main stream's source in the Rockies and New Mexico's arid plateau to the last 200 miles. In its long course the Arkansas drops some 4,000 feet. When it reaches the Mississippi Delta the river ranges in depth from 6 inches to 27 feet; but it can be depended upon to destroy many acres of rich bottom land every year.

This is a serious loss to Arkansas; and, surely, engineers would experience no trouble in satisfying by the same measures both Arkansas' desire for flood control and the upstream States' needs for irrigation.

Churchill to Griffin

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1941

ARTICLE FROM THE BOSTON POST

Mr. MARTIN J. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Bill Cunningham, staff writer for the Boston Post, which was published on January 20, 1941:

BOSTON, March 9.—Words spoken by Winston Churchill, now British Prime Minister, to William Griffin, editor and publisher of the New York Enquirer, may "play a major part in shaping the future course of every human being on this earth" in the opinion of Bill Cunningham, staff writer for the Boston Post, and nationally known for his brilliant reporting and comment on personalities and affairs.

Cunningham's story in the Boston Sunday Post deals with the matter of the now famous Churchill statement to Griffin, in which the British war lord criticized the part played by the United States in the World War and observed that the United States should have minded its own business and stayed out.

Dwelling at the beginning of his article on the vital importance the world may one day place on the Churchill-to-Griffin statement, Cunningham writes:

"The focus on the smallest and most inconsequential matters can be changed unbelievably by a shift of events. Words actually spoken by, or falsely accredited to, some individual, considered at the moment too innocuous either to qualify or to deny, may become surcharged syllables of devastating dynamite when recalled after enough sand has trickled through the shanks of the hourglass.

"WHEN IT HIT HOME

"So it is with an interview a New York newspaper publisher maintains he was granted by Winston Churchill in London in 1936. Three years passed before Churchill either heard of it or, if he did hear, figured it important enough to do anything about, but then, with affairs in England rapidly approaching a crisis, with United States friendship an imperative necessity, he branded the entire story of the interview 'a vicious lie.'

"The newspaper publisher thereupon sued Mr. Churchill, by this time First Lord of the British Admiralty, but not yet Prime Minister, for exactly $1,000,000 on the charge of slander, stoutly maintaining that the British leader did grant the interview and did say the things about the United States alleged in the original article, and attaching $20,000 worth of Mr. Churchill's assets in this country.

"SUIT FILED MARCH 1940

"The suit was filed less than a year ago, last March 9, to be exact, in New York, and what has happened since isn't part of the public record. Mr. Churchill, of course, has been extremely busy otherwise. The suit may be still pending, it may have been settled or dropped, but the alleged statements of the British Prime Minister are still so very much alive that they are apt to feature one of the bitterest and most important fights perhaps the world has ever known, the battle in Congress over the presidential plans to aid England to the ultimate."

Incidents on board ship in which the "little fuss-budget of an Englishman" figured in discussions about the war debt with Griffin are described amusingly by Cunningham. He relates:

"The entire story is especially interesting to me because I was accidently close to the start of it. It was one of those stories that came to light during the Olympic games in Berlin and shortly after part of the current literature of that busy period that seemed to be of no particular importance at the time, but which, in the light of things that have followed, has proved to be some of the most important and prophetic news writing of all time.

"WAR DEBT ISSUE HIS

"The newspaper publisher involved chanced to be my cabin mate on the ship coming back from Europe. There were three of us, all strangers, signed on catch-as-catch-can. The other gentleman was a little fuss-budget of an elderly Englishman crossing to the United States on business. He wasn't much fun.

"This other one was. His name was William Griffin, an energetic, two-fisted teetotaler in his forties, with a mind as quick as a steel trap, a potent sense of humor, an impressive

fund of historical and political information, and what seemed to be a burning but still well-tempered belligerence against every European nation that has welched on her war debts.

"In fact, every morning when the three of us woke up in this seagoing cupboard we were sharing as passengers, he used to say, 'Good morning, Mr. Blank,' to the fussy little Englishman, all done up in a flannel nightshirt and ear stopples, 'have you any reason why England hasn't paid her war debts this morning?'

"TOLD OF EUROPEAN TRIP

"His paper was, and is, the New York Enquirer, a weekly published on Sunday in the metropolis, and aimed to plug that gap between Sunday morning and the Monday predates, when the big town is otherwise uncovered journalistically.

"In the course of talking he told me what he'd just been doing in Europe. With the war-debt matter particularly burning his soul, he had made a grand tour of England and the Continent, not forgetting Ireland—he was a grand-nephew of the celebrated Irish poet, Gerald Griffin—and had managed on his credentials to get personal interviews with the heads of practically every government that owed the United States money, and sometime or other before he got through the ceremonies, he had asked them cold turkey why they didn't pay their debts."

Mr. Cunningham was intrigued by the Griffin technique of getting in to see the heads of European governments, as is shown in the following part of the Cunningham story:

"VISITED LE BRUN

"His description of some of this was really funny. There was the case, for instance, of Albert Le Brun, then President of France. Griffin used cards and letterheads featuring himself as editor and publisher of the New York Enquirer, which he was, and, as he explained himself, they didn't know over there but what he headed something comparable to the New York Times, and, as a powerful moulder of public opinion in the world's most important city, he was received with great ceremony.

"In the case of LeBrun, he was escorted with great dignity to Elysee Palace and into the presence of the Chief Executive of France, where all the best interpreters awaited and the usual palaver about sister republics and international bonds was salved on. The usual greetings were exchanged, the usual remarks about the weather, and then M. le Presidente naturally inquired of M. Griffin what he thought of France.

"It looks to be in fine shape to me," is about the way the Griffin reply—typical of those he made to practically every executive in every debtor land—began, "better than I expected to find it, as a matter of fact. Your country looks prosperous. Everybody seems to be working. The stores are busy. People on the streets are well dressed. In view of all this, it's harder than ever for me to understand why you people have welched on your war debts. From all I can see, you've got plenty of money. Why don't you pay us what you owe us, as any honest people would?"

"GREAT GUYS THEN

"Parbleau, what was that?

"Yes! Griffin would go on; the whole world knows that the American Army saved your country from utter annihilation. We were great guys when we came over and did the job, but when it came to getting any of the money back, it looked as if we'd have to go back to the prescription of Andrew Jackson. The man knew his history—a superplentitude of it.

"In Jackson's time, France owed America $5,000,000 for damage done American property during the Napoleonic wars. France tried to laugh it off, but Jackson recalled the United States minister and barred the sale of all French products in the United States. France thereupon paid fast, and with interest.

"But, said M. le Presidente, it was all M. Hoover's fault, M. Hoover asked the world to declare a year's moratorium on German reparations. At the end of the year Germany refused to pay and more so, France couldn't pay any more, either.

"CHARACTERISTIC DODGE

"'A natural and characteristic dodge,' replied Mr. Griffin. 'There is no connection whatsoever between reparations and war debts. When the money was borrowed, payment wasn't made contingent upon reparations. Anyway, we've canceled all debts incurred for actual war purposes. What we are trying to get now is money loaned you after the war, and you've even quit on that. As for not being able to pay, how about all these fortifications, how about the steamship Normandie?' And more and more of the same.

"But, said the harried President, the friendship between the two peoples. * * * Look to all the decorations the French Government had given to Americans. Wasn't that considered an important and significant thing in the United States?

"No, said Griffin, it didn't mean a thing to the average American. In fact, said he, a lot of true-blue Americans considered it exactly un-American."

Griffin's handling of opinions advanced by Lord Robert Cecil regarding the League of Nations appealed to Cunningham, who writes:

"He really gave it to the British, it appeared.

"HIS FIRST 'VICTIM'

"Lord Robert Cecil, then president of the League of Nations, was his first victim. The expansive British peer, greeting the newspaper publisher, said it was a source of great regret to him that the United States wasn't a member of the League and asked Mr. Griffin if he didn't think the League a splendid thing.

"Yes, said Mr. Griffin, it was indeed a splendid and powerful agency—for the preservation of the British Empire.

"But seriously, said the British peer, didn't Griffin feel that warm bond of friendship between the United States and England.

"Yes, said Griffiin, he could feel it. He could feel it despite the fact that England came over here in 1776 and incited all the savages in the howling wilderness to murder the women and children and then hired 30,000 Hessians to shoot at the men. He could feel it despite the fact that in 1812, England stopped our ships on the high seas, impressed our seamen into British service and capped it off by marching into Washington and burning the Capitol. He could feel it despite the fact that during the Civil War England loaned money to the Confederacy in the hope that our Nation would be split into two weaker halves, grabbing the merchant marine supremacy at the same time.

"MORE OBSERVATIONS

"He could feel it now, he said, despite the fact that England had welched on her war debts, but had spent $45,000,000 renovating the naval base at Bermuda, a port in our sphere of influence from which they couldn't fight anybody, but us * * * and so on and on and on some more."

More about the Griffin-Lord Cecil interview and the outstanding joints of the Griffin-Churchill interview are told by Cunningham in these words:

"This particular interview eventuated in Cecil's allegedly saying it was impossible for the British to pay the war debt in money.

"'All right,' said Griffin, 'then why don't you give us the Queen Mary and Bermuda as a down payment?'

"Cecil said that was ridiculous because Bermuda was thoroughly British and was populated by Britons who were already as close to America perhaps as they could stand—he was getting a little testy by this time—and that the *Queen Mary* was a symbol of national pride.

"The Churchill interview, which Churchill has since entirely disavowed with the results explained above, is the only one threatening to come back now with tornadic force, and at the time it was about the most innocuous and least noticed of the entire lot. The reason for that was that Churchill was but a private citizen by that time, and, as such, was apparently to live out his days.

"SAW HIM IN LONDON

"Griffin claims to have seen him in London. There was no particular needling in this visit. Churchill wasn't important enough. He was but a passé politician, a private citizen. He couldn't do anything if he wanted to.

"But Mr. Churchill, according to Griffin, fell to talking about the World War in a reflective mood, and he made a statement about the American participation that sounded at first heretical and startling, but which upon examination seemed to make a lot of sense.

"He said, in effect, that events to follow had proved that American participation was one of the tragic mistakes of the entire history of civilization, the point being that if the United States hadn't come roaring to the rescue of the Allies, the war would have ended with a negotiated peace instead of complete German surrender."

Developing the effect of the Churchill argument the Boston Post writer continues:

"Both sides were plainly stuck when the United States decided to go in, he said. Both were starved, bled white, and completely stalemated. They'd have had to call the thing off more or less by common consent.

"WOULD PREVENT HITLERISM

"If this had happened, he said, both sides would have gone ahead as they were trying to clean up the wreckage, but, specifically—and here was the crux of it all—Germany would have maintained her original form of government, including the Kaiser and all the rest, which would have made completely impossible the rise of a madman such as Hitler.

"In other words, a draw, with the Kaiser, would have been better for the world that was to follow than victory, and Hitler.

"So far as the war debts went, Griffin quoted Churchill as saying they were in all probability a consideration of the past. If America wanted to work the account down to a matter of dollars and cents, Griffin quoted private citizen Churchill, all right, but it took the United States a year to get their soldiers into action, and in that year, while the Allies held the line for us, they lost a million and a quarter men. If we wanted to get it down to a matter of dollars and cents, the bill for ammunition the Allies shot in that year, while they were 'holding the line for us,' should be deducted from the amount we said they owed."

Concluding his article and winding up with the observation again that Churchill's words to Griffin may affect the future of the whole world, Cunningham says:

"ENTERTAINING COPY

"All this—there were many more of these interviews, Lloyd George, Count Ciano, George Bernard Shaw, even a reverent and serious private audience with H' Holiness, Pope Pius—was just entertaining copy at the time, a sort of Connecticut Yankee in King Arthur's Court sort of thing. The idea was pretty clever, the reactions of the various famous gentlemen rather funny. Nothing had been accomplished, but nothing was supposed to be. No interview was ever denied. The entire report was just old newspaper copy mellowing away in the files for 3 years.

"But things were gradually happening to England. The appeals to the United States started making up again—that about friendship and duty and partnership in civilization. Mr. Churchill began to move from private life into the maelstrom. Finally, he became more and more the hope of his savagely challenged nation. He began to stress from the very first that the only hope and salvation of England was this country. We must give, give, give. We might have to take over.

"CALL THEM 'LIE'

"Somebody remembered these words he is alleged to have said about our taking over last time. He denied ever saying them. He called them a vicious lie.

"Publisher Griffin, as explained above, clapped the million-dollar slander suit on him, charging in the papers, 'Mr. Churchill has seen fit to endeavor to destroy my reputation for truth and veracity because at the time he made the above statements to me, he was trying to justify England's failure to pay its immense war debt to the United States.'

"Now starts the real fight over British aid in Congress, and I understand the words of this disputed interview are to be hurled at Churchill's head with all the power and the force noninterventionists can give them. They may be ringing from coast to coast and beyond to the farthest corners of the universe in another month and may play a major part in shaping the future course of every human being on this earth."

The Stars and Stripes and the National Anthem

EXTENSION OF REMARKS

OF

HON. ALFRED F. BEITER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1941

ARTICLE FROM THE WASHINGTON TIMES-HERALD

Mr. BEITER. Mr. Speaker, under leave to extend my remarks I include herein an article from a recent issue of the Washington Times-Herald on How to Show Respect for the Flag and What to Do When You Hear the Star-Spangled Banner.

THE STARS AND STRIPES AND HOW TO SHOW YOUR RESPECT FOR THE COLORS

(By Arthur Mielke)

You'd better get hep. The flag is going to do a lot of passing by from now on and Old Glory today, more than ever, deserves the attention and respect of those who live beneath it.

It's not necessary to go fanatical. The Stars and Stripes represent too much of what we hold to be truly American to need any excess of patriotism. But we should know how to salute it and how to display it.

By way of background, here is the resolution passed by the Continental Congress in 1777 which officially chose our flag:

"*Resolved*, That the Flag of the United States be 13 stripes, alternate red and white; that the union be 13 stars, white in a blue field, representing a new constellation."

NEW CONSTELLATION

A new constellation! That's what America was then in the heaven of the nations. No nation's flag ever started life under more inspiring circumstances. No banner ever hoisted aloft to express man's hopes, his ideals, struggles, or achievements ever meant more to as many people for as long a time as Old Glory has to us.

Back before the Continental Congress passed that resolution, most Americans recall, is the story of Betsy Ross and the first flag. How George Washington, Robert Morris, and an uncle of Betsy's, a Colonel Ross, came to her upholstery shop on Arch Street in Philadelphia and contracted for the flag. That was in June 1776, a month before the Declaration of Independence.

Perhaps some of you remember more of the details, how Washington submitted a specimen and how after consultation among the several members, the first flag with its 13 stripes of alternate red and white bands and the circle of 13 five-pointed white stars on a blue background in the upper left-hand corner, was decided on.

FLAG DAY

Congress was at that time busily engaged in waging a war against Britain and had little time for flag legislation. However, on June 14, 1777, the new flag was officially approved. This, of course, answers both the foregoing questions for June 14 is Flag Day and the adoption date was in 1777.

As flags go, the Stars and Stripes is one of the oldest standards among the great nations of the earth. It is said that the Danish flag goes back to the thirteenth century—to 1219, in fact.

The Swiss flag is said also to antedate ours, coming into existence in the seventeenth century. The famous tricolor of France was not adopted until 1794, 17 years after our own, while the British flag came into being in 1801. Germany's flag had its beginning after Bismarck had partially unified the country in 1866.

Flag legislation, since the original enactment of adoption of the flag, has been left to the States. Although a bill is pending in Congress called the uniform flag law which would make desecration or abuse of the flag a national offense, there is no national law punishing offenders of the flag. All the States and Territories have their own laws, however.

FLAG LAW

The constitutionality of these laws has often come before the courts. In two cases, in Illinois and in New York, the statutes were held to be invalid. A Supreme Court decision in the Halter against Nebraska case, however, superseded these decisions, when the Nebraska law was upheld. In this case the Court, with Justice Harlan rendering the majority opinion, said: "When a flag is used for purposes of trade or traffic (as in the above case), a purpose wholly foreign to that for which it was intended, it tends to cheapen and degrade the flag."

Along about the end of the nineteenth century agitation for a national flag act reached fever pitch. It seems that whenever there is a war a great tide of popular patriotism comes over our people. In that instance the Spanish-American War had America aroused. An American-flag association, organized in New York City in 1898, was the outcome of this furor. This association consists of the patriotic, civic, and military societies' flag committees throughout the United States.

In 1902 the Commissioner of Patents decided that the "flag may not be used as a trade-mark." In 1903 he went further and forbade the use of a shield, with the American flag on it as a trade-mark. These decrees were a result of the workings of this new flag association.

Popular disgust and repugnance for unseemingly acts toward the flag resulted in what is commonly referred to as the flag code. The flag code states a number of propositions on how the flag ought to be respected and handled, with a corresponding number of "don'ts."

WHAT NOT TO DO

For the civilian, the following "don'ts" ought to govern his relations with the flag:

1. Don't permit others to show disrespect for the flag.
2. Don't display the flag with the union, or star portion, down. This is particularly applicable to flags hung from windows and without a staff.
3. Don't dip the United States flag to anyone or anything. Even the President does not merit this attention.
4. Don't place any State flag or club flag higher than the United States standard. International custom has all nations' flags at the same level. All other flags, however, ought to be placed on a slightly lower level than the national colors.
5. Don't let the flag touch the ground or trail in water.
6. Don't place any object on a flag covering a table on a speaker's platform, other than a Bible.
7. Don't use the flag as drapery.
8. Don't fasten it so that it may be easily torn.
9. Don't fasten it on the hood, top, sides, or back of a vehicle. When displayed on a car, the flag should be affixed to a staff and fastened to the chassis or clamped to the radiator cap.
10. Don't use a flag on a float in a parade except on a staff.
11. Don't cover a ceiling with a flag.
12. Don't carry a flag on a staff horizontally, but aloft and free.
13. Don't use the flag as portion of a costume. It ought not be embroidered on cushions or handkerchiefs.
14. Don't put lettering on a flag.
15. Don't use the flag in any kind of advertising, nor fasten an advertising sign to a pole to which a flag is attached.
16. Don't display the flag in such a way as to cause it to be easily soiled or damaged.

In comparison with the "don'ts," the "do's" are relatively few. Whenever the flag passes, in a parade, for instance, a man should stand at attention and if wearing a hat, place it to his left shoulder with the right hand over the heart.

ARMY RULES

A woman ought also stand at attention and place her right hand over her left breast. At all other times, when the flag is in evidence, a dignified attitude toward it is desirable.

In the Army, handling of the flag is very formal. Whenever the colors, which is what the flag that is used in reviews, parades, etc., is called, is not in use, it rests in a holder in the office of the commanding officer of the post.

When it is to be taken out a guard must accompany the color sergeant who carries the flag. The sergeant, in this ceremony, first salutes the flag, furls it about the staff, and then takes it out of the building to the armed guards.

The guards come to attention and then take their places on either side of the color bearer.

The flag that flies over the encampment is also handled very formally. It is brought out in the morning and pulled up briskly to the top of the mast at sunrise. In the evening, at a ceremony called retreat, the flag is lowered very slowly to the strains of the Star-Spangled Banner.

In receiving the flag the soldier folds it neatly into the form of a triangle with the union outermost. It is then marched into the guardhouse and placed in a locker. The retreat ceremony is among the most beautiful in the Army. It is usually accompanied by the entire post detachment standing at attention on the parade ground.

Our soldiers and sailors know their duty and responsibility toward the flag. Civilians need a bit of a reminder on flag etiquette in days like these more frequently.

AND WHAT TO DO WHEN YOU HEAR THE STAR-SPANGLED BANNER

There aren't any official rules or regulations on whether to rise when the national anthem is played. But the feeling of any audience or crowd usually makes it pretty obvious what to do.

The United States Flag Association, which keeps a weather eye out for the welfare of the national banner, also has some hints of the musical problem.

When walking down the street the association's head, Col. James A. Moss, says one should stop and stand at attention as soon as he hears the national anthem. Men should uncover and women place the right hand over the heart. This is, of course, if the music is reasonably near and not merely a faint sound from afar.

IF IN AN AUTO

If you're riding in an auto, the same rule pretty much prevails, Colonel Moss says. The car should stop, conversation cease, the men uncover, the women place the right hand over the heart. It's not at all necessary to jump out of the car to stand at attention.

The advent of the radio posed a new problem, but the flag association offers this solution: "If it's natural and not forced to stand and uncover then do." Otherwise, no. As examples it says that people in a living room should stand, but if you're talking on the phone or are in the bathtub, it's not necessary.

After all, the problem is one of paying respect to a symbol of the Nation. Common sense should be the guide. And when to play the Star-Spangled Banner? Not at the slightest excuse. Not at every performance of a movie, say some authorities, though in England God Save the King is the finale of every day's performance.

A sound rule is to play the anthem at the close of public ceremonies of importance, or on patriotic occasions, at places and under circumstances which could not be criticized as commercial or in bad taste.

Strikes in Defense Industries

EXTENSION OF REMARKS

OF

HON. SAM M. RUSSELL

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1941

Mr. RUSSELL. Mr. Speaker, in these precarious times all Americans should join in a solid wall of unity on national defense and love for our country. America at our direction is drafting the flower and pick of our youth for service in the Army to better prepare for the defense of our country, paying them the sum of $21 per month, and be it said that many young men are leaving jobs behind which paid them $100 per month and more, and these young men are accepting this call without a murmur.

They are ready and willing to do their part—ready and willing to sacrifice careers and homes for America, and, if need be, for the defense of civilization itself—yes; willing to risk their lives that our civilization might live. Had they remained at home on their respective jobs, their careers, promotions, and hopes would not be jeopardized, yet they go on cheerfully without murmur or complaint.

It is not amiss to compare this group of young men with another group of supposed Americans who, under the guise of union labor are now during these trying times drawing many times the wages that the draftees are drawing, are striking, and by so doing are hampering and stopping national defense.

Striking for what? In most instances, for increases in wages. By their actions these strikers are depriving our country of necessary equipment for the national defense, depriving their brother Americans of equipment with which to defend themselves as well as their country. Has patriotism and love of country become so cheap that it has to be bought with small wage increases? If it has, then God save America. Is this kind of patriotism living up to the grand and glorious words which cause all true Americans' hearts and chests to swell with pride? Have the words "Equal rights to all and special privilege to none" been forgotten?

Is our Government at this time showing equal rights to the boys in uniform with those who are hampering our national defense by engaging in strikes and stopping the manufacture of material for the defense of our country? It is obvious that it is not. It is also very obvious what America's answer will be to these questions.

Are the people who are responsible for these strikes Americans? In many instances, I would say they are not. It has been reported, and I believe reliably so, that many of those responsible for these strikes are Communists, "fifth columnists," and others who are opposed to our form of free government.

Mr. Speaker, we are taught and believe in the old adage that "There are times when patience ceases to be a virtue." From what I can see and from the amount of mail that is coming to Congressmen, the patience of the American people is about exhausted over these, and I say again, un-American strikes, and they are about to issue a mandate to this Congress. In my opinion, if we fail to take action, some of us are serving our last terms as Representatives.

I believe that we should at all times be fair to labor and fair to capital, for neither can exist without the other. Each should be protected, and neither be permitted to crush the other. But these are times when labor and capital should be willing to sacrifice excessive profits and join in this common cause.

The boys who serve as soldiers are in most instances sacrificing, and industry should fall in line.

Tribute demanded by labor organizations should be prohibited, especially on defense projects and in industries which are engaged in the manufacture of defense equipment. Congress should act and act now to stop such un-American activities.

The following letter was written to the President by Mr. Wyatt W. Lipscomb, of Albany, Tex., and expresses the sentiment and feeling of 80 percent of the American people toward these strikes:

ALBANY, TEX., *March 5, 1941.*

FRANKLIN D. ROOSEVELT,
President, United States of America,
Washington, D. C.

MY DEAR PRESIDENT: You will permit me to express to you frankly, my deep concern over conditions that are becoming increasingly and hourly more disturbing. The patriotic American people who are at all posted on conditions of the world and are capable of reasoning can see the inevitable dangers that are immediately ahead of us and, we are extremely anxious that nothing stand in the way of our preparedness program and all-out aid to Britain, short of nothing. The continued consummation of smaller nations by the ruthless tactics of the Axis nations is alarming beyond measure, and the inevitable result is so vivid that even a fool can see it. We are convinced that you can and do see this danger with a greater degree of clarity than anyone else in America. We are convinced, too, that dangers abroad plus dangers at home complicates the situation and makes it necessary, yea even imperative, that firm action be taken at once to preserve the life, liberty, and property of the American people. We cannot hope to achieve that sacred objective if the Communistic Insidious Organization (C. I. O.) is going to be allowed to render material aid to the enemies of all free men (the Axis Powers) by their increased and unreasonable demands upon industry, and their rights to tie it up in a strike if their demands are not met. It is an insult to the intelligence of the patriotic people of America to say that these strikes are not materially hampering the progress of the preparedness program, and it is an outrage upon their loyalty to allow it to continue.

If there is any justification in drafting our boys for service in the Army and Navy as a measure of preparedness, then there is and there can be no justification for allowing these strikes to hinder the preparedness program. We appreciate your sympathy for the laboring class of people and we sympathize with them too, because the great majority are in that class but, we cannot and do not appreciate the selfish rights of any man or organization of men over the rights of all men, women, and children of America; neither can we understand your tactics in dealing with this serious situation. You are quoted by the press as saying that these strikes are not hindering one-fourth of 1 percent of the preparedness program, but if they are hindering one one-hundredth part of that program, that is too darn much.

The Selective Service Act provides a penalty for the boy who fails to register and present himself for a year's training in the armed forces of the United States Government and, the same Congress that provided that penalty for those boys left the same right to the succeeding Congress to provide a penalty for the strikers. We believe that it is just to them and fair to the boys that a penalty be provided for the strikers to insure the whole preparedness program, and ultimately for the security of our country, the purpose for which the program was inaugurated. We believe that these strikes are fostered by the direct influence of the "fifth columnists" and that many good, unsuspecting men are caught in their vice-like grasp and are intimidated until they are afraid to even try to break loose. They are lied to, lied on, and lied about, until they do not have the courage and the initiative to break away from that unholy influence. We deeply sympathize with the victim of that lying, deceiving propaganda perpetrated by paid agitators, but we cannot condone their action in supporting these unnecessary strikes.

There is no more justification for these strikers to hinder the preparedness program than there is for the smaller nations to surrender to the totalitarian powers without a fight. I have no patience with the excuse that they can do nothing but surrender,

neither do I have any patience with the excuse that these strikers have a right to strike. To h—— with excuses and strikes, too, when the security of our country is at stake. Free men who are not willing to fight and even die with other free men for freedom's sake, are not worthy to be called free men; and free men who are not willing to work with free men for freedom's sake, are not worthy to be called free men. Mr. President, we ask you is it right for loyal patriots to give up their time, talents, and means for the peace and security of our American way of life while the damnable parasites gnaw at the very foundation of our peace and security?

When that minority in the Senate are whipped down and are shown that they cannot force their selfish will upon the majority and the lease-lend bill is belatedly passed, we trust that you will go into action with all the vigor at your command, and we assure you that we will support you with our very all, even our lives if needs be.

Very sincerely yours,

WYATT W. LIPSCOMB.

Shall Our Navy Be Used To Protect Lend-Lease Shipments?

EXTENSION OF REMARKS

OF

HON. BERNARD J. GEHRMANN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1941

Mr. GEHRMANN. Mr. Speaker, it appears to me that every day events point to our eventual participation with our Navy in protecting shipments to England.

In my campaign for reelection in 1938, and again last fall, my solemn promise was that all of my votes would be so directed as to keep us from becoming entangled in Europe's quarrels, which would eventually get us into their war. My record of votes on the several important measures will show definitely that I have kept that promise. But in spite of myself and more than a third of the Members of Congress, the majority voted the other way, and we are now at a point where the next step will be, "Shall we use our Navy to convoy shipments of materials made under the lend-lease bill?"

I have kept my people informed of my stand on each one of the several steps that have come before Congress, which have now led us up to the very brink of actual participation. I want my people to tell me whether or not they have changed their minds about keeping out of this war. I do not believe that it is possible to use our Navy to convoy merchant ships and still keep out.

That kind of talk is pure propaganda, and I believe that the people of Wisconsin, who have thus far shown that they are willing to aid England and the other democracies with everything we have "short of war," will not now become hysterical and consent to actual participation. But if they have changed their minds and feel that we should enter this war, which we will do if we convoy, then I want to know it, and my votes henceforth will be accordingly.

Regardless of my own personal feeling on important matters, I try my best to keep in touch with the people in my district by weekly news letters to all the papers and by correspondence, and then vote according to their expressed wishes.

Until recently we have had the assurance of our President, as well as other high officials, including Mr. Willkie, the Republican standard bearer, that we will not use American armed forces or do anything that would force us into this war. Both major parties adopted strong antiwar planks at their conventions, and both candidates pledged to abide by that platform. The first sentence of the Republican national-defense plank reads as follows:

> The Republican Party is firmly opposed to involving this Nation in foreign war.

The Democratic Party likewise adopted a very strong antiwar plank, and starts out by saying:

> We will not participate in foreign wars, and we will not send our Army, naval or air forces to fight in foreign lands outside of the Americas, except in case of attack.

I believe that is plain unmistakable language. Are we going to invoke attack by convoying, and thereby create the excuse that we have been attacked? Again I am forced to say that those who have forgotten the short-of-war phrase and are telling us now that it is possible to use our Navy to convoy and still not actually participate in this war, know better than that. This proves once more how propaganda can eventually change the people's good judgment and understanding. These same people said that under the lend-lease bill Congress had the question of war in its own hands, because the President could not declare war, only Congress could do that. But everybody knows that once we use our Navy to convoy on the high seas they will be attacked, and then we are in war, whether Congress ever declares it or not.

Now is the time the Ludlow war referendum would be very useful. I wish we could force this bill out of committee this year as we did 2 years ago, when it was defeated because of the administration's strenuous opposition. I believe the people should have something to say about entering a war where we are not being attacked.

Since we have no way whereby the people of the United States can express themselves and advise Congress, I am taking the only possible means open to me to attempt to find the sentiment of the people that I represent on this question. Shall we use our Navy to protect shipments of goods for use in England and other nations from attack by German raiders, submarines, and bombers? The President, under the lend-lease bill, has the authority to do as he pleases, but indications are that he may submit the question of convoy to Congress, and I hope that my constituents will indicate their views on this all-important question to me as soon as possible. That may be done by circulating petitions, by meetings where the question is voted upon, individual letters and cards, or any other way which seems most convenient to the people. I may not be able to answer each communication individually, but I will acknowledge them through my weekly news letter, published in most of the papers in my district.

I appreciate the splendid support I have received, backing me up in my votes against the several individual steps that have now put us squarely face to face with actually using our Navy in this war. Thousands of letters have poured into my office which were nearly 100 percent in favor of the stand I took. I want to continue to represent the majority views of my people on this question of peace or war. Please let me hear from you.

Remember the words of Wisconsin's beloved and immortal Robert M. LaFollette, Sr., who said, "The will of the people shall be the law of the land."

One-Hundredth Anniversary of the Oregon Trail and Civil Government in the Oregon Country

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1941

Mr. ANGELL. Mr. Speaker, the year 1943 will mark the one-hundredth anniversary of the establishment of the old Oregon Trail from Independence, Mo., to the Willamette Valley and the Oregon country. It will also be the one-hundredth anniversary of the establishment of civil government on the west coast of the United States. These events in the historic life of our country were so portentous that we should not allow the year 1943 to go by without a fitting recognition of these important happenings in our national life.

Those of us from this great western portion of the United States are proud of the achievement of those sturdy pioneers of 100 years ago who blazed the Old Oregon Trail across plains and mountain ranges to reclaim and hold for the United States the great Pacific territory. These accomplishments of our pioneer ancestors who trekked their way to this new empire with their many covered wagon trains of that year so long ago are events of great significance to us of the West. This great territory, an empire in its proportions, now constitutes the States of Oregon, Washington, Idaho, Wyoming, Colorado, Nebraska, Kansas, and Missouri. Today, when the whole world is an armed camp and we are bending every energy to prepare our defenses so that we may ward off the attacks of any nation which may seek to invade our shores, we count ourselves fortunate that we are

protected by the two great oceans, the Atlantic and Pacific. We owe a debt of gratitude to those intrepid pioneers of 100 years ago who constructed the Oregon Trail and followed its course to the Pacific Ocean and there stood guard and claimed for the United States this great country bordering the Pacific and the broad hinterland extending eastward.

These pioneer settlers on May 2 and July 5, 1843, met at Champoeg on the Willamette River in Oregon and formed a provisional government which was the first civil government established in this great western frontier. Champoeg is now set aside, dedicated and maintained as a shrine to civil government in the West. The British Hudson Bay Co. had long monopolized and governed the Oregon country prior to that time. These strong willed and patriotic American traders, missionaries, and settlers who met at the historic meetings on May 2 and July 5 were determined to hold the country for the United States and they wished the Government of the United States to extend over the Oregon country and to form a temporary government until such time as the United States should extend its jurisdiction over them, as they declared in the preamble of the laws which they adopted in 1843. It is true the British considered such assumption of political authority an invasion of their rights procured by existing treaties. The controversy, however, was ended in 1846 when the United States by treaty gained possession of the Oregon country north to the British Columbia boundary.

Mr. Speaker, I trust that the Congress of the United States will by appropriate enactment provide for the recognition and commemoration of these historic events which took place in 1843 so that the one hundredth anniversary of the establishment of the Oregon Trail and civil government in the West may be fittingly observed.

I ask to include as part of my remarks the Senate memorial passed by the Legislature of the State of Oregon on March 20, 1941, calling upon the Congress and the States formed out of the Oregon country to provide for the commemoration of these historic events. The memorial follows:

Senate Joint Memorial 8

To the honorable Legislative Assemblies of the States of Washington, Idaho, Wyoming, Colorado, Nebraska, Kansas, and Missouri, and the Congress of the United States:

We, your memorialists, the Forty-first Legislative Assembly of the State of Oregon, in regular session assembled, respectfully request and petition as follows:

Whereas the year 1943 marks the one-hundredth anniversary of the founding of civil government in the West, and the blazing of the old Oregon Trail from Independence, Mo., to the Willamette Valley in the old Oregon country by that historic covered wagon train which won an empire for the United States; and

Whereas the migration of 1843 and those which followed made imperishable history for America; and

Whereas all of the States through which the old Oregon Trail passed are rich in the history and traditions of that heroic period: Now, therefore, be it

Resolved by the Senate of the State of Oregon, the House of Representatives jointly concurring therein, That we your memorialists, the Forty-first Legislative Assembly of the State of Oregon, do hereby respectfully request and petition that you join with the State of Oregon in a proper observance of the year 1943, that the heroic deeds of the intrepid pioneers who blazed the trail to the Pacific coast may not be forgotten, and that the name of the old Oregon Trail may be enshrined forever in the heart of America; and be it further

Resolved, That the secretary of state of the State of Oregon transmit copies of this joint memorial to the legislative assemblies and Governors of all Oregon Trail States, to the President of the United States, to both Houses of Congress, and to each Member of the Oregon delegation in Congress.

For Those Interested in Clean Streams and Pure Water

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1941

EDITORIAL FROM THE OUTDOORSMAN, COLUMBUS, OHIO

Mr. MUNDT. Mr. Speaker, the problem of pollution of the public waters of America is growing more and more acute. The attached editorial from the Outdoorsman, published in Columbus, Ohio, and widely read by sportsmen and conservationists throughout America, is concerned with the growing problem of pollution.

[From the Outdoorsman, Columbus, Ohio]

IMPORTANT AS MUNITIONS

It has been said that all wars are won by three elements—men, money, and morale—and that no nation is invincible if it lacks any one of the essential trio. Here in America, in preparation for the defense of our national security, we are giving considerable thought to men—which means manpower—and to money—which means production—and should be equally attentive to fostering a program for creating and sustaining morale.

It long has been known to students of political psychology that one of the most important factors in keeping a populace contented, clean-thinking, and healthy is the opportunity for everyone to participate in wholesome recreations. It is hobbies and recreations which set life above the drab commonplace and add spice to each day's existence. The average man's passion for his golf game, his fishing activities, his hunting trips, or other such hobbies is the thing that makes life so interesting to him and makes him so certain that all's well with his country. Thus it is important for national defense that national recreations be given full recognition in our defense program.

Of our national recreations the two having the strongest appeal to the American people are the sports of fishing and hunting. There are over 20,000,000 active participants in these two sports in the United States, which group embodies the most solid citizens. They and their families have a heritage that's deeply rooted in our soil and in our institutions, and they are quick to defend the American way of living. With their fascinating recreations to consume their leisure hours, they live an interesting, vibrant life—one that has no place for restlessness and dissatisfaction. Exhilarated by wholesome outdoor hobbies they are an emanating source of morale and Americanism.

As a part of our national defense—for the preservation of morale and Americanism—this group should be nourished and extended. Outdoor sports make a healthy contribution to the Nation, and the Nation in return should recognize their defense values and see that they are encouraged.

What is being done to encourage outdoor sports?

How are they faring in our defense program?

The answer, for the most part, is a sorry one. In some instances grave dangers are threatening fishing and hunting because of short-sightedness in our defense policies, and in other instances enemies of sportsmen are seizing upon the present national concern for insidious purposes.

Take the present breaking out of antifirearm bills. As this is written there are many antifirearm bills pending in various State legislatures, plus a continual barrage of agitation for a national law to deprive the American citizen of his constitutional right to keep and bear arms. These bills—paradoxical as it is—are being foisted on the public in some cases in the interest of national defense. What is the meaning of this outbreak?

There is little doubt among informed persons that much of the present agitation to take guns away from American sportsmen arises in Europe. It is part and parcel of treacherous schemes to weaken our Nation and make it more vulnerable to foreign aggression. True, many misguided, chronic reformers and publicity-seeking legislators are sponsoring such legislation without understanding of their acts—but making pawns out of respectable persons is an old art to European dictators.

Aside from insidious attempts to injure these outdoor sports which play such a great part in keeping America healthy in mind and body, there are many discouragements arising directly from the "haste and waste" character of our national-defense program and from pork-barrel schemes that cloak under national defense. Sportsmen are fearful of what may happen to our national forests, our swamp areas, and our streams while public interest is centered on defense production.

Already there has been evidence of a tendency to advocate as defense measures unnecessary and destructive drainage and dam-construction projects. Already there have been bills introduced in Congress to transfer our great national forests and wildlife sanctuaries to the War and Navy Departments for military use. The meager pollution-control laws we now have are already largely scrapped as cities and towns bid for war industry.

Pollution, particularly, is of grave concern. The prevailing attitude is that it should remain an "untouchable" during the defense production period. One even risks being called a saboteur when he intimates that industrial expansion should not be allowed to needlessly destroy our streams. Of course, we want planes, tanks, and other war materials as fast as we can get them, but the word "expediency" is often used to cover a multitude of sins. It should be remembered that there will be industries "after the war." The sport fishing "industry" is in itself of billion-dollar dimensions.

As this is written there is an antipollution bill pending in Congress, H. R. 3778, by Congressman MUNDT. This bill seeks to put the

country on record as regarding pollution a public evil, and would set up regulatory machinery. Should it pass, it would be a step in the right direction, but it would probably be ineffectual in meeting the present pure-streams crisis, since it contains a clause making it null and void whenever it is found to be incompatible with the expediency of the defense program. Stronger medicine may not be obtainable, but stronger medicine is needed.

Depriving Americans of the right to keep and bear arms, the exploitation of our forests and waters, the drainage of our swamps, and the pollution of our streams will never make America strong, but these things will do much to destroy two national recreations that are great sources of national morale. Our State and National legislators should take cognizance of this fact and see that present tendencies are shifted into reverse.

Jackson Day Dinner Address

EXTENSION OF REMARKS
OF
HON. MATTHEW J. MERRITT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

ADDRESS OF HON. JAMES A. FARLEY OF NEW YORK

Mr. MERRITT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by our former Postmaster General, the Honorable James A. Farley, chairman of the New York State Democratic Committee, at the Jackson Day Dinner, March 29, 1941, held at the Hotel Commodore, New York. His remarks, you will note, are most timely and it is needless to say that those in attendance were deeply impressed:

In 1936, after 3 years' experience as national chairman, I approved a plan submitted by the late Forbes Morgan, treasurer of the Democratic National Committee, to make the celebration of Jackson Day an event that would contribute material assistance to the party. Since then these annual dinners have been the means, not only of providing funds for party activities, but also of promoting party strength and party enthusiasm, and the three together have been in a large measure responsible for party success.

The first of these dinners held in New York was under the chairmanship of the Honorable James W. Gerard, who had the cooperation of the late Daniel H. Skilling as secretary, and Clarence H. Low as treasurer. This is the sixth in the series, and as Democratic State chairman, I want to extend my appreciation and the thanks of the Democratic Party to the dinner chairman, de Lancey Kountze, the treasurer, Clarence H. Low, and the secretary, Albert L. Ward, as well as to all the members of the committee, and to you present who have cooperated so finely in making this another in a series of outstanding Jackson Day accomplishments.

May I also at this time express my gratitude, and the gratitude, I am sure, of every leader of our party in the State; for the able assistance that has been given me and been given you for more than a decade, by my associate and close friend, Vincent Dailey.

These are trying days. No one recognizes more than I, that this is a time when partisanship must be submerged in the interest of national unity. I have recently returned from an extended business tour of South America. Since returning I have been in touch with friends all over our own country. I am definitely satisfied that in this Western Hemisphere the vast majority of all peoples are of one mind, that free democracies, as we know them, must and shall be preserved.

A great part of the friendly feeling toward us so evident in the Latin nations below the equator is due to the patient work done among them by our diplomatic representatives. These are the ambassadors, the ministers, and the consuls who have been the eyes and the ears as well as the emissaries of our State Department. They have performed well the tasks assigned them, and their achievements have been the greater because of the wise planning, the able direction, and the understanding cooperation that have been rendered them, by support, by encouragement, and by personal visits to the southern countries, of that greatest of our long list of great Secretaries of State, the distinguished Tennessean, the Honorable Cordell Hull.

But statecraft in times of conflict and peril must be backed up by national unity and national strength. The American people made their decision last November and since then there have been such evidences of our ability to bury partisan motives that our actions in this direction alone must constitute a source of wonderment and despair to the wishful-thinking dictators.

Couple with this national unity our willingness as a Nation to reconstruct by democratic action our industrial system to the purposes of defense, and our social system to the purposes of manning the machinery of that defense, and you have a complete picture of a determined democratic people willing to risk everything, even life, that the principles upon which our Nation was founded may persevere.

Leadership was never more necessary than now. Leadership we have, and it is the duty of every American to support it. As there can be only one general to the army, one admiral to the navy, there can be only one Commander in Chief in America, and that one is Franklin D. Roosevelt.

In this Empire State we, too, have a far-seeing administration, headed by a great Governor, who is doing all in his power to lend the support of New York to the cause of America. Like him, Governors of other States, regardless of party, are doing the same. Theirs is a position only second to that of the President. We take pride, not only as Democrats but as citizens, in the fact that in this emergency we have at the helm of this greatest of all the State governments such a tireless, experienced, and unselfish chief executive as is Herbert H. Lehman.

As a parting word, may I say for myself that I am deeply grateful for the generous support that has ever been given me in both public and party office. As chairman of the Democratic State committee, I hope to continue my efforts in every way possible for the advancement of the affairs of my country and my party. In these days I assure you that such efforts will be directed wholly toward increasing national unity, to the end that American democracy will carry out its responsibility in a world that needs the support, the example, and the wisdom of enlightened leadership more than ever before in history.

Primary Voting Irregularities in New Mexico

EXTENSION OF REMARKS
OF
HON. MATTHEW J. MERRITT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

EXCERPT FROM INVESTIGATION OF CAMPAIGN EXPENDITURES, 1940

Mr. MERRITT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include part of the Investigation of Campaign Expenditures, 1940, having to do with primary voting irregularities in New Mexico. Our former colleague, John J. Dempsey, now a member of the Maritime Commission, is most desirous of bringing this matter to the attention of the Congress.

(c) PRIMARY VOTING IRREGULARITIES

(1) NEW MEXICO

Complaint

United States Representative John J. Dempsey was a candidate for the Democratic nomination as United States Senator in the New Mexico primary election on September 14, 1940. Complaint was made to the special committee alleging irregularities concerning the following matters: Assistance to voters, watchers at the polls, counting of the ballots.

Statement of facts

An investigation of the foregoing complaint was made by agents of the special committee principally in the vicinity of Albuquerque, Las Vegas, and Belen, N. Mex., all located in San Miguel County.

Charges had been made by the complainant with respect to primary practices in four additional counties of New Mexico but a complete investigation was not made by representatives of the special committee in these other counties. The reason for this omission was because the complainant had taken court action therein and the ballot boxes and records in certain precincts had been impounded for recount purposes.

Subsequent to the recount, investigators for the special committee interviewed some of the participants who stated that there had been established a basis for the complaint as to irregularities in the primary election.

Assistance to voters

Investigators reported that the most flagrant irregularity about which complaint had been made related to assistance to voters at the primary. The primary election law consists of one article in the election code of the State of New Mexico. The primary law does not expressly authorize assistance to voters during a primary election.

Section 813 of the Election Code provides in part as follows:

"The powers and duties conferred or imposed by law upon boards and judges and clerks of elections, canvassing boards, and other public officials in connection with general elections, are conferred and imposed upon all such officers of primary elections and shall be exercised by them in connection with primary elections, except as otherwise herein provided or in conflict herewith."

Section 327 provides in substance that any registered elector who declares to election officials that he is unable to mark his ballot because of defective eyesight or other disability of a physical nature is entitled to be accompanied into the polling place by the two poll clerks who may assist him in marking his ballot; no other persons are authorized to render any assistance to such electors. A form of "affidavit of assistance" is specifically set out in the election code. This affidavit must be executed prior to the assistance and the affidavit must be deposited along with the ballot in the ballot box when the vote is cast.

The investigation indicated that affidavits of assistance generally were not filed, although there was considerable evidence to the effect that assistance was rendered to voters at the primary election. County officers construed the election code and formal statements were attributed to them indicating that affidavits of assistance were not necessary at primary elections.

It was also charged on behalf of the complainant that many of the electors in the territory wherein the investigation was made were of such a character that they could readily have been intimidated in the matter of voting. However, investigators reported that evidence in support of this charge was not discovered by them.

Direct evidence of improper marking of ballots during the assistance rendered to a voter was established by the statements of the elector and the person assisting the elector; both admitted that this had occurred during the primary election.

It was also charged, and evidence in support thereof was disclosed, that assistance was improperly given to electors entirely apart from the omission of an affidavit of assistance.

Watchers at polls: Sections 725 and 812 of the election code authorize candidates for nomination as United States Senator to have watchers present in the polling places throughout the primary election and during the counting of the ballots, and watchers expressly are allowed to make permanent memoranda relative to acts of omissions of persons charged with the performance of a duty under the election code.

Investigators for the special committee found that in various sections of New Mexico watchers appointed on behalf of the complainant had been refused permission to enter the polls either at all or not until late in the afternoon of primary day, that such watchers were asked to leave the polls, and in some cases were ejected without reason.

Counting of ballots: Improper counting of the ballots cast at the primary election was disclosed during the investigation. Watchers reported to the investigators that unmarked ballots were filled in by the counting judges over the protest of the watchers. During the recounts it was reported that pronounced similarity of the crosses on a considerable number of ballots was observed, which indicated to the observers that the marks had been made by one person rather than by the different electors whose ballots were being counted.

Conclusions

(1) Every charge made by the complainant was substantiated in at least some degree by evidence disclosed during the investigation.

(2) All irregularities related to provisions of the election code of New Mexico.

(3) The outstanding irregularity disclosed involved assistance to electors improperly and without an affidavit of assistance.

(4) Additional irregularities disclosed involved the illegal marking of ballots and counting of the same by election officials.

Guaranteeing Payment of Life-Insurance Policies

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1941

Mr. PATMAN. Mr. Speaker, many Members of Congress have inquired about the progress that is being made in the preparation of the bill providing for the guaranty of life-insurance policies up to $5,000. I announced some time ago that such a bill was being prepared and would be introduced by me.

Those of us who are working on this proposal, including representatives of the legislative counsel, have tentatively agreed on the following:

First. The plan to be voluntary instead of compulsory.

Second. To be administered by the Federal Deposit Insurance Corporation.

Third. The insurance fund of the F. D. I. C. to be entirely separate and apart from the funds to guarantee the payment of deposits of banks.

Fourth. An insurance fund of $150,000,000 to be provided by the United States Treasury to assure safety and solvency. This fund to be repaid later or when it can safely be done through assessments.

Fifth. The insurance fund may be invested in United States Government bonds; bonds of States, counties, cities, and political subdivisions; preferred stocks and bonds of corporations; and a limited amount in common stocks.

Sixth. The companies voluntarily coming within the terms of the act will be required to pay one-tenth of 1 percent of the premiums on policies up to $5,000.

Seventh. The guaranty to include up to $5,000 life insurance per person per company and also include reserves.

It has not been decided whether the proposal should include annuities or other contracts not involving life contingency.

The bill will probably be ready for introduction in 2 or 3 weeks.

The Panama Canal Should Be Converted Into a Sea-Level Canal for the Permanent Benefit of National Defense

REMARKS
OF
HON. JOSEPH J. MANSFIELD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1941

Mr. MANSFIELD. Mr. Speaker, some 40 years ago there was a violent dispute about whether the Panama Canal should be a high-level lock canal or a sea-level canal. It is doubtful if the public then or since has clearly understood the essential elements of the question. While national defense was from the beginning an important consideration, it could not in peacetime have had the compelling weight that it would have today. The decision in favor of a lock canal as recommended by a minority of the Isthmian Canal Commission of 1899–1901 was determined by peacetime conditions, and for the sake of economy in time and money.

The advocates of a lock canal stressed the reasons for tidal locks in a sea-level canal because they needed every argument they could muster to swing the decision to a lock canal. As a matter of fact, the tidal effects in a sea-level canal are not a very important consideration. They can either be overcome by tidal locks, or a sea-level canal can be used without tidal control. I have eminent engineering opinion for this statement.

Now do not misunderstand me. On account of the time and money involved, the sea-level canal was doubtless not the best solution of the problem in 1901. The lock canal and everything about it has been highly successful. The men concerned with it have deservedly received great credit and fame for their accomplishment. I would not for anything detract from this fame. However, what was entirely correct 40 or more years ago might not be the best procedure at this time.

Now, bombing from the air has become exceedingly efficient and exceedingly difficult to defend against. We are building a two-ocean navy. It is essential that transfers of naval vessels between the Atlantic and Pacific Oceans be as rapid, as easy, and as safe as practicable. The security of the Panama Canal against injury must be absolutely as certain as it is possible to make it.

Now, again, do not misunderstand me. It is obvious that the completion of a sea-level canal will take a considerable time. I express the hope that this war will not last as long as it would take to convert the Panama Canal into a sea-level canal. But we can never have the sea-level canal that our permanent national defense needs unless a start is made to that end. A project for converting the Panama Canal into a sea-level canal is not a fly-by-night scheme that may become obsolete before it is finished. It will be one national-defense effort that cannot become obsolete and will be a lasting benefit both in peace and in war.

Again let us not have any misunderstanding about my proposal. It is simply to design and construct the presently being constructed locks so that they can be used in the conversion of the present canal into a sea-level canal. In order to convert the lock canal into a sea-level canal an intermediate step is necessary. There must be a set of locks with miter sills and floors at such heights that the canal and Gatun Lake can be lowered to about half its present elevation and used

at the lower elevation while the canal is being dug to sea level.

My bill proposes that the design and construction of the additional locks now being constructed be carried out so that these locks can be used for conversion of the canal into a sea-level canal, and the bill will also authorize the conversion of the Panama Canal into a sea-level canal, in order that this important military and naval project may be initiated and prosecuted in an orderly and efficient manner for the permanent benefit of national defense.

In conclusion let me quote from the report of Governor Burgess of the Panama Canal in 1931. This is the last report made by a governor of the Panama Canal setting up a plan for a sea-level canal across the Isthmus of Panama.

The board of consulting engineers for the Panama Canal, appointed by President Roosevelt in 1905 to consider the various plans proposed for the construction of a canal across the Isthmus of Panama, in response to the President's request for its opinion as to the feasibility of converting a high-level multilock canal into a sea-level canal without interrupting traffic upon it, reported, in part:

"That it is practicable from an engineering standpoint to transform any lock canal which it (the board) has considered into a sea-level canal; but that the cost and difficulty of such a transformation would be so great as to render such a change impracticable from a financial standpoint until the traffic should have so increased as to tax the capacity of the lock canal, or until other good and sufficient reasons existed for such a change."

These conclusions of the board are as true today as when they were formulated.

Mr. Speaker, the efficiency of bombing from the air and the irreparable effects to the Panama Canal of such a bombing constitute at this time the " other good and sufficient reasons" referred to above. If the present high-level locks should be destroyed and Lake Gatun drained, the canal would be out of commission for an indefinite time.

De Lesseps started the Canal as a sea-level project. The International Board of Consulting Engineers, appointed by President Theodore Roosevelt, consisting of 13 engineers of great prominence, submitted two reports, the majority being in favor of the sea level. Five members of the Board submitted a minority report recommending a lock canal. The reasons given by the minority were (1) the smaller estimated cost; (2) the shorter time that would be required to place it in operation.

Mr. Taft, the Secretary of War, in submitting the Board's report to the President conceded that the sea-level project would be preferable, but he believed the time and cost of building such a canal would be prohibitive and recommended the lock canal. The sea-level canal was also favored by a majority of the Isthmian Canal Commission and by the chief engineer, John F. Stevens.

Gifts of the Irish

EXTENSION OF REMARKS

OF

HON. JOSEPH E. CASEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1941

RADIO ADDRESS BY HON. JOSEPH E. CASEY, OF MASSACHUSETTS

Mr. CASEY of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over radio station WBZ at Boston, Mass., on St. Patrick's Day, March 17, 1941, under the sponsorship of the Central Council of Irish Associations of Boston:

With the possible exception of Christmas, there is no day celebrated in so many places in the civilized world as St. Patrick's Day. That is because there is no section of this great globe where the Irish race has not penetrated. During the Dark Ages in Europe when foreign invaders had almost swept away the last vestige of civilization as it was then known, Ireland kept burning the fire of Christianity and learning. For this service alone the whole Christian world is indebted to her.

That is why St. Patrick's Day has been adopted by so many thousands of other nationalities; that is why we of Irish descent are willing to share this day with those of all nationalities who are anxious to do honor with us to the memory of that great man and saint.

This year is the eighteen hundredth anniversary of the arrival of St. Patrick in Ireland. In many places in this country various Irish societies are holding gatherings similar to this. For instance, in Philadelphia the Friendly Sons Society of that city are holding their one hundred and seventieth annual banquet. You will recall that George Washington was a member of that society and attended at least three of its banquets.

While the early history of Ireland was glorious, and we like to recall her great contributions to civilization and learning, the succeeding centuries were indeed sad. It was an unusual race which was able to preserve its identity and civilization during century after century of invasion and oppression. They were ever defeated, and yet undefeated. The Irish spirit would not die. Greater strength and resources made determined efforts to wipe out the Irish completely. The battle and struggle was between manhood and might, and Irish manhood never surrendered. No one has ever questioned Irish courage.

The Irish race, which has found glory on a thousand battlefields and disgrace upon none, has found distinction in every other line of useful human endeavor as well, particularly in America.

At the beginning of the eighteenth century, the Irish began coming to America in vast numbers. In New England, they located in Boston, New Hampshire, and Maine. In 1718 the city of Worcester consisted of 58 dwellings and 200 inhabitants. The Reverend Edward Fitzgerald, a Presbyterian minister, with 50 families settled in Worcester and doubled the population. The town of Concord was founded by immigrants from Ireland. One of the original settlers of Worcester was James McClelland, ancestor of Gen. George B. McClelland, and of a former mayor of New York. It was in New Hampshire that a group of Irish from Londonderry settled and called the new colony Londonderry, N. H.

These immigrants were chiefly manufacturers of linen and they brought their utensils for that purpose with them. The linen wheel or spinning wheel, so familiar in the households of New England, was introduced by this colony. The raising of flax and the manufacture of linen cloth was taken up with great earnestness by the other colonies. It is interesting to note that at this time the Irish also introduced the potato to America.

While we are on the subject of contributions to the material development of America, let me cite the following:

The first daily newspaper in America (1774) called the Pennsylvania Packet, was edited and printed by John Dunlap, who was born in County Tyrone.

The first steam engine built in the United States was by Christopher Colles, who was born in Ireland in 1765.

The first steamboat was built and operated by Robert Fulton, whose father came from Kilkenney, Ireland.

The first reaping machine was manufactured by Cyrus McCormick, of Irish descent.

The first piano manufactured in the United States was by Thomas Grehore, of Irish descent.

These are some of the inventive contributions to America that are very well known.

But there are other contributions that the Irish have made to the world that are even greater.

Take this one for example—I thought of it as I stood and looked at Old Blarney. The English took everything, it seemed, on God's earth from the Irish. They took their churches, they took their liberties, they took the lands they tilled, they took their valleys and mountains, but there was one thing that even tyranny could not take. They could not take the blarney from them—the Irish blarney. What a wonderful thing it is—the blarney of a statesman, the blarney of a politician, the blarney of a lover, or the blarney of the grocery man. It makes a dull day bright. It makes an old woman feel young. It has put more dimples in the face of care than any other thing in all the world.

Blarney! Why, it has been the power that has turned a broken heart into a smile. It has been the power that has helped create laughter sprinkled through the world like shamrocks are sprinkled throughout the Emerald Isle—the blarney that nothing killed and nothing could take from the Irish.

Then there is the song of the Irish—the sweet, sad song of the Irish—carried by her nightingales into every nation on the face of the globe. It sometimes seemed to me that the old land was just a nightingale that sang through her tears, sang through her agony, sang until her song beat up against the heart of the world. Sometimes it was half a laugh and half a sob, but there is no other song in all the world that touches the depths of our souls and strikes the chords of our noblest natures and finds its way to the tears of our eyes.

Then there is the wit and humor of the Irish. They don't know and I don't know where it came from. It was hard for the

exiles to find humor and yet they found it; hard for those driven from the land they loved to laugh at the world until the world laughed with them, and yet such has been one of the golden gifts of the Irish.

Eloquence—you can't speak of orators who moved great masses of people unless you find Irish names sprinkled among them as thick as clan names are sprinkled over Ireland.

Blarney, music, humor, oratory—just the blessed gifts of a people.

Then there comes another gift—that perfect, sweetest of all gifts that ever came to the sons of man. Sometimes I am thinking and swear that it is where all the others came from—the Irish mother. There never was a mother that wasn't almost next to Mary, the blessed.

It has always seemed to me that out of the travail and tears, out of the agony of the hour when her children left her and went from Ireland, and out of the bitter struggle to provide for the children that she took with her to a new land, there came some great gift from God that gave the Irish mother the mighty power to put ambition into the hearts of her sons, to fill them with determination that never died, to keep laughter and song there, and though their pockets were empty, their souls were rich in legends and stories and the golden love of an Irish mother. From her hands they went forth to do the work of the world, tunneling the mountains, spanning the rivers, throwing skyscrapers into the air, spreading the advance of civilization from one seacoast to another.

The Irish mother—mother of men—who gave to them that conquering heritage, the power of leadership, that sent them forth to make a land free and happy, to build its homes, to sing its songs, and make the jest and laughter of the world.

Now, none of this is strange, none of it unusual, when you know the story of how the Irish first came to be made into a people. Do you know how the Irish were made? Shame on you, then, for such ignorance. Let me tell you.

After the great world was made and the good God had sent it rolling out into space, He was resting on the seventh day. The saints were there standing all about him leaning on their golden shovels. The Lord said to them, "Look at all these odds and ends scattered around and left over after the world's making. Take them up and make of them the races of man to people the earth."

So St. George got a great lump of lead, and in the heart of it he placed a piece of gold and sent it bumping and rolling clumsily to earth and called it the English. But sure nobody from looking at it would ever have known that it has a bit of gold in the heart of it.

St. Dennis caught a flying sunbeam and tied it with the bow of a ribbon and added to it the flashing rays of gems and jewels and sent it to earth as the French.

Then St. Michael took a mask of velvet and a poniard of steel, the strings of a mandolin, and a piece of the moonlight and sent it to earth as the Italians.

But St. Patrick, Heaven bless him, had watched them all and noted their mistakes; and he, too, caught a sunbeam and the rays from jewels and the ripple of a brook, and he added to them the sigh of a poet, the heart of a child, a rose out of paradise, and a great golden chord from an angel's lyre. He took them all to the feet of the Master and said, "Dear and good God, to make my gift perfect give me one thing—give me the smile of God"; and God smiled.

St. Patrick sent his gift to earth and called it the Irish. But Satan, watching, said to himself, "Lo, if it ever gets to earth, Paradise will be in Ireland," and so, in envy and malice, he drew his bow against it and shot a poisoned arrow through it. It bruised the stem of the rose of Paradise and twanged against the chord of the angel's lyre.

Now some there are who say that because the devil's arrow bruised the stem of the rose of Paradise, Irish women are always a little sad at twilight; and some there are who say that because it twanged against the chord of the angel's lyre, the best of Irish music is always sweetly and poignantly sad; and still some there are who say that the devil's arrow accounts for the perversity and contrariness in the Irish nature. But, be that as it may, it is the duty of Irishmen everywhere to pluck hard at this arrow until there shall be nothing left in the Irish nature but the heart of a child and the smile of God.

And so, in conclusion, let me say that tonight America is grateful for the Irish men and women of this Nation, because there is writ on the tablets of their hearts a love of liberty and justice so deep that no dictator can ever erase it; no threat can ever cause it to be hidden in fear; and no oppressor, no matter how powerful, can ever take this Nation from its foundations of democracy so long as Irish hearts beat with life. And they shall continue to beat, for the fighting races don't die out, though they seldom die in bed.

So here's thank God for the race and the sod, and good night to you, on this St. Patrick's Day.

The Sincerity, Courage, and Public Service of Lindbergh

EXTENSION OF REMARKS

OF

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1941

ARTICLE BY GEN. HUGH S. JOHNSON

Mr. OLIVER. Mr. Speaker, it seems almost axiomatic and nearly automatic that every period of crisis and emergency develops a personality of size and stature commensurate with the degree and intensity of the crisis itself. In my opinion, America's need today for a national voice to balance and counteract the emotional hysteria which is leading and involving us in foreign wars and continuing power politics of the world is being met through the courage, patriotism, and self-crucifixion on the altar of cruel public criticism, articulated by a vocal few, of Col. Charles A. Lindbergh. It is with pleasure and personal satisfaction that I incorporate in my extension of remarks a recent newspaper statement in this regard by Gen. Hugh S. Johnson which will help to balance the record in connection with Lindbergh's position which I have publicly endorsed:

(By Hugh S. Johnson)

This Lindy has guts. I saw and heard him testify before SOL BLOOM's House committee on the lend-lease bill. There were all-out war men in that tribunal who, at first, felt they had him as securely tied to the post, in front of the fires, as was ever a sixteenth-century Jesuit missionary by any savage Huron or Iroquois Tribe of torturers. He was an isolationist, far more extreme than most of the rest. He boldly said that he didn't care which side won in Europe; he hoped neither would; he was interested only in perfecting the defensive strength of the United States which he believed could be done if we concentrated that strength on our own defense and did not fritter it away, attempting to conserve the British Empire.

It was not hard to hear the whinny of the whetting knives on the committee rostrum. A very hostile publicity background had been built up by the defend-Britain committee. People in the packed audience almost gasped at such audacity. When he first started to testify, I thought that he was in for a sort of Torquemada inquisition by the war-minded, whirling dervishes in the committee semicircle, with the encouragement of the crowd.

Nothing of the kind happened. One reason that it did not happen was that Committee Chairman SOL BLOOM—who has frequently been criticized as what, at West Point, is called a gallery boner and in more understandable Americanese a "publicity hound"—wouldn't let it happen.

He was impressed with the statesmanlike necessity, regardless of his own apparent burning conviction, to have this debate proceed, as he said several times, "in order." I have known Mr. BLOOM for years. Under the weight of these great responsibilities, he rises. Woodrow Wilson once said during the World War, "Take an ordinary citizen and subject him to these terrific war pressures and the duty of fateful national decisions, and one of two things happens. He grows or he swells." SOL has grown even majestically.

But there was another reason that you could see—tangibly, even visually—as it permeated both committee and audience through what I shall call by a very fancy but very accurate word adsorption. It was the cool, calm courage, logic, and fearless frankness of this American ex-hero in faith in his convictions—like the Jesuit at the Iroquois stake.

When he left the stand, the largely hostile audience and the overwhelmingly hostile political committee spontaneously stood in silent tribute—and SOL BLOOM was the first to stand. It was a great tribute to Slim, but it was almost as great a tribute to the committee and the usual American way of looking at things.

Now, Lindbergh has taken a similar stand in a long Letter to Americans, and Collier's which apparently doesn't agree with much of it, in a spirit similar to that of Mr. Bloom's committee, has published it. It is important to read it. I, too, disagree with some, but far from all, of its conclusions. But I first met this clear-eyed American when he was a kid flying the mail between Chicago and Kansas City. I knew his father before him. He has no flair or apparent wish for popularity and no sense at all for favorable publicity. He is simply sincere.

In every act of his life, through more than one epochal national and international incident, he has shown a rarely equaled calm, deliberate intelligence and fearlessness—an unexampled fortitude—that, in his prominence, are not merely personal but national assets. He has nothing to gain and a great deal to lose by his attitude. He is seeking no public or private preferment and, by his present stand, is bravely courting the reverse of either.

I don't see how anybody can read his Letter without a conviction that it is time and past time for all of us not only to "stop, look, and listen," but to begin to question the high-power propaganda which is whipping us into one of our greatest dangers—high time to try to stop the current sheep-herding of our Legislature into a headlong hysterical stampede toward an abyss.

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. WILLIAM T. BYRNE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1941

LETTER BY HON. WILLIAM T. BYRNE, OF NEW YORK

Mr. BYRNE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written by me to the Knickerbocker Press in opposition to the St. Lawrence seaway:

[From the Knickerbocker News, Albany, N. Y., March 27, 1941]

CONGRESSMAN BYRNE SAYS SEAWAY PLAN SAME AS BEATEN IN 1934

(By WILLIAM T. BYRNE, Representative from Albany)

The St. Lawrence seaway agreement which the President recently submitted to Congress is nothing more than a revamping of the proposed St. Lawrence Treaty of 1934. The project is the same basically unsound, pernicious undertaking that was rejected by the United States Senate in 1934. Some provisions of the agreement are less tenable than the revamped treaty proposed in 1938 and now, when every engineer, every skilled and unskilled workman, every ton of steel and pound of cement is needed for our defense program is no time to flit away our energies on glittering but hollow schemes.

In order to induce Canadian acceptance of the agreement, our Government becomes very generous. We agree to foot almost the entire bill in the International Rapids section of the St. Lawrence, regardless of whether or not the work lies in Canada. This country even agrees to construct—not only the Canadian power-house substructures as before, but the Canadian power-house buildings as well. All they have to do is to install the machinery in their own plants.

In generous moods of previous years, we requested the Canadian Government to pay for the construction of side canals and locks wholly within Canadian territory, but now we agree to pay for these.

ONE SECTION TO COST $266,170,000

According to the estimates presented to Congress with the St. Lawrence agreement, the International Rapids section alone will cost $266,170,000. The United States is obligated to pay over 82 percent of this amount and if Canada fails to proceed with the installation of the machinery for the development of power—as permitted to do under the terms of the agreement—the United States will pay 91 percent of the costs.

In spite of all of this, we agree that about 50 percent of all the work shall be performed by Canadian workmen, with Canadian materials.

The hurried submission of this project is, of course, prompted by the hope that its new dress of national defense will allure enough voters to insure the safe passage in spite of certain storms ahead. These will be raised by citizens all over the country who will not be duped into thinking such a generally ruinous project is essential to national defense. They realize that all of the skills, and labor of all kinds, materials, contracting organizations, and equipment necessary to carry on such a mammoth construction enterprise are sorely needed in our emergency defense program, and the blow the already staggering taxpayer would receive by diverting such a tremendous sum of money as would be required by the seaway.

CITES QUOTATION OF DR. T. H. HOGG

The following is a direct quotation of Dr. Thomas H. Hogg, chairman and chief engineer of the Hydro Electric Commission of Ontario, the Canadian agency which would develop and have at its disposal one-half of the St. Lawrence power:

"It is quite evident that this development (the St. Lawrence project) cannot be classed as a war measure, for even if it were undertaken tomorrow, it would be 6 or 7 years before it could become of use. Yet the project is persistently misrepresented as a war measure which, far from helping, would actually handicap war work."

Furthermore, the project would not even represent good long-range defense planning. There would be eight locks in the Welland Canal and nine in the St. Lawrence River. Each one of these would be vulnerable to aerial attack and sabotage. If any one of them was destroyed, it would close the Great Lakes to the sea for an indeterminate period of time. In addition to the locks, there are great dams and levees which would also form vital links in the seaway. The dam in the international rapids section of the St. Lawrence, if destroyed, would trap all naval and other deeper draft vessels in the Great Lakes for the duration of any war, and might cause grave damage to the port of Montreal and other vital areas between there and the dam.

POINTS OUT SHIPBUILDING POSSIBILITIES

The shipbuilding capacities of the Great Lakes should be fully used for naval-craft construction, but not for the type of vessel which would have to depend upon only one outlet to the sea—the St. Lawrence. The Great Lakes area might well be developed to the point of being the greatest construction area of the smaller type naval vessels in the world.

Here submarines, trawlers, mine sweepers, submarine chasers, torpedo boats, and other similar naval crafts could be constructed and sent to the sea by a number of routes. They could be shipped through the existing St. Lawrence Canal, Hudson River route, or by the way of the Illinois Canal, Mississippi River Channels—the most protected outlet of the Great Lakes to the sea in the entire United States or Canada. Smaller merchant marine vessels could also be constructed in the Great Lakes area and shipped in sections via existing canals, as in the last World War.

Such planned expansion of our inland shipbuilding facilities would then leave the ocean and Gulf yards open for construction of the larger-type vessels, both naval and merchant marine. It would distribute defense work and not hazard the possibility of locking the larger fighting craft 500 miles inland as a result of destroying one of many vulnerable locks or dams.

UNJUSTIFIABLE IN PEACETIME

As a peacetime project, the undertaking is utterly unjustifiable. It is extravagant; it would result in unwarranted increased tax burdens; and if used to the extent indicated by proponents of the measure, it would result in ruinous losses to American labor and industry alike. The seaway would be used primarily by cheap foreign tramp ships operated by undermanned, ill-paid, foreign crews. It would be to these carriers that American labor and enterprise would lose employment and business.

The port of Albany would be one of the chief losers. Construction of the seaway would have a devastating effect upon our city, and as your representative I have constantly opposed this undertaking, and will continue to relentlessly, fearlessly, and vigorously oppose ratification of the new agreement.

[From the Knickerbocker News, Albany, N. Y., March 27, 1941]

LABOR "WARS" ON SEAWAY

(By Francis P. Kimball)

Declaring "war to the hilt" because their livelihood is threatened, State labor groups combined forces today with business and industry in a drive which they promised will sweep the Nation to defeat President Roosevelt's St. Lawrence seaway-power project.

Asserting they will contact every organized labor group in the country, representatives of railroads, longshoremen, harbor and steamship workers, and the State A. F. of L. pledged an "all-out" battle to prevent what they believe will be a major economic disaster for the State and Nation.

Strength of the labor revolt against the seaway was the outstanding event of the emergency conference called by Carl E. Smith, president of the Albany Chamber of Commerce, at the Ten Eyck Hotel yesterday afternoon.

Labor representatives themselves were the first to denounce the project as "wrecking the transportation industry of the country," saying they did not propose to be put out of their jobs by "one man's ambition."

Reports that the national A. F. of L., the International Longshoremen's Association from New Orleans to Maine, and all railroad brotherhoods have joined the battle featured the meeting of more than 70 leaders of civic and commercial groups of the capital district, New York, Buffalo, Syracuse, and other upstate points.

Typical of the attitude of the labor delegates was the statement by John Fitzgibbons, legislative representative of the Brotherhood of Railroad Trainmen, that "we know who would really suffer from this project."

OTHERS SEE DISRUPTION

"Our people," he said, "would be walking the streets if it goes through." He said the feeling was alike among the railroad workers from Chicago to the Atlantic and every worker in the country sympathized with their plight due to the competition the St. Lawrence waterway would create with railroad haul between the interior of the country and the sea.

Other speakers, including Chauncey J. Hamlin, chairman, Niagara Frontier Planning Commission; Cornelius H. Callaghan, manager, Maritime Exchange of the Port of New York; George McCaffrey, Merchants Association of New York; B. J. Lewis, editorial director of the Knickerbocker News; Peter G. Ten Eyck, former Congressman and waterway leader, said it was imperative the Nation "be awakened" to the wholesale disruption of transportation and industry that would be caused by the seaway plan.

Announcing he had reports from Washington indicating while the Senate vote, by States, might be slightly in favor of the

seaway, Mr. Lewis said if the project were submitted now, it would probably be beaten 40 to 50 votes in the House.

SEES PRESSURE ON OPPONENTS

"We must not fool ourselves," he said, "the White House knows this situation as well as we do. What we have to look out for is the extreme pressure that will be exerted upon those who oppose the seaway. It is going to be a difficult fight.

"I believe it is possible by proposing amendments to the measure to clip off votes of those who would favor it. For instance, one of the most serious objections to the whole plan is that American money would be spent to employ Canadian labor on the project. An amendment to require only American labor on it would certainly arouse opposition in Canada, since they are the ones who expect to get the lion's share of benefits."

D. J. Roach, president of D. J. Roach, Inc., Albany stevedoring concern, said while the seaway, if enacted would "drive me out of Albany, I could probably find something else to do. But behind me I would leave 600 or 700 men whose occupations would be washed out, and it would mean their bread and butter."

He and other speakers urged that every public official, industry, and workman in the State be contacted in order to bring home to the public generally the great damage that the St. Lawrence seaway route would cause to American communities, since none of the benefits of the shipping would be returned to this country.

COMMITTEE NAMED

Resolutions declared "entire opposition" to the seaway-power plan and demanded the legislature and Congress repudiate the scheme. It was asserted the "avowed purpose of the seaway is to divert foreign and domestic commerce from the State and to construct a new deep-water route competing with the New York State railroads and barge canal between the Great Lakes and Atlantic coast."

This diversion, it was said, "would threaten enormous destruction of property values in the most populous centers of the State, whose growth, employment, and industry would be impaired and retarded." Since the project could not be completed in 4 to 7 years, it could not "be honestly termed a 'defense measure,'" it was said, and should be defeated as "ruinous" to the State, involving immediate large losses in employment.

A committee was named by Mr. Smith to confer with legislative leaders. It is headed by Truman Cameron, vice president of the Albany chamber, and includes Thomas J. Lyons, president, State federation of labor; Michael J. Powers, assistant secretary, Albany port district commission; Samuel McCochrane, president, Troy Chamber of Commerce; and Frank S. Columbus, Brotherhood of Railroad Enginemen and Firemen.

[From the Knickerbocker News, Albany, N. Y., March 22, 1941]

ROOSEVELT FAILS AT START IN AIM TO PROVE SEAWAY DEFENSE MEASURE

The Knickerbocker News condemned the St. Lawrence seaway project yesterday because it was an attempt by Mr. Roosevelt to do by devious means something he could not accomplish otherwise. In other words, he was avoiding the constitutional course of submitting a treaty for two-third approval by the Senate in order to gain his ends by an agreement that would require only a bare majority of both houses to implement.

It is fundamental that a house built upon sands should fall; it is also true that a project couched in false premises should not succeed. Thus Mr. Roosevelt gets away to a bad start on his device to destroy the commerce of the port of Albany and the Atlantic seaboard by diverting it through the St. Lawrence Channel.

Nor will the major premise of the President that the seaway is necessary to our national defense in the present emergency hold water, a bad pun but permissible in this emergency. The very nature of destructive war these days shortens its duration so that the conclusion may come in weeks or months, while the seaway would take at least until 1945 to finish, by which time the war in Europe will be history. This simple statement of fact should demolish the defense angle of the seaway argument. Then, why doesn't it? For the reason that Mr. Roosevelt believes there is sufficient hysteria over war in our country to prevent clear thinking even on a primary condition. He believes all that is necessary is to say "national defense," and the public will go for anything, from a canal to a new world's fair, and cheer in the doing.

The Executive no doubt is encouraged by the success of the "lease-spend" law on which he knew from the start he had the votes and the public support to put it across. But he had one thing more that he does not have in this instance. He had a sound case which could stand the closest scrutiny without divorcing support from it. In this instance he cannot say, "I've got the votes; we'll fire ahead, come what may," for this time he must marshal reason to back up the action he demands Congress shall take.

[From the Knickerbocker News, Albany, N. Y., March 24, 1941]

WHO WOULD PAY FOR THE SEAWAY?—ALBANIANS AMONG THE HARDEST HIT

With the nonchalance that lets him juggle billions of the taxpayers' money, Mr. Roosevelt estimates the cost of the St. Lawrence seaway at $266,000,000, a mere trifle to a Nation that is well on its way to a national debt of one hundred billions.

The estimate is probably careless of items which tend to expand the resultant bill. Foes of the scheme do not hesitate to say it would cost from five hundred millions to a billion, figured on actual costs. In making such forecasts there should be room for a little reminder the engineers' estimate for the Panama Canal was one hundred and forty-five millions and the cost was three hundred and eighty millions, or 2½ times the estimates. And that was in a day of lower costs. Also, the estimate for the building of the Welland Canal was fifty millions and it cost one hundred and twenty millions, or 2½ times that guess. It is entirely probable that this experience would attach to the seaway. Moreover, it is more than likely because of the prodigality of the President in his outlay of the Nation's gold.

But any figure on construction costs is incomplete because it does not include the losses consequent to the canal's completion. What about the loss in trade to our railroads, to the ports, to the coast-wise traffic? For 300 years we have been building up this trade through the natural ways of commerce. Are we to hurl it away to meet a caprice, to serve internationalism at a terrific sacrifice? We haven't enough tonnage now to fill the railroads, trucks, and waterways between the Atlantic and the Midwest. Why add a medium that would subtract from what we have? Surely it would mean less in wages, jobs, less in prosperity, of which we have not enough.

If you wish to be cold-blooded about the losses, take the world of the Brookings fact-finding institution in Washington that there would be no compensatory economic benefit to our country for the expense involved.

This loss would come very close to home. You can register it in the diversion of the millions of feet of lumber that come annually to the docks in Rensselaer. It can be figured in the eighty-five to five hundred millions that would be New York State's share of the cost, or about $35 for every man, woman, and child in the State. That is not all, of course, for one-third of all the Federal expense is paid in taxes from New York State. Which means that our taxpayers would not only pay the State's share, but a third of the entire Federal expense for the project. It is not a pleasant outlook for a State that is now stirred about economy, a State that is about to create a new division to keep its trade at home. Yet, this deal would send our maritime business to Canada, to the Midwest, eventually to Europe.

It isn't pleasant for Albanians to think they are being made a sucker in this international scheme, but it is forehanded to do so. To a town that gets thirteen millions in rail wages every year the reduction in such revenue is of vital importance.

This has been a discussion of who pays. It looks as if New York State people, and particularly Albanians, would pay terribly for the whimsical ambition of Roosevelt to build a seaway through Canada. And in the discussion, the destruction of our $7,000,000 port has hardly been mentioned.

[From the Knickerbocker News, Albany, N. Y., March 25, 1941]

ST. LAWRENCE AND THE DEADLY PARALLEL

Whither America? How far have we drifted from the basic ideals of our proud nationalism when our President seeks to build a seaway with American money through Canadian territory to destroy the trade of our country? A deadly illustration is afforded in a comparison between some of the basic facts concerning the Panama Canal, built by Theodore Roosevelt, and the St. Lawrence scheme F. D. R. is pushing.

ST. LAWRENCE

The St. Lawrence seaway will cost between $500,000,000 and a billion, possibly more. Most of the expense will be paid by the United States. Half the power developed on the international waterway will be Canada's, although we paid for it. The economic losses in shipping and rail trade are inestimable.

For three-quarters of its distance the proposed seaway would run through Canadian territory, subject to control of this friendly but foreign country. We are committed to the defense of this waterway in any war in which Canada may engage in the future.

The seaway would divert trade from the Atlantic ports and the American railroads to Canada. It not only creates disunity but it is the first overt effort by an American administration to destroy American commerce for the benefit of a foreign state.

PANAMA CANAL

Engineers' estimate on the Panama Canal was one hundred and forty-five millions and it cost two and one-half times that much. It has returned to America—and to us alone—many times its cost in tolls. It is primarily for our trade and our defense. It supplies an all-American route between our coasts that need be shared with no other country.

Under the guidance of Theodore Roosevelt, complete title and control of the Canal Zone was obtained from the Republic of Panama before the rights of the French Panama Canal Co. were purchased by us. There is no danger of any country or people disputing the title.

The Panama Canal opened a commercial route of unquestioned benefit to the trade of our country. It was for the benefit of the United States alone. It gave to our country and our country alone the strategically important control of this only route between the two oceans.

This is a deadly parallel because it shows how the Canal was devoted to the interests of our country alone and how the seaway is not. Our country is supposed to be for Americans

first, regardless of how much we may help other countries. But the scheme is particularly offensive in its emphasis of the drift of administration position from Theodore Roosevelt's America-first policy.

[From the Knickerbocker News, Albany, N. Y., Wednesday, March 26, 1941]

ST. LAWRENCE SEAWAY PROJECT WOULD BYPASS TRAFFIC FROM ALBANY AND OTHER NEW YORK STATE CITIES

(By Francis P. Kimball)

The St. Lawrence seaway program is described by the chamber of commerce leaders, and by port, city, and county officials as dangerous to this community and to the State at large.

Just what do they mean by this?

Many attempts have been made to make the seaway project appear complicated, but it is not really so. It is a project that, if carried out, may cost the jobs of many residents of this area. It may seriously disturb our railroad service, our harbor traffic, and our industries. It may put Albany and other neighboring cities on a sidetrack, while commercial development turns to another section of the State.

How can the seaway do this?

Look at the accompanying map. The St. Lawrence River is clearly marked on it, running northeastward from the Great Lakes to the Atlantic Ocean. You will notice that only a little of the way does this river run through international territory. After passing the northern New York State border, it goes for over 1,000 miles to the Gulf of St. Lawrence, entirely in Canada.

Thus the river carries traffic directly out of the United States to a route 80 percent of whose length is within the Dominion of Canada.

WILL OPEN NEW ROUTE

What the seaway is really designed to do is to open a new route 27 feet deep so that ocean vessels may cruise in from the Atlantic and up the Great Lakes to Cleveland, Detroit, and Chicago without a stop; take on cargoes and sail out again for foreign destinations—all without touching a New York State port.

In this way business is taken from Albany and New York on the east and from Oswego and Buffalo on the west. As shipping is now conducted, ocean vessels arrive from abroad at the port of New York or come up the Hudson to Albany. Cargoes are unloaded and shipments are forwarded by railroad or over the State Barge Canal to western points, including Cleveland, Detroit, and Chicago. This business furnishes vast employment at the docks and terminals, and on the railroad as well; and, the whole operation being conducted within United States routes, benefits this country.

Transportation since the days of the Erie Canal and the pioneer Mohawk & Hudson Railroad has been a major industry in New York State. It has many allied industries such as the manufacture of car wheels, brass journals, car and locomotive building, repair shops, steel fabricators, and many others.

WOULD BYPASS NEW YORK

It is well known that the Port of New York, the country's leading gateway, depends largely for its existence upon foreign trade. The St. Lawrence seaway route would make it unnecessary for ocean ships to call at the port of New York. They could, during the 7 months of the navigation season, lay their course directly for the St. Lawrence and pass up to the interior of America.

Not only would New York harbor find its activity curtailed, but the railroads which carry the loads overland would suffer the deprivation of a large part of their business. For the same reason, Albany would find its young seaport placed in competition with a seaway running "over its back" into the Great Lakes, and would find its development handicapped and impaired.

At the west end of the State, Buffalo, now one of the largest ports in America, would find itself bypassed by the St. Lawrence route. The traffic on reaching Lake Ontario would pass through the Welland Canal into Lake Erie and on up the Lakes. The Welland Canal lies entirely in Canada.

So both at the west and on the Atlantic side, New York State would be detoured by the St. Lawrence seaway. Tonnage would not come into the State and even the boats that carry the traffic abroad would very likely be foreign-owned. It is well known that the foreign governments heavily subsidize their ships, and there are only a few trade routes in the world served by American vessels.

REASON BAFFLES CHAMBER

Why New York State should pay to create such a seaway, when its only possible effect would be to divert its commerce to a foreign route and foreign ships is baffling to the Albany Chamber of Commerce and other groups who oppose the seaway plan.

They cannot understand why President Roosevelt has proposed it. They do not intend to accept his decision.

Just how much damage would result from the building of the seaway no one can properly estimate. The railroads, which face a loss of much tonnage 7 months a year to the St. Lawrence route, have a pay roll in the Albany district of $13,000,000 a year. With traffic diverted to the St. Lawrence a great part of the year they would not need as many trains or employees. They could only curtail, and it is most probable they could not even survive.

The port of Albany, which in the 1935–39 period handled over 200 ships a year, and produced a revenue in wages earned by 500 workers of over $1,000,000 annually, would find itself on a sidetrack. In 1940 the port handled over 200,000 tons of wood pulp, valued at more than $10,000,000. It would have handled even more business, going to paper mills in the Middle West, except that pulp moved down the St. Lawrence canals to Great Lakes cities, carried in foreign steamers that could operate on the 14-foot existing channel.

With the 27-foot ocean channel in the St. Lawrence, all the pulp for the Middle West would move down that route, and there would be a check on further shipments via Albany. That is one practical example of how the seaway may work. Yet the State of New York and the taxpayers of this area would be called upon to pay for the building of the seaway if the Roosevelt plan is adopted.

So far as the power development is concerned, the project is supposed to provide 1,200,000 of horsepower for this State. This more accurately means about 700,000 "firm" power, and steam stand-by stations would have to be built, as well as transmission lines and boosters to get the current down-State.

Besides the $90,000,000 the State would be required to pay for the powerhouse, the State power authority has drawn plans for a $105,000,000 transmission line, and taxpayers would bear one-third of the entire cost of the seaway in Federal taxation besides. Total cost to the State would thus exceed $200,000,000. In return for this there would be some reduction in power bills—how much nobody yet knows. The seaway opponents have said steam plants can be built in much less time and at no greater cost to supply the power needs. The chief power area would be in northern New York.

The question facing Albany and the rest of the State is primarily the disaster that would follow impairment of the existing transportation system which crosses the State. The State's greatest development has occurred along the route from New York City to Albany and Buffalo—and this is the area which would suffer the greatest loss from the St. Lawrence route.

There has never been an adequate study of the economics involved in this project. Even now the development is being pushed forward under the subterfuge of a national emergency, though it cannot be fully completed for 5 or 6 years. The chamber of commerce of the State of New York, which has studied the project carefully for years, has asserted the growth of the great Port of New York would be placed in check by the seaway plan. Obviously, Albany, Buffalo, and the other interior cities along the route cannot expect a better fate.

Defense and Pay As You Go

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1941

Mr. McGREGOR. Mr. Speaker, a rising public debt and heavy taxes go together. No country has ever increased its debt without being obliged also to raise more money by taxation. The public debt should be thought of as a first mortgage on the earning power of the people. Every day in the year is a tax day for all of us. The taxes to serve and pay for the public debt are a first mortgage and fall not only on all who work but on all who eat.

I am wondering if we realize just what the present Congress has spent. May I briefly summarize by giving a list of the major money bills approved by the House and passed or pending in the Senate: British aid, $7,000,000,000; Navy, $3,415,521,750; supplemental defense, $1,980,356,820; independent offices, $1,415,991,838; agriculture, $890,824,037. Major Budget Bureau recommendations awaiting action, and which will be passed: War Department, $5,967,475,809; social security, $894,209,685; Interior Department, $151,087,238. This expenditure will exceed the $65,000,000,000 debt limitation as prescribed by Congress.

In 77 days this Seventy-seventh Congress has spent $25,731,178,957. This represents an outlay of $334,171,155 a day, $13,923,506 an hour, $232,058 a minute, and $3,867 a second.

I am wondering if we realize what this means. This amounts to a debt of $485 per capita, and it cannot be blamed entirely upon national defense. On March 4, 1933, the debt was approximately $20,200,000,000, a Federal per capita mortgage of $163. Compare that with 8 years later and a per capita mortgage of $485. It is the most rapid increase of a debt in a like period that has ever occurred in the history of our country. Please remember, however, that "per capita" means every man, woman, and child. Since the average American family consists of four persons, the debt per capita is four times $485. This means that each breadwin-

ner is saddled with a debt of approximately $2,000.

The people of my district are heartily in accord with an adequate defense program and are willing to pay for it, but they insist that this vast, unnecessary expenditure for departments other than national defense must be immediately stopped. As I stated on the floor of Congress on March 21, the people of my district believe in a pay-as-you-go program, and that is what we are hoping the administration leaders of this Congress will finally agree to.

I again call on the leaders of this administration with this statement:

We are willing at all times to spend and pay for a defense program, but please quit calling on Congress to appropriate money for every conceivable department, labeling it under the guise of national defense.

Bobbing Back

EXTENSION OF REMARKS

OF

HON. WALTER G. ANDREWS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 1, 1941

ARTICLE BY HUGH S. JOHNSON

Mr. ANDREWS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Buffalo Evening News:

[From the Buffalo Evening News of March 22, 1941]

SEAWAY REVEALS PRESIDENT'S KNACK OF "BOBBING BACK"

(By Hugh S. Johnson)

WASHINGTON, March 22.—A principal characteristic of our President, in respect of which his pride is amply justified by the record, is what an observer might call persistence, but what he calls his "Dutch stubbornness." Whatever you call it, it certainly is there. If you look back over the story of what he set out to do and in which he was temporarily frustrated, you will find that the purpose remained and that, through one or another avenue—sometimes after years—the end was achieved.

Perhaps the most uncanny instance of his "bobbing up serenely" to get what he wants in the end is the so-called St. Lawrence seaway. It was advanced first as a navigation project to "bring the great ocean-going vessels of the commerce of the world to the docks of Cleveland, Duluth, Chicago, and all lake ports." It almost certainly would do no such thing.

But the "navigation" ballyhoo was necessary for two reasons. If it could be sold to the Middle West, it was good for political support. More important still, as the Supreme Court decisions then stood, the Federal Government could not develop a waterway for power alone. Its powers were confined to navigation but if, in developing for navigation, power was produced as an incident, that was permissible.

Finally, boundary waters between the United States and Canada had always been subjects of treaties—to be confirmed by two-thirds of the Senate. The then "navigation" argument wasn't good enough, and the President's proposed treaty with Canada for the St. Lawrence seaway was rejected.

Now new elements have entered. First, it is clear that under the Supreme Court, as now constituted, the Federal Government can develop a stream for power—especially if an element of "national defense" can be imagined. We are inclined to do anything suggested for national defense and do it without any debate or back talk. So, Mr. Roosevelt returns with an "agreement" for his "seaway" rather than a treaty—which by some alchemy is not supposed to require Senate ratification.

It is too bad this project can't be debated, at least to make clear whether it can't proceed at one-third the cost and openly as a power project only, which, while probably not yet necessary, eventually will be. When we are apparently going to need all the labor and machinery we can get in the defense program, why bring this up now? The answer is easy. The President's "Dutch is up," and this time he will get his way.

Democracy and the Dignity of Man

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Wednesday, April 2 (legislative day of Monday, March 31), 1941

ADDRESS BY THE VICE PRESIDENT BEFORE CONVENTION OF B'NAI B'RITH, CHICAGO, ILL.

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by the Vice President of the United States before the Triennial Convention of the B'nai B'rith at the Civic Opera House, Chicago, Ill., on March 30, on the subject Democracy and the Dignity of Man.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF HENRY MONSKY, PRESIDENT OF B'NAI B'RITH, IN INTRODUCING THE HON. HENRY A. WALLACE, VICE PRESIDENT OF THE UNITED STATES

B'nai B'rith meets in triennial convention—the culmination of almost a century of service. It has long recognized that the destiny of its people is one with those who seek to maintain human freedom. A harassed and menaced civilization today has made necessary as never before our reconsecration to the preservation of democratic values.

B'nai B'rith stands with the forces of righteousness, justice, and freedom against the forces of evil, violence, and tyranny—unhappily rampant in the chaotic world of today. Jewish opposition to dictatorship long antedated Hitler, Mussolini, and Stalin. Centuries before language knew the terms "communism," "fascism," and "nazi-ism," the Jewish people were historically the champions of human liberty.

The Maccabees of old were the predecessors of Washington and Bolivar and of many of those great personalities who have produced the American tradition. To preserve that tradition, we in America are now building our military defenses which must be strong and unconquerable. This is no time for political partisanship, needless economic conflict, or gratification of personal ambitions.

There must be destroyed every vestige of hope by the dictators that this, the greatest democracy of all, may be vulnerable. The whole world now knows that back of our elected leaders stands a united people of free men and free women—determined to remain free, at whatever cost—a people which counts no sacrifice too dear and no service too great if freedom shall prevail.

The security of the Nation has become the paramount responsibility of every American worthy of the name. Whether we be called upon to protect that security by service in the armed forces, by the giving of our technical and professional talents, by the use of our material resources—it is our sacred responsibility to serve with a devotion born, not only of a fundamental loyalty to the welfare of the Nation but of an instinctive determination to keep inviolate the individual rights of free men—rights which are indispensable according to the American concept of life.

Conceived in the deep-rooted tradition of America and the American way and dedicated to the support of the institutions which have preserved that tradition, B'nai B'rith has faith in the future security and welfare of the Nation if the people who enjoy the privilege of our democracy will understand that service at this time and in this crisis is an unprecedented opportunity for meeting the challenge of the times.

This convention of B'nai B'rith proposes to contribute further to our national strength by stimulating a more profound sense of national solidarity. We shall meet, with courage and without defeatism, the present-day challenge to our civilization. Once again we pledge, on behalf of B'nai B'rith and American Jewry, of which it is a cross section, our determination to rise to the present high opportunity for national service.

It is therefore fitting to present to you one who exemplifies that spirit of national service—the Vice President of the United States.

ADDRESS BY VICE PRESIDENT WALLACE

It gives me an unusual pleasure to talk to B'nai B'rith, to the Sons of the Covenant, who for 98 years have stood for justice and tolerance regardless of race or religion. I am especially happy to talk through you to Latin America, because most of the countries of Latin America, just like the United States, are inhabited by races for whom the Nazis have the utmost contempt. We of the Americas, North, South, and Central, must band together to maintain the sacred essence of democracy and religion.

The central core of both democracy and religion is respect for the dignity of man. No doctrine of state or church is higher, broader, or deeper than that of the fatherhood of God and the brotherhood of man. Whether it is the lawgiver speaking in the Pentateuch or Jesus in the Gospels or a defender of modern democracy, we find the essence of all successful statecraft and all religion in the wisdom of the ages: "Thou shalt love the Lord thy God with all thy heart and with all thy soul and with all thy mind and with all thy strength. Thou shalt love thy neighbor as thyself."

Any civilization, in order to endure, must recognize that every individual has placed in him or her a spark of the divine; we must respect the dignity of man, no matter whether he be Japanese or American, Scotch or German, English or Negro, Italian or Indian, Catholic, Jew, or Protestant. By custom and previous opportunity, the racial and religious groups are apparently greatly different. But by heredity, as distinguished from custom, they are astonishingly alike and are equally the sons of God. The most deadly of all sins is for a majority group to look down on, despise, and persecute a minority group.

Such a sin, which might well be called the sin against God, inevitably brings eventually a terrible penalty.

This evening I propose to speak very briefly on the importance of racial and religious minorities in a civilized democracy. As we ponder on this problem we begin to realise that God in his providence placed different racial and religious groups together in order to teach them tolerance and to awaken them to the infinite possibilities in man. If there were a nation pure in customs and blood it could not long endure as a progressive force in world affairs. The minorities are always needed either as a ferment or for other purposes. In England the Scotch and Welsh have always served a useful role. In Switzerland the French and Italians have lightened up the heavier German outlook. Somehow I can't help feeling that the Swiss experience in reconciling diverse races, languages, religious, and customs has in it a worthwhile lesson for the world of tomorrow.

The contribution of the Jewish group to many nations is too well known to be dwelt on at length. An Einstein in Germany, a Weizmann in England, a Bergson in France, and a Brandeis in the United States are a few of the many names which illustrate the contributions Jews have made working through the medium of various languages to serve the welfare of all mankind.

The Nazis rose to power largely by preaching hatred of the Jews. They propose to eliminate the Jews completely in all of Europe. The methods they have used in their efforts are unspeakable. I know that no person worthy of the name "American" will ever permit himself to take even the first step on that road of racial hatred, the road which carried the Nazis to power, and the road which will lead them to eventual ruin.

One of the most encouraging things to me about B'nai B'rith is the way in which it recognizes the necessity of the minority groups cooperating with the majority for the welfare of the whole. B'nai B'rith knows that no minority group is safe unless each believes and practices Americanism. B'nai B'rith is interested in Americanism and the protection of minorities through enlightened cooperation with the majority not only in the United States but also in a number of Latin-American republics. In some of these republics the Indians form a strong minority group, and in others the Negroes. When we consider that the Negro has been out of slavery for only about 80 years in the United States we are amazed at the contribution which has already been made to the arts and letters. As educational opportunity expands, I am convinced that the Negro contribution to the civilization of the New World will become increasingly important.

The Indians of the highlands of tropical America had an extraordinary civilization before the white man came. They are skilled with their hands and have an unusual sense of color. Above all, they are patient. The Indian element in Mexico has already made some unusual contributions to both the political and the artistic life. But we must remember that less than half of the Indians of tropical Latin America know how to read and write. Their educational and economic opportunities have been of the lowest. But now they are starting on their long trail to recapture the glories of their ancient civilizations and more, too. The Ambassador from Mexico to the United States in a speech at Springfield, Ill., last month, said: "Most of the people in our America have no land, no education, no sanitation, and little or no participation in government, but, thank heaven, they still have hope. Until that hope becomes a concrete reality, the unity and solidarity of the Americas will be merely apparent, a matter of official policy among the governments of this continent, without meaning for the masses below. The general ground of pan Americanism, in the face of world events, is today more than ever a common aspiration. The continental ideal—democracy. Not only formal and political democracy—a democracy of rights—but material and economic democracy, a democracy of duties, as well."

And then the Ambassador goes on to expand the theme which is very dear to my own heart, the doctrine that the political democracy of the nineteenth century, which was based on individual freedom, must be combined with the economic democracy of the twentieth century, which is based on social justice. These two types of democracy, one overly individual and the other perhaps too collective, must go along side by side under the limitations imposed by constitutional democracy. The emphasis of constitutional democracy, which I trust will embrace the whole hemisphere, must be on education and toleration. We must not allow a Gestapo or Cheka to get a foothold anywhere in this hemisphere. We must remember that if England loses, the Nazi scheme of things will, unless proper safeguards are taken, come in control within less than a year in certain of the Latin-American republics. It must be remembered that when Nazi control takes place no one at any time or any place is safe against imprisonment, degradation, torture, and death. Therefore we in all of the Americas will keep our political democracy bright and shining. As Bolivar, the great liberator, said in South America more than a hundred years ago, "More than anyone else, I hope to see formed in America the greatest nation in the world—not so much because of its size and resources, but much more because of its liberty and glory."

Yes; we believe in the dignity of man, the freedom of the individual. But we also believe in economic democracy, in social justice, and in education. In preaching social justice, we must also lay equal emphasis on social duties. Nothing is more dangerous to democracy than the unbridled passion of the ignorant mob led by an unprincipled demagogue. But equally dangerous are pressure groups, economic minorities who try to loot the Federal Treasury or get an unfair grant of governmental power for their own selfish purposes. Most demagogues and "plutogogues" appeal to the sacred name of social justice and in so doing defile it. On this subject, Bolivar spoke with insight when he said: "As long as we remain undisciplined, we are not able to be free, no matter what form of government we may desire."

In the name of efficient constitutional democracy, which in my opinion embraces both political and economic democracy, we must train the next generation to be not only tolerant of the racial and religious minorities but to rejoice in them. To those nations which best learn the art of reconciling minority differences will belong the future of the world. There is nothing so constructive or of more profound significance than that of bringing out the best which is in men of different backgrounds. The differences between men are a strength, not a weakness, to a nation, provided these differences are properly developed. I am sure that B'nai B'rith, when it erected at Philadelphia 65 years ago its statue to religious freedom, had this in mind.

And now in closing I wish to leave in your minds the name of a fourth kind of democracy, which I believe will gradually become more important in this hemisphere—genetic democracy. By genetic democracy, I mean the doctrine that no racial or religious group should be looked on as inferior because of its heredity. A race may be inferior for many years because of lack of education, lack of proper food, lack of economic opportunity, lack of knowledge of customs which are handed down from mother to son; but those inferiorities need not last forever. True it is, they cannot be changed too rapidly without the danger of ignorant clamoring for the impossible and, therefore, the destruction of political, economic, and constitutional democracy. But I do say to the minority groups of this hemisphere that there is such a thing as genetic democracy and its importance will gradually grow in the consciousness of the men of the New World. It must be said, however, that the Nazis hate the doctrine of genetic democracy above everything else. They believe all races but their own to be genetically inferior. They believe all other racial and religious groups should be enslaved. One of the strong reasons why all of us in the New World believe so strongly in hemispheric solidarity for defense purposes is because we know the Nazis look on most of us as belonging to what they call an inferior race.

Nazi-ism is partly religion, partly biology, and partly a doctrine of militaristic imperialism combined with precise economic warfare. With fanatical drive, nazi-ism is endeavoring to dominate the world. Hitler told Rauschning that one of the main objects of his policy was to conquer America. I quote: "We are already training picked young men for it, to whom the rotten Yankees will have nothing to oppose. Our youth will accomplish the task Washington was incapable of performing and which a corrupt democracy has completely neglected."

The cost of the Nazi terrorism in terms of suffering to Europe is great beyond measurement, but we in the New World owe a great debt of gratitude to the Nazis for forcing us to make clear our thinking about the meaning of democracy and the part which racial and religious groups must contribute if democracy is to be worthy of its name. B'nai B'rith, I know, has caught this vision and will work for it wholeheartedly in all of the hemisphere. The New World is a chosen land, not for the Jew or the German or the Anglo-Saxon or the Spaniard or any other one people. The New World is a chosen land in which all of us tolerantly living together can allow the dignity of man to be expressed free from the compulsions of the Old World but with that sense of duty which is necessary to preserve that which is precious beyond life itself—an efficient yet tolerant constitutional democracy free from the Gestapo and a greedy ruling class.

In the America of the future, hemispheric solidarity for defense will be, I trust, the spirit which will continue to animate the 21 republics and Canada. That which we will unitedly defend was well expressed by Morelos on the 14th of September 1813, in Mexico, when he laid down as a part of his 23 points which should be used in the Mexican constitution the following: "That slavery should be forever prohibited; that there should be no distinction between races or economic groups; that there should be less of both poverty and wealth, and that the only distinction between Americans should be that based on their vice or virtue."

And so I call upon you tonight, ladies and gentlemen of the B'nai B'rith, to keep burning within your hearts, like the Everlasting Light, the fire of love for our American land; upon the doorposts of the Nation let there be set up the indelible seal of the God who molds the character and destiny of nations, and within whose sustaining providence alone lies the peace, the happiness, and the security of all peoples; all the while I urge you to remain unyielding and unflinching in your loyalty to the ever-living principles of your faith, until life about us reflects these truths, strong in our hope that the day will come, as indeed it must come, when in the words of the immortal prophet Isaiah, "They shall not hurt nor destroy in all mine holy mountain, for the earth will be full of the knowledge of the Lord as the waters cover the sea!"

Conservation of Manpower

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, April 2 (legislative day of Monday, March 31), 1941

ADDRESS BY HON. ALEXANDER WILEY, OF WISCONSIN

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD an address which I delivered yesterday evening at Pittsburgh, Pa., before the Seventeenth Annual Regional Safety Engineering Conference and Exhibit of the Western Pennsylvania Safety Council. The subject of the address is Our Job—Conservation of Manpower.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, Your Honor, the Mayor, distinguished guests, and my friends of the Western Pennsylvania Safety Council, it is a distinct honor to be your speaker today, during this national-defense session of your conference. I come from Washington, the vortex of the political, economic, and social currents, to discuss with you the age-old question: Conservation of manpower; or, putting it another way, How can we save man?

I said it was an old question, because I believe that our common interest in safety and our common concern with the welfare of man is as old as civilization itself. The problem of conserving manpower originated even before man began to associate with other men in groups. But it became increasingly a problem of group concern when the collective security of the group was involved.

And so today, though we are discussing a problem which is as old as mankind itself, we are also discussing a problem which is completely new. I say it is new because the pace of our daily life and the tempo of our industrial activity have created a tremendous and almost unbridled machinery for creating unprecedented havoc, if it cannot be controlled. Five thousand dead in each of the months of January and February 1940. At that rate, 60,000 a year. That's more than Britain has lost in dead and wounded in a year.

I do not expect to discuss the conservation of manpower from a technical standpoint. Each of you here today is a member of the Western Pennsylvania Safety Council, and you are affiliated with the American Society of Safety Engineers. Each of you is a technician and a specialist. Men like your chairman, Ross Leffler, and men like your presiding officer, Mr. E. E. Moore, are much better equipped than I am to discuss the technical phases of conserving our manpower.

As a matter of fact, in a world which is on fire—in a world dedicated to destruction; in a world of hatred and strife; in a world of pillage and privation; in a world of conquest and carnage—it seems almost ironic to discuss the conservation of manpower.

But if there is any place in the world where the conservation of manpower might be discussed with validity, it is still in this land of ours—our beloved America. We are still a republic, and our manpower cannot be ruthlessly slaughtered at the whim of any power-drunk dictator. Our world in America, thank God, is not a world of hatred, slavery, and war.

It is my abiding conviction that the highest obligation of any program dedicated to the conservation of manpower must be the obligation of an insistence that our men will never be sent forth to be slain in any war of conquest. I do not like to prophesy, and I do not believe in making predictions, but I believe we must accept as an inviolate part of the future of the United States the traditional idea that this people will never embark on any war of conquest.

I say this because I believe that the problem of conserving manpower is inextricably interwoven with our ideals and with our concept of morality—individual morality and governmental morality.

I do not know what lies ahead for the United States in this war-torn world, but I do believe that whatever happens, when this people is summoned before the last great eternal Bar of Justice—whatever destruction may have been our lot—no indictment will be written against our purpose, no charge will be leveled against our concepts of morality.

I think that we cannot disassociate morality with the conservation of manpower. The question of occupational diseases is a question that is closely correlated with morality. In an age when industrial morality was at a low ebb and inhuman sweatshop conditions prevailed, occupational diseases were infinitely more common than they are today. This was a problem in light, and sanitation, and good working conditions, but above all it was a problem in morality.

When a reckless and intoxicated driver kills a pedestrian through his criminal negligence, that is a problem involving timing, speed, and brakes, but again it is primarily a problem of morality.

When any grafting city administration embarks on a construction program of jerry-built sewers and sanitation facilities, epidemics naturally follow. That is a technical problem involving drainage and bacteria, but again it is a problem in morality—this time civic morality.

Any phase of safety activity, which you can name involves its technical problems, but it is equally true that each of these phases involves a problem in morality—a problem in social and safety consciousness, a social and psychological integrity, and a mental stability.

And so, in brief, the principal theme of my discussion with you, today, is the idea that the greatest single factor in effecting a conservation of man-power is the level of safety consciousness and social morality, which we may be able to establish.

Your group, the Western Pennsylvania Safety Council, is affiliated with the National Safety Council. I have the highest regard for the work, which this organization has done in the field of safety engineering. The story of the National Safety Council is almost the story of the safety movement itself.

The story of the national council and of your group is an amazing and almost unparalleled story of growth and achievement, emerging from the darkness of ignorance as an organized movement, to capture the imagination of the entire country. Your story is a remarkable story of social integration—the integration of industry, of education, of government, and of private organizations. Your story is the story linked with the broad advances of economic welfare. Your story is one of superior technique and better-trained personnel and a humanitarian social concept, progressively decreasing the accidental death and injury rates.

The first cooperative safety congress, which I can recall, was held in my own State in Milwaukee in 1912. It was attended by a small group of industrialists, public officials, railroad men, engineers, and insurance company officials. These men were conscious of the extent, to which accidents were taking a toll upon American industry.

This little group meeting in Milwaukee, Wis., in 1912 was, in a sense, the nucleus of a program to stop industrial accidents. It was this group which conceived the idea of a national cooperative organization to study accident causes. It was this group which later instigated an active program of accident prevention.

It was fully a year later in New York that the National Safety Council was formed. This council took a leading role in the safety movement in America. It is my understanding that it is a nonprofit, nonpartisan, and nonsectarian organization. I understand that its sole purpose is the conservation of human life.

There are few objectives for any organization which can be more worth while than this, and I believe that the objective becomes even more worth while and even more inspiring when we link that conservation of human life to the problem of lifting the moral level.

We have behind us now more than two decades of experimentation and systematic organized planning to eliminate industrial accidents. These decades have left, as a heritage an outstanding record, though today we are still a long way from the goals which we seek. Your organization and the National Safety Council have become great clearing houses of information on accident causes in almost every field, and similarly your group has become a storehouse of valuable information on the successful and proven methods of accident prevention.

Under the leadership of groups like these the safety movement has been instrumental in saving hundreds of thousands of lives. Your constructive public-safety work has met with outstanding results largely because you have relied upon an integrated program of cooperation. No group can accomplish the objectives of the safety movement alone. Your group has wisely demonstrated the idea of cooperating with many forces—municipalities, civic movements, etc.—in a crusade to conserve manpower.

Since that first safety congress in 1912 in Milwaukee, your movement has grown steadily. I can recall that when Herbert Hoover was Secretary of Commerce he called together the first national conference on street and highway safety in 1924. That national conference, in a sense, marked a milestone in our disheartening record of traffic fatalities. Similar movements in industrial safety have altered our traditional concepts of industrial hazards.

Today accidents are no longer regarded as inevitable. Today we recognize, both from an economic standpoint and from the standpoint of humanitarianism, the absolute necessity for reducing the toll on our manpower.

Mr. Chairman, I notice on your program that this morning session of your conference is designated as the national-defense session.

In my judgment, there are two phases to the conservation of manpower in our national-defense program. One is the technical phase as directed by experts and technicians. The second is a broader phase involving a great many elements and evolving not so much from a technical direction as from the pattern of social consciousness which we create.

Let us speak first very briefly of the technical phase of conserving manpower in national-defense activities. On July 28, 1940, eight outstanding industrial safety experts were appointed by the Secretary of Labor to safeguard the productive manpower of those men in our Nation engaged in defense activities.

This program of activities is a plan designed to prevent the injury or death of skilled workers and to eliminate the loss of worktime, through sickness, accident, and industrial hazards.

The entire program is placed on a voluntary basis, and is designated as the National Committee for the Conservation of Manpower in Defense Industry.

As the United States Department of Labor has pointed out, national defense is the job of the century—a 50,000,000-manpower task.

There is no denying also, as the Labor Department has pointed out, that the manpower of America stands guard over the national security of America, and that that manpower cannot be measured by census figures alone.

It is undeniable, that in order to have an effectual national defense, we must conserve our manpower. It is obvious, that every industrial worker can be utilized in our defense program. There must be no waste of American manpower, through industrial accidents and diseases. Such a waste is always an appalling tragedy, and in times like these—a national calamity.

During 1939, more than a million and a half people, were seriously injured and more than 16,000 men and women were killed. In 1939, accidents and disease meant the loss of a billion and a half man-hours of production. The loss of that much time during this crucial defense period might be fatal.

We cannot afford to repeat the costly experience of the World War, when the increased need for defense orders created an ever-increasing accident toll. If we are to maintain and increase our industrial output, we must have safe working conditions, which will safeguard our manpower.

We talk about industrial priorities, of strategic and essential materials. The most essential material in the Nation is industrial manpower. It is a potent factor in preparedness. Anything which destroys American manpower or interferes with the work-hours of American manpower is a menace to national defense. All of this means that there is today a need for extraordinary precaution to conserve our industrial manpower.

I agree wholeheartedly with the objectives of the national committee. I believe their work offers almost limitless possibilities, and from the outstanding caliber of their personnel, I am convinced that they will do a splendid job.

This committee will be concerned largely with the technical phase of safety work. Let us briefly consider a second and less technical phase of the conservation of manpower.

I am referring now to the fact that this national committee was organized on a voluntary basis. That, to me, is a very heartening sign. One of the saddest lessons of this age is the lesson, that, as a rule, few individuals or groups have been successful in retaining freedom without discipline.

Sometimes that discipline is arbitrarily imposed by government. Sometimes that discipline is intelligently applied by government on the basis of mutual cooperation and helpfulness with the individual and the groups concerned. Sometimes the discipline is entirely applied from within, and this, of course, eliminates the necessity for any governmental control. And sometimes discipline comes from without, causing an awakening.

The problem of freedom for the individual and freedom for the group is closely identified with the safety problem. I do not believe in arbitrary government control of the individual or the group, except as an absolutely necessary last resort. I prefer to see governmental control voluntarily applied on a cooperative basis with the individual and the group; or, even better, I prefer to see individual or group discipline, which is so effective that it eliminates the need for any governmental control.

This last type of discipline, of course, is possible only to a very limited degree. The cooperative type of governmental control, however, is entirely feasible and is infinitely preferable to any type of arbitrary governmental control, however commendable its objectives may be.

As far as I know, the greatest achievements in safety have resulted from the organized efforts of comparatively small groups cooperating with government rather than by arbitrary governmental controls alone. In other words, the greatest advances in safety have resulted from intelligent self-discipline rather than arbitrary governmental control.

No safety record can ever be established solely on the basis of penalties. Such a basis is to a certain degree a bad psychological basis, because it sets up an antagonism. It is a negative approach at best. I believe it is a negative approach at best. program we assert some positive factor, some constructive objective accompanied by social approval, rather than continually pointing to something to be avoided on pain of penalty.

Society itself is an engrossing psychological laboratory, and it is a laboratory in which we may study the unstable mentalities and temperaments, the exaggerated or depressed personalities, the neurotic tendencies, the hyperspeed urges, the mental fatigue—all factors in creating hazardous conditions.

It appears to me that one of the most significant contributions which we can make to safety is to create a better mental attitude in our people, a happier frame of mind, a more secure society, and a more certain social order. I shall refer to this later.

It is our job to bring security to the staccato tempo of the times. It is our job to bring our living up to the pace of our inventive genius. Our job is to bring our mental approach up to the standards of our physical welfare. Our job is to learn how to interpret the advances we have made in our physical welfare.

Progress is a complex business, frequently accompanied by some hazard, because usually the pattern of our conduct is not formed as rapidly as the pattern of our material progress.

I like to believe that ultimately we will be able to lift the level of our ability to live together. I like to believe that ultimately we will be able to utilize our material advances in such a way that our mental and spiritual beings will also be able to advance correspondingly in a program of intelligent and worth-while use of our leisure.

It serves no purpose to speed up production, to annihilate delay, and then—to kill time. By an intelligent use of our leisure time we can do much to eliminate the neurotic, and we can do much to eliminate fatigue in our daily life.

Our problem in a fast-moving machine age, tuned to a machine-gun tempo, is to eliminate some of the hazards which accompany a so-called advanced civilization.

I would like to emphasize that the problem of conserving manpower is a problem closely connected with human ideals, human hopes, and human aspirations. If we are to fight a war, let it be first of all a war against the carnage of peacetime destruction, against the pillage of accidents.

Above all, if we are to increase the pace of our living, let us retain an approach to life which is free from hysteria. Let us seek to demonstrate a mental equilibrium in our lives.

Mr. Chairman, we have talked about conservation of manpower in its narrow sense. Let us, for a few moments, speak of the conservation of manpower within our Nation in the larger sense. In other words, let us think about conservation of America.

You and I know there are two ways for us in America to spend or lose our freedoms—our American values of life, home and property, and liberty and pursuit of the American way.

We can become so weak defensively, that we can go the way of Poland, Austria, Czechoslovakia, Norway, Holland and France, by not preparing against the totalitarian onslaught. But we are preparing in that direction—we are spending billions.

In the last 3 months we have appropriated in Congress sixteen and a half billion dollars. Speaking in Philadelphia recently I stated that fact to a group at luncheon. It made no impression. The mayor of Philadelphia was there and I turned to him and said "What is the assessment of your city?" He said, "About $2,000,000,000." I then said, "In the last 90 days we have appropriated money equivalent to 8 Philadelphias."

My own State has an assessed valuation of something over four billion one hundred million. In the last 90 days we have appropriated the equivalent of four Wisconsins.

That brings me to the second way that we cannot conserve the manpower and values of our Nation. We can keep on muddling our affairs, closing our eyes to realities and creating a condition during or after the present world crisis that would result in our dropping into the financial, social, and political abyss.

I remember when I was a lad attending the public schools that we had a certain school reader. In it was a graphic portrayal of a man who sailed carelessly with the current down Niagara River. Men on shore called out to him, telling him about the falls and telling him to row to the shore, but he paid no attention. He said he had enough time—he would sail along with the current.

I have forgotten the name of the school reader, I have forgotten the name of the author of the article, but I have not forgotten how the tale ended. When the canoeist, in a careless and lackadaisical manner, awoke to the reality of the situation, it was too late; the falls were right below him. He turned with his paddle and attempted to make for the shore, but the swift current carried him over the Niagara into the foaming abyss below.

How can we conserve the Nation? By doing the following:

Insist that Congress pass a realistic tax program that will at least take care of the overhead of government.

In the last 8 years we have run behind about three and a half billion dollars a year. If we keep on appropriating money like we have in the last 3 months, we will run behind twenty billion or more this year.

Second, we can insist that our business managers in Washington cut down on nondefense items.

Third. We can insist that the President require collateral security for the property and credits that he extends to Britain.

Fourth We can insist that the people get value received for the money that they are spending on this defense program.

Gentlemen, when you conserve this Nation intact with its freedoms, its right of property, the right of the individual to sell his labor and collect his wages, you are conserving the power of man.

Basically, if we are to conserve manpower, it will be necessary to conserve the power of man—the constitutional powers of the individual in America.

Mr. Chairman, our human theories, our human wisdom is inadequate for this hour.

We feel, most of us, about the national and international situation as Bobby Burns felt. Did you ever hear the story? Well, here it is—Bobby Burns and the bishop.

Bobby Burns was searching for the answers that we all desire.

Now we are looking out upon this troubled America of ours and we want some answers also.

Here are some of the questions or problems:

How is America to stop strikes in our national-defense work?

How are we to achieve national security and total defense in this war-torn world?

While some folks are willing to die for America, how are we to stop the saboteurs; how are we to stop the exploiters of our national emergency for their selfish ends—the grafter, the chiseler, the pay-roll padders, the profiteers?

Let us, men of America, have unity, loyalty, and selflessness.

Let us, men of America, get rid of greed, dishonesty, graft, and let us get rid of the saboteurs, the fifth columnists, the alien in our midst who is abusing his hospitality.

Hitler said America will destroy itself. We know now what he meant. We have seen how he weakened other countries. He thought that the grafter, the racketeer, the chiseler, the shirker, the men of corruption—men who create class hatred, class "isms," class war—could take over this land.

Are we going to prove that he is mistaken?

Yes; the battleground is here in America. Ignorance, disease, injustice, poverty, hate, disloyalty must go.

Unity, justice, loyalty, security must be wrought out by the men of America for the people of America.

Inter-American Cooperation Week

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, April 2 (legislative day of Monday, March 31), 1941

STATEMENT BY DR. JOSEPH TENENBAUM

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the RECORD a statement by Dr. Joseph Tenenbaum, executive chairman of the committee for inter-American cooperation, which sets forth the aim of Inter-American Cooperation Week.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The good neighbor as defined by President Roosevelt in his initial inaugural address is one who "resolutely respects himself, and because he does so respects the rights of others." This common-sense note has become, ever since, the keystone of our inter-American policy. The principle of collective responsibility as well as collective security has become the cornerstone of all pan-American pronouncements as well as all the acts of the incumbent administration.

A campaign through education can do much to create the basis of mutual understanding and cooperation, which is essential among neighbors who desire to live in peace. It is doubly important today when the peace and security of this country is dependent upon the peace and security of any and all of the 20 Latin American republics and when United States defense means no more and no less than an American defense. This means not only common bases and exchange of military information or pooling of military resources, not only shipment of capital and the dispatching of capital ships, but capital understanding of each other's problems. It implies not only unification of material goods but unity of the spirit as well.

The aim of inter-American cooperation week is to focus attention on this problem by emphasizing the common interests, strengthening the feeling of friendship and mutual respect, fostering the cultural and political ties, cultivating genuine understanding, and awakening us to the need of joint economic solidarity and mutual social security between the peoples of the Americas.

"Our Country, Right or Wrong"

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 2 (legislative day of Monday, March 31), 1941

EDITORIAL FROM NEW YORK DAILY NEWS

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an editorial entitled "Our Country, Right or Wrong," by the pen of Capt. Joe Patterson, editor and publisher of the New York Daily News of New York City.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Daily News]

"OUR COUNTRY, RIGHT OR WRONG"

We're expecting pretty soon to feel impelled to restore to our editorial masthead the Stephen Decatur toast which has bannered this column off and on for a long time: "Our country! In her intercourse with foreign nations may she always be in the right; but our country, right or wrong."

There is nothing wrong with the George Washington slogan which we are currently carrying. It is simply that the Decatur toast is more appropriate for a time of war; and we are now about as close to the European war as we could be without being actually in it.

Commodore Decatur was eminently qualified to propose this toast, at a dinner in Norfolk, Va., in April 1816. His life exemplified his words. And it so happens that the big episodes of Decatur's life had to do with places whose names have been prominent in some of the hottest of recent war news.

In 1553 the Turks took Tripoli from the Christian Knights of St. John; and shortly thereafter the Tripolitanian Turks went completely piratical. For centuries they preyed on Mediterranean shipping of all nations. Europe never could compose its own internal discords sufficiently to send a big joint expeditionary force with instructions to stay on the job till the Barbary pirates were wiped out.

The United States paid blackmail to the Barbary pirates from 1796 to 1801, at a rate of about $83,000 a year. In May 1801 Tripoli's pasha tried to jack up the price, and our Government refused. We sent some Navy ships to the Mediterranean to blockade Tripoli.

This adventure turned into a 4-year naval war; and it was in this war that Stephen Decatur, commanding the U. S. S. *Enterprise*, won most of his fame. His greatest single exploit was the leading of a successful sortie into Tripoli Harbor to burn the United States frigate *Philadelphia*, which the pirates had captured.

In this same war, a small American expeditionary force, starting at Alexandria, covered a lot of territory recently traveled by General Wavell's Army of the Nile, and wound up by capturing Derna—taken by Wavell's men January 30, 1941.

Barbary piracy took its deathblow from Decatur and his comrades, though it flickered along weakly until 1830, when the French finally knocked it in the head.

Decatur rounded out his career by figuring gallantly as commodore commanding the New York Harbor squadron in the War of 1812; leading our last expedition against the Barbary pirates in 1815; and getting himself killed at 41 in a duel with a suspended United States Navy commodore, James Barron, whose reinstatement Decatur opposed.

His "Our country, right or wrong" has been a rallying cry for nationalists ever since Decatur uttered it. It has also been as a red rag to a bull to internationalists, pacifists, and kindred serious thinkers.

IN PEACE AND WAR

In wartime, we cannot see how a people which hopes to win can follow any other principle. France is the most recent illustration of what happens to a disunited people when the drums begin to roll.

About peacetime and the "our country" principle, there is some room for argument.

Internationalists had high hopes that after the first World War the League of Nations could be built up into a world-governing body which could produce permanent peace. The same school of thought now hopes that after this war some benevolent combination of nations, armed with enough planes, battleships, and soldiers to keep everybody else under control, can enforce world peace for centuries to come.

We have grave doubts. The only example in history of such a thing is the old Roman Empire—and its ruling clique rolled up records for corruption and general rottenness which have yet to be surpassed. As soon as Rome's rulers began to lose their grip, nationalisms and desires for independence began to crop up all over the Empire.

So we don't know but what "Our country, right or wrong" is as good a policy for a people to follow in peace as in war.

United States Savings Bonds

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 2 (legislative day of Monday, March 31), 1941

ARTICLE BY HUGH S. JOHNSON

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the CONGRESSIONAL RECORD column by Gen. Hugh S. Johnson, published under the title of "One Man's Opinion" daily in the Washington News. This is a very interesting article relating to investment opportunities.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ONE MAN'S OPINION

(By Hugh S. Johnson)

A prospectus for an investment security—as neat a bit of selling argument as any I have ever seen after several years' close experience with such literature—came to my desk yesterday. It was signed Henry Morgenthau, Jr., and is issued by the United States Treasury. It tells all about United States savings bonds and is complete with a self-addressed order blank. All you have to do is sign, enclose a check, seal, and mail.

These bonds aren't new; they were first tried in 1935. The attractive blurb says, "Already they have become the most widely held single security in America." They are said to be for "small investors." Corporations and business associations can't have them, but any individual can buy $10,000 worth or less, down to $18.75, of any 1 year's issue—which is not so small in my book.

They don't render much income—and the tract doesn't say they do. In barnyard figuring it is 1½ percent per annum, but $18.75 invested now will be $25, 10 years from now, which is a gain of $6.25, and, while the following isn't the way bankers figure interest, that roughly is 3⅓ percent per annum on your $18.75. That is so because interest on your $18.75 is not paid to you. It is compounded semiannually. There are not many gilt-edge investments available so flexible as to figure so high a rate.

If you don't need the income in the meantime and can afford to put these securities in the box and forget about them—or let the Government hold them for you—while it is theoretically a low rate of interest, it is practically as good as you can get, considering all the other advantages of this remarkably flexible security—the income from which, by the way, is exempt from State and local taxes to the extent of other United States bonds.

The danger of buying the average long-term fixed-income bond in a market threatened with inflation is that the buying power of the small, fixed income may go down tragically as the cost of living rises, and with it will go down the price of the bond. You can then escape far greater loss only by selling at much less than you paid. Not many bonds could offer you an escape from this, but these Treasury bonds do. The Government will redeem them at any time for what you paid for them plus interest, after 1 year, at 1⅓ percent, or, if the redemption is after 7½ years, at interest of 2⅔ percent for the later years. That is as good a protection against inflation as you could have in a bond. Since few strong banks pay as much on deposits, these bonds are a lot better than leaving the money in a bank.

There are some other attractive features. You can use the bonds to purchase a kind of annuity on an installment plan. For example, if you invest $75 a month in these bonds for 10 years and don't redeem, you are entitled to $100 a month for the next 10 years. Your $8,000 investment over 20 years at $75 a month becomes $12,000, or increases 50 percent in 20 years. Lesser monthly investments return the same percentages of benefit. The actuarial calculation of the interest rate in this is too complex to discuss here, but it is a good, sound deal backed by the credit of the United States.

There are many variations and differing options on this and other features of these bonds that make excellent insurance against old age or provision for the future education of children or care of invalids. They can be registered in the name of two people to be the property of the survivor, and thus become a modified kind of insurance policy—probably free from death duties, although this is not certain.

It isn't the business of any column to turn itself into an investment sales-plugging advertisment, but I had never studied these bonds before and their ingenuity fascinated me. There are two good reasons why this column is perfectly kosher on this score. One is that the security here is the Nation. The other is that this is part of the Government's war-financing plan—a vital element of national defense. In the protection which these bonds offer the investor, they are far better than any Liberty Loan, War Savings Stamp, or other financing of World War No. I.

The best recommendation I can write for them is that I am going to buy as many as, under their income restriction, I can prudently afford myself, and so are some of my friends.

Joint Resolution To Define American Intentions

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 31, 1941

Mr. LUDLOW. Mr. Speaker, millions of people around the earth are being misled to believe that America is guided by improper and ulterior motives in respect to international relations and that our part in the world drama is motivated by mean and sordid objectives. Public opinion, though throttled in many lands, is still the most potent factor in the world, and it will be damaging to American prestige and influence to allow these reports to go unchallenged. The Congress and the President jointly comprise the authority that is best qualified to interpret the heart and soul of America, and in order to dispel the false impressions created by propaganda and to make American purpose crystal clear to all of the people of the world I am introducing a joint resolution defining American intentions; and I ask unanimous consent of the House that the full text of this resolution may be printed in the CONGRESSIONAL RECORD. I believe it is a sensible and timely resolution and that it should be adopted to clarify American intentions in these trying times.

The resolution is as follows:

Joint resolution to define American intentions in respect to international relations

Whereas propaganda actively in circulation throughout the world is placing the United States of America in the false light of expecting territorial advantage and world dominion as a result of the aid it is extending to the democracies, some of these reports going so far as to allege that it is the aim of the United States to build a world empire on the ruins of the nations now at war: Therefore be it

Resolved, etc., That the United States of America covets no territory it does not possess; it has no plans to extend its territorial domain and no intention of acquiring a single foot of foreign soil by war or conquest; it has no selfish interest in world affairs and no aim but service to humanity; and its supreme and only purpose is to protect, safeguard, and defend the great freedoms which are the basis of the American democracy and of free democratic government everywhere.

Labor Troubles

EXTENSION OF REMARKS

OF

HON. THEODORE FRANCIS GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, April 2 (legislative day of Monday, March 31), 1941

ARTICLE BY ERNEST K. LINDLEY

Mr. GREEN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an interesting article by Ernest K. Lindley appearing in this morning's Washington Post entitled "Sharing the Blame."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of April 2, 1941]

SHARING THE BLAME

(By Ernest K. Lindley)

WISE ADVICE ON LABOR TROUBLES

A temperate but devastating report on the Little Steel strike of 1937 has just been issued by the Senate Civil Liberties Committee. These were the strikes in the plants of Bethlehem Steel, Republic Steel, and the Youngstown Sheet & Tube Co. (A fourth, in Inland Steel, was settled.) Their cause was the refusal of the companies "to enter into contractual relations with collective-bargaining organizations of their employees," to quote the Senate committee's report.

More than 3 years have passed. But employer-employee relationships in these companies are still "strained" and without adequate collective-bargaining arrangements, the committee adds.

This has a direct bearing on the present defense-strike problem. Many of these strikes, actual or threatening, are in the plants of companies with strong antiunion records. Some have been outstanding violators of the National Labor Relations Act.

Here are some plain and wise words from the Senate committee: "Certain it is that the Nation cannot permit these companies today to take the same attitude they took in 1937 with the same inevitable consequences of interrupted production. Any company which today stands up and flatly refuses to enter into a signed bargaining contract under all circumstances and any employer association which supports and assists it in such a position are endangering the national security. Such conduct not only threatens the vital continuity of production, but it challenges the Nation's domestic authority, weakens respect of labor for the national defense, and destroys the sense of unity and common effort."

One might add that any official of the Federal Government who supports that position is likewise "endangering the national security." There are disquieting signs that some Federal officials connected with the Office of Production Management and the War and Navy Departments do not realize this.

Labor is in a dangerous situation. For that, the short-sightedness of its own leaders is largely to blame. Every poll, every day's mail to Congress shows that the Nation is going to insist that there be an end to strikes in defense industries.

The A. F. of L. leadership has at last waked up enough to begin to try to do something about curbing excessive union initiation fees. Some of the more level-headed C. I. O. leaders quietly have been trying to purge Communists and Communist sympathizers from positions of influence.

But the blame for strikes does not lie wholly with labor. It lies with what the Senate Civil Liberties Committee calls "the conduct of labor relations by management * * * according to antiquated concepts of industrial absolutism."

Bethlehem Steel is a notorious example. In World War I, Bethlehem refused to apply an award of the War Labor Board, headed by former President Taft and Frank P. Walsh. It rejected the War Labor Board's suggestion that it organize a shop-committee system of employee representation.

Mr. Taft was an extremely conservative man. But the stubbornness of Eugene Grace, president of Bethlehem, led him to say:

"This situation is very painful to me, for the reason that what we wish to do is to secure what under our award these workers are entitled to have, and it is very difficult for me to escape the conclusion that the conduct of the company in this matter, the correspondence that has been adduced, the dealings with Mr. Grace, the action by the Board in attempting to help Mr. Grace, and the present attitude * * * color the situation with a sense of injustice that makes one yearn for judicial power to compel justice."

The War Labor Board did not have the power to compel justice. The National Labor Relations Board, established in 1935, is supposed to have it, with the help of the Federal circuit courts. But Bethlehem Steel has not yet been made to conform to the law. A key case involving Bethlehem is still before the District of Columbia Court of Appeals. This case grew out of the Little Steel strike of 1937. It was decided by the N. L. R. B. in 1939.

A prompter method must be found to adjudicate cases involving refusal to bargain collectively. This is recommended by the Senate committee, which suggests that the N. L. R. B. confine itself to salient issues. This might help. But it does not dispose of the big test cases in which the N. L. R. B. has already reached its decisions—in many cases, long ago. They are mired in the courts, usually being fought to the last technicality by the companies found to be violators.

Unless it can compel big employers to obey the law, the Federal Government cannot expect labor to forego its indisputable right to quit work—a right of which it probably cannot be deprived by any constitutional means.

Squeezing the Farmer—Possible Relief

REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1941

Mr. WOODRUFF of Michigan. Mr. Speaker, the American farmers are in grave danger of being ruinously "squeezed" in the confusions and changes which have been wrought by the wars in other parts of the world, and by the new economic stresses and strains which have been brought about by the hasty—almost hysterical—efforts in the building of our own national defense.

Foreign markets, formerly served by the farmers of the United States, have disappeared and will not exist again in several generations—if ever.

New and vastly heavier taxes face the farmers and there will be no escape from this burdensome taxation, either now or later.

New competition has been created in the labor market which the farmer must meet—and he can meet that competition only by increasing the pay for farm work—and that means increased costs of production. Even then the shorter hours, the overtime, and the excitements of mass work on defense are all conspiring to draw help away from the farms and to the cities, the factories, and the cantonments.

Disparity of prices is growing. The administration promised that the profiteering of 1918 would not be given a chance to repeat, but the newspapers already are noting cases of profiteering, and the administration will be compelled to establish some sort of price controls, because the strong leadership, the effective appeals to public opinion against profiteering have not been in evidence. Of course, rising wages and shortened hours must of necessity increase the cost of production of all those goods and services the farmers must buy. These price rises, coupled with increased cost of labor, the draining off of the most skilled and intelligent farm labor to the factories, the cities, other lines of work, or by the draft into the Army, are all operating to squeeze the farmer. He must get more money for his products; he must look ahead to the time when the national defense has been built and factories go idle; when millions of people may begin again to walk the streets and the highways looking vainly for work, as other millions of soldiers are demobilized from the Army—when the war is over—to compete with jobless civilians in seeking work in a confused and chaotic economic situation.

Because of these grave dangers which now confront the farmers of America, and because the present administration has not, as yet, at least, shown any disposition to do anything more than prepare to apply a few palliatives, the Republican Agricultural Study Committee, which last year held hearings in various parts of the Nation, will resume its work. This committee, under the chairmanship of Representative CLIFFORD R. HOPE, of Kansas, ranking Republican member of the House standing Agricultural Committee, has been augmented by the appointment of several new members who came to Congress in the last election. These new members also have special knowledge of farm problems. The enlarged committee will be split up into subcommittees which will study problems confronting different branches of agriculture. The study committee will again hold hearings in various parts of the country from time to time in order to get first-hand "grass roots" information from the farmers themselves. Undoubtedly some of these meetings will be held in Michigan and adjoining States.

The divisions of study which the committee will pursue through its subcommittees are as follows:

Dairying; poultry, eggs; livestock, meats, and so forth; wheat; corn and hogs; potatoes; vegetables and canning industries; wool, cotton, and other southern crops, competition, and so forth; fruits; sugar; farm chemurgy; soil conservation; irrigation; foreign markets; reciprocal trade treaties and their effects; dumping; barter; marketing; production costs; processing, and so forth; tobacco; farm credits; use and effects of food stamps; surplus commodities sales; effects of hemispheric defense and loans on American agriculture.

Fifty-four Republican Members of the House, the speaker among them, will make up the committee. It is believed that the committee will be able to get under way with its studies within the next 3 weeks and continue throughout the sessions of this Congress.

There is no question but what these intensive studies which will be made by this special committee will be of great assistance to the whole Congress in shaping legislation to protect American farmers from these dangers which are rapidly rising to menace the future of agriculture in the United States.

Every competent student of affairs now recognizes that the Nation has been taken into a new and unpredictable era by the administration. No man can foresee future events, but it is imperative that we prepare for all the dangers which can be foreseen and then try to meet the new and unforeseen ones as they arise.

American agriculture must be preserved if free America is to stand.

Going the Extra Mile

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1941

ADDRESS BY DR. WILLIAM P. JACOBS

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following address which was delivered in the Senate dining room of the Capitol by Dr. William P. Jacobs on the evening of March 27, 1941:

This topic Going the Extra Mile is selected for discussion this evening because it presents a thought which is of utmost importance in our present emergency.

The Golden Rule, long accepted as sound public and private policy, says: "Whatsoever ye would that men should do unto you, do ye

also unto them." Our theme tonight is a sort of streamlined version of the Golden Rule which, in practice, acts as a clincher and positively assures the success of an unselfish policy. It precludes the slightest tinge of selfishness, for through it we go "all out" for the other fellow: "Whosoever shall compel thee to go with him a mile, go with him twain."

In a "gadget blessed" Nation we are fast becoming "softies." Life is too easy. The hard lot of the pioneer is almost forgotten.

Instead of sacrificing and striving against odds we are following the line of least resistance, and in our selfishness and shortsightedness we are seeking something for nothing. This trend is rapidly developing a national fallacy, for in truth there is nothing free in this world. Even salvation, which is often pictured as free, must be accompanied by self-denial, and self-denial is an art which is also becoming extinct in America.

Even in our defense program the hue and cry back home is, "How much can we get out of Washington?" while in reality we should be asking, "How much can we as individuals, corporations, communities, and States contribute to the aid of our country in this emergency?"

You gentlemen undoubtedly feel the brunt of this urge, as your constituents are constantly demanding favors, personal advantages, selfish objectives at the expense of the Government. It is probable that this pressure will continue until we shall develop a counter crusade for the extra mite in America.

At this particular time you are in an unusually strong position to answer selfish demands with an exposition of the extra-mite principle. The ideal is not only altruistic but it is also practical and profitable.

It enables one to benefit from the law of increasing returns and the law of compensation. It develops growth, initiative, self-reliance, definiteness of purpose, an attractive personality, a positive, constructive, neutral attitude, independence, and achievement. If persistently practiced, it can and will become one's greatest asset. It has been the basis of achievement of every successful man and woman in America. Its importance in the operations of groups, corporate structures, and governments is equally vital. Somehow our people must be convinced that really there is no Santa Claus, and that you gentlemen are not miracle workers. The law of compensation inevitably will work in the end.

It is unfortunate that in this emergency men place their personal differences ahead of national security. While no man can deny the privilege of individuals to form in groups for the purpose of advancing the common good, such cooperative effort must be based upon the principle of the extra mite if it it to be of lasting benefit. Short-sighted leadership, which pursues selfish ends and in so doing excites malice, envy, and distrust, defeats the very purpose of organized effort and develops a destructive, un-American menace. By the same token a corporation or government which builds upon selfish aggrandizement or financial profit alone is doomed to failure in the end.

We of the South can thank God that we have a minimum of this destructive spirit in our section. We come more largely from American-born ancestors, from the same original God-fearing stock, speaking the same language and worshipping the same God. It is little wonder, therefore, that we have more of harmony and patriotic cooperation than is true of most of the rest of the country.

Today, when important defense production is retarded by industrial discord elsewhere, there are comparatively no strikes in southern industry. It is to the everlasting credit of southern employers and employees that they have patriotically rallied in the emergency, have buried their personal differences and are working as one in harmony in spite of the disturbing news from other sections and in spite of the agitations of self-seeking agents of discord.

The textile employers with whom I am associated in the South are many of them manufacturing goods which they would rather not produce and for which they were not originally equipped. This they are doing in cooperation with the War Department. Our textile workers have displayed the outstanding spirit of unselfish patriotic cooperation for which they became famous during World War No. 1. They have proven themselves patient, sympathetic, and grateful for the opportunity to thus serve their country in industry and in arms. The employers have granted leaves with assurance of reemployment and just now are voluntarily increasing wages as an evidence of good faith. All this exemplifies the spirit of the extra mile. It is a natural trait of residents of the so-called "Bible Belt." Would that this unselfish, patriotic trait were prevalent throughout America in this emergency.

I appear before you this evening as a sort of hybrid. My personal activities cover a number of fields, but in each of them my prime objective is the gospel of the extra mile.

As a publisher, with my associate Napoleon Hill, I am endeavoring through spreading the philosophy of American achievement to show how our great leaders of the past have built upon the principle of the extra mile.

As president of Presbyterian College, I am trying to teach the potential Christian leaders of the future that the world owes them nothing and that they shall succeed in direct ratio to their willingness to practice the principle of the extra mile.

With this theme in mind it is perhaps timely to say to you that as the public in its short-sightedness and selfishness comes more and more to look to government for education and charity that the church and other sources of private education and private philanthropy are drying up. This trend toward public philanthropy is a bad omen for America. We, as public-spirited citizens, should be unusually alert to check this menacing demand for something for nothing and thus through the spirit of the extra mile retain that bulwark of American strength which comes from private philanthropy. The future of American leadership is dependent upon it.

In my responsibility for the public-relation policies of the cotton-textile industry in South Carolina, my chief concern is to encourage a oneness of purpose between employer, employee, and the public based upon the principle of the extra mile.

All of our industrial imaginary differences would be easily solved if we would practice this principle and we would all unite in a common effort to secure, build, and protect our industrial pay rolls as the life blood of the South.

Incidentally, the textile spindles in place in America have decreased during the past 25 years from 32,840,730 to 24,749,578.

Twenty-five years ago there were 17,525,916 spindles in New England and only 13,261,213 in the cotton-growing States. During the 25 years the New England spindles have decreased to only 5,884,114 and the southern spindles have grown to 17,951,358.

This is an enormous southern growth and reflects more harmonious relationships and more favorable conditions in the South. May this condition continue. We must not lose sight of the fact, however, that our southern spindles have shown a decrease during the past 2 years. If we can emphasize the principle of the extra mile we may hold to our textile gains and safeguard the interests of the southern textile workers and the public at large who benefit from our textile pay rolls.

In the consumption of raw cotton our southern mills consumed in 1915 3,025,000 bales as compared with 6,647,000 bales in 1940, while the New England mills have decreased during the same period from 2,149,000 bales to 918,313 bales.

It should be noted that this past year we consumed over 8,000,000 domestic bales in American mills, the highest point in the history of the industry. Apparently we must depend more largely upon domestic consumption in the future. The development of our own textile industry is therefore more important now than ever before to our farmers, our industrial workers, our stockholders and to the public at large.

In my fourth capacity, and the one which takes most of my time, as chairman of the South Carolina Council for National Defense, I find the principle of the extra mile of even greater importance for in an emergency it is imperative that we go the extra mile.

Our first concern in the southern industry is and necessarily must be to mobilize our resources to give the greatest service in the shortest possible time for defense. I am one who does not complain about the relatively small defense expenditures in the southern States. The condition is perfectly natural. The War Department needs speedy production by industry. The greatest speed is to be obtained where industry is already equipped for the production of war materials. The South is still largely agricultural and it is natural for the War Department to look first to our industrial centers for quick service whether the centers be in Michigan, Illinois, New York, New Jersey, Pennsylvania, or what not. The South comparatively is not yet well equipped for large-scale production of war materials, and that brings me to the most important phase of our southern responsibilities and opportunities.

Our responsibility in industrial defense as the first step is to offer the full mobilization of our industrial capacity and service which is already developed. That we are already doing. It has been my privilege to encourage the changing of specifications and equipment to enable southern mills to participate to the fullest in defense service.

However, as in the South we are largely an area of undeveloped resources and raw products, another and perhaps more valuable function is in the perfection of more of our undeveloped southern resources that they may be more extensively used in this and future emergencies.

I firmly believe that in this step our greatest responsibility lies not only in inducing outsiders to move into the South and build our pay rolls but, what is more important still, in encouraging our own southern people under the defense impetus to awaken and invest their own accumulations which are now invested elsewhere in the financial backing for our own young potential leaders that they may develop our own rich resources and build our own pay rolls.

It is a matter of populating the South with thousands of small locally owned and operated manufacturing plants instead of sitting lazily by and expecting our representatives in Congress to give us something for nothing. Again it is the principle of the extra mile.

In our State we have not even asked the legislature to produce the funds for industrial promotion. Instead we asked the private power companies and common carriers to put up the funds for the development.

We asked the chambers of commerce to assist with the research to determine our resources and opportunities. It is a matter of depending upon our own strength, our own resources, our own initiative. There has been too little of that commodity in operation during recent years. We have become too much a nation of softies seeking a free ride.

The program is working and leading to a sound industrial revival in the State. The heart of the program is in getting our own

people to work for themselves and inducing them to give more than they expect to receive.

I have been astounded by the response and my eyes have been opened by the unusual opportunities which are before us in the South.

1. We have a harmonious people as our greatest asset.

2. We have thousands of young men who have enterprise and leadership ability if we can only induce our local investors to back them.

3. We have great opportunities for hydroelectric-power development. Much has been done in that direction already and its continuation will lead the way for a South-wide industrial revival.

4. We have billions of riches undeveloped in our forest resources. Did you know that great changes have been brought about by the development of plywoods and plastics? It has revolutionized the furniture field.

Michigan, which formerly occupied first place in furniture manufacturing, has dropped now to sixth place. Two Southern States, North Carolina and Virginia, have advanced rapidly to fourth and seventh places, respectively. The center of hardwood growth is in the South and, because of the more rapid growth of softwoods in the South, our section will soon be the center of timber in the United States and can easily become the furniture, plywood, and plastics center.

Of 270,000,000,000 feet of hardwood in the United States, 172,000,000,000 feet are in the South and 28,000,000,000 feet of red gum and 83,000,000,000 feet of oak is included in our growth. The picture for small industries in this field in the South is unlimited.

5. The development of improved processes in food canning, packing, and quick-freezing opens enormous opportunities in the South for the production of the Nation's food. The marketing problem, which handicapped us in the past, can now be easily solved, and we have a splendid opportunity to diversify our agriculture and establish our farm independence thereby.

It is disturbing to study the records of our State agricultural departments and note the number of Southern States which today are importing more farm and dairy products than we export. An agricultural section like the South should boast of thousands of quick-freezing, canning, and packing plants. We should and can feed the Nation.

6. There are hundreds of agricultural products indigenous to our section which can take the place of cotton. They need development. Small manufacturing and processing plants will solve the problem.

7. In minerals the opportunities are tremendous. Large deposits of kaolin, limestone, magnesium, iron, coal, manganese, sulfur, phosphates, petroleum products, and dozens of other minerals in the South await processing. They can give employment to hundreds of thousands.

But need I elaborate further? Suffice it to say that the natural advantages are ours. There has never been a better time for an industrial revival than under the present defense impetus and following our great power developments.

We can and will grow industrially and protect our present industries. We must do it, however, by inspiring the initiative of our own people. We must encourage them with a sound tax policy. If our public expenditures are greatly increased because of the defense program, this circumstance need not discourage industrial growth. You gentlemen can encourage industrial initiative by determining the approximate total cost and setting a firm tax policy for its payment in an orderly fashion over a period of years.

Industry does not need anything so much as knowledge as to what the future will bring. Knowing what to expect, they can confidently build upon that knowledge. It is uncertainty, not high taxes, which discourages industrial development.

But above all essentials in an industrial revival, we need to awaken our own people into action. We must fill them with the desire to do the job themselves. We must inspire them with the spirit of the extra mile.

Inequalities of the Farm Parity Program

EXTENSION OF REMARKS
OF
HON. CLIFF CLEVENGER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1941

Mr. CLEVENGER. Mr. Speaker, the question of the so-called parity payments is continually before Congress. The approach to parity where only a few crops are subsidized has many times been demonstrated to be unfair and unjust. Note that the farmers of Maine, Vermont, New Hampshire, Connecticut, Massachusetts, and Rhode Island did not receive a single dollar of this money. Thousands upon thousands of these parity dollars have gone to big corporation farmers and small payments have gone to the family-sized farms. Note also that one State obtained over 14 percent of this money for the year 1940. Some States with an assessed value of less than $400,000,000 received from eight to twelve million dollars in subsidy payments, and also that the richest agricultural States, with assessed valuation of from $1,400,000,000 to $2,400,000,000, received from ten to twenty-eight million dollars parity payments in 1940.

In other words, these payments are not based on any constructive agricultural basis and are sectionally distributed, and distributed to crops that represent a small part of the total crops of the United States.

Cotton has had $96,164,550 for the year 1940 and the fiber-cotton crop of 1940 is valued at only $595,000,000. This one subsidy for cotton is over 16 percent of the annual value of this crop cotton, which represents much less than 10 percent of our national farm income. As long as parity is talked in terms of giving one crop 48 percent of the appropriated money, the time has come to have a new definition of parity.

Estimated net payments, 1940 parity payment program

State and region	Cotton	Corn	Wheat	Rice	Total
New York			$151,438		$151,438
New Jersey			22,761		22,761
Pennsylvania			704,179		704,179
Northeast region			878,378		878,378
Illinois	$28,000	$8,772,323	2,055,514		10,855,837
Indiana		3,805,302	1,618,943		5,424,245
Iowa		13,405,756	600,777		14,006,533
Michigan		348,156	861,430		1,209,586

Office of the Administrator, AAA, Apr. 1, 1941.

Bonneville Power

REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1941

Mr. PIERCE. Mr. Speaker, my object in speaking is to announce to the House that cooperative distribution of power developed at Bonneville is making real progress in the Northwest.

I hold in my hand a news release from the Bonneville Power Administration, showing that they have made a contract to sell power developed at Bonneville in the city of West Salem with some extension in Salem, the State capital.

Salem is the most conservative city that I ever lived in. During the time I was commissioned to be Governor of the State and lived in the State capital there was such sentiment against public ownership that they did not own their own water plant. They had to buy their water from a private company. This announcement that I hold in my hand states that the Bonneville Administration has made a contract with the cooperative to deliver electric power in West Salem.

Mr. PIERCE. Mr. Speaker, I ask unanimous consent to extend my remarks and include this release.

Mr. RANKIN of Mississippi. Mr. Speaker, reserving the right to object, and, of course, I shall not object.

I hope every Member of both Houses will read the statement of the gentleman from Oregon and note carefully the rates in the tables he is inserting. Then they will see what the American people ought to pay for electricity in every State in the Union.

The SPEAKER. Is there objection?

There was no objection.

The statement follows:

The Bonneville Power Administration began delivery of Columbia River power late Friday afternoon, March 28, to the Salem Electric Cooperative under terms of a contract executed less than 2 weeks ago.

The cooperative's distribution line was connected to the power administration's Willamette Valley transmission system at the Government's Salem substation. The cooperative's first member-customers to be connected to its new distribution system in West Salem received power shortly thereafter.

The Salem Electric Cooperative is the seventh such agency, and the twenty-sixth publicly owned system, to execute a contract with the power administration. It comprises about 170 members in Salem and West Salem. Sidney Stephens, of Salem, is president and D. M. Burroughs is vice president. Malcolm Mitchell is secretary and O. E. Snyder and Max Gehler are directors. H. B. Read is manager.

Cooperative officials announced they would distribute Columbia River power to their members at standard retail rates recommended by the power administration.

The rates follow:

RESIDENTIAL

First 50 kilowatt-hours per month, 3 cents per kilowatt-hour.

Next 50 kilowatt-hours per month, 2 cents per kilowatt-hour.

Next 200 kilowatt-hours per month, 1 cent per kilowatt-hour.

Next 900 kilowatt-hours per month, ½ cent per kilowatt-hour.

Excess kilowatt-hours, ¾ cent per kilowatt-hour.

COMMERCIAL

Energy charge:

First 150 kilowatt-hours used per month, 3 cents per kilowatt-hour.

Next 350 kilowatt-hours used per month, 2 cents per kilowatt-hour.

Next 1,000 kilowatt-hours used per month, 1 cent per kilowatt-hour.

Next 13,500 kilowatt-hours used per month, 0.8 cent per kilowatt-hour.

Next 25,000 kilowatt-hours used per month, 0.6 cent per kilowatt-hour.

Next 60,000 kilowatt-hours used per month, 0.4 cent per kilowatt-hour.

Excess above 100,000 kilowatt-hours used per month, 0.3 cent per kilowatt-hour.

Demand charge:

First 10 kilowatts of demand per month, no demand charge.

Excess above 10 kilowatts of demand per month, 95 cents per kilowatt.

The energy charge for use in excess of 360 times the demand shall be subject to a reduction of 0.5 mill per kilowatt-hour from the otherwise applicable rate.

The Relief Problem in Pennsylvania

EXTENSION OF REMARKS

OF

HON. HARRY L. HAINES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1941

LETTER FROM SECRETARY OF THE PENNSYLVANIA DEPARTMENT OF PUBLIC ASSISTANCE

Mr. HAINES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter I received today from the secretary of the Department of Public Assistance in Pennsylvania:

COMMONWEALTH OF PENNSYLVANIA,
DEPARTMENT OF PUBLIC ASSISTANCE,
Harrisburg, April 1, 1941.

The Honorable HARRY L. HAINES,
Congress of the United States,
House of Representatives,
Washington, D. C.

DEAR MR. HAINES: You are doubtless familiar with the recent recommendation of the Social Security Board regarding establishment of Federal grants-in-aid to the States for general relief as an extension of the Social Security Act's present public-assistance provisions covering the aged, the blind, and dependent children.

The American Public Welfare Association, the Council of State Governments, National Economy League, and numerous other national organizations have urged favorable action on this subject at the present session of Congress.

My purpose in writing this is to advise you specifically of the general relief problem in Pennsylvania, and some of the reasons why an early broadening of the Social Security Act to include general relief is extremely desirable from the standpoint of our own State.

Pennsylvania is virtually unique in the United States in the extent to which the State government has assumed financial responsibility for general relief. Since January 1, 1938, this form of aid (which is available to all needy citizens not eligible for old-age assistance, aid to dependent children, or blind pensions) has been 100 percent State financed. Pennsylvanians, regardless of party, have reason to be proud of the State's record of an uninterrupted Statewide general relief program since 1932—a program which has not once been curtailed at the expense of the needy because of the unwillingness of the State's citizens, through their legislators, to provide necessary funds.

Needless to say, provision of relief on this basis has necessarily involved a tremendous drain on State finances, critical tax problems, and a severe test of the ability of a key industrial State to compete successfully with other States in maintaining its industries and employment opportunities.

The following figures indicate the extent of State expenditures for general relief grants and for all public-assistance purposes in the past 8 years, excluding Federal funds expended for work relief or advanced to the State as grants-in-aid:

State expenditures for general relief grants:

1933	$30,476,000
1934	25,318,000
1935	33,982,000
1936	63,444,000
1937	57,813,000
1938	75,979,000
1939	91,646,000
1940	60,923,000

State expenditures for all public assistance, general relief and other:

1933	$38,308,000
1934	35,490,000
1935	54,944,000
1936	87,674,000
1937	83,467,000
1938	109,503,000
1939	130,450,000
1940	102,224,000

At the present time general relief is being provided by this State to 135,000 cases, representing 330,000 persons. In about one-third of these cases, there is no employable member and the need reflects a long-term public responsibility. A great deal of turnover occurs among the cases with employable members and the size of this portion of the general relief load is determined by the extent of both private and W. P. A. employment. In the summer of 1939, when W. P. A. employment was sharply curtailed, the State-financed general relief load reached a record peak of 273,000 cases, representing 1,023,000 persons.

The following, in my opinion, are among the most compelling reasons in favor of the enactment of Federal grants-in-aid for general relief:

1. Experience in Pennsylvania and nearly all other States indicates that Federal assistance is the only answer to the migrant problem. Even before the present defense program, migration of workers across State boundaries was creating a critical situation in many parts of the country. The situation has been intensified by the national-defense program. Pennsylvania, in common with other States, has been compelled to place restrictions around the State assistance which may be given to nonresidents. To do otherwise would place a heavy and mounting burden on the State's taxpayers, due to the wide disparity existing between the adequacy and extent of public assistance in Pennsylvania as compared with nearly all other States. Under present circumstances, lack of residence restrictions would encourage an economically unjustified influx of unemployed and unemployables with

resultant jeopardy to the entire program for needy residents.

A Federal program of grants-in-aid for general assistance to all indigent persons, on the other hand, would permit standardization of the innumerable conflicting State statutes regarding settlement and residence; equalize the burden of caring for migrant workers and their families; and ameliorate the hardships now confronting the worker who migrates for a legitimate reason and becomes destitute. Federal participation in general relief is a much sounder solution than any program of Federal aid for migrants alone, since the latter would tend to encourage migration by making the indigent migrant much better off in most States than the needy residents of these States themselves.

2. A general relief provision in the Social Security Act would ease the heavy burden now shouldered by the few States which, like Pennsylvania, have accepted the responsibility of providing reasonably adequately for all destitute residents not cared for by the W. P. A. or other Federal programs. At the same time it would stimulate States which have disregarded, or been unable to meet, their relief responsibilities to establish general relief programs meeting minimum standards. A variable scale of Federal grants-in-aid, based on State ability to pay in relation to need, would promote a reasonable degree of uniformity in general relief provisions throughout the country.

3. Federal grants-in-aid for general relief would serve to offset the inequitable features of the W. P. A. program. Operation of W. P. A. on a much more extensive scale in some States than in others and fluctuations in national W. P. A. quotas have resulted in situations where either large numbers of the needy unemployed are entirely unprovided for or the States and localities have been forced to assume unforeseen and disproportionately heavy relief burdens. The impossibility of sound State planning and budgeting under such circumstances has been repeatedly demonstrated. By making a definite Federal provision for general relief, the Federal Government could then curtail W. P. A. nationally, or expand it in some areas and contract it in others in keeping with the availability of work projects vital to State and national interest, without the serious results now attendant on such a course.

4. The Social Security Act provisions with respect to old-age assistance, aid to dependent children, and aid to the blind affect thousands of families whose need for help does not differ substantially from that of the destitute families not covered by these programs. In addition, there are many instances in which some members of a family are provided for by a type of aid now included in the Social Security Act while the needs of other members who share the same home and eat at the same table are ignored, insofar as Federal provisions are concerned. Federal participation in general relief would encourage State and local public assistance agencies to provide for the needs of families as a whole rather than splitting them into artificial units.

5. The present national-defense program makes it increasingly apparent that reasonable adequate general relief is needed as an underpinning for all of the health, welfare, vocational training and related activities which contribute to the strength and morale of the country. Federal participation in the cost of general relief, accompanied by Federal leadership in establishing reasonably equitable and uniform standards of administration in all States, will alone insure such underpinning.

If I can be of service to you in forwarding any additional information about public assistance and particularly general relief in Pennsylvania, please do not hesitate to call on me.

Meanwhile, it is my earnest hope that you will see your way clear to give maximum support to legislation providing for a broadening of the Social Security Act to include general relief as a fourth and extremely important category of public assistance.

Sincerely yours,

HOWARD L. RUSSELL,
Secretary.

So That Washington Post Readers May Also Have This News

EXTENSION OF REMARKS
OF
HON. HENRY C. DWORSHAK
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1941

ARTICLE FROM THE WASHINGTON TIMES-HERALD

Mr. DWORSHAK. Mr. Speaker, last night in the Senate caucus room, a group of more than 70 Senators and Congressmen held a highly important meeting which may mean much to the peace and happiness of every home in America.

With the exception of the Washington Post, other Washington papers carried an account of this meeting. So that readers of the Washington Post may also have some of the antiwar news, I call your attention herewith to the attached news story from this morning's Times-Herald which is substantially the same story appearing in the Daily News of today and which I am confident will be reported with equal fairness in tonight's Washington Star:

[From the Washington Times-Herald of April 2, 1941]

ANTIWAR BLOC FIGHTS CONVOYS—WHEELER HEADS GROUP FORMED IN CONGRESS

Congressional noninterventionists agreed at a surprise meeting last night to establish a permanent legislative organization to carry on their fight against "involvement of the United States in foreign wars."

One of the 14 Senators who attended said the meeting, described as "nonpartisan," authorized the election of a steering committee to consider and formulate steps to be followed by the group but that no action to set up such a committee had been taken. There was a general agreement among members, he added, to hold further meetings of the group to carry forward their program.

Senator BURTON K. WHEELER, Democrat, of Montana, who led the unsuccessful Senate fight against the British aid bill, presided. The meeting concerned principally steps to prevent the possible use of American convoys for war supplies to Britain.

In addition to the 14 Senators, 56 House Members were present.

In a formal statement issued shortly after the conference broke up, the group announced it had been decided to raise the question of convoys immediately by pressing for action on the resolution of Senator CHARLES W. TOBEY (Republican), of New Hampshire, and similar House bills to prohibit convoying of merchant vessels by United States warships.

"Various groups are now advocating that the President send to Congress a bill authorizing convoys, but the meeting determined to raise the issue at once by pressing the affirmative resolution of Senator TOBEY and similar resolutions introduced in the House which specifically prohibit convoys.

"The meeting determined that in spite of the defeatist propaganda, being promoted to the effect that war is inevitable, those present would press the fight against any active involvement in war which would take American boys to foreign battle fronts."

There's Something Wrong

EXTENSION OF REMARKS
OF
HON. ROBERT L. RODGERS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1941

EDITORIAL FROM THE ERIE (PA.) DAILY TIMES

Mr. RODGERS of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Erie (Pa.) Daily Times of March 27, 1941:

[From the Erie (Pa.) Daily Times of March 27, 1941]

This is an editorial. The sovereign Government of the United States can reach out and with its authority, backed by the Army, Navy, Marine Corps, the courts, and a legion of underofficers, grab a man between the ages of 21 and 36 from a good, steady job or a profession, push him through the ritual of a draft classification, send him through a gauntlet of doctors, induct him into the Army, separate him from his parents, his wife in some cases, send him to camp, and tell him what duties he shall perform. These duties range from latrine, kitchen, sentry, field to clerical. He must obey. He is in the Army. If he disobeys, the guard house, extra duties await him. In wartime if he sits down, strikes, or leaves his post, under the articles of war he can be shot. The Government has shot sleeping, disobedient, and sit-down striking sentries. It is a part of discipline. It has to be done. The young man who left a fine job and comfortable home must take orders. He can't walk out. The Government backs the officer who gives these orders. The young man gets $21 a month.

Back in the selectee's home town there might be an industrial plant engaged completely in producing the necessities of this great national-defense program—just like the Bethlehem Steel Co. is doing. The big plant is making the things of war to supply or back up the young man who was drafted and checked into the Army. In this big plant are men between the ages of 21 and 36 who are earning good money—say $8 per day. They put in 40 hours a week, are home every night with their families. Their jobs are important, for they are producers of the materials that are so essential in the vast program of our defense. They are as important, but no more important, than the young men drafted from good jobs and good homes. Yet, these workers getting good money can strike on the least provocation. They can desert their posts—positions that are keyed to our so-called defense program. Their union bosses can tell them to quit, with the threat of violence if they refuse.

The plant is tied up. The right to work is denied. The Government—the same Government that snatched the young man from a good secure job, and home—sits idly by, entangled in a political hawser that heretofore has been too binding to break. This same Government condones violence, sabotage in the very plants it has designated to back up the soldier and the program of defense. The $40-a-week, 40-hour "soldier" in an industrial plant thumbs his nose at the Government. The $21-a-month draftee would be court-martialed and sentenced if he even suggested such a gesture. There's something wrong.

Nonprofit Organizations Control Huge Corporations, Yet Pay No Taxes on Such Control

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1941

Mr. COFFEE of Washington. Mr. Speaker, our Government is in need of money to defray the expense of the defense effort. The tax base on incomes has been broadened and will perhaps be further extended. Federal bonds are no longer tax-exempt, and the incomes of State government employees are no longer exempt from the income tax.

Corporation taxes have been raised along with individual income taxes. Efforts have been made to force corporations to distribute their profits so that such dividends would in turn bear their share of taxation.

But there has been overlooked in this category the dividends of corporations paid to various types of benevolent and charitable organizations. Section 101 of the Internal Revenue Code provides for exemption from income taxes of a large number of various so-called nonprofit organizations. That is as it should be, no doubt, as to the original contributions made to such organizations. But it seems to me that the time has come for the Federal Government to look into the question of profits of these organizations. At the moment I am not prepared to say that all types of profits should be taxed, such as interest on bank balances, bonds, rents, and so forth. But I am prepared to recommend to the Congress of the United States that such income as is derived by organizations now exempt under section 101 of the Internal Revenue Code from dividends as the result of ownership direct or through trustees of such voting stock, shall be made taxable. I am introducing a short bill in Congress as follows:

Be it enacted, etc., That notwithstanding the provisions of section 101 of the Internal Revenue Code there shall be levied, collected, and paid by all organizations therein listed, a tax upon all income derived from dividends as the result of ownership directly or through trustees, of voting stock in any corporation or corporations not itself exempt under section 101, as follows:

(A) When the percentage of voting stock owned in a corporation is less than 10 percent, a tax of 20 percent on the income from dividends; and

(B) When the percentage of voting stock owned in a corporation is 10 percent or more, a tax of 40 percent of such dividends.

As will be noted the tax would be doubled in case an organization under section 101 of the Internal Revenue Code owned 10 percent or more of the common stock in a corporation. I think this is justified as a means of discouraging so-called philanthropic institutions from investing or retaining their funds for the purpose of controlling corporations.

The magnitude of the income now being disbursed by corporations that is going to benevolent organizations and that consequently does not pay taxes on such dividends cannot be determined without further investigation. It must run into the millions of dollars.

In checking the records of the Temporary National Economic Committee I find that in the case of the major oil companies the 100 largest stockholders are shown. From this record I have extracted the following information on holdings of these organizations in these major oil companies:

American Missionary Association, 287 Fourth Avenue, New York, N. Y., 1,224 shares Sun Oil Co.

The Commonwealth Fund, care of the New York Trust Co., Customers' Securities Department, 100 Broadway, New York, N. Y., 25,000 shares Standard Oil Co. (Ind.).

Cornell University, Ithaca, N. Y., 1,718 shares Sun Oil Co.

General Education Board, 49 West Forty-ninth Street, New York, N. Y., 123,466 shares Standard Oil Co. (N. J.); 320,800 shares the Ohio Oil Co.

The A. W. Mellon Educational and Charitable Trust, 514 Smithfield Street, Pittsburgh, Pa., 352,000 shares Gulf Oil Corporation.

The Frank Phillips Foundation, Inc., Att.: W. C. Smoot, treasurer, Bartlesville, Okla., 4,725 shares Phillips Petroleum Co.

President and Fellows of Harvard College, 24 Milk Street, Boston, Mass., 20,000 shares Texas Corporation; 3,000 shares Standard Oil Co. (Ohio); 71,197 shares Standard Oil Co. (N. J.); 35,100 shares Socony-Vacuum Oil Co., Inc.; 11,000 shares Continental Oil Co.; 50,000 shares Consolidated Oil Corporation; 5,500 shares the Atlantic Refining Co.

The Rockefeller Foundation, 49 West Forty-ninth Street, New York, N. Y., 132,912 shares Standard Oil Co. (Ohio); 1,037,505 shares Standard Oil Co. (N. J.); 691,140 shares Standard Oil Co. (Ind.); 94,684 shares the Ohio Oil Co.; 39,408 shares Continental Oil Co.

The Rockefeller Institute for Medical Research, 49 West Forty-ninth Street, New York, N. Y., 123,150 shares Standard Oil Co. (N. J.); 30,000 shares Standard Oil Co. (Ind.); 182,400 shares the Ohio Oil Co.

The University of Chicago, 122 South Michigan Avenue, Chicago, Ill., 83,634 shares Standard Oil Co. (N. J.); 35,000 shares Socony-Vacuum Oil Co., Inc.; 45,000 shares the Ohio Oil Co.

Yale University, New Haven, Conn., 30,964 shares Consolidated Oil Corporation.

Mr. Speaker, I could go at length into related questions of owners and former owners of some of this stock still exercising the benefits of control. It is the old question of endeavoring to create a perpetuity, or the control of existing institutions from the grave. The law has always endeavored, through statutes of mortmain and others, to put an end to such controls.

I could likewise go at length into the related question of the wisdom of permitting our educational institutions to place their dependence upon monopolistic corporate structures. But that is a long story in itself.

Suffice it to say that in this hour of need for revenue here is an untapped source that should be looked into thoroughly.

As to the organizations mentioned I have checked and find that they are all exempt from income taxation under section 101 of the Internal Revenue Code. My exchange of correspondence with the Bureau of Internal Revenue follows:

MARCH 17, 1941.

Hon. GUY T. HELVERING,
Commissioner of Internal Revenue,
Washington, D. C.

DEAR SIR: Can you advise me whether the following organizations are exempt from the payment of income taxes under section 101 of the Internal Revenue Code:

American Missionary Association, 287 Fourth Avenue, New York, N. Y.

The Commonwealth Fund, New York, N. Y.

Cornell University, Ithaca, N. Y.

General Education Board, 49 West Twenty-ninth Street, New York, N. Y.

The A. W. Mellon Educational & Charitable Trust, 514 Smithfield Street, Pittsburgh, Pa.

The Frank Phillips Foundation, Inc., W. C. Smoot, treasurer, Bartlesville, Okla.

President and Fellows of Harvard College, 24 Milk Street, Boston, Mass.

The Rockefeller Foundation, 49 West Forty-ninth Street, New York, N. Y.

The Rockefeller Institute for Medical Research, 49 West Forty-ninth Street, New York, N. Y.

The University of Chicago, 122 South Michigan Avenue, Chicago, Ill.

Yale University, New Haven, Conn.

What I am anxious to find out as quickly as possible is whether or not these organizations do, or do not, pay income taxes to the Government on their investments.

As a concrete example, the Rockefeller Foundation, listed above is reported in the hearings before the T. N. E. C. as owning the following common stocks: 1,037,505 shares Standard Oil Co. (N. J.), 691,140 shares Standard Oil Co. (Ind.), 132,912 shares Standard Oil Co. (Ohio), 39,408 shares Continental Oil Co., and 94,684 shares the Ohio Oil Co.

All of these corporations, except the last, paid dividends during the past several years. Did the Rockefeller Foundation pay any income taxes to the Government on such dividends, or are they exempt under section 101 of the Internal Revenue Code?

Your courtesy in providing this information for me is deeply appreciated.

Very cordially yours,

JOHN M. COFFEE.

TREASURY DEPARTMENT,
Washington, March 21, 1941.

Hon. JOHN M. COFFEE,
House of Representatives.

MY DEAR MR. COFFEE: Further reference is made to your letter of March 17, 1941, in which you request to be advised whether the following organizations are exempt from the payment of income taxes under the provisions of section 101 of the Internal Revenue Code:

American Missionary Association, New York, N. Y.

The Commonwealth Fund, New York, N. Y.

Cornell University, Ithaca, N. Y.

General Education Board, New York, N. Y.

The A. W. Mellon Educational and Charitable Trust, Pittsburgh, Pa.

The Frank Phillips Foundation, Inc., Bartlesville, Okla.

President and Fellows of Harvard College, Boston, Mass.

The Rockefeller Foundation, New York, N. Y.

The Rockefeller Institute for Medical Research, New York, N. Y.

The University of Chicago, Chicago, Ill.

Yale University, New Haven, Conn.

All of the above-named organizations have been held to be exempt from Federal income tax under the provisions of subsection (6) of section 101 of the Internal Revenue Code and the corresponding provisions of prior revenue acts, and they have not paid any Federal income tax on their income from any source.

Subsection (6) of section 101 of the Internal Revenue Code provides for the exemption from Federal income tax of "corporations, and any community chest, fund, or foundation, organized and operated exclusively for religious, charitable, scientific, literary, or educational purposes, or for the prevention of cruelty to children or animals, no part of the net earnings of which inures to the benefit of any private shareholder or individual, and no substantial part of the activities of which is carrying on propaganda or otherwise attempting to influence legislation."

If further correspondence relative to this matter is necessary, please refer to IT:P:T:-1—EAC.

Very truly yours,

T. C. MOONEY,
Acting Commissioner.

Newark, N. J., Opposes St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. ALFRED F. BEITER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1941

LETTER FROM NEWARK (N. J.) CHAMBER OF COMMERCE AND REPORTS FROM VARIOUS ORGANIZATIONS

Mr. BEITER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter I received from the Chamber of Commerce of the City of Newark, and I also include a synopsis of reports by commercial organizations, educational institutions, and engineers with comments:

CHAMBER OF COMMERCE OF THE
CITY OF NEWARK, N. J.,
March 31, 1941.

Hon. ALFRED F. BEITER,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN BEITER: The President of the United States transmitted to Congress, under date of March 21, 1941, the text of an agreement between the Governments of the United States and Canada, providing for the construction of the Great Lakes-St. Lawrence deep waterway. This agreement is to be made effective by concurrent legislation of the two governments.

The Chamber of Commerce of the City of Newark, N. J., has given this subject careful consideration, as indicated by the attached detailed report. We direct your attention to the following salient facts:

Excessive cost for power.

Any benefits derived will be restricted to a limited area.

The waterway will be closed 5 months out of the year to transportation.

Every ton of freight moved will cost the taxpayers $3 per ton.

Power would replace 58,000,000 tons of coal per annum, or 13 percent of the total coal output, thereby causing a reduction in employment in mines, railroads, etc.

Utilization of this project for national defense is too remote to be reckoned in the present emergency.

Construction will curtail existing emergency supplies of raw and finished materials, also manpower and transportation.

The economic factors, when properly weighed, establish that the Great Lakes–St. Lawrence waterway should not be given favorable consideration, and we respectfully request that you oppose the passage of legislation that would have for its purpose the United States proceeding with the construction of this project.

Very truly yours,

E. W. WOLLMUTH,
Executive Vice President.

ST. LAWRENCE WATERWAY

SYNOPSIS OF REPORTS BY COMMERCIAL ORGANIZATIONS, EDUCATIONAL INSTITUTIONS, AND ENGINEERS, WITH COMMENTS

Description

Proposed development, which covers territory between Lake Ontario and Montreal, includes 25 miles of canal, 8 locks (30-foot depth); 24½-foot serviceable channels (27-foot depth); power development of 5,000,000 horsepower; deepening lake channels; deepening lake harbors; control dams.

Additional changes

Improvements will necessitate additional expenditures for reconstruction of piers and other vessel-handling facilities, dredging of harbors and channels, and changes in cargo-handling machinery, etc., to meet changed conditions at practically all lake ports.

Differences in elevation

The fall from Lake Ontario to Montreal is 226 feet; the fall from Montreal to sea is 20 feet (28-foot draft vessels can now operate from Montreal to sea).

Time to construct

Seven to eight years.

Official estimate of cost

Navigation work	$108,700,000
Work common to power and navigation	141,200,000
Work primarily for power	144,100,000
Total	394,000,000
Additional power proposed	225,000,000
Total	619,000,000

Costs not included

Cost of following items not included:

Interest during construction (estimated)	$65,000,000
Improving channels through lakes (estimated)	45,000,000
Increasing depths of harbors (estimated)	250,000,000
Losses during development period	----------
Amortization and interest	----------
Cost of maintenance and operation	----------
Reconstruction or rearrangement lake ports facilities	----------
Cost to private interests account necessary rearrangements	----------
Loss in tax ratables	----------

Unofficial estimates of cost

The official estimates have been questioned by various engineers and following figures submitted:

E. P. Goodrich, consulting engineer	$1,054,000,000
H. L. Cooper, international engineer	1,350,000,000

Attention is called to the fact that experience and records show waterway estimates are almost invariably exceeded one to three hundred percent or more.

Comparisons

	Estimated cost	*Cost*
Chicago Drainage Canal	$16,000,000	$53,000,000
Suez Canal	30,000,000	80,000,000
Panama Canal	160,000,000	375,000,000
New York State Barge Canal	62,000,000	176,000,000
Welland Canal	40,000,000	128,000,000
Total	308,000,000	812,000,000

Overages, 263 percent.

Carrying cost

If the estimate given by Cooper (who has had wide experience in this line of work; constructed the Keokuk Dam, the only power plant on the Niagara River that has never been shut down by ice; and investigated the St. Lawrence proposition for private interests) are taken, we have the following approximate picture:

$1,350,000,000 at 4 percent interest	$54,000,000
$1,350,000,000 at 2 percent amortization	27,000,000
Operation and maintenance (estimate not Cooper's)	3,000,000
Annual carrying cost	84,000,000

Cost power

Cooper estimates the power will cost $270 per horsepower developed, following this with statement that "It is a well-known fact that no hydraulic development can compete with steam when the initial cost of hydraulic development exceeds $150 per horsepower." Estimated cost of the St. Lawrence development is 55½ percent over this figure.

Considering the annual carrying cost as applied to the gross exports of grain (if power will not pay cost), we find:

Gross tonnage, 1928

In the banner year 1928 there was exported through Buffalo 279,000,000 bushels, and through Montreal 217,000,000 bushels, a total of 496,000,000 bushels of grain.

Gross tonnage, 1922

In the maximum year 1922 the total grain exported through all North Atlantic ports was 462,000,000 bushels (13,800,000 tons).

Cost per ton taxes

If all the grain which was exported through the North Atlantic ports, in the maximum year 1922, passed through the St. Lawrence route, carrying charge to be paid out of taxes would amount to 18/10 cents per bushel or $6 per ton.

Saving per ton

The Department of Commerce estimates saving in transportation cost by the waterway will run 6 4/10 cents per bushel or $3.22 per ton, against above cost in taxes of $6 per ton, or a dead loss of $2.78 per ton.

Loss per ton

In other words the taxpayers would pay $6 per ton, to give the wheat growers a subsidy of $2.78 per ton, if entire saving were passed on to growers.

Cost to New York and New Jersey

If the power will not carry its expense, and the freight will not carry its expense, the whole question resolves itself into one of subsidy for transportation and power at expense of taxpayers with approximate tax on New York State of $25,000,000 to $30,000,000

per annum and on New Jersey of $3,000,000 to $4,000,000 per annum.

A large portion of the entire cost will fall on the States which do not receive any benefit, either directly or indirectly.

Availability

Another serious objection to the expenditure of such a large sum on the development, is that it will only provide for service for a portion of the year on account of closing of lakes and the St. Lawrence during the winter season.

The average open season for past 20 years has been from April 26 to December 9.

Channels and harbors

If the St. Lawrence is deepened to 27 feet it will be necessary to dredge channels and harbors at Lake ports to meet the increased depth, which would mean 13 American and 2 Canadian harbors would have to be dredged from 4 to 8 feet.

Changes facilities

Changes would also be required in Lake water-front facilities and equipment, at staggering costs.

Estimated tonnage

The most optimistic estimate of traffic for this waterway is 24,000,000 tons per annum, which would make the subsidy, or tax burden, $3.50 per ton (estimates of tonnage are almost invariably excessive). Other estimates are as low as 10,500,000 tons.

Reduction demands coal

If power estimated is developed, and used, it will replace 58,000,000 tons of coal per annum, or 13 percent of the total coal output of the United States, with consequent reduction in employment by mines, railroads, Lake ships, and manufacturers of materials, etc., dependent on fuel and transportation activities.

United States will not control

The United States, after spending the enormous sum necessary for completion of the project, would not control the waterway.

Brookings Institution

The Brookings Institution, in its 1929 study of the St. Lawrence waterways, reached the following conclusion:

"(1) The treaty calls for a 27-foot channel. This channel would accommodate only 5 percent of passenger-cargo tonnage in American service, 38 percent of the faster cargo tonnage, 13 percent of tonnage operating out of Montreal and Quebec, 40 percent of grain tramps tonnage operating out of Montreal, 19 percent of east bound intercoastal tonnage, no tankers. To handle usual ships, it would require a 33-foot channel.

"(2) The seasons of navigation on the Lakes average about 6½ months each year; ocean-going boats would have to reduce speed at least one-quarter between Montreal and the Lakes. Leading steamship lines claim first-class lines or regular cargo-liner service would not use the waterway under these conditions.

"(3) Authors estimate total potential tonnage for waterway at 10,500,000 tons, of which grain would account for about 6,500,000 tons; of total, 5,400,000 tons would be American traffic.

"(4) Their estimated cost of waterway is $712,000,000, and with carrying charges and maintenance, the cost to taxpayers would amount to $3.50 per ton or, say, 11 cents a bushel on grain, a saving on grain of 4 cents per bushel, or a cost of 175 percent over the estimated savings."

Canadian editorial

Following is from editorial in Montreal Star:

"The cost to Canada could not well be less.

"We get a half billion enterprise, not counting the expenditures on power plant, for less than forty million.

"The increased trade by the cheaper, safer, and swifter route will practically all be transshipped in Montreal Harbor, giving it greatly increased business.

"The real danger that the wealthy United States might build a deep waterway from Buffalo or Oswego to Albany, and so sidetrack Montreal, will be blown sky high by this treaty. Having put some four hundred million into this enterprise, thus creating a far better route than that by Albany, they would never waste money on the Erie project, and the city on the Hudson will be out of luck."

New York Chamber of Commerce

The New York Chamber of Commerce, in its report of October 6, 1932, states:

"The St. Lawrence canal project is unsound, commercially unwise, and politically inadvisable. Seventy percent of such a waterway would be in Canada and 30 percent in the United States. Is it conceivable that the United States would undertake a high investment in a foreign country under such conditions?

"It should not be forgotten that in the event of the United States being at war with some other country, international law would prohibit England from allowing the United States to use the St. Lawrence channel."

Stanford University

The Stanford University states in its report, prepared by Ford Research Institute, of the university:

"The St. Lawrence seaway would probably not reduce cost of shipments to Europe by over 5 cents a bushel during the season of open navigation, and the weighted annual savings on export wheats would be less. Whatever savings are made would be divided in proportion varying from year to year, mainly between the growers of export wheat affected and European consumers.

"There is little prospect that the net gain to American wheat growers as a whole would be significant. Canadian wheat growers would stand to gain more unless or until the expansion of acreage wipes out the price benefit."

Rochester Chamber of Commerce

The Rochester Chamber of Commerce report, November 20, 1933, states:

"There are ample grounds for requiring that the expense of the project be borne by the interests directly benefiting from the facility. The intercoastal shipping characteristics of the new seaway would justify the application of reasonable tolls the same as applies to shipping through the Panama and Suez Canals.

"It is our opinion that the economic merits and justification of large expenditures 'have not been fully determined' and that the economic justification of the project rests wholly upon studies 'by proponents, 6 to 13 years ago. Under conditions naturally different from those which now confront the United States, or, are likely to prevail during the next decade.' We believe there should be a complete up-to-date, impartial appraisal of the economic considerations involved in the project, from the standpoint of the United States, before the Great Lakes-St. Lawrence deep waterway treaty is approved by the Senate."

These remarks were followed by recommendation of following resolution by the chamber committee:

"That the Senate of the United States be requested to delay the adoption of the St. Lawrence treaty until an impartial survey can be made by the Board of River and Harbors Engineers, or a commission authorized by Congress to ascertain amount and character of the traffic, which the United States may reasonably expect to move via the St. Lawrence route, to show the savings and the States therefrom; that the board or commission determine definitely the annual costs of operation and maintenance, and the possibility of making the project self-liquidating within a reasonable period of years; also a study of such other factors as are essential to the determination of the wisdom of undertaking this development, under the present economic conditions and trend."

Remarks

There is a great discrepancy in estimates of cost, of main project and lack of information as to costs of maintenance and operation costs of remodeling equipment, harbor and channel dredging, terminal facilities, reduction in tax ratables, etc., and to meet changed conditions, which may very properly amount to large sums, which cannot be assumed by municipalities, and would be prohibitive for private interests, when the doubtful advantage to be derived from such expenditures are considered. No estimate is made of loss in tax ratables.

The actual waterway expenditure might well be a small portion of the total final cost, and from past experience the waterway estimate is likely to be exceeded by several hundred percent.

Before the St. Lawrence waterway project is considered we should examine our past experience with waterway promotions which have been one of the most expensive and perhaps least understood extravagances we have been cursed with by politicians and pressure groups for many years.

Hundreds of millions of dollars have been spent in the promotion of ideas in all parts of the country, under the guise of cheap transportation, and when they could not be put through under this pretext the national-defense issue has been brought in, with the hope of forcing them through.

There have been several projects which were justified, such as the Panama Canal, which is partially supported by tolls, and perhaps a few others but a large percentage of the expenditures could not be justified from an economic or any other standpoint.

There is a continual complaint of heavy taxes, by those who realize they are paying taxes, and it is such unsound and ill-advised spending as we have in the waterway and canal developments which is building up these taxes for the present generation, and for all time to come.

The average man seems to feel, if he does not own property he does not pay taxes, that they are paid by the wealthy and the large corporations, he does not realize that every man, woman, and child pays a portion of the taxes.

Those who do not own property or earn sufficient to pay income taxes, pay hidden taxes on everything they eat, wear, drink, or use, and at the present time at least one-fourth of every person's earnings is being taken from him for taxes. If he earns $4 per day $1 is taken for taxes.

A halt to unnecessary waste, burdening the taxpayer, particularly in view of other inevitable tax increases, should be enforced.

A number of organizations of public spirited people throughout the country are spending their time and money in an effort to correct this situation, but they receive little if any support from the public and they will never be able to accomplish important results until public opinion is aroused to a point where all become interested.

We have endeavored to get together some figures, from Government and other records, which will give an idea of how our money is being used on some other similar projects.

The usual manner of procedure of the promoters is to start with the publicity of the imaginary benefits one of these projects will give a local community, showing estimates of cost, which are only a fraction of the real cost, supported by estimates of tonnage which will be handled, exaggerated to as great extent as the costs are understated. By the use of this

combination of erroneous figures a saving is shown by reduced freight rates, etc.

They are very careful not to show the increase in taxes, which almost without exception is several times greater than the alleged saving in freight charges.

They do not explain that while the cost of transportation by water may save $1 per ton, taxes will be increased from $1 to $5 or more per ton, and the cost in taxes alone may well be more than the entire cost of handling the freight by truck or railroad, in some cases more than the goods cost.

In plain words, the consumer pays the transportation out of his own personal pocket as the penalty for following the advice of people who are paid by him to protect his interests.

One of the glaring examples, although not the worst, is the New York State Barge Canal, which has been a political pet for years.

This canal has cost the people of New York in cold cash approximately $400,000,000. Figuring interest 4 percent; amortization, 2 percent; plus maintenance of $1,700,000, makes a total of $25,700,000 per annum, and they are paying around $7.20 per ton in canal freight and taxes for a service they could get from the railroads and trucks for $3.50 per ton; in other words, they are paying an extra cost of several dollars per ton on every ton of freight carried on the canal.

If the canal had never been built, the people of the State of New York would be millions of dollars ahead each year.

Add to the cost of this State project the Federal white elephants, and it is costing the people of New York perhaps $70,000,000 per year for inland-waterway promotions, or $22 for each family in the State, with the bill increasing each year.

According to Government reports, we have well over $2,000,000,000 tied up in canals and waterways outside of our seaports. With interest at 4 percent and amortization at 2 percent, we have a carrying charge of $120,000,000 per annum, plus $100,000,000 per annum for maintenance and operation, or a total of $220,000,000, without considering the additional money that is being poured in each year for new projects.

The States of New York, New Jersey, Delaware, and Pennsylvania carry approximately 40 percent of the tax load of the United States, which means these four States pay approximately $88,000,000 of this cost, or over $19 for each family in the four States, for Federal projects alone.

If the St. Lawrence waterway costs the United States $1,000,000,000, and its carrying, operation, and maintenance costs run proportionately to other inland-waterway developments, the initial cost to the State of New York would approximate $210,000,000 and the carrying cost to the State $17,000,000 per annum. The initial investment for the States of New York, New Jersey, Delaware, and Pennsylvania would approximate $400,000,000 and carrying costs $32,000,000, in addition to the present amounts shown above.

If estimated costs run true to form as compared with actual costs, they may run two or three times this amount.

The following illustrations will give some idea of costs of handling freight on the waterways:

Cost in taxes to move 1 ton 100 miles

Canals and waterways:	
Chesapeake & Delaware	$1.20
Cape Cod	10.00
Beaufort to St. Johns River	1.90
Beaufort to Cape Fear River	2.20
Cape Fear River to Wingah Bay	5.00
Wingah Bay to Charleston, S. C.	3.00
Charleston to Beaufort	2.50
Below Wilmington Cape Fear River	1.50
Above Wilmington Cape Fear River	1.20
Saco River, Maine	159.00
Taunton River, Mass	46.00
Appoquinimick River, Del	57.00

Cost in taxes to move 1 ton 100 miles—Con.

Canals and waterways—Continued.	
Rehoboth Bay to Delaware Bay (IWW)	$1,660.00
Chincoteague Bay to Delaware Bay (IWW)	10.00
Shrewsbury River, N. J.	51.00
Woodbury Creek, N. J.	57.00
Cold Spring Inlet, N. J.	450.00
Norfolk to Pamlico Sound (IWW)	2.30
Swan Quarter Bay to Deep Bay, N. C. (IWW)	45.00
Channel, Back Sound to Lookout Bight, N. C.	200.00
Oklawaha River, Fla.	1,227.00
Jacksonville to Miami, Fla. (IWW)	6.20
Suwanee River, Fla.	900.00

There are numerous other projects which are as bad or perhaps in some cases worse.

Figures used are from Government reports covering costs to June 30, 1939, and tonnage figures for 1938, which are the latest available. Maintenance costs are from approved estimates, or where estimates are not shown are on basis of 2 percent on investment.

These costs are in addition to canal freight charges. It costs an average of around $1 to move a ton of freight 100 miles on the railroad or trucks, both of which instead of being supported by taxes, pay taxes.

The available data on numerous different waterway improvements do not show a single one handling freight (taxes only) as cheaply as the trucks or railroads.

One of them shows a tax cost of $16.60 for every ton of freight handled 1 mile for an entire year. The business of this waterway for an entire year was 1,385 tons and the cost in taxes $46,000 in addition to the canal freight charges or equal to $7,968 in taxes only for a 40-ton car load through a 12-mile waterway.

This certainly shows the necessity for curbing such promotions and absolutely refusing to approve any expenditures that are not sound beyond a shadow of a doubt.

The proposed development is unsound from economical and practical standpoints according to studies of numerous engineering and business experts which leaves only the rather weak argument of its value for national defense and this seems hardly worth considering in view of the following:

(1) It would not be completed for 5 years or more.

(2) Its construction would require immense quantities of steel, lumber, cement, machinery, tools, explosives, and other materials, and a large number of skilled labor, all of which are badly needed in connection with ship, airplane, and tank construction, the erection of new facilities for their production and manufacture of arms, ammunition, etc., which we all agree are an immediate necessity.

(3) It would slow up our aid to England and our own defense armament.

(4) No evidence has been offered to show it would help our national defense.

(5) Under certain conditions it would operate as a handicap.

(6) In case of war it would be difficult to defend and not difficult to destroy.

(7) Under war conditions, material could not be handled as quickly or safely through the channel and over the open Atlantic to and from our east coast, Gulf ports, and west coast as they could by our present inland transportation systems for several reasons, some of them—

(a) Lack of protection from unfriendly powers.

(b) Time required for movement.

(c) Necessity for light draught ships, which we do not have.

(d) Excess equipment necessary for this special service.

(e) Increased manpower.

(8) A 27-foot channel would restrict vessels to about a 24½-foot draught.

(9) Only about 5 percent of American ships of 2,000 tons or over could be operated through the channel.

(10) Only about 30 percent of foreign ships of this tonnage could use the channel.

(11) Only the small ships of the Navy could use the channel.

(12) It would require years and many millions of dollars to prepare lake ports for more than present services.

(13) Weather conditions would prevent full use of channel for more than 58 percent of the year or about 7 months out of each 12.

(14) On basis of 58 percent or 7 months out of 12, we would only get about 3 percent service out of American vessels and 18 percent out of foreign vessels.

(15) Only 6 percent of the business through the St. Lawrence is handled by American ships, while about 94 percent is handled by foreign ships.

(16) On this basis of each dollar we spent out of our taxes, only 6 percent would be for the benefit of our workmen and shipping and 94 percent for foreign workmen and shipping.

To sum the entire proposition up, it is apparently an unwise undertaking from either a defense, economical, or commercial standpoint.

1. It will interfere with national defense.
2. It will reduce employment in practically every industry in the United States.
3. It will reduce earnings of American workmen millions of dollars each year.
4. It will increase our cost of living.
5. It will increase our taxes millions of dollars each year.
6. It will give a subsidy of foreign workmen, shipping, and factories at expense of our workmen and industries.
7. It will place American workmen and industry in competition with cheap foreign labor, and the American farmer with a foreign grain, which could be delivered at lake ports cheaper than it costs our midwest farmers to produce.
8. It will place a burden on American workmen and industry for all time to come, with no hope of benefit.

Based on experience with previous estimates of cost of construction of waterways, the final cost will probably be several times the estimates, which in this case would mean two or three billion dollars more than now anticipated with consequent further increase in taxes.

As a result of the above findings and recommendations, the chamber of commerce of the city of Newark, N. J., is convinced that the plan is impractical, would result in a dislocation of trade, and in no way could the Great Lakes-St. Lawrence waterway project be justified; and especially is this true in view of the present emergency that exists.

Dated Newark, N. J., March 31, 1941.

Suggested Objectives for Which We Should Strive in This Crisis

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1941

LETTER FROM A CONSTITUENT

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include herein a letter

from a valued and very intelligent constituent, who is the secretary of the Pierce County Pomona Grange, No. 16, Mrs. A. S. (Margaret) Pirnie.

In this intriguing epistle, Mrs. Pirnie summarizes the situation as she views it today, and on behalf of the Pierce County grangers, sets forth some constructive suggestions which I commend to all as being eminently worthy of study.

The letter follows:

PIERCE COUNTY POMONA
GRANGE NO. 16,
Spanaway, Wash., March 14, 1941.

Hon. JOHN M. COFFEE,
Member of Congress,
Washington, D. C.

SIR: If the cause is in the liver, then a little caustic salve on the skin eruption can be expected to do little in the way of a permanent cure. Yet those whom we call statesmen—those who are selected as the leaders in solving and guiding our social destinies make a great deal of ballyhoo and fuss about applying a little caustic salve to effect a cure for that convulsive malady known as war.

What is the cause of war? By the remedy which Congress subscribes we should take it that they don't know. If that honorable body would care to pause for a moment and listen to what some of the citizenry who constitute this great nation of ours have to offer as probable causes of war and—especially, the present conflict, they might take their cue from this and evolve remedial measures which would have a beneficial and more lasting effect.

We believe that the causes of this war, and practically all wars, are economic, namely: that one group of people or one or more nations find themselves deprived of and in need of some of the world's natural resources. Like a hungry dog leashed to his home he eventually strives to break the chain in order that he may go beyond the confines and limits of his leash so that he may take what he desires for his sustenance. A hungry nation is like a hungry dog and what Congress proposes to do is but to tie up a nation again—perhaps with a stronger leash. There would still remain a nation in hunger for some of the natural resources of the world necessary for their functioning.

Appeasing a hungry nation may be like appeasing a hungry dog with scraps of meat. It may aggravate and intensify the craving for food. Even a hungry dog would not act normally for some time upon being fully fed after a long fast.

England is trying to tie Germany up. Congress proposes to send England more chain to do it with and at the same time permitting material to go from the United States to Germany indirectly which will be used to blast such chain asunder. We don't propose to be kidded by any such shenanigan and we are forced to come to the conclusion that our national legislative and administrative bodies are remarkably lacking in an understanding of the situation—or are extremely insincere.

We suggest that strict attention be given to seeing that America or Americans do not become or remain hungry. In other words, one of the first things to do is to stop adding fuel to the flames of Europe and attend to our own business.

We might suggest as objectives for the United States—

1. To strengthen our national defense first by distributing sufficient goods and services to every inhabitant of our country that their physical, mental, and moral conditions may be maintained upon a high level.

2. To build our own military structures for our own protection in case of attack.

3. To use our economic and diplomatic influence to bring about world peace at the earliest possible moment.

4. To use our economic and social knowledge to remove the cause of war by aiding in plans for the necessary economic adjustments among nations.

We would like to know what your objectives are concerning world conditions today.

We would be pleased to hear them from you at your earliest convenience.

Very truly,
PIERCE COUNTY POMONA GRANGE, No. 16,
(MRS. A. S.) MARGARET PIRNIE, *Secretary.*

Dr. Hutchins Asserts United States in War Would Lose What It Has of Four Freedoms

EXTENSION OF REMARKS
OF
HON. WILLIAM G. STRATTON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1941

ADDRESS BY ROBERT MAYNARD HUTCHINS, PRESIDENT OF THE UNIVERSITY OF CHICAGO

Mr. STRATTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting the text of a radio address made Sunday, March 30, by the great American educator, President Robert Maynard Hutchins, of the University of Chicago, at the regular Sunday morning service in Rockefeller Memorial Chapel at the university:

We hear on every side that war is inevitable, even that we are at war, and that there is nothing we can do about it.

Things look black. The President now calls for "total victory" over "the enemy" and urges upon us the determination needed to win.

Still there is a chance that these remarks are for foreign consumption and do not mean what they seem to mean. They seem to mean that the British, Chinese, and Greeks are our allies. If this is so, it is immoral to let them die for us while we sit safely at home. We should have been in the war from the start. We should fight now. And if we are actually to press on to total victory we must fight. We are not justified in hoping that the Axis will suffer total defeat without full American participation in the war.

Two days after war broke out in Europe the President assured the Nation he would do everything he could to keep it at peace. He has repeated these assurances again and again. Every speech he made during the campaign contained a pledge to keep the country out of war. The night before the election he said, "We propose and expect to continue our lives in peace." Two weeks ago he said, "Do not let us waste time reviewing the past or fixing or dodging the blame for it." But I cannot believe that this means that he wants us to forget his promises to pursue a policy of peace.

PEOPLE DO NOT WANT TO GO TO WAR

Until we are engaged in military action we must continue to hope that we can avoid the ultimate catastrophe. We stand on the brink of war. But we have not been attacked. The burden of proof rests on those who claim we are about to be. We have not lost the power to decide for peace or war. We still have a chance to catch our breath, reflect a little, and take a last look around before we plunge into the abyss. The President is a democratic leader. One of his greatest qualities is his sense of responsibility to the people. If he is moving toward war, he must be doing it in the conviction that the people want him to. If this is his conviction, he is mistaken.

The people have never had a chance to express themselves on the issue of war or peace. The election gave them no chance. Both parties declared for peace. Both candidates declared for peace.

No one should know better than Mr. Roosevelt that the newspapers are not always a reliable index of public opinion. Even if most of the newspapers are for war, it is no more significant than that only a third of them were for Roosevelt in 1936 and only a fifth of them for him in 1940.

The Gallup poll shows that the people are for peace and that they trust Mr. Roosevelt to keep them at peace. The Gallup question published 10 days ago was, "If you were asked to vote on the question of the United States entering the war against Germany and Italy, how would you vote—to go into the war or to stay out of the war?" Eighty-three percent of those asked said they would vote to stay out. The percentage voting to stay out was higher than it was a year ago. On the other hand, when the question has been, "Do you favor aiding Britain at the risk of war?" the majority of those asked have said "yes." We can only infer that the people want peace and that relying on Mr. Roosevelt's promises of peace, they have been willing to help Britain at the risk of war. The risk of war, with Mr. Roosevelt at the helm, was too slight to worry about.

The country wants to defend itself, aid Britain, and stay out of war. We have been told over and over again that we could do just that. During the hearings and debates of the lease-lend bill man after man announced that this was a bill to keep the country out of war. Mr. Willkie said that was why he was for it. Senator GEORGE, who led the fight for the bill, said that was why he was for it. The passage of this bill gave the President no mandate for war. The people want peace.

"THE DEMOCRACIES" WE ARE TO SAVE

If we go to war, what are we going to war for? Mr. Roosevelt tells us we are to save the "democracies." The democracies are, presumably, England, China, Greece, and possibly Turkey. Turkey is a dictatorship. Greece is a dictatorship. China is a dictatorship. As to England, in 1928 Mr. Anthony Eden, now Foreign Secretary, speaking in behalf of a bill extending the suffrage, felt it necessary to say to the House of Commons, "We have not got democratic government in this country today; we never have had it and I venture to suggest to honorable members opposite that we shall never have it. What we have done, in all the progress of reform and evolution of politics, is to broaden the basis of our oligarchy."

There can be no doubt that the people of this country prefer the Government of Britain to the governments of its Allies or its enemies. Britain is a constitutional state and has been the inspiration of many constitutional states. We prefer the Governments of China, Greece, and Turkey to those of the Axis. But we cannot use the word "democracy" to describe every country that is or may be at war with the Axis. If Russia is attacked by Germany, will she be welcomed into the choir of democracies?

If we go to war, what are we going to war for? The British propose to defeat the Axis. What they propose to do then they do not say. They have repeatedly refused to say. Yet the United States is entitled to know. Are we to rush to arms every time the British Empire is in danger? If

so, we are entitled to know what the future policy of the British Empire is to be. Are we to put down every tyrant that arises in Europe? If so, we are entitled to know what is to be done to keep each tyrant from being worse than the last.

WHAT DO WE DO ABOUT RUSSIA?

If we go to war, what are we going to war for? The only specific statement the President has made on the course we are to pursue after the war is found in two sentences in his last speech. He said, "We believe that any nationality, no matter how small, has the inherent right to its own nationhood." To the same effect he said, "There never has been, there isn't now, and there never will be any race of people fit to serve as masters over their fellow men." Do these statements imply the restoration of pre-war boundaries in Austria, Czechoslovakia, Memel, Danzig, Poland, France, China, and Rumania? Is this undertaking to be world-wide? If so, how do we induce Russia to restore the pre-war boundaries of Estonia, Latvia, Lithuania, Finland, and Poland?

If we succeed in reestablishing these boundaries, how do we know they will last? The boundaries we helped lay down the last time fell apart in 20 years. And we tried to lay them down on the same principle that the President proposes now: the principle of self-determination.

And what do we do about the countries which were victims of aggression before 1939? Is everybody who stole anything before that date to keep it, and everybody who stole anything after it to give it up? What do we do about Hong Kong, the Malay States, the Dutch East Indies, French Indo-China, Africa and, above all, India? If there never has been, isn't now, and never will be any race of people fit to serve as masters over their fellow men, how can we tolerate the mastery of the white race over our yellow, brown, and black fellow men throughout the world?

If we go to war, what are we going to war for? We are stirred, but not enlightened, by the great phrase—the four freedoms—which the President has used as the general statement of our aims. Freedom of worship, freedom of speech, freedom from want, and freedom from fear—if we go to war, we go to establish these four freedoms everywhere.

NEW CONCEPTION OF WHITE MAN'S BURDEN

The President cannot literally mean that we are to fight on till the four freedoms ring everywhere. If we are to be responsible for the four freedoms everywhere, we must have authority everywhere. We must force the four freedoms upon people who might prefer to do without them rather than accept them from the armed missionaries of the United States. This new imperialism, this revised conception of the white man's burden, this modern version of America's manifest destiny is a repudiation of the Presidential teaching that there never has been, isn't now, and never will be any race of people fit to serve as masters over their fellow men.

Of course, we must extend the four freedoms to our allies as well as to our enemies. We must see to it that British possessions throughout the world have them. The hopes held out to India during the last war, disappointed after it, and now held out again, must be fulfilled. China, Greece, and Turkey must reform, too. In the Latin-American countries we shall have no easy task. Few of them have the four freedoms now. From Mexico to Patagonia we must send our legions to convert our good neighbors by force of arms.

The President cannot mean this, for it is a program of perpetual war—war in Latin America, war in the Far East, war in the South Seas, and even war with Britain. Mr. Roosevelt must mean that by defeating the Axis we shall rid the world of those governments at present most aggressive in their attack on the four freedoms. During or after the war we shall have to figure out the next steps: How to establish and maintain governments that believe in the four freedoms. The first step is war. Here, then, is the real issue. Is the path to war the path to freedom?

This war, if we enter it, will be long, hard, and bloody. We do not have the choice between a short war abroad and a prolonged period of militarization at home. The enemy now controls all of Europe and part of Asia, and is not yet driven from Africa. We have no evidence that the totalitarian regimes will fly to pieces when their opponents get superiority in the air, or even that superiority can be achieved.

IS TOTAL WAR THE PATH TO FREEDOM?

Total war for total victory against totalitarian states can best be conducted by totalitarian states. The reason is simple. A totalitarian state is nothing but a military machine. A totalitarian state will be more effective in war than any other kind of state. A democratic state is organized for the happiness of its citizens. But their happiness cannot be considered in total war. Every one of them must become a cog in the military machine. If the United States is to proceed through total war to total victory over totalitarian states, it will have to become totalitarian, too.

Is total war, then, the path to freedom? We seek freedom from want, and we impoverish ourselves. We seek freedom from fear, and we terrorize ourselves. We seek freedom of worship and freedom of speech, and we suppress them.

And when total victory has been won, will the totalitarian administration end? We may find a clue in England. A responsible member of the British Cabinet, Sir Archibald Sinclair, publicly supports a proposal that there shall be no elections in England for 3 years after the war. The reason is clear. Poverty and disillusionment will make democracy dangerous.

What will be America's fate after a long, hard, and bloody war? In times of peace we have had 10,000,000 unemployed; we shall have at least that many again. We shall have an enormous debt. Repudiation and inflation may rid us of that—and at the same time of the middle class. Having exhausted our resources in getting guns, we shall have none for butter, houses, relief, social security, or education. We shall have want and fear, and we may have the maintenance of order by a government scarcely distinguishable from those which we went forth to fight. We may have the kind of freedom proclaimed by one of Napoleon's marshals to the German towns. He said, "My friends, I bring you perfect liberty. But be prudent. I shoot the first man who stirs."

There are those who say, "Of course, if we go to war, we shall have totalitarianism in this country. But if we try to stay at peace we shall have all this and Hitler, too. Unless we go over and get Hitler, Hitler will come over and get us."

Lord Halifax on Tuesday said that Hitler could never invade England. If he can never invade England, he can never conquer the Western Hemisphere. We in America have a chance to save democracy if we build our defenses and stay at peace. If we enter upon total war to total victory, we lose that chance, even if we win the victory.

WAR IS TERMED COUNSEL OF DESPAIR

War, except in self-defense, is a counsel of despair, despair because the world is bad, despair because peaceful change is too slow and hard. It was the counsel of the nihilists, the Russian revoluntionaries described by Dostoyevsky. They believed in progress by catastrophe. Our modern American nihilists want catastrophe because they despair of getting progress in any other way. They think that everything will be wonderful after the war because such things as capitalism, which they dislike, will be destroyed.

I think it fairly certain that capitalism will not survive American participation in this war. And since it is the vehicle of the materialism that has brought us to our present pass, I am not altogether sure that it deserves to. But experience after the last war in Germany, Italy, and Russia does not suggest that catastrophe is the road to something better.

The trouble with the doctrine of progress through catastrophe is that you can be sure of the catastrophe, but not of the progress. So of war as the path of freedom. You can be certain of the war. The freedom is another matter. If we enter this war, we shall lose what we have of the four freedoms. We shall lose the hope of realizing them. What we have, in this country, is hope. War, for this country, is a counsel of despair. It is a confession of failure. It is national suicide.

We have far surpassed most other nations in our advance toward the four freedoms. We and we alone have the hope of realizing them. We must bravely and hopefully face the task of realizing them. We must show the world a nation which understands, values, and practices the four freedoms. This is America's destiny.

We cannot run away from our destiny because it is hard. We cannot avoid it by claiming that we must have the British fleet to protect us. We cannot evade it by pleading fatigue from our futile efforts to meet the depression, suggesting that we would like an ocean voyage to recuperate. We cannot be like Stendhal's hero, who at the age of 16 ran away to join Napoleon to escape from the sorrows that were poisoning his life, especially on Sundays. We must stay here and fight. As Mr. Willkie said so truly during the campaign, "America's battle for liberty is right here at home."

FALSE PATH TO FREEDOM

The path to war is a false path to freedom. It is a false path to freedom for America. It is a false path to the four freedoms everywhere. War is for the sake of peace. The spirit of the peace will be determined by the spirit of the countries which make it. An Englishman, J. Middleton Murry, said of England: "This country, as it is, is incapable of winning a Christian victory, because it simply is not Christian." This general principle is sound. No country can win a democratic victory unless it is democratic. Only those who understand, value, and practice democracy know what a democratic peace would be. Only those who understand, value, and practice justice can make a just peace. Only those who understand, value, and practice the four freedoms can make a peace to establish them everywhere.

Fear and ignorance wrote the last peace; the fear of the French and British, the ignorance of all the nations. From this fear and ignorance sprang a peace that made this war inevitable. There is no less fear and certainly no less ignorance today. Have we the courage and the wisdom to bring the world to a peace that shall establish the four freedoms everywhere? If we have, we should do it, no matter what the cost in blood or treasure. We want to serve humanity, and in her cause we should be proud to sacrifice our fortunes and our lives.

We cannot seriously believe that what we have of the four freedoms we owe to our courage and our wisdom. We owe it rather to the courage and wisdom of our forefathers, who wrote our Constitution, and to the Divine Providence that placed enormous resources at our disposal at a distance from the conflicts of the Old World. Do not misunderstand me. We have accomplished much, but when we appraise our opportunities and our obligations we see that it is only a beginning. We are fearful and we are ignorant. Our fear is the result of our ignorance. Our

fundamental error is the overwhelming importance that we attach to material goods. Money is the symbol of the things we honor. Only in war can we be united by the call to sacrifice billions for the welfare of mankind. Only at such a time could Mr. Jesse Jones say without bitter protest from the taxpayers, "We are preparing for war. When you do that, you must throw money away." We are frightened and confused by our inability to use our vast resources to obtain a constant flow of more and better material goods. We are dismayed by the long depression and the collapse of our attempts to deal with it. We are easy marks for those who tell us that the way out of our troubles is to march to Berlin.

Are we so ignorant that we think the way to defeat a doctrine we hate is to shoot at it? Are we so naive that we believe that rearrangements in the material order—land, mines, and waterways—will solve the problems of the world? Are we so child-like as to suppose that the overthrow of the Nazis will bring a just and lasting peace? Are we so frightened as to think that if only the British Empire can be preserved, if only the Germans can be crushed, all the ills that have beset us will automatically disappear?

FUNDAMENTAL PROBLEMS REMAIN

But if we go to war, and preserve the British Empire, and crush the Germans, our fundamental problems will remain. We do not face our fundamental problems by going to war; we evade them. We do not make a just and lasting peace by writing into another treaty the fear, ignorance, and confusion that have marred our efforts to build a democratic community at home. If we would change the face of the earth we must first change our own hearts.

Hitler was right in holding before the German people an ideal higher than comfort. He knew he could not give them that. He offered them instead a vision of national grandeur and racial supremacy. These are false gods. Since they are false, they will fail in the end. But Hitler was half right. He was right in what he condemned, and wrong in what he offered in its place. It is our task in this country to realize the true ideals of human life, the true organization of human society, the true democracy. It is our task to work out a new order in America, not, like Hitler's, based on slavery and degradation, but based on the premise that society exists to promote the happiness of its members and that happiness consists in the development of the highest powers of men. The good life and the just society—not the luxurious life or the powerful state—these are the goals toward which America must strive.

It is America's destiny to reach these goals. It is her duty to the world to struggle toward them. The war to which humanity calls America is the war against poverty, disease, ignorance, and injustice. We must win this war in America now. We can hardly be content with a society in which almost half the people are living below the minimum level of subsistence. We cannot be proud to learn that 250,000 babies were born last year without benefit of medical care. With one-room schoolhouses, scanty libraries, nonexistent art museums, and undernourished churches, vast stretches of our country are barren cultural, intellectual, and spiritual wastes. And too often American justice is the interest of the stronger written into law. We must fight on if we are to win America's war.

To win this war we must have peace. Edmund Burke said to the House of Commons: "Judging of what you are by what you ought to be, I persuaded myself that you would not reject a reasonable proposition because it had nothing but its reason to recommend it. * * * The proposition is peace."

The proposition has nothing but its reason to recommend it. The war to total victory over poverty, disease, ignorance, and injustice has none of the glamor and draws few of the cheers that accompany a war of mutual extermination. But though tyrants may be put down, tyranny cannot be destroyed by airplanes and tanks. Tyranny can be destroyed only by creating a civilization in which people will not suffer so much that they will trade their liberties for the pitiful security which the tyrant offers. The war to create this civilization is our war. We must take advantage of every day we have left to build a democracy which will command the faith of our people, and which, by the light of its example, will restore the democratic faith to the people of the world.

America has been called the arsenal of democracy. It has been called the larder of democracy. Let us make it the home of democracy. This is America's destiny.

Hon. William M. Colmer and Defense Housing

EXTENSION OF REMARKS

OF

HON. E. E. COX

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1941

STATEMENT OF THE RULES COMMITTEE

Mr. COX. Mr. Speaker, several days ago there appeared in a number of newspapers throughout the country in a syndicated column a story concerning my friend and colleague on the Rules Committee, Congressman WILLIAM M. COLMER, of Mississippi, a story which was calculated to do Mr. COLMER a grave injustice. Mr. COLMER in the time that he has been a Member of this House has by his fair conduct, industry, and ability won the esteem of his colleagues and the respect of all who have come to know him.

Because this article placed him in an untrue and false light the entire Rules Committee, both Democrats and Republicans, in an effort to right this injustice have made the following statement:

We, the undersigned, constituting all of the members of the Committee on Rules of the United States House of Representatives, have had our attention called to an article which appeared recently in the newspaper column known as the Washington Merry-Go-Round concerning the activities of one of the honored members of this committee, to wit, Hon. WILLIAM M. COLMER, of Mississippi. The gist of this article is to the effect that Mr. COLMER, as a member of this committee, held up the consideration of the $150,000,000 defense housing bill for some 10 days for fear that the legislation might adversely affect the interest of an iceman in his district.

While the membership of this committee realizes the futility of attempting to answer false statements made about men in public life, nevertheless the article referred to is so unjust to Congressman COLMER and so distorts the facts that the membership of the committee feels that this brief statement should be made in the interest of truth, justice, and fairness.

During the consideration of this defense housing bill, Congressman COLMER, as a member of this committee, in interrogating a witness before the committee, raised the question of the wisdom of the Government spending the money of the taxpayers in equipping low-cost housing units for defense workers with such unusual appliances as electric refrigerators and electric and gas ranges and stoves while all other citizens have to pay for such conveniences out of their own pockets. It was practically the unanimous opinion of this committee that such policy was wrong, and the committee decided to hold the bill and proceeded for several days to question witnesses, including the highest authorities of the Housing Administration. As a result of this investigation an amendment was unanimously written into this legislation by the House when it reached the floor, prohibiting the installation of these appliances in future projects except in rare instances And no Member of the House spoke against such an amendment.

The statement that Congressman COLMER held the bill in the committee for 10 days is erroneous, unjust, and untrue in its entirety. On the contrary, Congressman COLMER from the very first insisted that defense housing legislation was necessary and should be speedily enacted. And on three different occasions during the consideration of the matter he made a motion to report the rule out, giving the bill the right-of-way on the floor of the House. Moreover, he was the only member who made such a motion, and it was upon his motion that the rule was finally reported out.

The members of this committee, who have been associated and served daily with Mr. COLMER for a number of years, have a deep and abiding faith in his ability, integrity, loyalty, and patriotism, and deplore and condemn this unjust attack made upon him.

A. J. Sabath, chairman, Democrat, Illinois; E. E. Cox, Democrat, Georgia; Howard W. Smith, Democrat, Virginia; Martin Dies, Democrat, Texas; J. Bayard Clark, Democrat, North Carolina; Lawrence Lewis, Democrat, Colorado; John J. Delaney, Democrat, New York; W. L. Nelson, Democrat, Missouri; Jack Nichols, Democrat, Oklahoma; Hamilton Fish, Republican, New York; Leo E. Allen, Republican, Illinois; Earl C. Michener, Republican, Michigan; Charles A. Halleck, Republican, Indiana.

Adjournment of Congress

EXTENSION OF REMARKS

OF

HON. FREDERICK C. SMITH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1941

Mr. SMITH of Ohio. Mr. Speaker, I want the RECORD to show that I am opposed to the House adjourning at this time. In my opinion the situation of our country is such as to demand that Congress remain constantly in session.

Organized Labor and National Defense

EXTENSION OF REMARKS
OF

HON. ADOLPH J. SABATH
OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1941

ARTICLE FROM THE ILLINOIS STATE FEDERATION OF LABOR WEEKLY NEWS LETTER

Mr. SABATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Illinois State Federation of Labor Weekly News Letter:

[From the Illinois State Federation of Labor Weekly News Letter, Chicago, Ill., March 31, 1941]

ORGANIZED LABOR AND NATIONAL DEFENSE—OFFICIAL REPORT AND DECLARATION BY THE EXECUTIVE BOARD, ILLINOIS STATE FEDERATION OF LABOR

To Organized Labor in Illinois, Greeting:

The executive board of the Illinois State Federation of Labor, the official State branch of the American Federation of Labor, is in full accord with the declaration of the President of the United States that there should be no unnecessary strikes.

It is the opinion of the board that strikes should be resorted to only after all other means of obtaining adjustment have been thoroughly tried and have failed.

The President has not asked for any sacrifice of either legal or moral rights.

He has simply requested that such rights be exercised with due regard to the national interest.

His very words, brief, but highly significant, carried an implication of sympathy for and understanding of the problems of the workers.

There are within the borders of the State of Illinois approximately 3,000 local organizations connected with the American Federation of Labor, representing the great majority of organized labor in the State.

The board is confident that all have a keen sense of their responsibility in relation to the present national emergency.

This has been apparent for some time past, to such an extent that the number of strikes in which American Federation of Labor unions have been involved in this State has dwindled to the vanishing point. A. F. of L. members and activities are not hampering the defense production in any part of the State.

An intensive telegraphic survey, made by the officers of the Illinois State Federation of Labor during the past 3 days covering American Federation of Labor organizations in every part of the State, shows that there is not a single case in Illinois in which defense work is being hampered by a strike of American Federation of Labor members.

Not one!

The general policy of these organizations is to seek adjustment of difficulties through channels that do not involve stoppage of work in defense industries.

The Illinois unions are being encouraged in this policy, not only by the Illinois State Federation of Labor, but also by the officers of the American Federation of Labor and of the national and international unions with which they are connected.

This applies to all this great army of workers, cooperating with each other in approximately 2,800 local unions and over 200 central labor bodies and councils. All within the borders of Illinois.

Thus, the American Federation of Labor members work on steadily at every defense task where they can obtain such employment, notwithstanding many instances in which they are subjected to uncalled-for irritations by antiunion corporations that resort to subterfuges, and even disregard of law, to avoid recognition of the unions.

Every thoughtful citizen familiar with psychological effects will, we believe, understand that conditions may arise, in some particular case, in which a short strike may become necessary and wise if there be no other way to relieve a steadily growing discontent and unrest that might interfere with production to a far greater extent than a temporary stoppage of work.

The workers in Illinois, as in all America, are free men and women.

We shall continue to remind those whom we represent that the one great test of freedom is the performance of necessary duties without the application of compulsory law.

It is a glorious fact that under the American flag compulsory service in industry and commerce is a forbidden thing. Thus speaks the Constitution!

The highest point of efficiency in any industrial or commercial undertaking or enterprise can only be reached through the willing service of free men. That is a true application and significance of American life.

We have no illusions regarding the unfortunate attitude of altogether too many reactionary employers, particularly among the larger corporations, who seek to obstruct the workers in their right to organize into trade unions to secure improvements in life and labor.

The working people can respond wholeheartedly to the request of the President without yielding themselves to the arbitrary control of such reactionary groups.

The Congress of the United States has given recognition by statute to the organization rights of the working people. Even the most humble laborer in the plant of even the largest antiunion corporation may have recourse to an established governmental agency if he is discriminated against because of union activity.

The day of the "yellow dog" contract is gone.

The Conciliation Service of the United States Department of Labor is at the beck and call of any group of citizens, including trade-union officials and employers, who may become involved in labor controversies.

There is no need to wait for the service of the Conciliation Division until some pending difficulty has reached the acute stage of a threatened strike. The business of the conciliators is to bring the parties at issue together and to develop negotiations that lead to voluntary agreements. The use of the Service does not involve a single dollar of expense on the part of either the workers or the employer. The Division may be called upon in every sort of labor controversy, including intrastate as well as interstate employments.

The new National Defense Mediation Board, which has been established by an Executive order of the President, furnishes an effective means, we believe, whereby controversies may be adjusted when the conciliatory and mediatory activities of the United States Department of Labor fail to bring about a settlement of controversies in defense industries.

The National Labor Relations Board is charged by law with the duty of preventing unfair labor practices by employers against workers, in accord with the act of Congress giving statutory recognition to the right of American labor to organize in trade unions for mutual aid and protection, including the development of fair standards of work and wages through trade-union (collective) methods of negotiation and agreement with employers.

The officers of the city central bodies of the A. F. of L., located in every industrial center, are available at all times for advice and guidance.

Authorized organizers of the A. F. of L. are ready everywhere to assist in bringing about adjustments of difficulties whenever they arise.

The unorganized workers should join the unions of their respective trades and occupations. They should insist upon their rights as free men and women to participate in the determination of the conditions under which they live and work. This they can do now with greater hope of success than ever before in the history of America, without stoppage of work except where the employer is of such an arbitrary character that all public sympathy will run against him.

The American worker is first of all an American citizen. He does not lose an iota of his citizenship rights or duties or responsibilities when he enters the work shop.

The rights that have recently been declared for American labor through acts of Congress and decisions of the United States Supreme Court are valuable heritages which must be passed on to the coming generations without having been sullied or narrowed and restricted, as a result of careless and thoughtless action.

Rights used without due regard to consequences are easily lost.

The irritations caused by reactionary employing interests must not be permitted to drive the workers into activities which may result in their cause and purpose being misunderstood by the general public.

The formation of company unions, controlled by employers, is prohibited by Federal law.

Independent unions, organized solely for collective bargaining, even though not actually dominated by the employer in a manner susceptible to legal proof, are not independent in any real sense.

Much like the slaves of antiquity, these so-called independent unions are prisoners within the barred gates of the employing corporation.

They mistakenly assume that all is well if they are permitted to engage in collective bargaining with the employer, satisfied to be allowed to talk to the boss.

The members of these independent unions have not yet, apparently, learned that the basic conditions of labor are not the subject of collective bargaining but are determined by public laws and regulations enacted by Congress, the State legislatures, city councils, county boards, boards of education, and other public agencies.

It is a continuous, never-ending process in which the trade-unions are always represented and from which the independent unions are always absent.

At this very moment in the Illinois Legislature there are pending over 150 bills affecting the immediate interests of the working people, organized and unorganized.

The trade-union movement is represented by active legislative committees at the State capital every hour of the day and night during sessions of the State legislature.

But the "independent" unions never engage in these highly essential activities, without which "collective bargaining" is almost useless from the point of view of the interests of the workers

These "independent" unions, we repeat, are not independent. They are imprisoned within the estates of the "masters," and are engaged in the dubious task of persuading their misguided members that for them there is

neither hope, nor duty, nor responsibility, outside the borders of the corporation plant.

The trade-unions, on the other hand, are combinations of freemen, organized on the basis of broad citizenship interests. They give constant attention to not only the needs of their own members, but act for the general welfare of all workers, their homes and families, and also of the communities in which they live and work, and of the great American Nation as a whole.

In conclusion, we present some observations in relation to the creation of jobs and the development of trade skills, which are always matters of importance to working people.

The A. F. of L. unions are cooperating with the Illinois Department of Labor, the Federal Government, and the vocational schools in the registration of skilled and semiskilled workers, unemployed or working at nondefense jobs, whose services will be needed in defense industries.

The vocational training conference of the A. F. of L. local unions in the Chicago area, called by the Chicago Federation of Labor (the city branch of the A. F. of L), and scheduled to be held on April 12, for the purpose of cooperating with the Government and the public-school authorities in the promotion of skills for defense work, clearly indicates that the unions are eager to aid the defense program.

There are many A. F. of L. members and other workers seeking employment. They want work.

It is to be expected that the Federal Government authorities in charge of defense production will naturally be inclined to make the greatest allotment to the area most capable of responding with speed and efficiency. One result in those sections of the country will be increased employment and the raising of standards of life. Illinois, located in the very heart of America, is, we believe, well prepared to proceed with loyalty, efficiency, and speed, to respond to the national need. Great defense projects are already under way in the State. There is room for more.

As a final word before closing this report, the executive board of the Illinois State Federation of Labor urges the workers of Illinois to remain calm and steady, notwithstanding the storm of excited debate now raging throughout America in relation to national and international policies.

It is clear that in all the welter of clashing public opinion there appears to be one significant point of general agreement; namely, that in the present state of world affairs the United States of America is warranted in undertaking the greatest defense-preparedness program in all history.

The progress and security of American workers, as of anybody or anything American, depends upon the security of America itself.

Fraternally submitted.

Illinois State Federation of Labor: R. G. Soderstrom, president; Robert G Fitchie, first vice president; Charles E. Driscoll, second vice president; Charles H. Sand, third vice president; M. J. Whalen, fourth vice president; Wm. L. McFetridge, fifth vice president; Mary McEnerney, sixth vice president; M. D. Cox, seventh vice president; John L. Kinsella, eighth vice president; Fern R. Rauch, ninth vice president.

Attest:

V. A. OLANDER,
Secretary-Treasurer,
Executive Board, Illinois State Federation of Labor.

Control of Tuberculosis

EXTENSION OF REMARKS
OF
HON. PAUL J. KILDAY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1941

RADIO ADDRESS OF DR. C. J. KOERTH

Mr. KILDAY. Mr. Speaker, under leave granted to extend my remarks I include the following radio address delivered by Dr. C. J. Koerth, of San Antonio, Tex., outstanding authority on tuberculosis. This address is in support of my bill, H. R. 3492, to confer on the Public Health Service power and authority to control tuberculosis:

Friends of the radio audience, recently when our great leader, President Roosevelt, reminded you of the danger confronting our country and called upon you to support the huge program necessary for the defense of this country, the great masses of the American people arose magnificently in support of this vital plan; and yet, my friends, there moves among us, unnoticed, untrammeled, a far more devastating power than all the dictator powers of Europe, more insidious than the "fifth column," and more ghastly than the most ingenious product of the diseased minds of the mass murderers across the sea. My friends, I am talking about tuberculosis.

On October 16 last 17,000,000 young men registered for national defense. They went willingly, even happily, ready to a man to give their all that we might live decently and without shame. A glorious sacrifice that we pray to God they shall never be called upon to make. Our radios hourly bring us news of the inhumanities in Europe, and we are stirred; our hearts go out to these unfortunate people. That is the American in us, I guess; and yet, right here in our own United States we have with us an enemy more relentless, more deadly than any bomb dropped by the dictators of Europe. There are no air-raid shelters, no warnings, just slow, miserable death, and no indignation by the public when you have been attacked and slain by this foe.

This miserable enemy lurks in the darkness of ignorance and indifference, an alliance more deadly than the well-known Axis.

The problem of health in a city, county, or State is hard and cruel. Cities have grown, people live closer together, and problems of disease grow with the growth in size of the cities. Of course, health problems affect agricultural areas, too, which means public health is also a national question.

Several years ago the Members of Congress saw fit to enact legislation to control venereal and cancer disease. Now, my friends, it has been found that the cancer and venereal bills are great legislation, and are essential to our national welfare—that the grave danger of tuberculosis is underestimated in this country, and the Federal Government should certainly fight it like it does these other diseases. In other words, tuberculosis is a major health problem of serious national proportions.

A land full of public-spirited individuals have recognized the need for combating this menace to our national welfare, and there is now before Congress a fine bill that will establish, extend, and improve measures for the prevention, treatment, and control of tuberculosis, including the provisions of facilities for sanatorium and other care for persons with tuberculosis. This bill is known as Senate bill 195, and its companion House bill, H. R. 3492, which was introduced by our own Representative, the Honorable PAUL KILDAY. The Senate bill 195 is now before the United States Senate Finance Committee, and House bill 3492 is in the Interstate and Foreign Commerce Committee of the House.

Did you know that every single case of tuberculosis represents an economic loss to this country of about $4,000 and, according to the last report, there are 630,000 such active cases in the United States? Can you possibly conceive such tremendous loss? Two billion five hundred and twenty million dollars?

It is true that progress has been made in stamping out tuberculosis. From 200 annual deaths per hundred thousand it has been reduced to 49 over the Nation. That is a fine record. But in some places death is on such a vast scale as to amount to mass murder. Where there are no standards of practice, no facilities, this affects every part of the country, for an infected consumptive goes from one State to another; the disease travels over the Nation. I am not advocating that the Federal Government take over tuberculosis work, but I do believe that the Government should definitely give leadership, as it has in cancer and syphilis.

Now, just what is tuberculosis?

It is a chronic, contagious disease, and one that will attack any part of the body, although it is most frequently found in the lungs, and is caused by a germ. It is a disease that is communicable or "catching."

Tuberculosis is a respecter of no individual, and may attack a lawyer, doctor, minister, rich man, or anyone.

Now, remember, there can be no tuberculosis without a case of tuberculosis in the community, for one case of tuberculosis comes from another. Easily a million people are now suffering with the active disease of tuberculosis who are walking the streets, coughing and spitting, in many cities of our country, and who are not receiving treatment. Why? Is this disease serious? Certainly, for it is the robber of the prime of life. It strikes the greatest number of people in the age group between the ages of 15 and 45, the national-defense age. My friends, it is this period when life is the most precious to the individual and most useful to the family and community.

The saddest part of it all is, that when an individual is stricken with this disease, before he passes on, he will have infected hundreds of people. With the million sufferers infecting others, the misery and pain can only, of course, be estimated.

To fight tuberculosis is not mere humanitarianism, but it is good, sound business.

Tuberculosis will be found in homes, stores, offices, in elevators, kitchens, laundries, nurseries; everywhere in ordinary workaday life these deadly germs are flying like little invisible black birds of death over and about you in busses, schools, moving-picture theaters, churches, sleeping cars, and railroad coaches—and wherever you come in contact with the coughing, hawking, spitting individuals. Some have said that syphilis is the No. 1 health problem, but if you consider how easily tuberculosis is communicated, tuberculosis undoubtedly is the worst. If I am any judge of the information given us by vital statistics, and of what I have seen and do see daily with my own

eyes, public enemy No. 1 to health is tuberculosis.

In the year 1938, the vital statistics records of the United States revealed that 12,000 people died of syphilis, that 30,000 were killed by automobile accidents, while tuberculosis killed 64,000 people, silently and unseen.

Now, here are some ratios taken from the figures I have just given you: Tuberculosis deaths are five times as many as syphilis, and twice as many die of tuberculosis as automobile accidents. By all the records and facts, by emotion and feeling, tuberculosis is the greatest problem, and undoubtedly the most dangerous of contagious diseases.

I can say with truth that there are thousands and thousands of unknown tuberculous people in the United States caused by the tuberculosis dead, and who are in need of treatment but cannot receive it because there are no facilities for the control of the disease.

Now, what is to be done about this?

There must, of course, be local, State, and national action, and I will speak of those phases in order:

Locally, everywhere, the people must wake up to the danger. There must be sufficient facilities. First, public health departments, whose phase will be to a large extent preventive medicine; also there should be visiting nurses, tuberculosis clinics, dispensaries, a lot of education for prevention and care, and, finally, sanatoriums.

That will cost money. All of this and more must be done by all the localities of America.

As to the States: Their work should be generally to assist local units, but also to have State hospitals and other facilities for tuberculosis.

Nationally, the Federal Government should subsidize the public-health features; that is, the preventive medicine. There should be a gigantic national tuberculosis-control plan. It should have its own tuberculosis division with laboratories in Washington, as they have for hogs, cattle, chickens, and animals.

That, roughly, covers the purpose, but the main thing is for Congress to do something about it. Your Congressman will always be glad to get short letters about any subject of a helpful nature, and which letters were written by the citizen himself. So sit down and write a one-page letter and ask them to fight tuberculosis, and vote for Senate bill No. 195, and House bill No. 3492. And don't just ask them to vote for it "when it comes up," but ask them to get the bill on the floor and put it through, for the sake of the people.

I want to read you what a sufferer of tuberculosis has to say about the problem. He is William Garrett Brown, and is widely quoted. He says:

"To protect the public, we (he means tuberculous) must burden ourselves with both expense and trouble."

And I think that this is quite right, for facilities are necessary, and they cost money.

Mr. Brown continues:

"We must constantly take, for the sake of the public, precautions which are disagreeable and costly."

And he then shows how the public neither cooperates nor helps. He says this must be done for their own health and safety.

Then he continues:

"If the public is to continue to be safe from us, if the public is to continue to have our protection from that against which it failed to protect us, then the public must make it possible for us to get it. We do not ask favors, but—the public would get rid of us. The public would pretend, and would have us pretend, that we are nowhere. It thereby insures that we shall be everywhere. It proscribed us, and thereby admits us."

So, I urge you to fight tuberculosis. Fight all diseases, of course, but the war on tuberculosis must be started again, and there must be a hard and persistent fight. What can you do? First, write to your Congressmen and Senators; then, wherever you are, cooperate with your health authorities.

One thing is certain about tuberculosis—it is entitled to as much money as the other major diseases which the Federal Government now helps. Say so; and when you get a solemn sermon on economy, please reply: "Death by preventable disease is criminal, and it should be good economy to prevent it."

Defend America, yes, my friends, defend America, and this means against all of her enemies, disease as well as the dictators in Europe.

Write or wire now, and ask your Congressmen to actively support Senate bill 195 and House bill 3492 for tuberculosis control.

The Government Corrects Pollution—Why Not the Industrial Polluter?

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1941

Mr. MUNDT. Mr. Speaker, many Members may have failed to read the voluminous hearings of the Department of Justice appropriations bill for 1942. For that reason I am asking leave to reprint herewith some testimony found on pages 553 and 554 of the hearings, reproducing a colloquy between James V. Bennett, Director, Bureau of Prisons, and Commissioner of Prison Industries, and Congressman CARTER, of California.

This testimony reveals that the Federal Government is setting a shining example for America as a whole by correcting the pollution of its institutions throughout the country. This is as it should be and the Bureau of Prisons deserves commendation for its public-spirited attitude in this connection.

However, this sensible policy on the part of the Federal Government gives added significance to the need for Federal legislation to control the increasing menace of pollution throughout the Nation as a whole. Why, after all, should taxpayers pay taxes to build pollution-control works for Federal institutions when short-sighted municipalities, backward States, or selfish industrialists dump injurious pollution and raw sewage into the public waters of America? Since Uncle Sam sets the good example, should he not also set the standards which should be complied with by others who are now polluting the country's interstate waters? If pollution is good, why should the Federal Government spend your money to correct it? If pollution is bad, why should the Federal Government hesitate longer about setting up a reasonable and rational program of controlling it?

Mr. Speaker, on March 4, I introduced H. R. 3778, known as the Water Pollution Control Act, which provided a reasonable method for correcting the pollution evil in the public waters of the United States. This bill has the support of all the major conservation organizations in the United States, and leaders of the Izaak Walton League of America were active in helping to prepare this bill. It differs from my previous bill on pollution in that it is more temperate in nature than the bill I introduced in the Seventy-sixth Congress, and provides definite machinery by which a municipality or industry can safeguard itself against any abrupt or drastic application of its provisions to the detriment of such cities or industries. It specifically provides that the bill shall in no way serve to slow down or impede the national-defense-production program. It is as moderate as any legislation on the subject can be and still make definite progress toward correcting the pollution evil; it is probably as rigid as any legislation can be at this time in order to win the popular support necessary to begin the long process of ridding the public waters of America of the menace of unnecessary and unjustified pollution.

SENATOR GILLETTE INTRODUCES COMPANION ANTIPOLLUTION BILL

On March 17, Senator GILLETTE, of Iowa, introduced a companion bill in the Senate to H. R. 3778. Senator Gillette's bill, which is known as S. 1121, is identical to the Mundt bill—H. R. 3778—and it is hoped that hearings will soon be held on this legislation in both the Senate and the House. Those interested in correcting the pollution menace in America are urged to write the Senate Commerce Committee and the House Rivers and Harbors Committee asking that public hearings be initiated on this important legislation. With the Gillette-Mundt antipollution bill written into law, taxpayers will begin getting better value on their money when they appropriate funds to prevent pollution on the part of Federal institutions—they will then not only have set a good example but they will have established a sensible standard for less enlightened and public-spirited groups to follow.

[Citations from House hearings, pp. 553 and 554]

CHILLICOTHE SEWAGE-DISPOSAL PLANT

Mr. HARE. What is the next new item?

Mr. BENNETT. The only new item for Chillicothe is the first increment of $15,000 for the construction of a sewage-disposal plant.

The sewage-disposal plant at Chillicothe was constructed in 1918 by the Army, and was taken over by us. It was not of very permanent design when it was originally built, being merely a temporary wartime camp.

It is now worn out, and the public-health authorities and the local officials have been criticizing us for some time for dumping raw sewage into the Scioto River.

We estimate that, with our own labor, we can rebuild this plant so as to meet proper sanitary and public-health standards for a

total of $35,000, and we are requesting $15,000 for this purpose for the first year.

Mr. CARTER. Will that keep the sewage out of the river?

Mr. BENNETT. Yes; completely.

Mr. CARTER. How many other places do you dump raw sewage into the stream?

Mr. BENNETT. I suppose we dump raw sewage into the stream at four or five other places, but we don't dump raw sewage into the stream where it is the only contamination of that stream.

Mr. CARTER. It would be a good example for the Government to set to clean that up, wouldn't it?

Mr. BENNETT. Yes, sir; I should think, Mr. CARTER, that it would be a splendid example. I certainly think that good sewage plants pay a high dividend in health. We have tried to follow the local practices, although I agree with you that we should set a good example by putting in a sewage plant.

Mr. CARTER. We have had a pollution bill before Congress. In fact, there was a pollution bill that passed both Houses of Congress and got into conference and never got out. It died in conference at the last Congress. That was a bill trying to clean up the pollution all over the United States.

But I think it is a good idea for the Federal Government—and I am insisting on it in every building program that I have anything to do with—to put a sewage-disposal system in whatever the project is.

Recently, in my district, we put in a large naval air station there to take care of 1,000 men. They have a plant there that they installed at a cost of about $75,000, which is much less than I thought it would cost when we started on it. But that treats all of the sewage from this plant, where several thousand men are employed and a good many of them housed there also.

Mr. BENNETT. We try to conform to the local requirements. For instance, at Sandstone, Minn., we were dumping our sewage into the Kettle River, the local river there. But all the local people and the game wardens and everybody else complained about it; and we gradually brought that up to standard.

But this plant at Chillicothe is a brand-new one. This is a complete rebuilding of it to serve the existing population.

Mr. HARE. Is that to be constructed with prison labor?

Mr. BENNETT. Yes, sir. The other item is $12,500 for a vocational shop. That is the second increment of a project approved last year.

Mr HARE. I understood that the sewage-disposal plant was to cost $35,000.

Mr. BENNETT. It will cost $35,000 ultimately. That includes all the machinery, the chlorinating equipment, as well as the sludge beds and the filtration beds, and so forth.

Mr. HARE. The complete plant?

Mr. BENNETT. The complete plant.

Four Defense Strikes Ended

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1941

ARTICLE FROM DEFENSE

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Defense, official weekly bulletin of the Office for Emergency Management:

[From Defense—official weekly bulletin of the Office for Emergency Management]

FOUR DEFENSE STRIKES ENDED—MEDIATION BOARD'S FIRST CASES

Less than 4 days after the National Defense Mediation Board had taken jurisdiction over its first cases, the first of more than 17,000 striking employees were returning to work in all four cases certified to the Board. In three of these cases production was being resumed on defense orders at the request of the Board. In the fourth case the strike was settled in the face of a scheduled hearing before the Board.

The three cases in which production was resumed pending settlement of the disputes by the Mediation Board are Vanadium Corporation of America, Bridgeville, Pa.; Condenser Corporation, South Plainfield, N. J.; and the four plants of the International Harvester Co.—McCormick Works, Chicago; Tractor Works, Chicago; and the plants at Rock Falls, Ill., and Richmond, Ind. In the case of the fourth company, Universal Cyclops Steel Co., of Bridgeville, Pa., within a few hours after the Board had requested settlement, word was received that the dispute had been ended by mutual agreement between the company and the union.

UNIONS AND EMPLOYERS RECEIVE TELEGRAMS

The first four cases were certified to the Board by the Secretary of Labor, in accordance with the terms of the President's Executive order, at approximately 4 p. m. Thursday, March 27. The next morning the Board sent telegrams to the unions and employers in each of the cases requesting, first, "that you agree today to resume production," and second, that both sides come to Washington for meetings with Board panels under the following schedule:

Universal Cyclops Steel Co.—Meeting 10 a. m., March 29. Panel: Frank P. Graham, representing the public; Thomas Kennedy, representing labor; Roger D. Lapham, representing employers.

Vanadium Corporation of America—Meeting, 10 a. m., March 29. Panel: William H. Davis, representing the public; Thomas Kennedy and Roger D. Lapham.

Condenser Corporation of America—Meeting, 10 a. m., March 29. Panel: William H. Davis; George M. Harrison, representing labor; Cy Ching, representing employers.

International Harvester Co.—Meeting 10 a. m., March 31. Panel: C. A. Dykstra, Board chairman, representing the public; Philip Murray, representing labor; George M. Harrison, representing labor; Walter C. Teagle and Eugene Meyer, representing employers.

VANADIUM CORPORATION

The agreement to resume operations in the case of Vanadium Corporation was reached following a short meeting Saturday and a 12-hour session ending at 10 p. m. Sunday night. Under this agreement the Board will hold hearings concerning the issues involved in the dispute, under section 2; paragraph d, of the President's Executive order.

CONDENSER CORPORATION

The agreement to resume operations at the Condenser Corporation plant was reached after a 7-hour conference in Washington Saturday afternoon and night. Under this agreement the company and the union will negotiate their differences while at work, and, in case these negotiations fail, the matter will be submitted to the Mediation Board.

INTERNATIONAL HARVESTER CO.

The agreement to resume operations in the four plants of the International Harvester Co., under terms of a proposal suggested by the Board, was reached before representatives of the union and the company left Chicago for the scheduled meeting with the Board in Washington on Monday.

Gallup Poll

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1941

ARTICLE ON POLL-TAX REPEAL

Mr. GEYER of California. Mr. Speaker, it is interesting to note what the Gallup poll has learned through its sampling of the Nation on the subject of poll-tax repeal.

Under leave to extend my remarks, I am reproducing his release on the subject. This appeared in the papers throughout the Nation under date of April 1, 1941. The article follows:

THE POLL-TAX ISSUE—FIRST STUDY OF PUBLIC OPINION ON POLL-TAX ISSUE COMPLETED BY INSTITUTE IN NATIONAL SURVEY—SENTIMENT IN EIGHT STATES WITH POLL TAXES IS OPPOSED TO ABOLITION, BUT NATION AS A WHOLE VOTES TO LIFT RESTRICTION

(By Dr. George Gallup, director, American Institute of Public Opinion)

PRINCETON, N. J., April 1.—One of the political problems being widely discussed throughout the South is the question of abolishing poll taxes, which are still a requirement for voting in eight Southern States.

Campaigns headed by civic and other groups have been started in nearly all of the eight States to repeal the poll taxes, and a bill has been introduced in Congress by Representative GEYER, of California, to bar the poll tax as a requirement for voting in Federal elections.

With public discussion of the issue just beginning to take shape, the American Institute of Public Opinion has conducted a survey to measure first public reaction to the anti-poll-tax campaign, both in the poll-tax States as a group and throughout the rest of the country. The study is the first of a series which will be conducted by the institute in future months to measure the trends of sentiment on this issue.

Today's survey results reveal three facts about public opinion on the poll-tax question:

1. Throughout the Nation as a whole a large majority of voters are in favor of abolishing all existing poll taxes.

2. In the 13 Southern States public opinion is of mixed complexion on the issue. In the 5 Southern States which have already abolished poll taxes, or never had them, a majority wants to see them repealed in the other parts of the South where poll taxes are still in force.

However, in the eight States which still have poll taxes—Alabama, Arkansas, Georgia, Mississippi, South Carolina, Tennessee, Texas, and Virginia—majority sentiment is still in favor of retaining the tax.

In those eight States the issue was posed as follows:

"Should the poll tax be abolished as a requirement for voting in this State?"

The attitude of persons who have paid their poll taxes and are eligible to vote is as follows for the eight poll-tax States combined:

Poll-tax States

(Vote of persons who have paid their poll tax)

	Percent
For abolishing poll tax	34
For retaining poll tax	59
No opinion	7

The survey also included, however, persons of voting age who, through failure to pay the poll tax, are not eligible to vote. When they are added to the others who have paid their taxes, the combined sentiment is:

Poll-tax States

(Persons who have paid poll tax combined with those who have not)

	Percent
For abolishing poll tax	35
For retaining poll tax	53
No opinion	12

In interpreting these figures it must be remembered that the percentages apply to the eight poll-tax States as a whole, and are not necessarily typical for each of the States individual. Special studies with larger samples are necessary to report sentiment by individual States.

HOW REST OF NATION FEELS

The next aspect of the question is—what is the sentiment of the rest of the South (the five non-poll-tax States), and of the country as a whole?

Here are the findings of the survey on that score:

"Some Southern States require every voter to pay a poll tax amounting to $1 a year or more before they can vote. Do you think these poll taxes should be abolished?"

Vote in 5 Southern States with no poll tax

For abolishing poll tax, 51 percent; for retaining poll tax, 25 percent; no opinion, 13 percent.

Total United States vote

For abolishing poll tax, 63 percent; for retaining poll tax, 25 precent; no opinion, 12 percent.

Florida, Louisiana, and North Carolina formerly levied poll taxes but abolished them in recent years.

The average tax in the eight States with poll-tax requirements is about $1.75. In some States the taxes are cumulative so that a voter might be required to pay as much as $36 before he could vote.

In the early days of the Republic only people who owned property could vote. Poll taxes were adopted in those days as a means of widening the suffrage. By paying a few dollars' poll tax, persons could vote without having to own property.

Contrary to popular impression, the present poll-tax system in the South is of comparatively recent origin, dating back only to the period between 1880 and the early 1900's. The taxes were levied chiefly as a means of combating the popularity of the Populist Party among poor whites in the South.

ARGUMENTS PRO AND CON

Here are some of the arguments on the poll tax which were stressed by persons interviewed in the South by field reporters for the Gallup poll:

For abolishing the tax

A 76-year-old farmer in Hazen, Ark., expressed his opinion to Institute Interviewer Bess Lay as follows:

"You can't find a man in this whole county that voted for the poll tax in the first place; it was just put on and run over the people."

Over in De Valls Bluff, Ark., another farmer felt the poll-tax system encouraged political corruption. He told an institute interviewer. "It's gotten so rotten the way they purchase those poll taxes that the whole poll-tax system ought to be done away with."

From Knoxville, Tenn., Interviewer Roger Johnson reports the following statement by a timekeeper in a textile mill:

"I don't think it's right to make some people pay a poll tax while others in other States don't have to."

A 37-year-old bookkeeper in the same city expressed his view this way:

"Abolishing the tax would eliminate a lot of election frauds and produce more votes and a more democratic form of government."

For retaining the tax

In Kosciusko, Miss., an institute reporter interviewed a 40-year-old farm wife who had this to say in casting her vote to retain the poll tax:

"Poll taxes help pay for the schools and keep the Negroes from voting."

A 30-year-old insurance agent in Virginia, expressing an attitude held by many voters in the survey, said:

"We ought to keep the poll tax because when you pay a tax you're more interested in the results of an election."

One poor white farmer in the deep South was for retaining the poll tax because he thought there were many people who wouldn't take voting seriously enough to be able to vote intelligently. He said:

"Better keep the poll tax because, if we don't have it, some people will just vote 'cause somebody gives 'em a bottle of whiskey or a dollar bill."

Dr. Mohler Honored

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1941

ARTICLE FROM THE WASHINGTON EVENING STAR

Mr. GILLIE. Mr. Speaker, a few days ago an unusual honor was bestowed upon a member of the veterinary profession—Dr. John R. Mohler, Chief of the Bureau of Animal Industry, Department of Agriculture. Dr. Mohler was selected by the District Medical Society to deliver the annual Kober Foundation lecture at Georgetown University, an honor usually reserved for members of the medical profession.

Dr. Mohler was selected for this high honor in recognition of a lifetime of service to science and humanity, particularly in the field of animal diseases which affect humans. His accomplishments in this important field have contributed immensely to the health and security of America.

Dr. Mohler, lecturing before a distinguished and enthusiastic audience, discussed one of the most serious of these diseases—brucellosis, more commonly known as undulant or Malta fever. A report of his lecture is contained in the following story from the Washington Evening Star, which I submit for inclusion in the CONGRESSIONAL RECORD:

[From the Washington Evening Star of March 29, 1941]

MALTA FEVER RANKS WITH ENEMIES OF UNITED STATES, SAYS DR. MOHLER, ANIMAL INDUSTRY BUREAU CHIEF SPEAKS IN KOBER FOUNDATION LECTURE

Dr. John R. Mohler, Chief of the Bureau of Animal Industry, declared last night in the Kober Foundation lecture at Georgetown University that the threat of a serious disease and the menace of foreign military powers have much in common as enemies of this country.

"One of the enemies—and a formidable one—is brucellosis, a disease that afflicts man and his domestic animals," he told an audience of doctors and scientists in Gaston Hall.

Brucellosis gets its name from its discoverer, Sir David Bruce, who first isolated the germs in a herd of goats on the island of Malta in 1887. Frequently it is called undulant or Malta fever. The Bureau of Animal Industry imported 65 goats from Malta a few years later and since then the source of the disease has been traced also to cattle and swine.

Dr. Mohler disclosed the fact that during experiments conducted to bring the "appalling ravages" of brucellosis under control, 11 scientists and helpers of the Bureau of Animal Industry had become infected seriously with the disease, which similates typhoid fever.

"The one death to occur was that of a young helper who became delirious and jumped from a fourth-story window," he said.

HONORARIUM PRESENTED

The certificate and $500 honorarium of the foundation were presented to Dr. Mohler at exercises by the Reverend David V. McCauley, S. J., dean of the Georgetown University School of Medicine, in the absence of the Very Reverend Arthur A. O'Leary, president of the university, who was ill. Present were officers and members of the Medical Society of the District, who chose the Government pathologist for the lectureship honor this year.

Father McCauley paid a brief tribute to Dr. George Martin Kober, who endowed the foundation in 1923, when he was dean of medicine at Georgetown. Last night was his birthday anniversary.

Before the "test and slaughter" plan was put into effect in 1934 in conjunction with the Federal program to reduce the number of infected livestock in this country, Dr. Mohler said brucellosis was taking an annual toll of $50,000,000 from the cattle industry. The campaign for complete control may take years, he said, but it will ultimately succeed. Progress has been made to the point, he said, where the disease is now under control in 350 counties.

Dr. Mohler recalled that Dr. Kober and Dr. Lloyd Magruder, then dean of medicine at Georgetown, with Dr. Emil Berliner, inventor and philanthropist, were among the first persons in this country to witness the laboratory experiments because of their interest in milk-borne diseases.

PASTEURIZATION CUTS TOLL

Pasteurization of milk is the preventive measure for humans, Dr. Mohler said, except in those occupational groups whose work brings them into contact with infected animals.

The Government scientist said that control measures are slow. "Nature was not to be hurried," he explained. "By assembly-line methods man has speeded up production of automobiles and airplanes; but in dealing

with the placid cow our anxiety for quick results is of no avail."

Segregation of cows in "maternity stalls" and the vaccination of calves in general were the approved methods of undertaking control, Dr. Mohler explained. A vaccine is being developed for swine, but no report can be made of it at the present time.

Universal Daylight Saving Time

EXTENSION OF REMARKS

OF

HON. DONALD H. McLEAN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1941

RADIO ADDRESS BY HON. DONALD H. McLEAN, OF NEW JERSEY

Mr. McLEAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered over the radio on March 23, 1941:

I thank the National Broadcasting Co. for the privilege of presenting to a Nation-wide radio audience the purpose of the bill I have introduced in Congress for universal daylight saving. I say "universal" because the plan for daylight saving now operates in a number of States and localities, while others continue on standard time, and it is the purpose of the bill to do away with this conflict and provide for a uniform system of time throughout the country.

The idea of daylight saving is not new. Benjamin Franklin frequently referred to greater use of daylight. In his autobiography he wrote: "In walking through the Strand and Fleet Street one morning at 7 o'clock I observed there was not one shop open, though it had been daylight and the sun up above 3 hours; the inhabitants of London choosing voluntarily to live much by candlelight, and sleep by sunlight, and yet often complain, a little absurdly, of the duty on candles and the high price of tallow." With these thoughts Franklin suggested the pertinent arguments for daylight saving—the benefits of sunlight, recreation during daylight hours, and the conservation of artificial light and the materials necessary to create it.

The daylight-saving plan is not unique nor fantastic. Its purpose is to save an hour of daylight each day during the summer months. The present-day adaptation of the plan originated with William Willett, a London architect, about 1908. He, like Franklin, noticed how deserted the streets were in the early morning hours, even when fully lighted by the sun, and he conceived the idea of moving the clocks ahead an hour in the summer so that the people could have an hour more of daylight. Innumerable objections were proposed. In the British Parliament the legislation embodying the idea was defeated in 1909 and the 4 succeeding years, but more numerous became those who saw advantages in it, and on May 17, 1916, the measure was adopted. It was afterward adopted in France, Germany, Italy, Norway, Sweden, Denmark, Holland, Portugal, and Australia.

The plan does not propose to change either the laws of nature or the habits of man, but it does seek to alter the conditions under which we work and play. Specifically, the bill I have introduced provides that on the last Sunday of March of each year at 2 o'clock a. m. the clocks shall be advanced 1 hour. On the last Sunday in October of each year at 2 o'clock a. m. the clocks shall be turned back 1 hour, putting them just where they were before. It will create no confusion, but it will give an extra hour of daylight from March to November. It merely means that the day will commence 1 hour earlier to sunrise, and terminate 1 hour further from sunset than at present. We merely borrow 60 minutes of the afternoon and loan them to the morning. This will enable us to do more in the early hours of the day, and have more time for recreation in the afternoon while it is yet daylight. The same amount of time for work and the same amount for recreation will be ours as at present—the only difference being that our work and our pleasure will be consummated in daylight.

It was not until 1883 that any sort of a standard of time was determined upon. Until then each community fixed its own standard, depending largely upon the pursuits of the people and the influences of surrounding communities. In those days when important centers were isolated, people in the East had little concern for the habits of life of the people of the West. The development of transportation extended the sphere of influence and importance of the several communities throughout the country, and made them increasingly more dependent on each other. This created a demand for greater regularity and certainty of communication, and, consequently, for a standard of time.

In 1883 there were 77 different times kept by the railroads of the United States. The resulting confusion was so great that a convention of prominent railroad men was called to devise a remedy. They did this by adopting what is now our present system of standard time. Its use by the railroads had such an influence on the life of the country that it was adopted by common consent, but it was not given official sanction until the act of Congress 35 years later.

The first experiment in daylight-saving time in the United States was in 1918. It was adopted as a wartime measure in the interest of public health, conservation, and production. Time and circumstances have again brought the threat of war to our shores. We can no longer hope to avoid war by observing the generally accepted rules of neutrality. The enactment of the so-called lend-lease bill, and the comments of the President and administration leaders since, have fixed our course, which is to provide for ourselves an adequate national defense, and to aid Britain and the other nations resisting the forces of aggression. Because of these wartime activities, conditions today are comparable to those during the last war, and, all measures adopted then are needful now, and should be enacted at once, including the daylight-saving time.

The original Daylight Saving Act proved its usefulness, and remained in effect until the end of the war. Its benefits were so manifest that when it was repealed permissive or mandatory State laws were enacted. These laws have been in effect for many years, and have been gradually extended. Under them daylight saving was in effect last summer in all or part of 16 States—Maine, New Hampshire, Vermont, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Delaware, Michigan, Illinois, Indiana, Georgia, Idaho, and Tennessee. Unwards of 35,000,000 people in the United States experienced its benefits, and good sense requires that these benefits should be extended to the entire country. This year cities like Chicago, Philadelphia, New York, Boston, Buffalo, Pittsburgh, and Memphis will observe daylight saving. It is at once apparent that this will affect adjacent territory where the habits of the people are influenced by life in the larger cities. To avoid confusion and inconvenience resulting from the partial observance of daylight saving, Congress should enact a law applicable to all States. Confusion is bound to exist where some sections of the country have adopted the system of daylight saving, and other sections still operate on standard time. One or the other should be adopted, and the popularity of the daylight-saving plan and its benefits in the present emergency recommend it for adoption at this time.

My own State of New Jersey is one of the States that has continued daylight-saving time since 1918. The experience of New Jersey with daylight saving has been satisfactory, and its example might well be followed by other States. New Jersey is a State of widely diversified interests, in manufacturing, agriculture, and horticulture. Our extensive seacoast and mountain lakes afford ideal recreational facilities and attract throngs of visitors annually. Thousands of our people commute daily to their business in New York and Philadelphia. Returning to their homes in the evening, they are glad to have the extra hour of daylight for work on the grounds about their homes and in their gardens. The demand in my State is not only for the present daylight-saving period but that it be extended for 2 additional months, as I have proposed.

We know that daylight work, free from the strain of artificial light, is the most efficient. Accurate studies show that a majority of industrial accidents occur during the closing hours of the day, when artificial light is required. Work in the morning hours in summer is free from the aggravating discomforts that come with the heat of the day. Daylight saving will provide an additional hour of morning coolness and discourage the need for work under artificial light. When overtime work is necessary, daylight saving will permit more of this labor to be performed by natural light, with resulting increased efficiency.

Polls on the subject of daylight saving have been taken among the employees of commercial and manufacturing establishments, and in each instance a very large majority have favored it. Out of 300,000 ballots cast in one survey 95 percent were voted in its favor.

Some opposition to the plan will come from the agricultural districts, the farmers contending that their work is governed by the rising and setting of the sun, but, if the farmers in those States which have already adopted the daylight-saving program have found it possible to conform to the change in hours, it would seem that the farmers elsewhere would not be seriously inconvenienced.

Daylight is free. Artificial light is costly. Daylight saving will reduce the industrial, commercial, and domestic expenditures for artificial light. Imagine the saving in fuel and electric current if all the lights of the country were turned out for 1 hour each day. Based on the statistics available from the experience during the World War, the estimated saving of fuel during the daylight-saving period would be upward of 5 percent, which is an enormous amount in volume of materials and energy when the total consumption is considered. These resources could be advantageously diverted to the national-defense program.

The encouragement I have received from chambers of commerce and other organizations, and from people in all walks of life, indicates a demand for the adoption of daylight-saving time as the standard summer time for the United States. It is fairly calculated to accomplish valuable economies in our national life; it will be of

special value in the present national emergency; it will contribute to the comfort, convenience, and unity of the home life of many millions of our people, and we all know that home life is the life of America and that which has made America great.

No Strike Need Be

EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1941

EDITORIAL FROM THE WASHINGTON POST

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post for today:

[From the Washington Post of April 2, 1941]

NO STRIKE NEED BE

The outstanding fact about the strike in the soft-coal fields is that, with a little patience and good judgment on the part of the disputants, it could have been prevented. The issues are not complicated. Nor had the operators and miners exhausted the possibilities of reaching an agreement around the conference table. Negotiations had been under way for several weeks but the Conciliation Service had not had an opportunity to explore the controversy fully when the workmen laid down their tools. It was not till Sunday that Dr. Steelman, the Labor Department's chief conciliator, went to New York at the request of President Roosevelt and Secretary Perkins to investigate the threat of a coal strike

Most of the responsibility for the decision to fight it out on the picket lines seems to fall upon the operators. At the beginning of the negotiations the United Mine Workers proposed that work should continue after expiration of the contract with the understanding that if negotiations were prolonged beyond April 1, the new agreement would become retroactive to that date. Acceptance of that reasonable offer would have prevented the strike. Now that the walk-out has technically begun, despite the fact that yesterday was a miner's holiday, that proposal still seems to be the best starting point for a hasty settlement. Fortunately there are indications that a back-to-work order on this basis may soon be agreed to.

The resumption of work while negotiations go forward would not imply, of course, that all the miners' demands should be met. John L. Lewis' bid for wage increases of $1 a day seems to be particularly excessive at a time when the administration is attempting to keep economic relationships on an even keel. Adjustment of these differences, however, is a task for the operators and the U. M. W. aided by the Conciliation Service. The public's concern is that the mining of coal to keep defense industries in full operation shall not be stopped or seriously curtailed. Coal mining, like every other industry vital to the armament program, is now affected with a public interest in a very real sense. The Government cannot tolerate any prolonged shutdown. Realization of that fact should bring about an agreement that will send workers back to the mines before another day has passed.

Harrison B. Quigley Post, No. 72, World War Memorial Association, Palmyra, Pa.

EXTENSION OF REMARKS

OF

HON. JOHN C. KUNKEL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1941

ADDRESS BY HAROLD E. COCKLEY

Mr. KUNKEL. Mr. Speaker, last year I inserted in the CONGRESSIONAL RECORD the remarks of Harold E. Cockley at the seventh annual banquet of the World War Memorial Association and the Harrison B. Quigley Post, No. 72, of the American Legion, of Palmyra, Pa. Mr. Cockley's remarks at that time were found to be of great interest.

At the eighth annual meeting of the same group held on February 14, 1941, Mr. Cockley gave what seemed to me a very graphic and striking description of the events which are occurring in the world today and of the challenges which these events present to us. His remarks follow:

Comrades of the American Legion, fellow members of the Memorial Association, honored guests, and all our friends, once again I take real pleasure in greeting you and bidding you a cordial welcome. We are glad to have you here. All of you seem to be in a happy frame of mind, and we are going to do our best to keep you that way the entire evening. For the past 8 years we have been meeting together on occasions like these; an evening for which we plan and look forward to with a great deal of interest, for it gives us an opportunity to meet and chat with friends, many of whom we do not see at any other time of the year.

It seems such a short time since we met here just 1 year ago. Truly a year of swiftly moving events at home and abroad, that it is hard to realize so much could actually happen in 1 year's time.

We have seen democratic nations, much like ourselves, desiring nothing but peace with their neighbors, struck down and enslaved by the legions of a war lord crazed with power. We were shocked at the quick collapse of France. We were shocked at how the deadly effects of propaganda and intrigue had poisoned the minds of many of the French people. We saw the courageous stand of the French soldier, fighting with inferior weapons, giving his all, yet knowing he had been let down, sold out by unscrupulous political groups who placed their own selfish desires ahead of love of country, and their liberty loving nation died on the battlefields of Flanders.

Today we see the people of England facing the greatest crisis in all their history, but meeting it with remarkable courage, and amazing fortitude in one common united effort. Today England is not fighting for empire, not fighting for king, not even for the dynamic Churchill, but England is a courageous people fighting for their ideals of social justice, freedom, their way of life, and for this they are taking such punishment as perhaps no other nation could absorb.

We in America continue to enjoy peace but we know that our peace is threatened. Danger signals are ahead, and we are in the midst of a gigantic preparedness program. These are days when we hear much talk of defense and what constitutes our first line of defense. Arguments have been brought out for large two-ocean navies, powerful air forces, highly mechanized armies, but I wonder if our REAL first line of defense is not within our own individual bodies. What is our attitude to all this? Do we have the will and courage to see this thing through? Are we willing to accept our responsibilities? Or are we in favor of this defense program just as long as it doesn't cost us anything or interfere too much with our own personal desires? Surely events of the past several months should tell us that democracy as we know it, is pretty much on trial, and that nations who are not READY or WILLING to defend their liberties may lose them.

Freedom and democracy, like good health, should receive good care. Many of us are not reasonably concerned with our health until we lose it. Then we make frantic gestures, trying to recapture it. Oftimes, too late. We should realize that democracy is not just a trophy or an heirloom handed down to us, stored away and only to be admired on special occasions; but it is a living, vital force constantly exposed to the ever-changing conditions of society, and the contaminating influence of those elements who ever seek to destroy it. We are a people of many privileges, but privilege carries with it responsibility. There is no doubt that we will have to face issues of vital importance. Perhaps it may help if we turn back a few pages in history and note the manner in which those early colonists accepted their responsibilities, of the hardships and suffering endured in their unyielding struggle to live as a free people.

Try to fix in your minds, the suffering of a ragged, starving Continental Army on the bleak and barren hillsides at Valley Forge. Try to fix in your minds the courage and heroism unsurpassed in the terrible human sacrifice at Gettysburg. Today, many monuments mark that historic shrine, outstanding of which is the "Eternal Light," a memorial to peace. It is also a memorial to a very tall, gaunt, careworn man who labored for peace, whose only thought was peace and unity for the people he represented. Receiving word of the third day's fight at Gettysburg, he kneels in the presence of Cabinet members in humble prayer that his Nation would not be divided.

In the great cemetery at Arlington, a sentry paces back and forth in eternal vigilance before a tomb where lies one unknown, who, with thousands of others, some of them companions of our youth, accepted their responsibilities in all that that term implies.

These and many more are stories told of courage, toil, privation, and much sacrifice. It is why we enjoy the priceless privileges we do today. Nor should we forget the thousands of unnoticed, unsung heroes of those early days, such as teacher, preacher, so-called country doctor, tending and helping body and soul, receiving little or no reward, expecting none, theirs a service to humanity. Today throughout the entire land are thousands of research laboratories, modernly equipped hospitals, great universities, and magnificent cathedrals, which are, in truth, fitting memorials to those men, who so unselfishly gave lifetimes of service to the ideals of democracy and, above all else, love for their fellow men.

I daresay all of you here tonight, have at some time or other thrilled to the words from the pen of Irving Berlin, sung by Kate Smith, as only she can sing it, "God Bless America." When we hear that song, let us be ever mindful that we, too, have a duty to perform; that we can and will accept our responsibilities; that we will do our utmost to protect these cherished ideals of justice,

freedom, our way of life. And when called upon we will gladly make sacrifices for the America that we know—for the America we want to keep.

Vermont Federation of Labor Endorses Plumley's Stand

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1941

LETTER FROM VERMONT FEDERATION OF LABOR

Mr. PLUMLEY. Mr. Speaker, under leave to extend my remarks I insert the following letter:

VERMONT FEDERATION OF LABOR,
Sheldon Springs, Vt., April 1, 1941.

Hon. CHARLES PLUMLEY,
Representative to Congress,
Washington, D. C.

SIR: It is with pleasure that I read in the Free Press this morning of your stand in regards the strikes in our national-defense industries. Now, as president of the Vermont Federation of Labor, I wish to congratulate you, and to say that the Vermont Federation of Labor stands solidly behind the national-defense program, and will cooperate to the fullest.

I wish to state here that I am utterly disgusted with these strikes, as are most of the workers in this State, and from past experiences we know that most of these are engineered by un-American leadership within the ranks of labor; and the quicker they are outlawed the better.

I am a member of the American Federation of Labor, and if they go in for strikes as the C. I. O. are now doing I would denounce them as quick. That is the way I feel. Once again, congratulations. Let us keep Vermont above the rest in Americanism.

Very sincerely,
CARMI G. COMINGS,
President, Vermont Federation of Labor.

Industrial Understanding Is Democracy's Best Defense

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 2, 1941

ADDRESS BY RALPH HAYWARD, PRESIDENT, KALAMAZOO VEGETABLE PARCHMENT CO.

Mr. SHAFER of Michigan. Mr. Speaker, under permission to extend my remarks, I include the speech Industrial Understanding Is Democracy's Best Defense, delivered by Mr. Ralph Hayward, president of the Kalamazoo Vegetable Parchment Co., at the American Paper and Pulp Association's meeting in New York, February 19. The speech follows:

Industrial understanding is the foundation of sound and permanent industrial relationships. It is even more than this—it is the line of defense against the forces which are trying to attack and destroy our system of free enterprise and democracy.

For many years all the industrialized nations of the world have been passing through a social evolution and an industrial revolution. This industrial revolution has been directed against the theoretical concept of capitalism and free enterprise. Many countries have passed over to state capitalism under various names such as communism, nazi-ism, fascism, etc. It is even possible to adopt these philosophies under the name of democracy.

Along with this has been a struggle by the various countries to control the resources, production facilities, and trade. Back of all this turmoil is an effort by various nationalities to provde security for their people at the expense of the other peoples of the world. The net result of this struggle to date has been the practical destruction of all security for all people, and a lower standard of living than they should enjoy. The last World War and the present one are both outbreaks in this struggle. When the war ends, there is still no assurance that this basic conflict will not continue.

REGIMENTATION DESTROYS DEMOCRACY

This country offers a good example of this paradox. We are spending billions of dollars and training millions of men for the defense of freedom and democracy. At the same time we are moving directly toward complete regimentation of industry and a nationally planned economy. It is not commonly understood that free enterprise, operating under reasonable regulation, is democracy. When you completely regiment industry, you destroy democracy. We are buying a one-way ticket, station by station, on a road leading to an unknown destination. The scenery along the way is beautiful and each station is fascinating. What the ultimate destination will be no one knows; but it may not be entirely to our liking. You can be pretty sure that it will resemble the conditions that are found in some of the foreign countries, where they have already completed the journey.

The control of industry can only be administered finally by control of the press and control of all means of spreading education and propaganda. This leads to restrictions on freedom of assembly, freedom of worship, freedom of the courts, and all other freedoms as we now know them. The experience of every country that has passed through this change shows that it is necessary for the Government to remove these freedoms in order to plan, control, and operate industry.

Nazi-ism and fascism are only the practical, realistic operation of a politically controlled economy where industry is privately owned but completely regimented. In the last analysis the working people suffer most from such a program of regimentation. They not only lose their freedom and security, but also the opportunity of improving their position. The inefficiency that develops results in a lower standard of living for all people.

UNIVERSAL MISCONCEPTIONS

In every country, there is a universal concept of capitalism and free enterprise, which is repugnant to a large majority of the people. This you would expect because it has been the basis of our economic teachings and the foundation of most of our political speeches. Inasmuch as this revolt is against what people think of capitalism, should we not examine this concept and see if it represents conditions as they exist today? What do people think about the capitalistic system and the operation of free enterprise?

First. That capital is an intangible, impersonal, selfish entity that seems to be associated occasionally with a few people controlling unlimited volume of wealth.

Second. That capital controls the raw materials and the equipment for carrying on the production processes.

Third. That industry is operated solely for the selfish interests of capital without regard to any social responsibility that it may have.

Fourth. That there is a perpetual struggle between capital and labor and between capital and the public interests.

Fifth. That the basis of industrial operation is to hire labor at the lowest possible wage, provide working conditions only good enough to insure a high degree of efficiency, and even working conditions that have no regard for the safety of the worker.

Sixth. That men should be worked as hard as possible, as many hours as possible, in order to get the most out of them at the lowest possible cost.

Seventh. That capital hires and fires labor without regard to the social problems that it creates and without regard to individuals.

Eighth. That it takes no responsibility whatever for the older employees, and that it seeks, wherever possible, to employ child labor in order to still further reduce its costs and increase its profits.

Under this concept industry is pictured as selling its products at the highest possible price that the traffic will bear without regard to the public interest, even going to the extent of creating monopolies in order to further this end. After operating the business on this basis fabulous profits are supposed to be distributed to a few stockholders and excessive salaries to the executives of the industries. Industrial leaders are pictured as economic royalists and privileged princes, holding the masses in economic slavery.

A NEW PHILOSOPHY

If this concept were true in its entirety, there certainly would be just cause for an industrial revolution and most of us would be active in the movement. During the past generation, tremendous changes have been made in the operation of industry and a new philosophy has been developed which is not appreciated or understood. It is of vital importance to our company that we modernize our views of the capitalistic system and develop a better understanding of the real functions of industry. If this old concept is not changed in the minds of the people, nothing can stop our passing into a state-controlled economy.

The job of removing confusion from the minds of people is the real battle line of freedom and democracy. If the battle is not won on this front, all will be lost in the end. It is the most important responsibility facing business and industry today.

Will we drift into a totalitarian state by the German route of national bankruptcy? Or by the French route of selfishness, indifference, and corruption? There is not a manager of industry who would not respond to a call to arms to protect America and the American way of living. Will they meet this challenge of defending our country against the destructive forces of ignorance and lust for power, without having the emotional appeal that comes from a united war effort?

During the past few years there has been a tremendous effort on the part of industry to develop a better understanding of the functions and service of industry and its problems of operation. These need to be further analyzed and any abuses that may exist should be corrected. When this is done, an

intensive educational program should be carried on. If the leadership of industry accepts this responsibility, you need have no worry about the future of free enterprise and democracy.

CHANGES IN INDUSTRIAL SYSTEM

What are some of the changes that have taken place in our industrial system during the past generation?

The ownership of industry has spread to more and more people throughout the land. By far the majority of our people have some direct ownership in business. Those who do not own stocks in our industries have an indirect interest through their savings accounts and life insurance policies.

High wages are an asset to our industrial system. This is understood and accepted by industry and is practiced quite generally within the limits of our competitive system. Nearly half of our manufactured products are purchased by the people who produce them. Their purchasing power must be maintained on as high a level as possible.

We must keep in mind that approximately two-thirds of our population are not engaged in industry and that they consume the majority of our manufactured products. Their purchasing power must be kept in balance with that of the industrial worker. If industrial wages and prices are too high, their purchasing power will be limited and the market for manufactured goods will be restricted.

Nearly half of our population are engaged in agriculture. Their purchasing power must be kept in balance with those engaged in industry. Maintaining this balance by taxing industry and subsidizing agriculture seems very cumbersome. International trade also is a limiting factor on both agricultural and industrial prices.

DISTRIBUTION OF INCOME

The ultimate distribution of the income of any company is simple to trace. Generally, 60 to 70 percent has to be paid for materials, supplies, or fixed charges, leaving only 30 to 40 percent to be distributed between employees and stockholders. Of this money available for distribution, employees have been receiving regularly from 65 to 90 percent. If you trace this distribution from the start of the raw materials through the various processes of conversion to the point of ultimate consumption, including transportation, you will find that this same ratio holds at every point.

Labor today is receiving from 85 to 90 percent of the wealth that is created. These figures are confirmed by a study made by the Department of Commerce. The real profits of industry are represented by the money that remains from sales after paying for materials, supplies, and other fixed charges. These profits have been and are now being shared between the employees and the stockholders.

The employees have been receiving 90 percent of these profits with only the risk that comes with the variations in our national economy. The stockholders' share varies from year to year with varying conditions and ranges from nothing up to 15 percent of the real profits, which, on the average, represents a return of 3 to 4 percent on their investment. These facts are not understood by our economists and politicians, so you can hardly expect them to be understood by those employed in industry.

HOURS OF WORK

During the past generation, the hours of work have been consistently reduced. This reduction has been possible because of the intensive mechanization of industry. Labor has shared in this improvement to an equal or greater extent than capital. Although many social organizations claim credit for this reduction, it has, to a large extent, been a voluntary movement on the part of industry. It would not have been possible if manufacturing methods had not been improved. Scientific application of power has reduced most of the drudgery that used to exist and the majority of workmen today are operators.

NEW PRODUCTS

Industry is quite generally carrying on a very extensive research program. The results of this have been the development of innumerable new products and improvements in existing products. New ways are being found to produce these products more economically and they are being made available to all people.

Fear has been removed to a large extent as a means of enforcing discipline in our industrial system. There is still room for improvement in this direction. The use of fear as a means of maintaining order and discipline is not compatible with our democratic system. We need more inspirational leadership on the part of our supervisory force. Security is uppermost in the mind of every individual. Management has been very hesitant about giving assurances along this line.

An examination of the service records of any company would show that a great deal of security has been enjoyed by a great many people. A positive statement of desire and intent from management along this line, with emphasis on the records from the past, would help materially in settling this question in the minds of a great many people. Individual recognition is desired by everyone and everyone likes to feel that he is a necessary and important part of an organization and wants to know more about the part he plays in the operation of a company. You can only obtain the best in workmanship in a friendly, appreciative atmosphere.

DECLARATION OF PURPOSE NEEDED

Has industry not advanced far enough to define and positively state that its purpose is that of a public service? Are we not ready to declare that each company is a cooperative enterpr'se? The stockholders contributing of their resources for the supplying of buildings, equipments, and materials for the manufacturing processes—and the employees contributing of their time and their talent for the converting of these materials into something that will be of service to the balance of society. Each has a common interest in the success of the enterprise. There can be no basic conflict between them. If either tries to profit at the expense of the other, both will lose in the long run.

If this cooperative enterprise is to succeed, it must render a real and valuable service to its customers or the public, so that the rights and privileges of the customers must always be taken into account.

The manager of a company represents the employees as well as the stockholders in every business transaction; first, in directing their efforts in manufacturing and then in selling their services to the public.

In view of the fact that management is the leader of both employees and stockholders, and in view of the fact that there is a question of the distribution of real profits, will not the time come when collective-bargaining negotiations will be carried on between committes representing the stockholders, employees, and the public? Management would then supply all of the facts and figures relative to the operation of the business for all to consider.

MANAGEMENT'S RESPONSIBILITY

It is the job of management to see that justice prevails between these three groups—customers, employees, and stockholders. The permanent life of a business depends upon keeping a perfect balance between these three.

Under this policy manufacturing should be carried on as efficiently as possible, and the product should be sold to the public at a price which would be fair to them and still permit the maintenance of good wages and good working conditions, as well as a fair return to the investors.

There should be some surplus left which can be used for plant improvements in order to continue to give better service to all groups. Plant improvements are of vital interest to both employees and stockholders. Such a program is their assurance of work and income in the future.

If a company accepts the concept that it is a cooperative organization for rendering a public service, it can go before its employees and stockholders with an industrial-relations program that is founded upon bedrock and can build relationships that will stand the test of time. As more companies recognize these relationships a new concept of economics will develop which can be understood by everyone, for it will be based upon fundamental truths.

A GREAT OPPORTUNITY

Cooperative free enterprise, operating in a democracy, can outproduce and outlast any totalitarian state and can provide the best in living conditions that any economy can support. The development of industrial understanding offers management its greatest opportunity of performing a valuable public service. Work in this direction will bring profit to both employees and stockholders. It is of even greater importance than the maintenance and development of equipment and the promotion of sales. The future of freedom and democracy hangs in the balance. Management must accept this responsibility and do the job.

Control of Strikes

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, April 3 (legislative day of Monday, March 31), 1941

LETTER BY E. MERRICK DODD

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the RECORD a letter to the New York Herald Tribune, written by Prof. E. Merrick Dodd, Jr., of Harvard University, on a plan to eliminate strikes.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of April 3, 1941]

TO ELIMINATE STRIKES

PROFESSOR DODD, OF HARVARD, FAVORS MEDIATION INSTEAD OF HASTY, REPRESSIVE LAWS

To the New York Herald Tribune:

Although the extent to which our national program of production for defense has been delayed by strikes in defense industries has been exaggerated by many persons, there is no doubt that the problem of strikes in such industries is a serious one. The total number of man-hours which were lost through strikes was lower in 1940 than in any recent year, but the number of strikes has increased substantially during recent months, and some of these strikes have seriously delayed production at

strategically important points. It is essential to our defense program that the production which it requires shall be carried out with all possible speed, and that means that ways must be found of eliminating strikes, or, if that is impossible, of reducing them to a minimum.

The problem is a very difficult one. Although labor in defense industries is doing work which is essential to national defense, it is not working for the Government but for private corporations which are engaged in business for profit. Disputes between such employers and their employees as to the proportion of the employer's total receipts which shall be paid out in wages, as well as disputes as to other conditions of employment, are bound to occur in many plants. When they do occur, labor has no choice (in the absence of provisions for mediation or arbitration) except to surrender to the employer or to put pressure on the employer by a collective refusal to continue at work. An attempt to deal with labor disputes in defense industries simply by outlawing strikes would, if it could be enforced, weaken labor's bargaining position in its disputes with employers to such a degree as to cause grave injustice and bitter and justifiable resentment.

If we are to eliminate strikes, we must find means by which labor's claims will be given a fair hearing before some body or bodies which are more impartial than labor's employers. The problem of setting up adequate machinery for that purpose involves an understanding of what the commoner causes of labor disputes are—for labor disputes are of varied types and it is a mistake to assume that the same methods will be suited to the settlement of all of them. The establishment of the new National Defense Mediation Board is not an attempt to deal with the whole subject of labor disputes. The Board is to act only after other efforts to settle the dispute, including those of the Commissioners of Conciliation of the Department of Labor, have failed. There is much that can and should be accomplished to prevent disputes from reaching that stage.

In many cases in which disputes exist the plant is being operated under an existing agreement between the employer and the union There are two kinds of disputes which arise in such cases—disputes as to whether one or the other party is living up to the terms of the agreement, and disputes as to the extent to which the agreement should be modified when it expires because of changed conditions. Well-drawn labor agreements provide machinery for adjusting grievances of the first type, and the Government should encourage the insertion of similar provisions in all labor agreements in the defense industries. In addition to providing a method for adjusting grievances, such agreements should provide that there will be no strikes or lockouts while the agreement is in force.

The problem of renewals is more difficult. Here the agreement is about to expire and the parties may differ radically in their views as to the terms on which it should be renewed. The Government can, however, use its influence to induce the parties to agree that work will go on while negotiations for a new agreement are pending or while the dispute (if it proves to be incapable of settlement by negotiations between the parties) is being submitted to Government mediation agencies.

The objection sometimes made by labor to such an agreement is that it gives management the power to drag out negotiations and meanwhile to avoid a wage increase or some other change to which labor believes that it is entitled. Arrangements for invoking the services of Government mediators at an early date would adequately meet that objection.

Where a plant is being operated without any agreement with a union a dispute will often involve the issue of recognition of the union, perhaps with an additional controversy over wages and working conditions. The National Labor Relations Act guarantees labor the right to organize, to bargain collectively with the employer through representatives of labor's own choosing, and to be protected against certain antiunion activities which the act refers to as unfair labor practices. The National Labor Relations Board is the governmental agency which has been set up to assure labor that the rights given to it by this act will be respected.

Questions arising under this act are often complicated and, since important legal rights are involved, the employer has the right to appeal to the courts from the decisions of the Board. Such lengthy legal battles lead to impatience on the part of labor, particularly where it believes that the rights which the statute guarantees it have been violated and that the employer's appeal to the courts is a deliberate effort to keep labor out of its enjoyment of its legal rights as long as possible. The situation is one for which it is not easy to find a solution, but in many cases the Labor Relations Board can do a good deal to alleviate the tension by the prompt holding of an election to determine whether the union is, as it claims to be, the authorized representative of a majority of the employees.

Although disputes arising out of labor's attempt to assert its rights under the National Labor Relations Act are a very serious cause of friction in a few important cases, the overwhelming majority of labor disputes are not concerned with legal rights but with the inability of the parties to agree on terms on which they are willing to work together. Government mediators have thus far been able to settle most of these disputes in short order once their services have been invoked. The President's Executive order establishing the National Mediation Board calls upon employers and employees in defense industries to furnish the Department of Labor and the Office of Production Management "sufficient advance notice of any threatened interruptions to continuous production as will permit exploration of all avenues of possible settlement of such controversies so as to avoid strikes, stoppages, or lock-outs."

With this prospect that mediation by these agencies will begin at an earlier stage in future disputes, and with the certainty that the efforts of the Conciliation Service of the Department of Labor will henceforth be supplemented by those of the new Mediation Board, which represents labor and management as well as the public, the country has taken a long step forward in the establishment of more effective methods of assuring that stoppages of work in defense industries will be prevented.

No doubt there are many who feel that the new machinery ought to be supplemented by some form of compulsion, that what is needed is compulsory arbitration, or at least a compulsory "cooling" or waiting period, during which strikes are declared illegal. Compulsory arbitration has not been a success where it has been tried and is widely regarded by those who had experience in the settlement of labor disputes as a hindrance rather than a help in bringing about the kind of cooperation between labor and management which we need in order that our defense program may go forward with all possible speed. Although the Mediation Board has no power to compel acceptance of its proposals, pressure of public opinion will generally deter either party from disregarding the Board's recommendations for the settlement of a dispute.

It has, however, been asserted in many quarters that even though compulsory arbitration would be unlikely to be successful a compulsory waiting period should be established so that there would be ample opportunity for settlement of disputes before they resulted in a stoppage of work. The importance of keeping the wheels of the defense industries turning while the mediators are ascertaining the facts and formulating their proposals is obvious. But many of those who have most experience with labor problems believe that this objective is more likely to be attained by seeking the voluntary cooperation of labor union leaders than by a statutory prohibition that would be very difficult to enforce.

It will not contribute to the success of the defense efforts to arouse the fears of labor that defense is being used as an excuse for depriving labor of hard-won rights. The strike is labor's normal method of enforcing its demands for what it regards as fair treatment. Because of the seriousness of the emergency, we are now seeking to substitute negotiation and mediation for the strike as a method of settling disputes. Our present need is to encourage the making of collective agreements between capital and labor and to encourage resort to mediation where the parties are unable to agree. Now that the new Mediation Board has been established, it should be given a chance to win the confidence of capital, labor, and the country without complicating its problems by the injection into the picture of controversial legislation of dubious efficacy.

E. MERRICK DODD, JR.

CAMBRIDGE, MASS., *April 1, 1941.*

Col. Charles A. Lindbergh

EXTENSION OF REMARKS

OF

HON. WILLIAM H. SMATHERS

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, April 3 (legislative day of Monday, March 31), 1941

ARTICLE BY BEATRICE M. JONES

Mr. SMATHERS. Mr. President, I find written in the Winter Haven Daily Chief of Winter Haven, Fla., an article by Beatrice M. Jones, on the subject, Lindbergh—Public Asset or Liability? which so thoroughly expresses my appraisement and opinion of Mr. Lindbergh that I ask unanimous consent to have it published in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Winter Haven (Fla.) Daily Chief]

LINDBERGH—PUBLIC ASSET OR LIABILITY?

(By Beatrice M. Jones)

One of the most bitter pills to swallow, man finds, is the realization that his idol's feet are made of clay.

When Charles A. Lindbergh flew the Atlantic in 1927 and arrived at Le Bourget Field, outside of Paris, not only the United States, but the world as well, acclaimed his feat. He became America's favorite son, and on no one has this country lavished greater glory, praise, and affection. After his triumphant return from France, he made an air tour of the

United States, visiting every State in the Union. This was followed by a good will tour to Mexico, upon the invitation of President Calles, and from Mexico the tour was extended to South America. His place in the heart of his country was assured.

NEWSMEN FIRST PIQUED

It was not very long after this that rumors circulated that Colonel Lindbergh was anything but popular with newspapermen. Reporters and cameramen alike spoke contemptuously of his petty vindictiveness, of traits that were unbecoming a man of Lindbergh's position. Because these impressions were confined mostly to the profession, not much of it leaked out to the general public, and what little did was dismissed as envious backbiting. Unfortunately, most of it was true, for the men who were sent to cover Lindbergh's arrivals and departures were men long accustomed to meeting and interviewing great men, and they resented, and properly, the unpleasant incidents that always marked their attempts to secure cooperation from Colonel Lindbergh. "Swelled head" was one of the least opprobrious stickers affixed.

When the Lindbergh boy was kidnaped, and all through the subsequent pain and grief, America mourned with the parents, and well-meaning people cluttered the efforts of the investigation in their genuine desire to help.

In December 1935 Lindbergh decided to shake the dust of America from his feet. Opinion was divided between condemnation and condonation. It was difficult for many people, though, to understand the quirk of character that caused Lindbergh to censure all the American people for the acts of a maniac, and a foreign-born one at that, or for the inevitable publicity the case provoked.

His reasons for leaving were announced by friends 2 days after the ship had sailed from American waters, and, if memory serves us correctly, it was to find privacy and a refuge in England.

ENGLAND WELCOMES HIM

England made him welcome, provided a home for him and his family, and literally gave him the key to the island. How he was to repay that hospitality England was to discover to her sorrow.

In the various aerial trips the Lindberghs made no one could deny the colonel's ability to plan air routes and make proper preparations, reduced their hazards to a minimum. This article is in no wise an attempt to belittle the air pilot, navigator, and technician that Lindbergh undoubtedly is, but is a protest against the assumption that in like degree he knows everything about everything else; in short, that he is an expert. This assumption is as fallacious as the colonel's reasoning on international affairs.

When Colonel Lindbergh visited Russia, France, and Germany, coming events were shaping in Europe, events that were casting their shadows before. He was interested in the air forces of the different countries, particularly of Germany and Russia. And in this connection, we must not forget that wherever he visited he saw only what he was intended to see, no more. Whether he saw all of Russia's aerial might we shall never know, but it is known that he spoke quite disparagingly of Russia's air force to English officials. Many informed observers felt that Russia as a European power would have been included in the Munich Pact and not ignored as she was if Lindbergh had minded his own business. And while this writer holds no brief for Russia, it would have helped the democracies today to have Russia with them instead of with Germany, however nebulous the Russo-German collaboration may be. Yet this same man took to the radio to tell the American people, during the hearings on the lifting of the arms embargo, that the President of the United States was meddling in European affairs. But for an observer, without diplomatic or military status, to so meddle was perfectly all right, we can infer from the colonel's actions. The President of the United States was uninformed, our military attachés were blind, but Lindbergh "knew." Ah, vanity!

NAZIS SOW PROPAGANDA

The most potent weapon of the Nazi machine is its propaganda. There are no "dumkopfs" among the Nazi officials, and the importance of Lindbergh's visit was not lost upon them. They made hay while the sun shone and created a lasting impression upon him. Just as was the Sudetenland, Austria, et al., the United States is on the Nazi agenda, and it was not too early, when Lindbergh paid his visit, for the Nazis to lay the groundwork for future use. Just as in Norway there was a Quisling, and in France a Laval, the Nazis wanted to be sure there would be someone in the United States to preach defeatism, German invincibility, and to caution collaboration with Germany instead of opposition. Also to speak of negotiated peace.

The Nazis have won practically all their triumphs so far, because a few men in positions of importance and trust in each country, assured the public that "Germany cannot be beaten," and it was better to work with the Nazis than to be obliterated by their war machine. It worked with most of them, but it failed with Britain, for the British don't scare easily, and neither do Americans, and we can attribute our similarity of character in this respect to the fact that we are free people, free to think, free to read, and free to speak as we choose.

In his various radio speeches, pleading for isolationism, Lindbergh spoke of the "haves" and the "have nots" of Europe, and made it abundantly clear to all who listened, that his sympathy was with a poor, abused Germany because she did not possess as much as the British Empire, overlooking or more probably, deliberately ignoring the fact that the British Empire is no longer an empire but a loosely knit commonwealth of free dominions that are held together by a symbol, the Crown. And these dominions were colonized and built up by those who settled in these outposts and made them their homes. They were not exploited as were the possessions of Germany and Italy and other countries who drained their colonies dry of their wealth and abused their peoples.

LINDBERGH AIRS VIEWS

In none of his speeches criticizing the President of his country did Lindbergh once criticize the dictators. Never once did he speak of what has happened to freedom of speech, of press, and religion on the continent of Europe. Never once was his voice raised in behalf of the "have nots" of Czechoslovakia, Austria, or Poland. And to this day he has never publicly denounced the invasion of the Low Countries, of Denmark, of Norway.

It seems more than coincidental that Charles Lindbergh, of Swedish origin, should be an isolationist Member of Congress in the first World War, and his son, Charles A. Lindbergh, should follow the same pattern in this second World War, and that the only country unravished today by the Nazis in their swing to the north and east, is Sweden. Is this the kind of collaboration Colonel Lindbergh has in mind for the United States, a lesser satellite in the Nazi orbit? Sweden is theoretically neutral, but so wholeheartedly pro-German that Hitler does not have to go into Sweden to "protect" them. In the first World War, Swedish police and military searched the houses of the people, to take whatever food they could find to ship into Germany to ease the rigors of the British blockade. Certainly Germany then and Germany today had nothing to object to in Sweden's official attitude.

When Lindbergh testified recently before the committee conducting hearings on the lease-lend bill, his Anglophobia was quite evident. When asked whether he cared which side won, he did not have the guts to say he would like Britain to lose, so admitted he did not care, he didn't want either side to win. Rather difficult for most Americans to understand, when all the things that we hold most dear are hanging in the balance, and that balance a British victory, that he does not care which side wins. Evidently the Nazi way of life is not unattractive to him, but to most of us, the thought of Nazi domination of the world is abhorrent.

BERLIN PRAISES HIM

If a man is known by the company he keeps then Lindbergh should be ashamed of the enthusiastic reception every anti-British utterance receives. Berlin praised him quickly, after his testimony in Washington, which would make any other man want an antiseptic bath. It doesn't seem to phase him a bit that every time he has made his position known, he has brought down upon his head the criticism of the vast majority of Americans, from every walk of life.

It has been reported that Lindbergh is sick and tired of being linked with fascist organizations. The answer to that one is obvious. He should not be so ready to join or lend his support to those organizations whose avowed purpose is to prevent aid from reaching Britain in time to help. After unpleasant notoriety each time, he announces that his name has been withdrawn from the letterhead of first one and then another of these un-American groups, as soon as the newspapers have publicized its membership. If he does not want to be linked with fascism, why did he speak at Soldiers' Field in Chicago, under the auspices of the German-American Bund, to which the members had been commanded by a German-language radio program, to be certain to attend?

His testimony before the House committee was peculiar in many ways, and Lindbergh, least of all, seemed aware of the incongruity of his appearance there to criticize the Government while he professes not to care whether freedom of speech is lost to the world by a Nazi victory. Does the colonel think that anyone can publicly criticize the government in Germany?

On what is Lindbergh's "expert" testimony based? Commercial experience? Yes. Combat service? No. Does commercial experience make him competent to say whether Germany shall win, even with our help to Britain? Or is the wish father to the thought?

"Upon what meat doth this our Caesar feed
That he is grown so great?"

CHIEF OF STAFF DISAGREES

Our famous Chief of Staff, General Marshall, was quite brash in testifying the next day, out of the wealth of experience of one world war and over two score years in the service, that Germany could be beaten by our material aid to Britain now, so that American men would not have to fight alone, after a British defeat, against the might of a German juggernaut unparalleled in the world's history. Unless, of course, that we wish to believe that Lindbergh is the expert, and General Marshall the novice, we are more inclined to put our faith in General Marshall.

Lindbergh made several other statements at this hearing which should be analyzed. He said that the United States had nothing

to fear from Germany. We'd like to ask, How does the colonel know that Germany won't bother the United States—inside information? Surely Lindbergh would not ask America to place any credence in Hitler's promises. If he is so gullible, America is not. We have seen the enslavement of a Europe that believed in Hitler's treaties and promises, an enslavement that in the degradation of mankind puts the dark and bloody ages of history to shame. And to believe that, after a British defeat, Hitler would be content to allow the wealth and natural resources of the Americas to elude his grasping hands is to embarrass the ghost of P. T. Barnum.

Lindbergh also stated that, if Hitler has been unable to cross the English Channel, he doubted if he could cross the Atlantic Ocean. Then if Germany is unable to cross the English Channel, why is Lindbergh so certain of British defeat, even with American aid? And if Lindbergh believes in complete defense for the United States, against whom does he expect us to defend ourselves if we have nothing to fear from Hitler?

As Walter Lippmann so dispassionately points out, the colonel reasons in circles. Lindbergh says it won't matter what happens to the British Fleet, an adequate air force is ample protection for the United States, but admits we need bases in South America to complete our defenses. As Walter Lippmann asks, How are we going to supply those South American bases unless we use convoys, and to use convoys we must have control of the ocean, and, if Britain loses and we stand alone, we will never have control of the two oceans so necessary to our defense?

SAID TALKING IN CIRCLES

It is really amazing, but every time Lindbergh makes a public statement or speech America's respect for "Wrong-Way Corrigan" increases.

There must be something radically wrong with Lindbergh's character that the same pettiness would run through all his actions. Because newspapermen asked for interviews and camera shots (all part of their jobs), Lindbergh would delight in having the propeller of his plane throw sand in their faces or smash their cameras. Because he suffered a tragic loss in the kidnaping of his son, it was necessary to go into exile. Other parents have suffered equally devastating experiences but did not hate America for them. And in the same way, Lindbergh's hatred of Britain (or admiration for Germany—no one can be sure which it is) forces him to willingly sacrifice the safety of his country to his petty emotions.

The part that should be of concern to every man and woman in this country is that the cherished heritage that each generation of Americans has passed along to the succeeding generation, and the foundation stone upon which this Nation was so firmly built, our Bill of Rights, means nothing to Colonel Lindbergh. The danger of the United States becoming the last stand of democracy, and in making that last stand, shedding the blood of its manhood in the fight for survival, obviously leaves him unmoved. The tragic part is that we in America raised Lindbergh to the status of a national hero, but with his Fascist leanings and professed indifference to a Nazi victory, he is anything but a wholesome example to hold before the eyes of American youth.

Lindbergh has been a distinct disappointment to the country that made all things possible for him, and he has neither lived up to the responsibilities of his position, nor to the responsibilities of being an American citizen.

Was it not Marc Antony who said, "I had rather be a dog, and bay the moon, than such a Roman."?

The President's Acceptance of the National Art Gallery on Behalf of the Nation

EXTENSION OF REMARKS

OF

HON. HENRIK SHIPSTEAD

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, April 3 (legislative day of Monday, March 31), 1941

POEM BY HORACE S. CARLISLE

Mr. SHIPSTEAD. Mr. President, I ask unanimous consent to have printed in the Appendix a poem written by Mr. Horace C. Carlisle, of Washington, on the occasion of the dedication of the National Art Gallery.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

THE PRESIDENT'S ACCEPTANCE SPEECH UPON THE OCCASION OF THE DEDICATION OF THE NATIONAL GALLERY OF ART

On behalf of the people
Of the United States,
With the real satisfaction
That the duty creates,
I accept these collections
Of real art, so designed
As to live thru the ages,
In this building enshrined.

He who gave us this building,
For refinement's uplift,
Thru his own modest spirit
Has made richer the gift,
With the strict understanding
That his gift shall be known,
Not by his name, but, rather,
By his Nation's alone.

And these other donators
Of the first fruits of art,
Like the gallery's founder,
Have the same sort of heart—
'Tis their prayer and their purpose,
From these walls and these shelves,
To enshrine here the masters'
Works of art—not themselves.

To these gracious collections
We most gratefully add
Loans and other donations—
The best ones to be had—
For their well-wishing owners
Were artistic at heart,
And desired to contribute
To this temple of art.

Many gifts of choice paintings,
In the mem'rable past,
The American people
Have received, first and last,
From the wealthy who'd purchased
Masterpieces which they,
Later on, gave to cities
And to towns, in their day.

The great works of the artists,
Like great men that are gone,
"Now belong to the ages,"
And will live on and on—
They, unnarrowed by limits,
Go about doing good,
Lifting man to a higher
Plain of citizenhood.

Tho there've been many public
Gifts of art in the past,
Few, if any, are worthy
With this gift to be classed—
It presents a relation,
Seen in paint and in stone,
Emblematic of union,
With a peace all its own.

In accepting this building,
With the gifts it contains,
We accept a remembrance
That fades not, neither wanes,
But grows on in its grandeur,
More uniquely sublime,
By the elements mellowed,
With the passing of time.

Our revered common people,
Not so long ago, thought
That the works of the artists
Meant but little, if aught,
Except to the collectors;
But they've learned in late years
That the works of the artists
Are for them, too, and theirs.

Now the great common people
Feel that they have a part
In the cultural beauty
Emanating from art—
And in great art museums
They are happy to find
That a welcome awaits them,
The American kind.

When the people see pictures
Painted now by their own
Sons and daughters, and neighbors,
They want it to be known—
When they found out that making,
And not owning, is art,
Those among them with talent
Began playing their part.

Art's no imported treasure,
From the dead past alone;
It's produced in the present,
And is happily known
As a source of enjoyment
That is second to few,
With its repeating pleasures,
Entertainingly new.

To accept for the people
Of the United States
This unique, philanthropic
Mem'ry-gift generates
A true prayer of thanksgiving
In America's heart
To the God of all wisdom
For the beauties of art.

Howsoever these paintings
Heretofore have been classed,
They now picture the spirit
In the art of the past—
They are symbols of spirits,
In the past, that found joy
In producing what bombers
Ought not now to destroy.

In the third year of struggle—
In our late Civil War—
There, in Washington, gathered
Many, from near and far,
To behold the completion
Of the Capitol Dome,
Where the Goddess of Freedom
Stands enthroned, here at home.

It had been an expensive
And laborious task
To establish this stature,
Thru the ages, to bask
In the sunshines and shadows
Of the vanishing years,
Keeping watch o'er the Nation,
Thru its smiles and its tears.

Tho some people objected,
The great work went ahead—
And when Lincoln heard of it,
He took courage, and said
That 'twould be to the people
A sure sign of the dawn
Of the day when Secession's
Dangers all would be gone.

For our own, we may borrow
From the great Lincoln's thought—
"Must" is vain man's commandment;
God's commandment is "ought."
If we follow our conscience,
We'll let "ought," and not "must,"
Govern us in our actions—
And prove "In God We Trust."

In this war against Freedom,
It's our purpose to give,
With our prayers, our assistance,
That our Union may live,
And preserve the traditions
Of the spirit which made
Us a united nation
That need not be afraid.

Now, with this dedication
Of this gall'ry of art
To a past in whose making
We have all had a part,
And a still greater future,
May God's smile rest upon
Our American people,
Who pray "Thy will be done."

May the Golden Rule ever
Guide our great Nation on—
Matters not what the dangers—
Thru the dark to the dawn;
For the Master told nations
What they, too, ought to do
When He said, "Do to others
As ye'd have them do you."

—Horace C. Carlisle.

Income-Certificate Plan Hearings—Farm Legislation

REMARKS
OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1941

Mr. FULMER. Mr. Speaker, I have asked for this time for the purpose of announcing to the Members of the House that the Agriculture Committee, of which I am chairman, will commence general hearings on major farm legislation on April 22.

I want to take this opportunity of extending an invitation to all Members of Congress, regardless of whether or not you represent a farm district, to appear before our committee for the purpose of giving your views on the present farm program pending legislation, or any helpful suggestions that you may have which would assist our committee in working out a really constructive bill, one that will definitely give to the farmers of the United States actual parity prices for their products, which they have been promised during the past 8 years, and that which would be in line with what the Congress has done for other groups.

My bill, the income certificate plan, H. R. 3378, will be the major bill up for consideration during these hearings. However, we shall be very glad to have the views of all groups and interested parties on the following proposals:

First. Payment of full parity prices on cotton, wheat, tobacco, and rice by appropriation out of the Treasury of the United States.

Second. High loans in the amount of full parity with a further reduction in cotton to around nine or ten million bales.

Third. Actual price fixing.

It may be of interest to you to know that I was the author of the original Agricultural Adjustment Act, passed by Congress in 1933, which carried a processing tax provision. This bill was working admirably prior to the time the United States Supreme Court decided that this act was unconstitutional, based on the grounds that agriculture is a local problem. I feel sure that if the members of the present United States Supreme Court were called upon to pass upon the constitutionality of the old Agricultural Adjustment Act, it would stand up 100 percent under the Constitution of the United States.

During these past years we have had a wrangle in the Congress every year in trying to get an appropriation for the purpose of paying even a part of parity, and I believe that the time has arrived when it is going to be impossible to secure the necessary funds out of the Treasury to make parity payments, especially 100-percent parity.

Still there are those, including the textile mills of the country, who oppose every bill that is offered suggesting that we should secure the money out of the Treasury of the United States.

When the Farm Board was created and the high-loan program placed into operation under the Hoover administration, I stated on the floor of the House that it would be just like putting that much money in a rat hole unless we were able to absolutely control production in line with domestic consumption, and the amount of cotton that we would be able to actually export.

You remember what happened when this program came to an end. We lost millions of dollars. Still today there are those, in Congress and out of Congress, who believe that we can settle the cotton problem by placing a high loan on cotton.

There is a bill pending in the Senate proposing 100 percent loan on cotton with a further restriction in production to the actual amount that we would be able to consume in the United States and the amount that we may possibly be able to export. This would tend to further cut the production of cotton to around nine or ten million bales.

If we do this, naturally, the farmers of the South will be driven into dairying, wheat growing, raising cattle, hogs, and growing all of these crops which are grown in other agricultural sections of the country, not only for the consumption of our own people but for the general markets. This increased growing of all of these crops, especially for markets other than for our own markets, would bring about tremendous competition with every other agricultural section of the United States, which would tend to bring disaster to all of the agricultural sections of the country, including the South.

In the second place, the thing that has been destroying our cotton markets in the United States and in Europe has been the tremendous increase in the production and consumption of rayon and all types of synthetic fibers, including many types of paper products.

This Senate bill referred to would leave our market wide open for a tremendous increase in consumption of rayon and all types of synthetic fibers in that the bill does not carry a compensatory duty on these highly competitive products.

If I were engaged in the cotton warehouse business, naturally, from a purely selfish viewpoint, I would be very anxious to see a high loan bill pass, because it would tend to place additional cotton in the warehouses of the country.

In the third place, it would take a tremendous amount of money to subsidize any amount of cotton that we might be able to export so as to place the price of our cotton on a competitive basis with foreign prices.

Then, there is the price-fixing bill.

Congress has passed legislation in the interest of other groups, actually giving them the right to fix prices, for instance, the Fair Trade Practice Act, which is nothing but a price-fixing act, the Bituminous Coal Price Fixing Act, a tariff policy for industry, and a freight rate making commission, known as the I. C. C. for railroads.

There is the Wages and Hours Act placing a bottom under wages, and I could mention many other pieces of legislation passed by the Congress in the interest of various other groups.

I do not believe, however, that we could work successfully the actual price fixing of farm products unless we could change our marketing and distributing system. There are just too many people handling farm products, all of which would make it impossible to keep a check on price fixing.

My bill, the income-certificate plan, is somewhat similar to the original Agricultural Adjustment Act.

I believe that the passage of this bill will definitely solve the securing of parity for farmers.

Let me give you some definite information about the provisions of this bill:

THE INCOME-CERTIFICATE PLAN, H. R. 3378

The purpose of my bill is to place farmers on a parity with other groups as to prices for their products in line with the prices they have to pay for that which they purchase. This bill represents the first major effort to make the farm program self-supporting since the historical Supreme Court decision 5 years

ago, invalidating my bill, the Agricultural Adjustment Act, and specifically outlawing processing taxes.

In addition to enacting the income-certificate plan, my bill has five other definite and specific aims:

First. The Secretary of Agriculture is to ascertain parity price on cotton, wheat, rice, and tobacco, and at the proper time prior to the planting of these crops, is to announce the parity price for each.

Second. A loan program will automatically become effective. The loans will be based on two-thirds of the parity price. Cotton loans will be computed on a basis of seven-eighth inch Middling cotton.

Third. A compensatory duty will be placed on rayon and other synthetic fibers comparable to the amount of the income certificate placed on cotton to avoid giving these competitive fibers an economic advantage.

Fourth. A duty will also be levied on jute and jute products that are imported from India, a large cotton-growing country, in line with the amount placed on cotton by the income-certificate plan.

Fifth. The difference between the loan price and parity will be paid to the farmer from the funds secured from the income-certificate plan. No money will be placed into the Treasury or taken out of the Treasury to make these payments.

Suppose the Secretary determines that the parity price on cotton is 16 cents per pound. This would automatically mean that a loan of 10⅔ cents per pound basis seven-eighth inch Middling would be made available to the grower of cotton. If the parity were 18 cents, then the loan would amount to 12 cents.

Suppose the parity price on wheat was $1.25. The loan in that case would be 83⅓ cents, and the amount that would have to be paid to the farmer between the loan and the parity would be 41⅔ cents.

This would definitely accomplish two things; first, it would put a bottom under the price of cotton, thereby weeding out speculation; and in the second place, we would definitely know the amount that would have to be raised under the certificate plan to pay the difference between the loan or the price that the farmer received for his cotton and parity.

The bill also provides that the income-certificate plan will be based on a graduated scale, in being applied to the different types of cotton goods, so that it would not work a hardship on consumers who buy cotton goods like overalls, work shirts, and so forth. It would not place anything on cotton bagging and cotton sacks.

For various reasons that I will not take the time to explain at this time, we might just as well make up our minds that our foreign markets for cotton are definitely gone except for a very small degree. Whatever cotton you may be able to export could be subsidized, which would be a very small amount of money in paying the difference between the loan price and the foreign-market price. In the meantime you would be giving the farmer the benefit of this subsidy in connection with my loan program. Farmers will still get their soil-conservation payments.

This plan will give to farmers a larger amount for their product than will the high-loan plan that has been suggested wherein a rate of 85 percent of parity should be made in the way of a loan.

Regardless of this or any other plan, we might just as well make up our minds that unless we can consume several million more bales of cotton annually in this country we will definitely have to cut even the amount of production that we have at this time.

My bill, the cotton-pulp consumption proposal, H. R. 99, wherein I propose to mix a very small amount of lint cotton with wood pulp in the manufacture of paper products, rayon, and other synthetic products, which will enable us to consume an additional 4,000,000 bales of cotton annually in the United States, is the answer to the surplus-cotton problem.

I would be very glad to have the views of my constituents and all others interested in solving the serious agricultural problems of this country on the income-certificate bill. In that farmers are not securing real benefits out of the spending of billions in connection with our national-defense program, like industry and labor, as stated, if we fail to pass proper and constructive legislation during this session of the Congress, agriculture will be in a deplorable condition, especially at the close of the present destructive war which is now raging in Europe.

The Civilian Conservation Corps' Eighth Anniversary

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1941

Mr. RANDOLPH. Mr. Speaker, the Civilian Conservation Corps was established 8 years ago as an emergency agency to aid the Nation in time of crisis. Its major purposes since its establishment in April 1933 have been to provide work and training for unemployed young men, and to conserve the Nation's great natural resources, wealth of soil, water, and timber, for which there never before was a program of adequate protection.

Today as the corps begins its ninth year of operation it is also engaged, as is the entire Nation, in furthering our national-defense preparations.

On this eighth anniversary of the establishment of the C. C. C. I think we may well pause to look back on its accomplishments and to consider its future usefulness.

During these 8 years since April 1933 there have been great changes in the social and economic aspects of our own country, as there have been throughout the entire world, though fortunately we have suffered no such cataclysmic disasters as have shattered many countries. I think it is very interesting to know that throughout these years the C. C. C. has maintained the high standards of usefulness and service envisioned at its conception, and during the past year has become an increasingly important adjunct of the all-important national-defense activities of the Nation.

TWO MILLION AND A HALF MEN AIDED

For 8 years the C. C. C. has made a tremendous contribution to national security through its conservation and manbuilding programs. It has trained two and a half million men in better work habits, taught them work skills, improved their morale, developed their muscles, improved their health, taught them love and respect for their country and its Government—made them healthier, sturdier, more employable, and better citizens. It has contributed to our national security by advancing conservation projects in every State in the Union—projects such as reforestation of millions of acres of land, the protection of additional millions of acres of farm lands from erosion, the return of grass and water to the cattle-raising lands of the West, the improvement of forests and parks and the development of wildlife refuges and other facilities for wildlife and wildfowl.

The average American citizen was, I think, well acquainted with these phases of the C. C. C. program. Many had boys from their own families who had been in camps and returned improved in health, ready to take a job and do it well. Others had visited camps and seen the corps in action. Others had seen the face of the Nation literally change through the conservation work projects carried out by the C. C. C. enrollees. Trees, bridges, dams, lakes, parks, by the hundreds, by the thousands, by the hundreds of thousands, followed in the trail of the C. C. C. workers. In some cases it seemed like magic. But there was no magic about it. It was the result of careful planning, wise direction, and steady, hard work. All this the country saw, all this it recognized as splendid achievement. But it came as a surprise to many to see how well the C. C. C. fit into preparations which carried the country a step forward from national security into national defense.

There was suddenly a need for developing the physical hardihood of our young men, and for training large numbers of men in skills needed in the advancement of industrial defense. With this need came also the realization that the C. C. C. in carrying out its own program had been converting unemployed young men without work experience into strong, vigorous youth who could drive trucks, and tractors, build roads, bridges, telephone lines, handle explosives, operate radios, draw maps, practice photography, act as expert cooks and bakers, drafting clerks, and welders, and do many other kinds of work, all of aid in the advancement of industrial defense and in the organization and strengthening of the military forces. Through the Nation the corps had been taking boys with no previous job experience and making them into good workers, and good citizens, while at the same time advancing a tremendous conservation program which has added im-

portantly to our natural resource, wealth, and economic preparedness. Such conservation is in itself an important phase of national defense.

The corps was ready, then, in 1940 with its camps, its enrollees, its work projects, its schools, its trained personnel, and it met the problem of 1940 as it had met its problem in 1933.

WORK IS OF DEFENSE NATURE

Not by design, but it is a fact that at least 75 percent of the field jobs in the general run of C. C. C. camps are the same types of work which engineer troops are called on to do, either in peace or war. Enrollees are also trained in many duties performed by members of the Quartermaster Corps, and workers in industries and agriculture behind the lines, so there was no major change necessary in the job and job-training phases of the C. C. C. program to enable it to make a definite contribution in this line to national-defense preparations.

There was, however, a revision of the academic- and vocational-training activities in order that the greatest emphasis might be placed on those phases which contribute the most to national defense. Instructions were sent to all camps directing officials in charge of these activities to see that the training programs were so conducted.

A daily calesthenics drill was instituted which, coupled with the regular work program and the discipline of barracks life, conditions them for whatever service they may be called upon to render to their country. All of the enrollees are required to take the standard Red Cross 20-hour first-aid course, which means that a half million men will have learned proper basic methods of caring for wounded or sick persons.

Every C. C. C. enrollee receives training on the job given by the work supervisor to the men when they are actually at work on the many jobs the C. C. C. undertakes. The supervisors not only see that a job gets done but that the men know how to do it and why they are doing it so every man becomes more skillful—not only in the single job at hand but at numerous related jobs. For example, so simple a job as ditch digging offers the initial and primary instruction in surveying, drainage, hydraulics, and sanitation.

The opportunities for vocational training are numerous and may be divided into five classifications: First, training received while at work, such as truck and tractor driving, blasting, road and bridge building; second, related training, given in camp classrooms after work hours, such as radio, photography, theory of surveying, forestry, soil-conservation work, public-grounds development, and so forth; third, camp shops—here are taught such things as welding, woodworking, motor repair, and so forth; fourth, nearby schools—these offer various vocational-training opportunities for C. C. C. enrollees; fifth, C. C. C. central repairs shops and special schools conducted by the corps.

TRADES ARE TAUGHT ENROLLEES

In expanding the training program, steps were taken to train enrolless at the corps' central motor-repair shops, where the 43,000 pieces of motor equipment used on the conservation-work projects—trucks, tractors, bulldosers, power shovels, and so forth—are sent for overhaul and major repair. Additional cooks' and bakers' schools were established to train cooks and bakers. Increased facilities were provided for the training of truck drivers, operators of the heavy equipment used in the 1,500 C. C. C. camps. Provision was also made to train additional C. C. C. enrollees in radio operation, aviation, mechanics, photography, map making, map reading, and in other fields both in camp and in nearby trade and vocational schools. Schools for the training of subalterns, who serve as assistants to the camp commanders, were established in the various corps areas.

The C. C. C. now has in operation 46 central motor-repair shops, with an additional 8 approved and planned for operation in the near future, and a total of 63 eventually to be in operation.

Enrollees who have shown special aptitudes are chosen for training in motor mechanics at these shops under the direction of skilled automotive mechanics. It is estimated that between 2,000 and 3,000 enrollees can receive training at one time in these shops when all of the 63 planned are in operation. An additional 5,000 or more enrollees are working in the 1,500 camps as maintenance mechanics, performing all types of maintenance and repair duties except those which require the precision equipment and heavy hoists available only in the central repair shops.

The 43,000 pieces of automotive equipment used by the corps require the training annually of approximately 60,000 enrollee operators. They learn to operate trucks, tractors, bulldosers, draglines, power shovels, road graders, and other heavy machinery which are not far removed from the combat cars, tanks, and military-engineering equipment used by the armed forces.

Twenty-nine cooks' and bakers' schools are now being operated by the C. C. C. to train enrollees to staff the 1,500 camp kitchens, and also junior officers—assistants to the camp commanders—who need experience in mess management. The course ranges from 2 weeks to 2 months, and upon completion of these courses the enrollees return to their camps, where they gain further practical training as cooks, bakers, and mess stewards. Approximately 9,000 enrollees receive training in these fields at one time. The demand from private employers and also the armed forces for competent cooks and bakers practically assures the enrollee who has had such training of a job after leaving the corps.

Thirty-one schools for the training of subalterns, who serve as second in command of the camps, are being operated by the corps for the purpose of developing junior officers to fill vacancies caused by the department of C. C. C. camp commanders—who are in most cases Reserve officers called to active duty with the armed forces—and also to give the enrollees an incentive and opportunity to gain promotion within the corps itself. About 649 enrollees are now in training in these subaltern schools—597 are receiving this training in organized schools and 52 in C. C. C. camps. It is interesting to note that leadership and training activities carried on in the C. C. C. camps has resulted in the promotion of thousands of enrollees to administrative and supervisory positions on the camp staffs. A recent survey conducted among the nonenrolled personnel of the 1,500 camps now in operation disclosed that 228 former enrollees are now in command of C. C. C. camps or serving as junior officers; a total of 1,794 former enrollees hold positions as project superintendents or foremen, and 83 are serving as camp educational advisers—this means that many former enrollees have worked up from the ranks, where their base pay is $30, to positions paying in some instances $2,900 a year.

RADIO TRAINING IS GIVEN

Instruction in radio operation and maintenance, both code and voice, is given at many camps. In the West, where camps are far removed from cities and sometimes isolated by weather conditions from contact through telephone and telegraph, the radio has been widely used for reasons of economy and practicability. It also finds a valuable use in the fighting of forest fires and in rescue operations during floods, hurricanes, and other disasters. In the Fourth Army Corps Area, which embraces the Southeastern States, a radio school is conducted at Fort McPherson, Ga., to provide enrollee-operators for the camp stations. These enrollees are required to pass a standard test which qualifies them for positions not only in the corps but with the Army, Navy, Coast Guard, and private radio firms. There has been a great demand for C. C. C. trained radio operators by various agencies.

The recent placing of 124 Civilian Conservation Corps enrollees who graduated from the aviation mechanics course at Camp SCS–11, Vista, Calif., in west coast aircraft plants attests to the success of this type of training in the corps.

As you see, there are many jobs or skills related to national defense in which enrollees receive instruction during work hours on camp work projects, in camp administration, in the operation of camp motor-repair shops, in cooks and bakers' schools, and in camp kitchens. The following table taken from a report prepared by Director McEntee shows some of these jobs and skills, together with the number of enrollees receiving this training each year:

Operators of trucks, tractors, power shovels, draglines, etc., and other heavy equipment	60,000
Road-construction workers	60,000
Building-construction men (including workers in concrete, practical carpenters, stone masons, painters, electricians, and plumbers, etc	25,000
Telephone-line construction workers	10,000
Operators of air hammers, air compressors	8,100
Blasters and powdermen	7,900
Bridge builders and bridge-construction workers	7,500
Semiskilled mechanics	500
Maintenance mechanics and mechanics' helpers	5,000
Practical welders	1,500
Practical blacksmiths	1,500

Surveyors, map makers, map readers, and draftsmen	3,000
Axmen, sawyers, saw filers, and sawmill men	12,135
Operators of crushers	975
Pipe-line construction workmen	5,900
Quarry workers	6,200
Clerks	3,200
Warehousemen	3,000
Cooks	4,500
Bakers	2,000
Mess stewards	1,500
Supply stewards	1,500
Hospital and infirmary attendants	3,000
Radio operators	1,600

About one-half of the enrollees supplement the training which they receive on the work project by attending classes in camp vocational shops or nearby trade schools where training is available after the regular camp workday is over. At present more than 26,000 C. C. C. boys are taking special national-defense vocational courses in cooperation with State departments of education.

This camp and trade-school instruction includes courses in bookkeeping, business mathematics, business management, typing, blacksmithing, welding, surveying, drafting, carpentry, radio work, aircraft mechanics, and many other subjects.

Recently Director McEntee found in a survey of the veteran enrollees that a large number of these men were skilled in certain trades and could qualify as instructors for defense-training courses. He has issued regulations permitting these veteran enrollees to be transferred to junior companies to act as instructors for the younger men.

As you know, the United States Office of Education has been allotted $10,000,000 for training the rural youth of the country for national defense. It so happens that in certain rural sections of the country trade schools have not been established. On the other hand, many of the C. C. C. camps have well-equipped training shops and educational buildings. In response to requests from the State departments of education, the Director of the corps has issued a ruling permitting the residents of these rural communities to attend classes in the camp schools and shops.

87,000 TAUGHT TO READ

There is also the opportunity for each enrollee to continue his academic education in the class work held during leisure hours. The only required study is for those boys who cannot read or write and they must attend classes for the elimination of illiteracy. You may be surprised to know that a large number of boys who joined the corps were unable to read or write. Since 1933, 87,103 boys have been taught to read or write. During the past 3 years, 19,116 have completed the elementary grades and received eighth-grade diplomas while in camp, 4,241 have received high-school diplomas, and 254 have received college degrees.

This is the specialized training given in the corps.

However, the biggest and perhaps the most important job of the C. C. C. from a national-defense standpoint is the general training given all enrollees in the corps. Commenting on this phase of the C. C. C. program, Mr. McEntee said recently:

They are taught to keep regular hours and to direct their activities to useful purposes. When on the work project they put in a full day at the jobs to which they are assigned. Some operate jackhammers; others wield shovels, axes, and other tools; others drive trucks or tractors. Whatever they do, they are learning while they work. After the workday ends they have leisure time, with opportunities to attend classes, either in camp or at nearby schools, or to study in the camp library. The great majority of them take advantage of these opportunities.

Each year the C. C. C. turns back into private life approximately 300,000 men better equipped to cope with the problems of modern society. They have learned how to work and how to apply their leisure time to better advantage. They have associated with other men of widely varying temperaments and personalities—a cross section, as it were, of the temperaments and personalities with which they will deal in later life. They have learned to live in barracks, to practice personal and public hygiene. They have acquired a community spirit which makes them feel that they are not an isolated individual in the mass of humanity, but a living, breathing, integral part of our whole complex civilization. If the C. C. C. had done nothing else, this psychological change in the outlook of the enrollees toward life probably is worth the entire cost of the program. It has nullified to a great degree the un-American tendencies that are frequently spawned of unemployment and despair.

The C. C. C. has never been a static organization. It has kept firm its major objectives of employment and training for youth, and the conservation and rebuilding of our great natural resources. But it has constantly sought means of increasing its usefulness and has not hesitated to put changes into effect when they were for the betterment of the program.

One recent change of January 1, 1941, will prove a great incentive to the enrollees, I think. Savings accounts were set up for the enrollees in the Office of the Chief of Finance, War Department, who acts as fiscal officer for the C. C. C. Previously, $22 of each enrollee's $30 a month basic pay was sent to his dependents and the remainder turned over to him for personal spending. Under the new arrangement, $7 each month will be placed in a savings account for him with the Chief of Finance, War Department; $15 will be allotted to his dependents and $8 will be given him for personal use. At the conclusion of his enrollment, the aggregate of his savings account will be given him in a lump sum to provide a "nest egg" until he is earning in private employment.

Another change during the last year opened the C. C. C. rolls to a wider range of applicants. The interpretation of the eligibility requirement, "unemployed and in need of employment" was broadened to include applicants who were unemployed and in need of employment although their families were not necessarily in financial distress.

DIRECTOR M'ENTEE PRAISES C. C. C.

We owe another debt to the Civilian Conservation Corps. There is no doubt but that the Corps has become the strong right arm of conservation in this country. I should like to quote from a recent report of James J. McEntee, Director of the Civilian Conservation Corps, explaining the program of the Corps' conservation activities.

"As a nation in years gone by the United States had taken the pioneer's point of view, to take the best and waste the remainder in the taking," Mr. McEntee said. "Our forests built the homes, the towns, and cities of America, but we pillaged rather than harvested the country's timber crop. We had millions of forest acres, and we gave no thought to future wood needs, had little concern about consequent soil waste and stream pollution, and had little worry about our vanishing wildlife. Federal and State and private conservation agencies had been aware of all this for many years and were doing all they could to halt the despoliation.

"Great progress had been made and plans had been drawn up for restoration, improvement, development, and salvage of our natural resources in forests, soils, water, recreation, and range, but men and money were needed to carry out these plans to make them effective. But it was not until the coming of the Civilian Conservation Corps—300,000 strong—in 1933, that a real start was made on the job of restoring our natural-resources wealth.

"Under capable foremen and technicians the C. C. C. has been working now for over 7 years, all over this land of ours, working to salvage our forest, soil, recreation, and water wealth.

"In cooperation with Federal and State conservation departments the C. C. C. has done a tremendously big job; it is still doing it. It must continue to do it, for even an army of 300,000 young men cannot in 7 years repair and restore the waste of many generations. There are still many years' work ahead for the C. C. C. to do. The conservation agencies still have plans for many years of work yet undone. The national conservation job cannot be done, cannot be completed and wound up in short order. The C. C. C. has increased the natural-resources wealth of this country literally by hundreds of millions of dollars and has contributed in great measure to the national defense. It can and should continue to do both."

Graduation Exercises of the National Police Academy

EXTENSION OF REMARKS

OF

HON. THEODORE FRANCIS GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Thursday, April 3 (legislative day of Monday, March 31), 1941

ADDRESS BY J. EDGAR HOOVER

Mr. GREEN. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by J. Edgar Hoover, Director of the Federal Bureau of Investigation, Department of Justice, at the graduation exercises of the sixteenth session, National Police Academy, at Washington, D. C., on March 29, 1941.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Responsibilities weigh heavily upon all of us today as we meet here to honor this fine

graduating class of the National Police Academy of the Federal Bureau of Investigation. The world is engulfed in a tragic war. No man, woman, or child can escape the rigors of such a struggle in which military might, economic pressure, and "fifth column" attacks upon civilian morale are used with equal force. The challenge of twisted philosophies from the perverted minds of vainglorious dictators is too sweeping to be accepted in a single tongue. Right-thinking people throughout the world must arise against this aggression upon the sacred heritage of democracy.

As a Nation, we are now witnessing a crucial period which will determine the future of our civilization. Assailed by encircling forces of totalitarianism, American democracy is the world's last great bulwark of liberty and freedom.

The armed forces of the Nation can be relied upon to defend any attack upon American democracy on land or sea, but the law-enforcement bodies of the land form the first line of defense against any attack that might be launched from within.

Never before has there been a greater need for unity, for calm appraisal of the forces which work against us, for coordination of thought and effort in building an impregnable defense.

A nation faces a desperate moment when its men and guns are called into action. It is in the period before this time, while the enemy is making every possible inroad upon our moral defenses, that the true battle takes place. That battle is now in progress in America.

The United States, rather than becoming the last stronghold of democracy, has become its greatest arsenal.

We are proud that law enforcement has been given the task of protecting this mighty arsenal from the foul schemes of foreign agents who seek to interrupt the flow of raw materials into its giant machines and to slow down the production lines. No greater responsibility has ever fallen upon a profession so young. We of law enforcement must always remain aware that should we fail in our task the life of a peace-loving people could become chaotic overnight. A successful fulfillment is vital.

With hypocritical organizations bearing high-sounding names to appeal to every human want or frustration, with silver-tongued prattlers of class hatreds, with leaflets of poisonous propaganda, renegade espousers of totalitarianism seek to destroy the unity of our people. To meet this threat requires the best of law enforcement. When the history of this era is written the record will clearly show that never before were the peace officers of America better prepared.

Throughout the ages, the maintenance of law and order has been one of the most important of all governmental functions. In any community, in any State, in any nation, it warrants the highest type of personnel and facilities. Based upon this fundamental principle, the Federal Bureau of Investigation has been happy to pioneer in the development of the new profession of law enforcement. Increased protection for the citizens of the Nation has been the result. No longer is the public enemy in the ascendency. No longer do the kidnaper and the bank robber maraud with impunity.

The anticipation of the very emergencies which now confront us led to the establishment of the F. B. I. National Police Academy 6 years ago. With the graduation today of this sixteenth session, 553 carefully selected representatives of municipal, county, and State police agencies have received this course of instruction. Our purpose throughout this time has not been to merely improve the ability of 553 officers who already were experienced and capable public servants. A greater goal has been achieved, because the graduates of the National Police Academy have been able to aid in the instruction of members of their departments in the most approved and modern methods of law enforcement.

No field of public service has made more rapid advances than that of the law-enforcement profession. Recent years have witnessed an increasing desire on the part of citizens in every section of the land for more effective aid in law and order. As a result, law-enforcement organizations have been used less frequently as a dumping ground for political hacks and incompetents.

Alertness, good judgment, physical and moral courage, and business efficiency are required by modern departments. Self-sufficiency, petty jealousies, and lack of cooperation are no longer the rule but the infrequent and surprising exception. Unification among agencies has been achieved and today they work together to provide the type of protection the citizens deserve and should expect of their peace-time soldiers. In these changes, the men of the National Police Academy have been a progressive and guiding force.

When the President of the United States called upon the Federal Bureau of Investigation to take charge of all investigations dealing with the internal security of the United States, we were confident of the assistance we could expect. We knew that all law enforcement was prepared to accept the added responsibilities growing out of the emergency.

They were enthusiastic in attending the conferences the F. B. I. called throughout the country for the purpose of fully coordinating all efforts in the prevention and detection of espionage and sabotage. As a result, this work has gone forward thoroughly and efficiently, with calmness and saneness.

Notwithstanding the great and wholehearted support which we of law enforcement have and may continue to expect from the great body of the American people of every walk of life in aiding us to meet our additional responsibilities and duties in this time of national emergency, we must constantly be alert to subtle but viciously dangerous attacks and threats which, while claimed to be aimed only at the forces of law enforcement, are basically directed against the very heart of our democracy and its traditions.

Let me condemn with all the strength of a firm conviction that most vicious of all un-American activities—the scummy slur and innuendo spewed forth from a lying tongue to undermine confidence in duly constituted law enforcement. There are those in this country who have attempted assertions that law enforcement has failed to take every possible precaution to protect this country from the attacks of "fifth column" agents. Such statements can give comfort only to the enemy. They cannot bear the burden of proof. We of law enforcement must challenge any such underhanded attack upon police agencies as an attempt to break down law and order. Every loyal American knows that only the irresponsibility of vigilante action can follow such a break-down.

The vigilante, with his unjust trampling of the rights of innocent persons, must be avoided. This is a time for clear thinking; confusion is an ally of the enemy. There is no cause whatsoever for hysteria, which leads to confusion and irresponsibility. The public has been confident in the ability of trained men to handle a job in which an outbreak of a wave of hysteria would be disastrous. Law enforcement prepared itself to meet the present emergency long before the professional alarmists concerned themselves.

The vilifying attacks of Communists and their allies—the Nazis and the Fascists—too scurrilous and too numerous for repetition, have not escaped us. In their abortive efforts to sow discontent and destroy confidence in every democratic tradition, they paint a picture of double-dealing and treachery around every officer of the law. They know that the Federal Bureau of Investigation, its graduates of the National Police Academy, and their fellow peace officers are their greatest enemies. No lie is too fantastic for them if it will serve to destroy the confidence of the public in constituted authorities. With characteristic lack of decency or scruples, those who would undermine America are quick to accuse the F. B. I. of any disgraceful tactic. They would have our citizens believe the men of this service constitute a threat to the very liberty they themselves ultimately plan to destroy.

The rabble-rousing Communist, the goose-stepping bundsman, their stooges and seemingly innocent "fronts," and last but not the least, the pseudo-liberals, adhere to the doctrine of falsification and distortion. They add and subtract, twist and warp facts with the rapidity of a whirling dervish. Inconsistency is no deterrent when they seek to spread their poppycock propaganda. They seek to weaken law enforcement in every conceivable manner as their first step toward turning law and order into revolution and chaos. Law enforcement will meet these challenges.

At a time when such forces of destruction constitute an ever-present threat to orderly government, it is fortunate that we can graduate from the National Police Academy another class of capable men to instruct in the methods of maintaining internal security. At a time when thorough preparedness means so much to the welfare of the Nation and the life of democracy itself, the Federal Bureau of Investigation is proud of this opportunity to contribute to the strength and preparedness of a vital segment of our defense.

For this reason, we have given you everything we possess in the way of knowledge of law enforcement methods, and now, as you depart, we of the F. B. I. give you the motto which we cherish—fidelity, bravery, integrity. May you carry on with the knowledge that we wish you Godspeed in your every endeavor.

Republican Agricultural Study Committee

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 3, 1941

STATEMENT BY HON. JOSEPH W. MARTIN OF MASSACHUSETTS

Mr. HOPE. Mr. Speaker, the farmers of this country are on the job in connection with the national-defense effort now under way. They are doing their part and will continue to do their part and do it cheerfully, just as they did during the first World War.

Already, however, it is apparent that the war and the defense program are intensifying the grave problems which have confronted agriculture for many years, and for which no real solution has yet been put into effect. Not only are those engaged in agriculture adversely affected by the existing situation, but unless something is done, even more distressing conditions may be expected when the

war ends and the inevitable deflation takes place. It is imperative that attention be given not only to the pressing problems confronting agriculture at this moment but to the situation which will exist when peace comes.

In order that the Republican Party may be in a position to fully meet whatever responsibilities may fall on it in solving this problem, House Republican Leader JOSEPH W. MARTIN has recently appointed a Republican agricultural-study committee. This committee is composed of Republican Members of Congress from 22 States reaching from the Atlantic to the Pacific and succeeds a similar committee appointed by Mr. MARTIN in the last Congress.

I am sure that the statement of Mr. MARTIN made at the time he announced this committee is of great interest to all who are interested in agriculture and its problems. Pursuant to permission unanimously granted by the House, I include this statement herewith:

Renewed activity of the Republican Agricultural Study Committee was announced today by Representative JOSEPH W. MARTIN, of Massachusetts, Republican leader in the House of Representatives. The agricultural study committee, augmented by some of the new Members who came to Congress in the last election, will make an exhaustive, Nation-wire study of farm problems which existed before the involvement of the United States in defense and war activities, and the new and grave problems which have been created by the war. The study committee was originally formed in October 1939 by Minority Leader MARTIN, with Representative CLIFFORD R. HOPE, of Kansas, ranking Republican Member of the House standing Committee on Agriculture, as chairman. Mr. HOPE retains the chairmanship of the enlarged committee.

Mr. MARTIN, in announcing the appointment of the study committee, said:

"The gravity of the many conditions involved in the depressed and unhappy condition of American agriculture at the outbreak of hostilities abroad has been tremendously increased by these foreign wars. The factors which have operated to reduce agriculture to its present plight have arisen from conditions which extend not only throughout the economic structure of America but of the whole world. Some of these conditions have been due to alterations in the mode of life and habits of entire peoples, including those of America, and are permanent. Other factors involve loss of foreign markets, danger of agriculture being 'squeezed' between opposing conditions arising from defense and war work, increasing disparity between agricultural and other prices, rising costs of farm production and scarcity of farm labor, rising taxes, and the very grave condition of deflation, which will be sure to strike what could be a fatal blow at American agriculture when the defense activities cease and the wars end, unless careful and sound plans for cushioning that shock are made far in advance of the time when the blow comes.

"The ills of American agriculture had not been cured when these new defense activities and war dangers arose. Effective remedies had not been applied. Only temporary expedients which had little permanent value had been employed. The Republican study committee, under the chairmanship of Representative HOPE, will see to it these grave dangers which face American agriculture are not obscured and neglected in the false and temporary boom conditions of national-defense and war activities.

"The first prerequisite to an intelligent effort to solve these problems confronting American farmers is a careful study of each problem and its relationship to the others. In order to achieve the most comprehensive study of agricultural problems from the standpoint of working out permanent solutions, I have added to the original committee several new Republican Members of the House of Representatives who also have a special knowledge of the various phases of agriculture and the dangers confronting American farmers. To encompass the wide range of study and analysis necessary, this study committee will be divided into subcommittees, each of which will study one phase or problem.

"The divisions of study fall into the following categories:

"1. Dairying, poultry, eggs, etc.
"2. Livestock, meats, etc.
"3. Wheat.
"4. Corn and hogs.
"5. Potatoes.
"6. Vegetable and canning industries.
"7. Wool.
"8. Cotton and other southern crops, competition, etc.
"9. Fruits.
"10. Sugar.
"11. Farm chemurgy.
"12. Soil conservation.
"13 Irrigation.
"14. Foreign markets, reciprocal trade treaties and effects; dumping, barter, etc.
"15. Marketing, production costs; processing, etc.
"16. Tobacco.
"17. Farm credits.

"These subcommittees will hold hearings from time to time in various parts of the country to get 'grass root' views and information directly from the farmers themselves.

"It is imperative we work out an affirmative and constructive approach to the rescue of agriculture from these dangers which menace the farmers. It is one of our gravest problems, and upon our efforts in behalf of the farmers will depend in a large measure the future prosperity—if not the very safety and security—of the whole Nation."

The enlarged Agricultural Study Committee will be composed of the following members:

Clifford R. Hope, Kansas, chairman; Leo E. Allen, Illinois; H. Carl Andersen, Minnesota; John Z. Anderson, California; August H. Andresen, Minnesota; Leslie C. Arends, Illinois; Philip A. Bennett, Missouri; Stephen Bolles, Wisconsin; Clarence J. Brown, Ohio; Ushur L. Burdick, North Dakota; Frank Carlson, Kansas; Francis Case, South Dakota; J. Edgar Chenoweth, Colorado; Cliff Clevenger, Ohio; O. S. Copeland, Nebraska; Fred Crawford, Michigan; Francis D. Culkin, New York; Paul Cunningham, Iowa; Carl T. Curtis, Nebraska; Everett M. Dirksen, Illinois; Henry C. Dworshak, Idaho; Frank Fellows, Maine; Bertrand W. Gearhart, California; Fred C. Gilchrist, Iowa; George W. Gillie, Indiana; Edwin A. Hall, New York; William S. Hill, Colorado; John Jennings, Jr., Tennessee; Ben F. Jensen, Iowa; Anton J. Johnson, Illinois; Noble J. Johnson, Indiana; Samuel H. King, Hawaii; J.
